GROVE PARK SCHOOL, WREXHAM.

PRINCIPAL.—J. PRYCE JONES, L. C. PREC.

ATTENTION is respectfully invited to the following facts :—1. The locality of the School is remarkably healthy. 2. The premises are extensive, and fitted up with due regard to the comfort of the Pupils. 3. Every facility for recreation is afforded by the large playground and cricket-field which adjoin the house. 4. There is a sufficient staff of well qualified Masters, including a Classical Master, B.A., in Classical honours, Cambridge, and a resident Frenchman. 5. At the Examinations of the College of Preceptors and the Oxford and Cambridge Universities, Pupils from the School have taken Honours in several distinct branches of Education, *e.g.*, Latin, French Mathematics, Book-keeping, and English. 6. At five examinations by the College of Preceptors, Certificates were Awarded to one-third of all the pupils in the School. 7. At five out of seven examinations by the College the highest place in Book-keeping was given to candidates from the School. 8. The Principal earnestly endeavours to form in his Pupils a manly Christian character. 9. The Diet is liberal.

TERMS which are moderate and inclusive with lists of successful pupils on application.

CALCUTTA METAL MART.

THE undersigned have a large stock of Machinery, Metals, and Miscellaneous Articles of all descriptions, and are prepared to give estimates, or contract for the supply of any materials which they have not in their godowns.

They are also prepared, for a moderate commission, to import any articles from England at actual cost, and are in a position to get the best quality at the lowest possible price.

The following are generally in stock or on the way :—

Portable Engines.

Clayton & Shuttleworth's

Prices, with Single Cylinder .. .. Rs.	4 H. P. 2,700	6 H. P. 3,250	8 H. P. 3,900	10 H. P. 4,500	
Do., with Double Cylinder .. .. Rs.	10 H. P. 4,750	12 H. P. 5,000	16 H. P. 6,250	20 H. P. 7,500	

Reversing Gear.

Extra, at Rs. 200 to Rs. 400, according to size.

Stationary Engines.

Tangye's (suited for Tea Gardens), with vertical boiler mounted on base plates, occupy little room, and are well adapted for use with Tea or other machinery requiring small power. Fire-places are constructed to burn either wood or coal.

Prices .. .. Rs.	2 H. P. 1,400	3 H. P. 1,500	4 H. P. 1,650

Fire Engines.

Holman's, with suction and delivery hose complete.

Centrifugal Pumps.

Gwynne's—are largely used all over the world where a rapid discharge of water is wanted.
A 6-inch pump worked by a 6 H.P. Portable Engine will discharge about 700 gallons of water per minute.
A 7-inch pump worked by an 8 H.P. Portable Engine will discharge about 900 gallons per minute.
An 8-inch pump worked by a 10 H.P. Portable Engine, will discharge about 1,100 gallons per minute.
Prices, with pipes and other fittings complete.

	4 in.	5 in.	6 in.	7 in.	8 in.	10 in.	12 in.
Rs.	460	600	750	900	1,050.	1,300	1,500.

Centrifugal Pumps.

The same sizes, but of slightly different shape, may be had mounted on wheels, and will be found useful by Contractors and Engineers who require Portable Pumps.

Special Steam Pumps.

Tangye's, are very compact and simple in construction.

Disintegrators.

Norton and Hawksley's for *grinding to a fine powder artificial manures, ores of all kinds, shale, asphalte, lime, chalk, coal, coke, clays, barks, myrobalans,* leather, drugs, sugar, seeds, and grains of all descriptions, besides many other articles.

Prices.

No. 1, Rs. 450; No. 2, Rs. 1,050.

Extinctures.

Dick's—can be carried by one man, and always kept ready for instant use in case of fire. They have proved very efficacious at Home; and in Warehouses, Mills, and Ships; as well as for Private Dwellings, they form a great safeguard against damage by fire.

Prices.

No. 4, Rs. 100; No. 5, Rs. 125.

Charges for ditto supplied extra, at Rs. 4 per tin.

Steam Road Rollers.

Aveling and Porter's, 5 ton and 8 ton.

Stone Breakers,

Marsden's	Rs.	3,000
ALBION DRILLING MACHINES	„	325

Steam Hammers,

3 cwt., with fittings complete	„	1,250

Soorkee Mills,

with 6-feet pan and rollers complete	„	1,025

Injectors.

Giffard's—are much superior to Pumps as Boiler feeders, and are very simple in their construction.

	No. 4.	No. 6.	No. 8.	
Prices .. .. Rs.	70.	90.	135.	

Wire Tramway.

Hodgson's. These Tramways are well adapted for carrying produce and minerals over hilly ground, or in any country where good road or water carriage is unavailable; and as feeders for railways, their use might be extended.

The undersigned will be happy to furnish Catalogues and particulars on application.

RESERVED Issue 10,000 Shares of Rs. 500 each, called up in full.

DIRECTORS.

HAMILTON MAXWELL, Esq. (of Messrs. W. Nicol & Co.)
R. VALENTINE REID, Esq. (of Messrs. Finlay, Scott & Co.)
A. J. MACDONALD, Esq. (of Sir Charles Forbes & Co.)
DINSHAW MANOCKJEE PETIT, Esq.
AHMEDBHOY HUBIBBHOY, Esq.
KESSOWJEE NAIK, Esq.
E. D. SASSOON, Esq.

FIFTEENTH REPORT.

The Directors have the pleasure to submit to the Proprietary the accounts of the Bank for the half-year ended 30th June last. They have been audited, and the Auditors' Report is annexed.

The Cotton crop proved to be a full average one, and the staple was in steady demand throughout the season. The Directors did not re-open the Dhollera and Wudwan Branches finding that there was little probability of their being able to work to a profit. The returns from the Branches in operation have been generally of a satisfactory character.

A few small failures have taken place in the bazaar. The Bank has made no bad debt during the six months.

The accounts show a net gain of Rs. 6,71,354-11-4, and, adding to this Rs. Rs. 1,14,890-14-8, the balance brought from the half-year ended 31st December last, there is a sum total of Rs. 7,86,245-10-0 for distribution.

In accordance with the Articles of Association, the Directors recommend the declaration of a dividend at the rate of ten per cent. per annum,

which will absorb	Rs.	5,00,000 0 0
The transfer to Reserved Fund	„	2,25,000 0 0
In reduction of cost of premises	„	20,000 0 0
To Bad and Doubtful Debt Account	„	10,000 0 0
Leaving a balance to be carried forward of	„	31,245 10 0
	Rs.	7,86,245 10 0

The Directors regret to repeat that they have not been favoured with any communication from the Government of India regarding the very important questions still at issue—*viz.*, the Bank's Charter of Incorporation, and the removal of the local agency of the Bank of Bengal.

Mr. H. R. Cormack resigned his seat at the Board on leaving India, and Mr. A. J. Macdonald has rejoined the Board by desire of the Directors, subject to the approval of the shareholders in terms of Clause 70 of the Articles of Association.

Mr. R. Valentine Reid and Mr. Dinshaw Manockjee Petit retire from office on this occasion, and are eligible for re-election.

The shareholders will have to elect Auditors for the ensuing year, and to fix their remuneration. The present Auditors being eligible, offer themselves for re-election.

By order of the Directors,
M. BALFOUR,
Secretary and Treasurer.

Bombay, 13th July, 1875.

AUDITORS' REPORT
For the Half-year ended 30th June, 1875.

Bombay, 13th July, 1875.

To M. BALFOUR, Esq.,
Secretary and Treasurer, New Bank of Bombay, Limited.

DEAR SIR,—We have to report that we have audited the Bank's Accounts for the half-year ending the 30th June, 1875.

The General Ledger, Stock Ledger, the Security Ledger, and the Branches' Ledger have been duly examined by us. The balances given in the Balance-Sheet agree with the Bank's Books and the returns made by the several Branches. We have counted the Cash and Currency Notes in the Bank's till in Bombay, and found them to agree with the figures given in the Balance-Sheet. The value of Government Securities and Specie belonging to the Bank is correctly stated.

The Securities deposited for safe custody, as also those in possession of the Bank against Loan and Cash Credits, we have carefully examined and have found them in order in comparing them with the Registers.

The Abstract of the Balance-Sheet and Profit and Loss Account are correct, as showing the true position of the Bank at the end of the year under report.

We are, Dear Sir, yours faithfully,

SAM. W. READ,
EDULJEE NUSSERWANJEE SETTNA, } Auditors.

Arriving at ZANZIBAR on the return trip 24 hours before the departure of the Steamer for Aden.

From LONDON for LISBON, ALGIERS, PORT SAID, SUEZ, JEDDAH, ADEN, MAKULLA, KURRACHEE, BUNDER ABBAS, BUSHIRE, and BUSSORAH. BAGHDAD Cargo transferred at BUSSORAH, to Steamers of the Euphrates and Tigris Steam Navigation Company, or other Steamers, 7th August.

„ BUSSORAH „ LONDON calling at same ports as on outward voyage, 10th August, touching at KURRACHEE on 22nd August.

Note.—This line connects at Aden with the Steamer for Zanzibar, carrying Passengers, Mails and Cargo for the Steamer from Zanzibar for Mayotte, Nossi Bi, and Mozambique. It likewise connects at Kurrachee with the Steamer for Bombay, carrying Passengers, Mails and Cargo for Goa.

AGENTS AT BOMBAY

MESSRS. W. NICOL & Co.

AGENTS AT MADRAS

MESSRS. BINNY & Co.

Managing Agents, MACKINNON, MACKENZIE & Co.,

CALCUTTA.

Steam Communication with the Malabar Coast, Ceylon, Madras and Calcutta.

THE British India Steam Navigation Company (*Limited*), UNDER CONTRACT WITH GOVERNMENT, despatch steamers as above with Mails, Passengers and Cargo, every fourteen days.

This route is the most expeditious and economical for passengers for the Neilgherry district, Bangalore and Madras, who can land at Calicut for Beypore, and proceed from thence by rail.

Passengers for Calcutta can take the same route, picking up the steamer at Madras.

W. NICOL & Co.,
Bombay, 1875. Agents.

Steam Communication with Kurrachee.

THE British India Steam Navigation Company (Limited), UNDER MAIL CONTRACT WITH GOVERNMENT, and in connection with the weekly service from England, despatch a steamer to Kurrachee every Monday at noon.

W. NICOL & Co.,
Bombay, 1875. Agents.

Steam Communication with the Persian Gulf, via Kurrachee.

Interchanging Cargo and Passengers at Bussorah, to and from Baghdad, with the Euphrates and Tigris Steam Navigation Company.

THE British India Steam Navigation Company (Limited), UNDER MAIL CONTRACT WITH GOVERNMENT, will despatch a steamer every 14 days to the PERSIAN GULF, touching at KURRACHEE, GUADUR, MUSCAT, BUNDER ABBAS, LING, BUSHIRE, FAO, MAHOMERAH, and BUSSORAH.

W. NICOL & Co.,
Bombay, 1875. Agents.

NOTICE TO PASSENGERS.

FOR LONDON.

MESSRS. GREEN'S S.S. *Sultan*, F. W. Owen, Commander, will leave Calcutta on the 6th or 7th August.

Fares—1st Class, Single ... ... Rs. 550

For passage, apply to
GILLANDERS, ARBUTHNOT & Co.,
or to MESSRS. GRINDLAY & Co.

Eastern Bengal Railway Company.

Through service to Chuttuck, Sylhet, & Cachar.

The Steamer "*Queen of Seebpore*" and Flats, plying in conjunction with this Railway, will, until further notice, perform the service to Chuttuck, Sylhet, and Cachar every third week, instead of fortnightly as heretofore, commencing as from Sealdah on Saturday the 22nd current.

Goods for despatch should be delivered at the Sealdah Terminus by 1 P.M. of the Thursday previous.

Full particulars as to the dates of departure, rates and fares &c., may be obtained of the Enquiry Officer, Sealdah Terminus, or of the District Agent at Dacca and Naraingunge.

AGENT'S OFFICE,
Sealdah Terminus, 10th May 1875. (Sd.) GEO. LOW CALDER,
Acting Agent.

Eastern Bengal Railway.

NOTICE.

WEEKLY Communication by Railway and Steamer between Calcutta, Dacca and Naraingunge for Sylhet, Cachar, Tipperah and Eastern Districts.

This Company's Steamers leave Goalundo for Dacca and Naraingunge every Sunday morning, returning from Dacca and Naraingunge every Wednesday, reaching Goalundo on the Friday.

Passengers should leave Sealdah by the 7-30 A.M. or 8 P.M. Train on the Saturday preceding the departure of the Steamer, and goods for despatch should be delivered at the Sealdah Terminus before 8 P.M. on the Thursday previous.

Further particulars can be obtained on application to the Company's Enquiry Officer, Sealdah, or the Company's Local Agent at Dacca and Naraingunge.

E. B. RAILWAY, AGENT'S OFFICE,
17th November, 1873. FRANKLIN PRESTAGE,
Agent.

ALL persons having claims on the Estate of the late Colonel Widdicombe, District Judge, Kurrachee, are requested to send the same to Major Staveley, R.A., President, Committee of Adjustment, Kurrachee, within one month of this date, after which no claims can be entertained.

Kurrachee, 19th July 1875.

THE BANK OF BENGAL.

Calcutta, 20th July, 1875.

NOTICE is hereby given that in conformity with Section XXXIII of the Charter, Act IV of 1862, the Annual General Meeting of the Proprietors of the Bank of Bengal will be held at the Bank, on Monday, the 2nd August, at 11 o'clock A.M.

By Order of the Directors,
(Signed) R. HARDIE,
Secretary and Treasurer.

ASSURANCE COMPANIES.

STANDARD LIFE OFFICE.

THE DEATH CLAIMS paid by the STANDARD COMPANY, during the past nine years, have been upwards of £1,200 per business day.

THE FUNDS during the same period, after payment of Claims and Expenses of every kind, have increased from £2,600,000 in 1865 to £4,800,000 in 1874.

NEW ASSURANCES, to the amount of £1,000,000 Sterling, have been placed upon the Company's Books in each of the years since 1865—some of them years of doubt and anxiety in the Assurance World. This result, it is believed, has been maintained by no other Office in the United Kingdom, during the same period.

BONUS YEAR 1875.

The next division of Profits will take place at 15th November, 1875.

ANNUAL REPORT 1875.

Copies of the Annual Report, containing the Balance Sheet, &c., may be obtained on application.

GEO. LUCAS KEMP,
Secretary, Calcutta Branch.

Henry Michael Steinthal, Esq.

Insurances are granted by this Company on nearly every description of property in Great Britain, in Foreign Countries and in some of the Colonies at moderate rates.

Mills, Factories and other hazardous risks will be specially surveyed at the request of the owner.

KETTLEWELL, BULLEN & CO.,
Agents in Calcutta.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal Ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman of the Annual Meeting, 7th August,* 1874.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policy-holders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 41 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society, which for twelve years continuously has now returned *Fifty per cent.* of premiums on the participating scale.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, Quarterly, or Monthly, at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary Civil Rates:
No extra Rate for unimpaired Whole-term Lives in India.

Available Funds	...	... **£ 1,012,185 16 8**

William Gordon Thomson, Esq.
The Rev. Richard Wood, B. D.
John Ralph Engledue, Esq.
Secretary,—Andrew Francis, Esq.

The financial position of the Institution on 31st December 1874, was as follows:—

Proprietary Capital	.. ..	£1,000,000 0 0
Annual Life Income	Premia	76,424 0 0
	Interest	25,594 0 0
Realized and Invested Funds	.. .. ..	598,970 0 0

RETIRING PROVISIONS.

Policies are issued by which these may be secured, and at the same time a surviving family be protected in the event of premature death.

ASSURANCES BY TERMINATING RATES OF PREMIUM.

Under this system, Assurances can be effected for the whole term of life, the annual premia for which cease after a given number of years.

FREE POLICIES.

Assurances by this system can never altogether be forfeited by non-payment of Premia.

CLERGY FUND.

One-tenth of the Proprietors' Profits is periodically set aside for the purpose of aiding Clergymen and Ministers to assure their lives for the benefit of their families.

COLVIN, COWIE & CO.

NEW PLAN

BY THE

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATES, with 80 per cent Invested Solely for Policy Holders.

Example.

A, aged 30, wishes to Assure Rs. 1,000. With Profits.

Annual Premium at Indian Rate ...	Rs.	36	0	0
Annual Premium at English Rates ...	„	23	10	8
Difference ...	Rs.	12	5	4

The "ORIENTAL" charges (*A*) the English Premium of Rs. 23-10-8 *only*. The Extra Premium for India, Rs. 12-5-4, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with *Compound* Interest at 3 per cent is equal to the sum assured, *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses, and Forms of Proposal can be obtained from any of the Agents, or from

D. McLAUCHLAN SLATER,
Fellow of the Institute of Actuaries,
Manager and Actuary.

BONUS YEAR 1875.

INCORPORATED BY ROYAL CHARTER AND SPECIAL ACTS OF PARLIAMENT.

NORTH BRITISH & MERCANTILE INSURANCE CO.

ESTABLISHED 1809.

President—HIS GRACE THE DUKE OF ROXBURGHE, K.T.

Vice-Presidents.

HIS GRACE THE DUKE OF SUTHERLAND, K.G. | HIS GRACE THE DUKE OF ABERCORN, K.G.

Chairman of the General Court of Directors.

THE RIGHT HONORABLE LORD LAWRENCE, G.C.B., G.C.S.I.,

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

Age next Birthday	Yearly.			Half-yearly.			Quarterly.			Age next Birthday.	Yearly.			Half-yearly.			Quarterly.

56, 59, 60 & 61, *ENTINCK STREET,*

CALCUTTA.

THE numerous testimonials received by C. Lazarus and Co. tend to prove that their

BILLIARD TABLES

are now the only ones appreciated in India, being constructed on an entirely new principle introduced by C. Lazarus and Co.

DENTISTRY.

MESSRS. CORFIELD & CO.,

May be consulted daily upon all cases of Surgical and Mechanical Dentistry,

THEIR IMPROVEMENTS IN

Artificial Teeth and Painless Dentistry

Afford the following advantages :—

First.—Extreme lightness, being completely self-supporting.
Secondly.—Moderate charges, extreme simplicity of construction, the highest class of mechanism, and the best materials.
Thirdly.—Absolute immunity from pain.
Fourthly.—Nature so closely imitated, that detection becomes an impossibility.
Parties residing in Calcutta and the Suburbs attended at their own residences if desired.
Teeth supplied by other Dentists not having proved satisfactory, or old cases that have become out of order through absorption of the gums and other causes, can be remodelled on Messrs. Corfield's system on moderate cost.
Artificial Teeth repaired and returned by following post.

J. CORFIELD & CO.,

Surgical and Mechanical Dentists, Pharmaceutical Chemists, &c. &c.

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourishing frame."—*Civil Service*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ½ lb. and 1 lb. tins, labelled thus :—

JAMES EPPS & CO.,

HOMŒOPATHIC CHEMISTS,

48, THREADNEEDLE STREET, & 170, PICCADILLY.

Works—Euston Road, and Camden Town.

(Makers of Epps's Milky Cocoa and Cocoa Condensed Milk.)

The Collector is, of necessity, tied down to head-quarters during a great part of the year. He hears appeals from all Magistrates under the first-class. He has to direct operations, more than carry them out ; and it is necessary that the centre of Government for the district should be fixed in one place during the greater part of the year. It would, therefore, be hardly practicable, if advisable, to alter the existing state of things, as far as district officers are concerned. In this article, we propose to discuss the question—how far the power of sub-divisional establishments could be utilised more than it is at present ; and it will be as well to state, at first, that one of the chief reforms which we would advocate, would be an assimilation to the system prevailing, we believe, in the Bombay Presidency. There each district has its Collector and Assistant Collector. Each *Assistant Collector is in charge of a certain ilaqua*, and, except during the rainy season when camping is impossible, he is moving about that ilaqua. Now, in Bengal, a sub-divisional officer is, with the exception of his cold weather tour, more or less tied down to the sub-divisional head-quarters ; even though he makes occasional rapid tours into the interior, his head-quarters are fixed. His office is there, and people have to come there for any business that they may have. Climatic differences render it impossible that sub-divisional officers could be in camp during the hot weather of Benga' ; but each sub-division has its four or five police thanna .s, and why should not the sub-divisional head-quarters be moveable—for three months, say, at one police thannah, and for three months at another—and all these changes duly notified ? Whilst this would familiarize the people with the sub-divisional officer, it would,. undoubtedly, give him a greater facility in knowing their wants, and in knowing them personally. His morning ride would show him, in the course of three months or less, as the case may be, the actual condition of the people in the vicinity of his head-quarters. When they got to know him, they would not regard him as a *deus ex machina* come for two or three days to make their village a Utopia. They would cease to put forward extravagant claims, knowing that he was likely to remain and investigate them. They would at the same time not fear to come to him with real grievances. It would not then be a case of his being in a certain locality to-day and gone to-morrow. He would be there for a certain time, and would be coming back in a short time after, on his general tour during the cold weather , and there would, besides, be the Collector coming round afterwards.

The only expense to Government would be the erection of small bungalows at each thannah, such as were erected all over the distressed tracts, during the famine, for officers in charge of the roads. There would, really, be no practical inconvenience from this change of head-quarters from time to time. The sub-treasury might still remain at head-quarters in charge of the Sub-Deputy Collector, or even, if this were found impracticable, it might be taken about or done away with altogether. It is never a very extensive affair, and its abolition, though it might cause temporary inconvenience, when weighed with the practical good the change would effect, would be a matter of but small moment. Remittances made from distilleries or pounds, are generally made under a guard, which, if it is effectual to protect the remittances in transit to the sub-divisional head-quarters, would be equally effectual in protecting it to the sudder treasury ; and, for small payments and stamps, the ordinary police-guard should be enough to protect the amount required. This would be, in our opinion, a great improvement on the present state of things, and could be effected without altering the present legislation. How much more effectual *would it be, if* sub-divisional officers had the cognizance of rent suits, has already been pointed out in these columns. We would then have our sub-divisional officers moving constantly about ; trying those very issues which show the true state of the agricultural classes ; entering into them on the very scene of the dispute ; seeing, with their own eyes, the improvements alleged to have been made, and knowing intimately the relation between the ryot and his zemindar. Statistics then would be the result of the observation of intelligent officers, and would be stated intelligently, not in the crude pigeon English of some half-educated canoongo. Litigation would be reduced, seeing that cases would not then depend for their success on the tutoring of false witnesses, or the spurious eloquence of mookhtears, but upon the observations of officers desirous of getting to the truth. We should have law in its true sense brought nearer to the peasant, the law that would enable him to obtain his right ; not the law as it at present is, involving him in ruinous expense and delay, and but too often failing in its object. We should have paternal Government in its true sense, steadied by wise laws, not dependent on misdirected or misinformed impulse ; and, above all, we should have a knowledge of the people whom we govern—which, under the present *régime*, it is difficult if not impossible to attain.

ANGLO-INDIAN PROBLEMS.

THERE have been numerous examples in the history of the world, of two different peoples coming together into close contact, by means of conquest or otherwise ; but in all these instances the circumstances of the connection have been widely different from what we find here. In the spread and the downfall of the Roman Empire, we have a proud, prosperous, and civilized people first making their way successfully amongst surrounding vigorous and less civilized tribes, and finally being conquered by them. In this case a people of culture and refinement, but greatly demoralized by luxury and vice, were overcome by a race inferior in intellectual acuteness and training, but much superior in physical and moral qualities, and possessing in themselves, consequently, a foundation pon which might be built a glorious future. We know the result. The manly strength, honesty and straightforwardness of the hitherto barbarous tribes, soon forced a way upward, broke into shatters the old Roman civilization, and, having become impregnated with new Christian life, laid firm, through many a struggle, the foundations of the freedom and the order of the present day. In all this we have circumstances totally different from what we see here.

Look again at the contact between modern British colonists and the inferior races which meet them in different parts of the world. The great continent of North America was for long a fierce battle-ground between the British white man and the red Indian. The difference between the colonist and the aborigines was so great, that amalgamation, such as took place in the ancient Roman colonies, was impossible. The poor Indian had to retire before the advancing tide of civilized life. But his retirement was not by force of conquest. Had he been capable of receiving the higher civilization which was offered to him, he might have converted his arrows and tomahawks into ox-goads and ploughshares ; but he preferred the wild freedom of the woods to the society of even the peaceful followers of Penn, the Friend. Elevation to a higher level or gradual extinction, were the alternatives which fate offered to the poor red man. Incapable of the former, he had to submit to the latter. This is the alternative which is offered, in numberless places over the world, to the aboriginal inhabitants of British colonies. Throughout the great colonial empire, which is gradually springing up in Australasia, it is becoming more and more apparent that the extinction of the inferior races is only a matter of time. These islands are fitted by climate and soil to become true colonial homes for the superabundant and vigorous population of Britain. And the struggle of races will undoubtedly result in what has been aptly called, the survival of the fittest. But here in India, all these circumstances are different. The inhabitants of the country, although of various origin, have, for centuries, passed beyond the nomadic stage of life ; they have established among them permanent institutions—social, judicial, executive, and religious. They have, by the lapse of centuries, become adapted to the climate and the modes of life which the climate necessitates. They have inherited from many generations of ancestors, customs, beliefs, and intellectual, moral and religious traditions, varying greatly amongst the different ranks of the community, but firmly rooted. They constitute a compact and a more or less homogeneous mass, in which the principle of unchanging custom prevails over that of progress. The consequence of this condition of things is that external influences are very slow in being felt, or in producing any great effect, and that there is a vital power amongst the people of the land which is not at all likely to succumb before that of their Western conquerors. Moreover, the genius of the two peoples is so different, that there is no probability of an amalgamation, and, even if this were possible, experience shows that it would be highly undesirable.

On the other hand, the Western nation, which is here the paramount power, does not find in India the circumstances to make

the country a permanent home. Residence here involves the separation of families for the sake of the health and education of the young, and this circumstance alone is enough to make the idea of colonization absurd, and to cause the present ruling race, for all time to come, to look upon India as only a temporary place of residence during the active part of their lives. The Western rulers of the country, however, represent a civilization and vigour, moral courage, rectitude, and religious faith, which, wherever they are to be found, are bound to prevail.

These and other circumstances render the problems connected with the contact between the two great races in India quite unique in point of interest as well as difficulty. And we propose, in succeeding articles, to examine into some of these problems for the purpose of obtaining, or throwing, light upon them. In advancing to the task we have little confidence in our ability to solve many of the Anglo-Indian problems; and therefore must appeal to the generosity of our readers.

THE LATEST AND LEAST RELIABLE.

A CONTEMPORARY has heard—whether among the voices of the night, when the wheels of Queen Mab were on his sweetly parted lips, or by the regular auditory or optic channel by which his information usually reaches him with sober certainty, he does not inform us—a hint or suggestion, or something short, at least of authoritative information, that the negociations with Burmah are being weakly protracted, in order that the war may be put off till after the Prince has come and gone.

We, too, have—though, happily, they flow but seldom—strange and incommunicable sources of information; or, shall we call them founts of inspiration? And the information has, with the usual mystery, been recently conveyed to us, that the Burmese war is being purposely deferred till the Prince has come, but not till he has gone. We have been reminded that the Prince is a British Prince and Field Marshal, and that, as a genuine Britisher, he loves a stand-up fight, and, as a young Field Marshal, he is burning with warlike fire. Pigeon-shooting and deer-stalking are tame sport to one on whom Father Mars has cast the *paludamentum*, and cannot for ever satisfy the lofty aspirations of the son of Queen Victoria. He longs to prove that he has a soul above pigeons, and so we are given to understand that he does not merely purpose to exchange pigeons for pigs, and the "antlered monarch of the to hunt elephants is our gallant Prince approaching: he comes to take vengeance upon the lord of the elephants, yea, upon the lord of the white elephants, the golden-footed barbarian of Burmah.

It would be as much as to declare that we are utterly destitute of the faculty of wonder were we to assert that this information caused us no surprise. That the heir-apparent of the Queen of Britain and Empress of India, the good *bon-homie* Prince who is destined to be the pivot of political parties in the English constitution, the cardinal point of the nation, whose reign we love so well to look forward to, that we pray earnestly that the happiness of doing so may be continued to us for many years to come—that he should be permitted to risk his royal person, and invaluable life, in leading our troops to battle against barbaric arms—not merely to shoot, but, good heavens, to be shot at!—can the Powers that rule the destinies of the British race permit it so to be? Half incredulous and half alarmed, we have been—we confess it—for several hours, in a state of weak bewilderment, sometimes murmuring, with natural pathos,

> "How should the Prince die?
> With red spur deep in maddening charger's flank,
> Heading the rush that cleaves the foeman's ranks,
> And shouting some time-famous battle-cry?"

and again, mute, and dumb-foundered, with a mingled din in our ears, compounded of the shock of elephants, the crash of forests, the roar of artillery, the down-rushing of pagodas, and the clash and clatter of golden umbrellas.

~~O! happy Flower, blest were thy dreams, and sweet were the~~ visions of thy head upon thy pillow. Would that we were inspired as thou art. The very thought of thee brings us relief, and we cast our hallucinations—for so we begin to think them—to the winds, and find peace in the recollection of thy "Prince's Dream." For to thee are known the secrets, yea, even the dreams, of Princes. A Daniel art thou in this latter day, to whom is revealed both the dream and its interpretation. O Beltshazzar of the Doab, whom the Himalayan gods and goddesses visit, and inspire with knowledge unattainable in the thick and soporific air of this Gangetic Delta, to thee we appeal. Tell us, we entreat thee, that our demon is delusive, and that the Prince must not, cannot, will not, fight the King of Burmah.

We are out of the trance. The painful ecstasy is over, and we fervently pray that we may never be inspired in like manner any more. We resolve henceforth to detest and abjure all demonic communications; and, as regards the Prince's visit, while welcoming all information that Beltshazzar can give us, we shall calmly wait to see what we shall see, carefully hoarding, meanwhile, our loyalty and our rupees. For we hope to expend a large stock of both when the hour has come and the man.

IN MEMORIAM.

V.

THE poem, we have said, might have ended with the fifty-sixth section. We have even ventured a surmise, that the poet meant to end it there. But the fifty-seventh section contains the Muse's high behest that he must sing a loftier song before he closes. The fifty-eighth strikes the key-note of that song—a settled sorrow, but a sorrow softened and sanctified, "sometimes lovely like a bride," sometimes even playful; and henceforth "In Memoriam" is a psalm of life, not a song of death and weeping; but, like human life itself, it never altogether loses the deep under-tone of sorrow, till the very close, when it loses itself in God:

> "That God, which ever lives and loves,
> One God, one law, one element,
> And one far-off divine event,
> To which the whole creation moves."

We have already indicated that it is not our intention to follow, as we have endeavoured up to this point to do, the growth of thought to the close of the poem. The task might be pleasant to ourselves, but, as the poem widens in its scope, and the thoughts that rise before us are "unto vaster motions bound," and seek a "higher height, a deeper deep," we both feel our own deficiencies as elucidators, and begin to be aware that our readers may have good ground for saying, "something too much of this." Besides, we must recognise the fact, that Tennyson has just come before the world in a new light, as a dramatic poet, and students of his works must, for a season, shut "In Memoriam" and open "Queen Mary."

In a few closing sentences, then, we shall briefly notice the position of the poet's mind, as exhibited in the latter half of the poem, towards the unseen world where he believes his departed friend has entered on a higher life, and towards the world around him where he has been left to run his ~~race~~ reconciled to Death. Faith in immortality has robbed the Shadow of his terror, and yet there come occasional bursts of the old anguish; for though the mystery of death does but conceal a higher and nobler life, the painful fact of separation remains.

> "I wage not any feud with Death
> For changes wrought on form and face;
> No lower life that earth's embrace
> May breed with him, can fright my faith."

The man has entered into a higher stage of the "eternal process," and here in the Grave is but the "ruined chrysalis." On that the mind of our poet cannot dwell, but simply turns away from it to the contemplation of the glorified spirit. It requires the morbid genius of such an *enfans perdu* as Edgar Allen Poe, to seek to shed unnatural beauty over the chrysalis in ruins. Notwithstanding the charm of Poe's muse, we suspect that few can read without a shudder such words as these:

> "The lady sleeps, O may her sleep,
> As it is lasting, so be deep;
> *Soft may the worms about her creep.*"

Poe's eye was turned downward; Tennyson's looks upward more and more.

> "Nor blame I Death, because he bare
> The use of virtue out of earth:
> I know transplanted human worth
> Will bloom to profit, otherwhere.
>
> "For this alone on Death I wreak
> The wrath that garners in my heart;
> He put our lives so far apart,
> ~~We cannot hear each other speak.~~"

In the stronger light in which the poet now lives, *the shadow* that once chilled his blood, becomes less and less terrible, and almost disappears. It is not now death that

> "Spread his mantle dark and cold
> And wrapt thee formless in the fold,
> And dulled the murmur on thy lip;
> But 'God's finger touched him, and he slept.'"

But how does affection for the departed act upon the poet's relations with his friends around him? In his great grief for the dead he was perhaps too forgetful of the claims of the living. But it is so no longer. And he feels not only that his friends have need of him, but that he himself has a craving for living companionship.

"My heart, though widowed, may not rest
Quite in the love of what is gone,
But seeks to beat in time with one
That warms another living breast."

He turns again, and probably with quickened ardour, to the living loves; and he finds, as all who love truly find, that love for the living does in no way interfere with sacred affection for the dead. In fact he seems to hear the voice of his old affection speaking from the tomb, and bidding him

"Arise and get thee forth and seek
A friendship for the years to come."

Still he can never be the same in his relations with the world around him as before. He has now a "highborn kinsman" in the upper world, and the thought of this relationship lifts him to a greater height of spiritual effort. A voice from above breaks again and again upon him in "silent speaking" words:

"So word by word, and line by line,
The dead man touched me from the past,
And all at once it seemed at last
His living soul was flash'd on mine,

"And mine in his was wound, and whirl'd
About empyreal heights of thought,
And came on that which is, and caught
The deep pulsations of the world,

"Æonian music measuring out
The steps of Time—the shocks of Chance
The blows of Death."

But though he is thus snatched away at intervals on the wing of "thoughts that wander through eternity," as he had formerly felt that, in his frozen bosom, were "thoughts that lay too deep for tears," the brightness of his ideal visions casts no shadow on the real life with the living brother and sister of his love. Now, too, it is an unmingled pleasure to dwell upon the memory of his friend, of whom he draws a picture in the brightest colours. We should have liked to glance, at his estimate of young Hallam, a youth of the most splendid promise; but we cannot linger, if we would, and may besides confess that our knowledge of him is limited to the sketch given by Dr. John Brown in his "Horae Subsecivæ," which we commend to the attention of those who may wish to know the worth of Tennyson's estimate of his friend. It is true that

"The world that credits what is done
Is cold to all that might have been,"

but there must have been wonderful promise in one of whom a poet so self-restrained as Tennyson, writes as follows—

"[illegible] can I doubt, who knew thee keen
In intellect, with force and skill
To strive, to fashion, to fulfil—
I doubt not what thou would'st have been;

"A life of civic action warm,
A soul on highest mission sent,
A potent voice of Parliament,
A pillar steadfast in the storm,

"Should licensed boldness gather force,
Becoming, when the time has birth,
A lever to uplift the earth
And roll it on another course,

"With thousand shocks that come and go,
With agonies, with energies,
With overthrowings and with cries,
And undulations to and fro."

After all, how little the world appears to miss the noblest life that is blighted in its bloom. Cicero imagines that if a greater proportion of men lived to old age, the sum total of wisdom in the world would be immensely increased. But as Carlyle says "these *might-have-beens* are mostly a vanity," and the poet, though his muse delights to picture the "might-have-been," is not blind to the fact that the great world moves steadily on, little affected, as far as we can see, by the loss of the most valuable individuals. Here indeed, is a mystery, and an apparent cruelty, in the sacrifice of the individual life, while the race moves onward to the splendid future which rises before the "vision and the faculty divine." On this theme even the harp of Tennyson cannot but give forth some bitter notes. But he confesses the mystery which he cannot unravel, and, in spite of the mystery and the apparent cruelty, he clings to *the faith that infinite love is over all:*

"Love is and was my King and Lord,
And will be, tho' as yet I keep
Within his court on earth, and sleep
Encompass'd by his faithful guard,

"And here at times a sentinel
Who moves about from place to place,
And whispers to the worlds of space,
In the deep night, that all is well."

"All's right with the world!" is the strong healthy faith in which the poet rests; and not only is all for the good of "that great race which is to be," but all is well with "that friend of mine who lives in God." Though Death has bereft him of the friend of his heart; though

"Nature, red in tooth and claw
With ravine, shrieked against his creed,"

though the Philosophy of Doubt had spun its cobwebs over his soul, he has "fought his doubts and gathered strength" and believes in one vast purpose of love running through all nature—that "Love is nature's final law." As regards the friend whom he has mourned he can say:

"Far off thou art, but ever nigh;
I have thee still, and I rejoice;
I prosper, circled with thy voice;
I shall not lose thee tho' I die."

And this lesser faith is but a part of the greater, which involves it; for he has learned to trust

"With faith that comes of self-control,
The truths that never can be proved
Until we close with all we loved,
And all we flow from, soul in soul."

"THE DUKE AND THE SCHOLAR."

MR. OLIPHANT had two objects in view in presenting this book to English readers. The first he gives expression to in his tersely written preface. The second is the one which gradually impresses itself upon the reader as he turns over page after page of the interesting book. The first object is to bring before the notice of England the lives of two Frenchmen—one a Duke, the other a Scholar, who may well serve as patterns to our countrymen. The second is to sound the praises of the thirteenth century, and to encourage the study of its literature, history, and monuments. From the example of the French Duke, English noblemen may learn—so Mr. Oliphant hopes—to make a patriotic use of their vast revenues. The life of the Scholar contains—he thinks—a lesson to such English writers as are "fonder of brilliant claptrap than of grim, hard work." Mr. Oliphant complains that English noblemen do not, as a rule, encourage scholarship and historical research. Even their family records they allow to remain hidden in their libraries, and make no arrangements for their contents to be printed or to be examined with a view to clearing up things of doubt in the past. Happily there are some who are exempt from the blame which is here lavishly bestowed upon manuscript-owners in general. Such a one is Sir Thomas Phillipps of Middlehill. Mr. Oliphant says that few who have been welcomed to his hospitable house "will ever forget the apartments [illegible] and any Grammar [illegible] full of books, the tables laden with musty charters, the printing-press always at work on fresh catalogues of literary treasures. The worthy owner, most different from certain rich curmudgeons that might be named, delighted in throwing open his ever-waxing stores to all scholars, native and foreign alike." The book altogether is one not at all encouraging to the race of "rich curmudgeons" to presevere in their selfish watchfulness, and may awaken whatever patriotism and generosity may lie dormant within them.

The Duc de Luynes whose story is here given to English readers, was a member of the house of the Alberti. He was born at Paris on the 16th of December 1802. His mother was the well-known Duchesse de Chevreuse, who was banished from Paris by Napoleon. She brought up her son in a somewhat harsh manner. He had red hair, and this was a trouble to her. She kept him out of sight as much as possible. He consequently grew up very shy. He was never thoroughly at ease in society, and seemed ever grave. He was not well trained in study as a boy. He did not make any serious commencement of the studies in which he afterwards excelled until early manhood. At twenty he married, but his wife died two years afterwards, leaving behind her a son. He also about the same time lost a younger brother to whom he was much attached, on account of the saintliness of his disposition. Sorrow made a student of him. He henceforth applied himself with the utmost diligence to his books. He made a thorough revision of his previous studies in the classics: he learned the rules of sound criticism: and after a while began to work in Oriental languages. He would sometimes travel; and he knew how to make his travels interesting by connecting them with his researches. He had no taste at all for personal luxury. His bed-room was as simple as a hermit's cell. He rose early every morning, and in winter would light his own fire and lamp, and begin his day's work when others were still sleeping. He did not thus combine simplicity with industry for the sake of amassing riches. He felt it his duty to use his great wealth in the service of his fellows. To fix himself to all his good resolutions as to the disposal of his wealth, he set down for his own guidance a list of duties, which it seemed to him, devolved upon rich men. It bore for a title the letters 'D.D.R,' that is, 'Devoir des Riches,' but

no one knew that he thus disciplined himself until after his death. Schools were founded by him, teachers salaried, hospitals and parsonages built. He opened new roads, gave prizes to farmers for improvements in agriculture, and endowed charitable societies. He kept a watchful eye upon the village schools, singled out promising lads, put them on the road to liberal professions, helping them sometimes to carry on their studies at the Polytechnic School. Almsgiving he discouraged, believing it to be better to put the needy in the way of obtaining employment. During the revolutionary year, 1848, he pitied the work-people of Paris who were plunged into distress. He found employment for twenty families and for 200 women, in the Faubourg Saint Antoine. To do this he had to melt down his plate and borrow money, as he had just then gone beyond his income, large as it was. Later on he displayed a generous feeling in quite a different direction. The vast estates in his possession had been bestowed by the Crown upon an ancestor who had been Constable of France early in the seventeenth century. He looked upon himself simply as a trustee of the estates. In 1864 the Comte de Chambord, whom he regarded as his lawful King, was in difficulties. He offered help, it was at first refused. He begged a favour for himself from the Comte, and when it was granted he pressed his offer again, and it was accepted. The transaction was an honourable one on both sides. The Duc lived mostly at his castle of Dampierre, eight leagues from Paris, in a valley not far from the Abbey of Port Royal. An ancestor, known as the Good Duke, had been on quite paternal relations with the Port Royal Brotherhood, and had translated into French the *Meditations* of Descartes. The Duke restored his castle, between 1840 and 1842, and fitted it up in the best historical and archæological style. He was once advised to make architectural alterations, but these were rather more luxurious than useful. He hesitated, counted the cost, and then said "No; "with the price of this I shall be able to maintain ten families next "winter." In 1846 he married a second time. The lady gave up the brilliant world of fashion to devote herself to helping her husband both in his studies and in his charities. She died in 1861. She was ever after in his thoughts. He never spent a day at Dampierre without placing upon her tomb flowers gathered with his own hands. The loss of a favourite grand-daughter soon after, was also a great grief to him. In the midst of his own sorrows, however, he did not forget the troubles of others. He spent a whole month upon his estates in Picardy, where the cholera was raging, tending and consoling the sick. His manager once found him in a cottage brushing away with his handkerchief the flies that were settling on the face of a poor dying woman. After the 2nd of December, 1851, the Duke took no part in politics. He had protested against the *coup d'état*, and was consequently for two days imprisoned in Mont Valerien. He applied himself all the more to study, and to work in his laboratory. The fabrication of steel occupied his attention. After some years of experiments, he seems to have discovered the secret of the Eastern armourers. Weapons which challenge comparison with the scymetars of Damascus and Ispahan were produced by him; and he helped the makers of surgical instruments to many improvements. He fitted up a part of his castle as a museum. Its geological collection is very valuable; the rocks of the Vosges, the volcanic productions of Italy, and the fossils of Egypt being all represented. Photography and lithography also owe many of their latest developments to his fostering care. But his chief pleasure was in historical research, and in the collection of sculpture and antiquities. Vases and medals he bought, because of their usefulness in interpreting the mysteries of Greece and the East. Seals, charters, and inscriptions, he gathered together, and looked upon as chiefly valuable in clearing up historical disputes, and as furnishing a safe basis to inquirers. It was in 1839, that he first turned his attention to the period which is never spoken of by Mr. Oliphant, but as the great, the mighty, or the glorious thirteenth century. One of the first things he did was to put into order the 209 articles which make up the chronicle of Matthew of Paris. He commissioned M. Victor Baltard, an architect, to draw the chief monuments of the Norman and Suabian Princes which were then standing in Southern Italy. The drawings were most ably executed, and the accompanying descriptions were entrusted to a young scholar, M. Breholles, the one whose life is associated with that of the Duke. The work altogether occupied sixteen years, and brought the Duke and his literary friend into constant intercourse. He was ever ready to manifest the interest he took in historical investigation by aiding in the publication of important documents. For Michele Amari, the Sicilian writer of the famous "War of the Sicilian Vespers," he published maps of Sicily to accompany his "History of the Mussulmans in Sicily." He assisted also another Italian writer, Passerini, in compiling the history of the Florentine family of the Alberti. The account of his life is a continuous record of diligent researches, either undertaken by himself, or by others with his aid. The coinage both of Rome and of Magna Græcia, the painted vases of Etruria, the medallions of Syracuse, the coinage and inscriptions of Cyprus, the Celtic antiquities of Italy,—to all these he devoted patient enquiry. He travelled, too, in the East, searching for historical monuments. His last Eastern journey was in 1864. He undertook it partly to enable himself to shake off the burden of sorrow which was then oppressing him. The exploration of the Dead Sea, and an expedition into the Moabite land, were accomplished by him; and the results were published along with valuable maps.

The Duke died in 1867. He died at Rome. He had hastened there on hearing that the city was threatened by an attack from Garibaldians. His adherence to the cause of the Pope was not that of a Roman Catholic devotee. In religious matters his attitude seems to have been somewhat that of a Positivist. "The real good of our race," he thought, "must be sought here below; he saw nothing but dark mystery in the question of origin and our destiny." But there are indications of a severe inward struggle in which the faith of a Christian was not wholly quenched. He looked upon Pius IX as the representative of order and historic civilization. He looked upon Rome as the queen of cities, and as the home of the arts. He looked upon those who threatened her as barbarians. He reached Rome on the eve of the battle of Mentana. The next day he was on the battle-field, tending the wounded. He gave one of them his own cloak, as the weather was severe. He thus caught a cold, which he could not shake off. He died on his birth-day. His last words, "I am going to rejoin my good grand-mother, my dear wife, and my holy brother," showed that his strivings with doubt had not destroyed his hopes in the soul's immortality. His life, as it is disclosed to us, seems to have been one prolonged worship of the Truth in History and the Beautiful in Art. He could never endure anything that was pretentious, false, or alloyed. He unwillingly kept aloof from politics. He did not like the national tendencies during the late Imperial rule. He thought his countrymen loved equality more than liberty, change more than progress. England he looked upon as the world's beacon in matters political. The English Constitution he regarded with especial admiration. And Englishmen, though the Duke's excellences run in grooves, along which those of English noblemen are not always to be found, will be thankful to Mr. Oliphant for bringing into the circle of their acquaintance, one who, though often outwardly stern and inwardly sad, was a real lover of his fellowmen, a worshipper of all that is [illegible] history, and ever desirous to perpetuate the records of man's past experiences, and to preserve everything beautiful in art bequeathed to us by generations gone before; and who, though he might have passed through life in all the listlessness of ease and luxury, found his only happiness in being a true worker for his own and for succeeding ages.

Readers of Mr. Oliphant's book will be also grateful to him for co-ordinating with the life of the Duc de Luynes that of M. Breholles, the Scholar, who was associated with him in various literary and historical researches, more than one of which occupied years of patient toil. The Thirteenth Century was, with the Scholar, as with the Duc, a period to be looked upon almost with reverence.

EDITORIAL NOTES.

SIR GEORGE CAMPBELL appears to have made a favourable impression on the Commons by his speech in the debate on the opium question. This success is the more gratifying, as his oration on the Tenant-right Bill of the Government, a fortnight before, appears to have been a complete failure, not even eliciting a remark from any of the speakers that followed him. The truth is, that Indian statesmen, as a body, hold more advanced views on the land question and freedom of contract as connected therewith, than suit the temper of the present House of Commons, in which the landlord's interest is still supreme, and promises to be so for a generation of years to come. The Conservative measure was as much as the House could be expected to bear, constituted as it now is; a fact Sir George Campbell might *himself* have discerned, instead of committing himself to an amendment which, however, economically sound, could only be distasteful to an assembly of landlords, but half convinced of the necessity of legislation at all in the matter. As to the opium question, it is marvellous how slow men are to understand its exact nature, and the possibilities of our position. Sir George does not seem to have advanced anything new upon the subject, but it is an important gain to have secured a hearing in the House for a rational statement of the matter, while Lord Lawrence and Sir Bartle Frere are harping upon the "immorality" of a system which both were content to

administer without hesitancy, when themselves in charge of the finances of the Empire. If the opium monopoly be an "immorality" in their eyes, the time for saying so was when they themselves were administering it, and then they might have spoken with effect.

***

"RELATIVELY to other nations, England is at least as strong today as she was on the eve of the great French war"—writes the leading journal of London. The real fact, however, is, that Great Britain is very much stronger now than throughout that contest. We must remember how very small a people the English were at the beginning of the present century, and how great relatively were their neighbours. The figures before the present century are not very good, but at the outbreak of the great wars—say in the year 1791—the population of Great Britain was estimated at something like ten millions, but for France the estimate was over 26,000,000. Such was the disparity between us and our antagonist when we entered on that contest. Even if we include Ireland, our numbers were still only about 14,000,000, or little more than half the French total; but Ireland ought properly to be excluded in such a comparison as being, from its state of active disaffection, a drain upon our resources, rather than an addition to them. Now the population of Great Britain may be put at 27½ millions, against 36 millions in France, or if we include Ireland, which is now much less of a counterweight than it was for many years after 1790, we are at present 32¾ millions, against 36 millions in France. That is to say, from being a State with a half or a third of the numbers of France, we have become a State almost equal in point of numbers. If the growth of resources has been at all in proportion—and it has been quickest, we should say, in England—the change in the relative force of the two countries is immense, and may give us some notion of what the relative power of Englnnd must now be towards any State of the numbers which France possessed during the great war. England is both more powerful as regards numbers relatively to all combined, and far more powerful with reference to the strongest individual State. In 1815 we were immensely overshadowed, like our neighbours by the numbers of France; now we are not materially less than any, except, perhaps, Russia, where our disparity is at least less than it was, and is always of less importance on account of the scattered settlements of the Russian people and their defective civilisation. Of course all this is dealing with the question on the footing of mere numbers, but we do not think there will be any doubt as to our resources having developed in proportion since 1815, whatever doubts may exist as to the consequences which would result in a contest from the greater or less degree of our relative preparation compared with what it was in 1790—which would apparently be a question more easy to raise than to settle.

***

CONTINUING its able notes on the "State of the City," the *Economist* reports that nearly all the firms which have lately failed had been supported for a long time by the London discount market—the bills being, in the first instance, discounted either by Messrs. Sanderson or by Messrs Young, Borthwick & Co., a smaller firm of bill-brokers, who have collapsed since. These bills were then re-discounted at some bank, and so the firms, which have probably enough been long insolvent, have been maintained in existence till now. "The liabilities of them all are very large, and frightening figures are current in the market It must be remembered, however, that these liabilities are liabilities on the same bills, both drawer, acceptor, and indorser having failed. As far as the banks are concerned, these bills are not three distinct debts, but one single debt for which three persons are answerable." And this will diminish the loss. Bu even after this deduction, the real, serious fact remains, that a very large amount of bad paper has been long kept afloat by re-discount at the banks for bill-brokers *of no corresponding* property, and *who did not know their* business, and that the simultaneous discovery of the whole mass will cause many important bad debts which will reduce the profits of London banks, and will cause the meetings of many to be by no means cheerful.

***

A CORRESPONDENT writes: The opium trade has had a night to itself in the House of Commons. The annual debate on the propriety or otherwise of abolishing that traffic came off a few nights ago. The discussion possesses little interest, because it has no actuality. Nefarious or not, everyone knows that in the present state of the Indian revenues we could not pay our way but for the opium trade, and that consequently the question of abolishing it, cannot be made a subject of serious discussion. The one notable thing in the debate was the very curious argument advanced again and again by those who defended the traffic, to try not merely to rob it of its immorality, but to clothe it in a garment of virtue. The Chinese, they said, would have opium; if we did not sell them Indian opium they would grow it in China of a far worse and more deleterious character; by our benevolent exertions we preserved them from sinking into that lower depth of stupefying themselves with bad opium. This is as though a procurer should represent himself as a man worthy of esteem, on the ground that though he did pander to the vices of his clients, he never supplied them with anything but a superior article: he was careful to damage their health as little as was compatible with the practice of that particular vice. Defences of this kind show the weakness of the position which can find none better to rely on. The advocates of the opium trade ought to limit themselves to the plea of necessity. There is no other justification.

***

MR. BLANCHARD is said to have remonstrated against the drudgery of sub-editing, when he felt equal to the higher flights of leader-writing, by the forcible remark that one should not put a race-horse to do the work of plough-cattle. Much the same complaint we have heard before from ambitious Government officials, who compared the actual duties of Money-order Agent and Secretary to a municipal committee with an ideal one in the higher walks of Imperial rule, which they had fondly hoped would have been alloted them. "Blessed are they that expect little" would be our commentary in both cases.

***

"BRIEF life is here our portion," and the disciples of the Epicurean school of philosophy, have much to urge for their generally somewhat discredited doctrines. The reasons are sometimes far to seek, that induce a man of ordinary health and presumably average intelligence, to feast his soul, without intermission, upon the dry, and often unpleasantly stale, husks of official documents. Ambition may account for a great deal of the high pressure, at which men, who have placed their feet on the upper rounds of the ladder of success, live and work. Early habit, and that plethoric development of the mental faculties which a long course of successful minute and report writing induces, may account for more. We once knew an official whose rise had been more rapid than his mental calibre would have led us to expect, and, casually soliciting from his senior an expression of his opinion as to the effectual cause of what, to our limited capacity, seemed inexplicable, we were told that Mr. B's talents had been very justly appreciated by those to whose discrimination he owed his success: he was credited with "an unlimited capacity to sit." No doubt the dogged will, that can carry a man through the repulsive drudgery of compiling and précis-ing from chaotic materials, with a resulting statement of facts, upon which a higher cast of mind may base a 'resolution,' will always be a good qualification for a certain kind of office.

The formidable arrays of figures, and the paragraphs bristling with statistics, which now and again drop from the anvil of the Secretariat into the supplements to the *Gazette*, impress the uninitiated with wonder and reverence at the vast assimilating and elaborating powers of our rulers. A compilation, which recently figured in the pages of the *Gazette* of the North-Western Provinces, was calculated to excite these feelings. Few can have read through the pages of "The Resolution on the working of the Infanticide Rules, for the "half-year ending 30th September, 1874," without having felt a sense of relief, after its perusal, that his lot is not cast among the thorns and thistles which flourish in the pasture fields of Lieutenant-Governors. A slightly extended course of such reading would infallibly make most men melancholy-mad. But, happily, it is no necessary part of human knowledge, to learn how many fractions of girls were born in a particular district during a specified period, or the fact that, as only 27·5 per cent. of boys existed in a certain village, this affords serious ground for suspecting that the wily Rajpoots have "faced about," and turned the flank of the enemy by smothering their male infants. We will not attempt to inform our readers what were the results of the "Working of the Infanticide Rules during the half-year ending on 30th September 1874," further than to say, that the figured statements are, after having been tested by six ordinary, and six special standards (we hope we are understating them, as we quote from memory), declared by the highest authority to be probably incorrect Our attention—for wander through the maze of *Gazettes* and supplements we, in our Editorial capacity, must—has since been drawn to a later "resolution" from the same high authority, in which we are informed that "the number and voluminous character of the

"annual reports, at present printed and published," must be reduced. May we, not irreverently, but with a deep sense of our censorial responsibility, briefly reply, "Physician, heal thyself"?

***

THE Sultan's necessities naturally suggest the squeezing of tributaries, and the conquest of Darfur by the Khedive has afforded an opportunity to the Ottoman Porte of demanding the payment, in future, of double the tribute formerly extracted from Egypt. It appears that when the appropriation of Darfur was in contemplation, Ibrahim Bey, the Khedive's representative, assured the Porte that an additional tribute would be paid in the event of the Sultan according his sanction to the undertaking; but the Khedive, although perfectly willing to keep his promise in this respect, maintains that the receipts from the newly-acquired territory do not admit of the payment of anything like a double tribute. As the diplomatic correspondence on the subject has been unsatisfactory, the Khedive is shortly going to Constantinople with his Foreign Minister, Nubar Pasha, to arrange the matter in person.

***

TURKISH bondholders are somewhat uneasy in their minds at the lamentable financial condition of that country. In a recent issue we directed attention to the sinister rumours about the probability of bankruptcy in that quarter. It is stated that the cash revenue is £18,000,000, but of this the vast sum of £15,000,000 is swallowed up as interest on the debt. Of the remaining three millions, the Sultan's pageants, comforts and indulgences, devour two, and one million is left to maintain the services. As the services can thus receive but little from Government, they make up their deficiencies by bribery and oppression. Always in such cases it is the dumb multitude that "pay the piper"; and it is not so much the Government of Turkey that is in difficulty, as that the whole nation is groaning under the burden. But oppression, exaction, and discontent on all sides, make an unpleasant state of affairs even for a somewhat complacent ruler; and it is not altogether unlikely that the Government may get tired of paying nearly the whole of the revenue away as interest it. Bondholders comfort themselves by the faith that the Powers would, in that case, at once interfere; and what the consequences of that event would be, forms grave speculation. The *Spectator*, with no mercy for the feeling of the poor bondholders, endeavours, with considerable appearance of reason, to show that such an interference of the great Powers is unlikely, and points out, as we ourselves have done, that the Turkish bankruptcy would fall heavily on the shoulders, chiefly, of the few units who have supplied the money. It is at least pretty certain that matters cannot very long remain as they are. Something of importance, at the least to bondholders, perhaps to Europe and Asia, may be expected ere long. Notwithstanding, however, that an official communication states the deficit for the past year at £5,000,000, the same communication denies emphatically that the Turkish Government contemplates a reduction of the interest on the debt. The present deficit is ascribed to exceptional causes, such as famine, cattle-plague and inundations; and Government is declared to have carefully studied the means of recovering it. The statement goes on to say, "The Ottoman Government has always made it a point of honor to fulfil its engagements, and has never contemplated prejudicing in the slightest degree the interests of the holders of the Turkish debt." The worth of such a declaration may not be great, but "the payment of the July coupon of the Five per cent. Bonds, has been officially notified."

***

WE have seen it ably argued of late, that one cause of the slow success of Missions among us is, that the *simplicity* of the Gospel is hidden from the Eastern mind under a choking parasitical growth of technical theological terms, and systems of doctrine which, though they may be useful in Western Europe, are even pernicious here. Is it amusing, or is it pitiful, to learn that the Rev. T. T. Matthews, whom a sensible Aberdeen newspaper thinks it a credit to be able to claim as a townsman, has translated into the Malagasy tongue—with tremendous effort surely—the Shorter Catechism of the Westminster Assembly, and "in addition to *doing* the compact hand-book of Calvinism into Malagasy, for the benefit of those who are of 'weaker capacity' in Madagascar, has added the references to texts giving scriptural proofs" Now, here is doubtless, a most estimable man, who has expended labour, pains, and (we presume) a certain amount of hard-won erudition, in producing, what is doubtless 'a literary curiosity,' as our authority styles it, but what will be a heavy incumbrance (should it be used at all) to the progress of pure Christianity in Madagascar. "If the blind lead the blind," &c.

***

VERY edifying, indeed, is the fact, if fact it be, that the inquiry into the alleged grievances of Civilians has been delayed on account of a missing document—a statement, namely, that had been circulated by the Civil Service Commissioners "among all the chief public schools in Britain, showing the average pay to which men entering the Indian Civil Service would probably be entitled at the various stages of their career," and not a copy of this statement could be obtained in India! Surely some C.S. might have obliged a Government so anxious to fulfil its promises, and have saved the delay and expense of telegraphing to England for a copy. However, time is no object to an Indian Government. But surely even red tape must be getting scarce when such an important document has been allowed to go astray. It is probable that copies in abundance were found after the English one arrived.

***

A MELBOURNE paper noticing the speech of the acting Governor on the recent opening of Parliament, and refering to the provision of school buildings under the new Education Act, mentions a report that the funds for that object were to be provided by means of a loan. Our contemporary thinks that there is strict justice in requiring posterity to defray a part of the cost of an educational system which is established for their benefit. Certainly, when money is hard to be found, and a country is prosperous and progressive, there could be few better objects for which to incur a national debt than the provision of buildings for the education of future generations.

***

THERE are, it would appear, inspired journals in Australia, as in other places known to us. The *Australasian* says: "Newspapers are always ready to denounce humbug. But like some other practitioners, they don't always practise as they preach. What greater humbug can there be, than for an Editor with a draft of the Vice-regal speech before him, to pretend to surmise that which he positively knows are its contents? 'It will probably be found': 'It is likely that His Excellency will recommend — The probability is that attention will be drawn'—'In all likelihood Parliament will be asked,' &c. Now isn't all this a most transparent sham?"

***

THE same paper, dealing with the Government population returns for 1874, states that the gains and losses of Victoria by immigration and emigration were not quite satisfactory. There were 4,645 arrivals from the United Kingdom against 3,230 departures; 1,378 from foreign ports against 1,270 departures—leaving, from these two sources, the small gain of 1,533 during the year. The colony lost 1,404 to New South Wales and Queensland, and 687 to South Australia. From Tasmania, however, it drew 3,769 and 166 from New Zealand. "It would appear, then, that this colony (Victoria) can offer superior attractions to those of Tasmania, but that the advantages of New South Wales and Queensland are so much in excess of our own as to draw away a part of our population."

***

IT is pretty generally confessed that the Civilians have not received justice at the hands of Government, and we should hardly have anticipated that even the *Standard* would have affected blindness to the fact. Blindness, however, may be pitied, and even wilful blindness, though it may be provoking enough, may be endured so long as it merely refuses to see. But the *Standard* not only cannot see that the Indian Civilians have any real wrongs to be complained of, but has quite needlessly charged them with being actuated simply by foolish *conceit* and jealousy. It is quite unnecessary to refute that charge, as the lack or possession of such feelings has nothing at all to do with the question, which is one of simple justice. It is of no consequence at all what the "competition-wallahs" may or may not think of themselves, as compared with men who have passed no competitive examination. They may, perhaps, think that a competitive examination successfully passed, is evidence of at least some attainments, and feel irritated at seeing men appointed to posts that they consider theirs by right, without, as far as they know, having given evidence of special fitness, by examination or otherwise. But the question of importance is the very plain one—Did Government in the clearest and most formal manner promise certain advantages to the "competition-wallahs," and have these men suffered by the non-fulfilment of these promises? Doubtless in some way or other, an

attempt will be made to abolish the grievance, but the wheels of Justice move very slowly. We said lately that such an injustice could not be left unatoned for in England without odium. Mr. Lowe declared in Parliament that the excuses made for it are such as "no Chancellor of the Exchequer dare urge in his place in Parliament with reference to the Civil Servants of England."

***

THE gist of the article of the *Times* anent the late Opium debate in Parliament is somewhat as follows: The Chinese Government wishes to exclude foreign opium in the interests of its own revenue. But the Chinese consumers are determined to have opium, and Bengal is the best opium-producing country that can be found. There is, therefore, no question but the trade must go on, and the moral arguments against it are mostly irrelevant. The question then becomes one of mere policy, and though it is true, as a general rule of economy, that Government should keep its hands clear of any kind of industrial enterprise, and it is, therefore, incumbent on the supporters of the present policy to justify the exception, it may be a sufficient objection to any immediate change, that the system is already in existence, that a large part of the Indian revenue depends upon it, and that Indian finance—especially after the strain of the late famine—is not in a condition to permit of dangerous experiments. "Where an income of some six millions is at stake, the English Legislature will make very certain of its ground before it will venture to interfere." The proposal that the Indian Government should withdraw from participation in the opium traffic was rejected in the House of Commons by 94 votes to 47.

***

WE have been of opinion that Mr. Gladstone had not overestimated the importance of the revolutionary movements of Vaticanism, when he entered the controversial arena on this subject. We believe he has done good service on the whole, in awakening interest in this question. At the same time, it is probable that he has fully fulfilled his mission in this respect, and his friends and admirers will doubtless be pleased to learn that he has been induced to consent to resume the leadership of his party next session. Notwithstanding the contradiction of the *Daily News*, it is confidently asserted he has promised to do so, and we trust he will let ecclesiastical matters alone now for a time. His latest utterance in the *Contemporary* has, we presume, extinguished the hopes of those who looked forward to his appearance as the leveller of the Church of England.

***

MR. GLADSTONE was present when Dr. Schliemann read his paper at the Society of Antiquaries on the discovery of Homeric Troy. In the course of his speech after the reading of the paper, the right hon'ble gentleman said: "I have never been of the opinion current until quite recently that Burnarbashi was the site of Troy; for it was quite impossible to reconcile that site with the distance from the sea, and to bring together the natural features of the plain with the described features of the poem. But I don't see by what arguments are to be met the proofs adduced by Dr. Schliemann in favour of Hissarlik. He has shown indubitably that at a great depth below the surface he has found the records of a city of a certain size and a certain advance in civilisation—a city which underwent a sudden and violent destruction by means of fire; and so far he is in entire and indubitable accordance with Trojan and Homeric traditions. (Cheers.) Looking, then, into the details of Dr. Schliemann's discoveries and the details of the Homeric poem upon almost every point on which I have had the opportunity of instituting a comparison, there is a precise correspondence between the facts of the poem, and the evidence afforded by the objects which he has discovered at the place he has unveiled."

***

A CORRESPONDENT writes: The history and mutual relationship of the Hindoo castes, forms a tempting and interesting subject of enquiry, but the investigation is difficult. The subject is in itself obscure, for time has blotted out all memory of many events, but the greatest difficulty in the path of the enquirer is the amount of fictitious information which is always freely supplied. Some of the fictions are the product of unconscious imagination, while others are the result of deliberate fabrication. Each caste endeavours to trace for itself an illustrious origin, and is hence driven to depreciate the claims of others. An amusing instance of this tendency came to our notice lately. An office writer was asked to what caste he belonged; he replied that he was a Khatriya, and, in answer to another question, said that Khatriyas were not Rajpoots, but ranked next to Brahmins, the Khatriyas being the pure, original stock of which the Rajpoots are a degraded branch. By way of explanation he affirmed that the latter race is descended from a *Dhobin*, in Hindee called Raj. At the moment, Tod's *Rajasthan* lay open before us, and it was difficult to preserve a grave face whilst this man calmly consigned the thirty-six royal races to infamy as the bastard descendants of a *dhobin*. How incensed would the enthusiastic Tod have been, if he had heard this timid man of peace thus claim superiority over his favourite warrior clan, the children of the sun and moon!

***

IT is no new discovery in England, but its truth receives fresh confirmation from every year's experience of the working of the Poor Law, that the amount of pauperism in any district increases or decreases directly as the amount of out-door relief, and inversely as the amount of workhouse aid. Out-door relief distributed by law, has most of the disadvantages of a lax system of charity, with the grave additional defect, that it invokes no gratitude, and inspires no humility. Lord Lyttelton appears to be of opinion that cases that cannot be relieved in the workhouse, should be left to private charity. But in that case private charity must, in fact, become a vast public organization, and would, we fear, ultimately differ little in its outward effects from out-door relief by law. The difficulty of pauperism in England is far from being overcome, for it is not yet clearly proved what is the best way in which to grapple with it. It is fervently to be hoped that we in India are not destined to have a constantly-increasing English-speaking pauper class to try problems upon. If pure benevolence be insufficient to stir us up as a community to grapple with the 'poor white' difficulty, enlightened selfishness might make us try to meet it, before it reach huger dimension!

***

A CORRESPONDENT of the *Guardian* points out that the dissensions arising from the action of the Irish Church Synod, illustrate the inconvenience of legislating on the principle that it is really intended that the law shall be obeyed. "There are, in fact, at least three possible courses which the Church may take, either (1) as seems of late to have been the practice in England, that each clergyman shall settle for himself which of the Church rules he will obey; or, (2) as I understand is to be the English practice from the 1st July, that the Bishops shall, in their discretion, settle which of the Church rules are to be insisted on; or (3) as the Irish Synod wishes, that all the Church rules shall be obeyed. If once the third course is adopted, we are forced to relax many of the existing rules, unless we choose to incur the risk of driving out from us some with whom we should be very sorry to part." It is also pointed out that, in matters of ritual, the fashions in the Irish Church are very much what they were in England thirty years ago, and that the Synod has done little else than legalise the existing practice.

***

AS to the relative importance of ritual, Mr. Gladstone says in the *Contemporary*, "With respect to the clothing which the Gospel may take to itself, my mind has a large margin of indulgence, if not of laxity, both ways. Reverence, indeed, is a thing indispensable and invaluable, but reverence is one thing and ritual another; and while reverence is preserved, I would never, according to my own inclination individually, quarrel with my brother about ritual."

***

THE speech of the Secretary of State for India at the banquet of the Middlesex Conservative Association is noteworthy, and it is so chiefly, not as a defence of the policy of his party and of the character of the session, but as indicating a hopeful change in his temper and position of mind towards his party and towards the nation. We cannot stop to enquire how his "education" has been accomplished. Probably time and experience have been his schoolmasters more than his present chief, or the Earl of Derby. Certainly the old intractableness, and the extreme uncompromising Toryism, seem pleasantly modified; and the hope that he may by-and-by become the acknowledged chief of the party, is doubtless a good deal stronger now than heretofore. "I should ask," he said, "that the ministry be judged—not by the sensational character, not by the heroic completeness, not by the compulsory violence, not even by the number of its measures, but simply by the answer to this question—Have their measures been such as to suit the wants of the day and the wishes of the people?" Now, assuming that he implies his adherence to the general proposition, that the duty of a ministry in England is to endeavour "to suit the wants of the day and the wishes of the people," and is prepared to act on that as a principle, we have no hesitation in saying that he is the

man to lead the Conservatives of the not distant future. The nation will not in the future be governed by political parties so much as political parties must obey, and give expression to, the wish of the nation. And though professed politicians are Conservatives, Liberals, and Radicals, the mass of the voters at the present day are not properly of any party. And the party, by whatever name it calls itself, that can "suit the wants of the day and the wishes of the people," is the party of the nation for the time being. When the temper of the nation changes—for the nation is not bound to outward consistency as political parties are—and the party in power cannot at once adapt itself to the change, another party that can must take its place. The changes of parties in power will thus go on very much in the same way as in the past, but will henceforth be less influenced by party tactics and mere political generalship, and more by the real current of public opinion; that is, not the opinions of politicians alone, but of the mass of the nation. This is a real change of recent years, amounting to a revolution indeed, and the spirit of the change seems to have manifested itself to the mind of the Marquis of Salisbury, with a result which will add to his own weight as a statesman, and will benefit not only his own party but the British nation.

***

OPINIONS differ considerably as to the dramatic merit of Tennyson's "Queen Mary." The *Spectator* places it above Shakspere's Henry VIII., and the *Athenæum* ranks it below Swinburne's "Chastelard"! Its adaptability for the stage is, it seems, about to be put to the test, if we may rely on a statement that Mr. Irving, who has made such an impression in *Hamlet*, intimated to his audience at the *Lyceum*, that "Queen Mary" was to be played there after *Macbeth* had had its run. Miss Bateman, the famous *Jewess*, is to take the part of *Mary*, and if the character is at all fitted for the stage, we believe no actress of the present day is so well qualified to do it justice as that lady.

***

THE descriptions which reach us by the home papers of the death and destruction caused by the floods in the South of France, are heart-rending. A district of over 200 miles has been more damaged in 12 hours than it would have been by war in a twelvemonth. At least 2,000 persons are supposed to have perished, and some of the incidents recorded are horribly picturesque. The loss to property is, of course, immense. It is stated that in the town of Toulouse and Agen alone it will amount to some £5,000,000. Marshal MacMahon was soon on the spot and there has been no lack of generous and heroic assistance. But all assistance can only soothe a little the effects of a terrible calamity—one of those campaigns of destruction in which nature appears red-handed, and men are brought face to face with the "mystery of the cruelty of things." Doubtless such persons as those who ascribe the fires of Chicago to the sins of Roman Catholics, will be able to explain the meaning of the floods in France. The state of mind is both pious and intelligent, which believes that such events are calculated and intended to teach some important lesson to man, and that the severity of the lesson is needed, though it is often difficult to see how it is so. But nature's lessons are often delivered in the most strangely mysterious language, and while it becomes men to seek with humility to learn from them what wisdom they can, they should beware of any interpretation that involves a lack of charity to other men.

***

IN South America, too, has happened another of those outbursts of nature which seem as if they were indeed to drive men perforce away from that inviting, but deadly, strip of country along the Pacific and across the Andes to the boundless and luxuriant inland plains. Seven towns, with populations ranging from 1,600 to 5,000—except the city of Cucuta which is supposed to have numbered about 18,000 inhabitants—have been visited with more or less complete, and almost instantaneous, destruction. In some of them only a few houses escaped.

***

Is the possibility of a future quarrel in Asia any reason why England and Russia should not come to a friendly understanding about affairs in Europe? Apparently not. Russia's designs in Asia do not, at present, at least extend so far as India. "If ever," says the *Pall Mall*, "Russia seeks to disturb India, it will be done to further interests nearer home. It follows, therefore, that a policy calculated to maintain peace in Europe, will also be a policy calculated to postpone any collision between Russia and England in the East."

A DEPUTATION, headed by His Grace of Canterbury, lately waited on the Marquis of Salisbury, and expressed, on behalf of the various Indian Missionary Societies connected with the Church, the need of increasing the episcopate in India. The Secretary of State freely admitted the need, but wisely deprecated any fresh legislation on that object. There were, he said, two classes of measures which the House of Commons always receives with apathy—Indian measures and ecclesiastical measures. He had little hope that much attention would be given to a proposal which combined both causes of distaste. He thought the necessary increase might be made in some way under the existing state of the law. It was understood that the new Bishops would be supported by voluntary contributions. How or where they are to be "started," to use the elegant expression of the *Church Gazette*, does not yet appear.

***

"THE Papers of a Critic" afford interesting glimpses of a number of the prominent literary characters of the early part of the century. Coleridge is somewhat severely handled in the following extract: "Underwood and Mackenzie say that there was more humbug in Coleridge than in any man that was ever heard of. Underwood was one day transcribing something for Coleridge when a visitor appeared. After the commonplaces, Coleridge took up a little book lying upon the table, and said, 'By-the-bye, I casually took up this book this morning, and was quite enchanted with a little sonnet I found there.' He then read off a blank verse translation, and entered into a long critique upon its merits. The same story, the same translation, and the same critique were repeated five times in that day to different visitors, without one word being altered. Mr. Underwood says that every one of his famous evening conversations was got up." That a man who was incessantly talking, should often repeat himself and sometimes in nearly the same terms, is credible enough, but in the case of Coleridge the statement that his evening conversations were got up, can mean little more than that he talked in the evening on the themes that had occupied his thoughts during the day. That he did so without much consideration for the tastes or feelings of his audience seems also true, but a "humbug" is rather too hard a term to apply for this offence, which we suspect is common to most talkers.

***

A GREEK correspondent gives an emphatic denial to the rumour that King George at any time contemplated abdication. He has a decided religious respect for the engagements he has undertaken, and though he sees the serious evils inherent in the present constitution, he thinks they are working their own cure. His Queen has endeared herself to the poorer classes by her amiability and charity. "The King's position is certainly far from being a bed of roses, but abdication has never been meditated, and, notwithstanding the continual strife of parties, the country is making great and visible progress in industry, prosperity, internal improvements, and public security."

***

COLERIDGE in his "Biographica Literaria," tells an amusing story. An amateur performer in verse expressed a strong desire to be introduced to the poet, but at the same time pretended to hesitate to accept an offer of introduction, because, as he explained, he was the author of "a confounded severe epigram" on the Ancient Mariner. The epigram proved to be one that had appeared in the *Morning Post*, and had really been written, as a jest, by Coleridge himself. It was as follows:—

Your poem must immortal be,
Dear Sir! it cannot fail:
For 'tis incomprehensible,
And without head or tail.

***

THE Sunday question, which has been much agitated of late in connection with the Brighton Aquarium case, is one which, more than most questions, affects the happiness and well-being of the mass of the people, and it is one that will certainly be settled before long by the feeling of the nation. Sabbatarian tyranny not only does no good, but a great amount of evil. It is adverse to the health, comfort and intelligence of the working multitudes of our cities, and being totally at variance with the spirit, and, we believe, with the plain teaching, of scriptural Christianity, cannot further their spiritual interests; though it may, and probably does, retard them. Christian Sabbatarianism, if not indigenous in Scotland, has attained its highest development there. The reign of the Puritans was too brief in England to allow Sabbatarianism in its extreme form to get firmly established. It was the product of a rural people, and among such a people was probably, to a certain extent,

good. Those who spend their six days toiling and travelling in the open country among woods, hills, streams and meadows, may be none the worse, but probably the better, if on Sunday they are led to confine themselves to the house and the book,—it being remembered that the study and confinement of the day is diversified by a walk, sometimes of miles, to church and home again. The consequence is that many who have been trained in the rural districts of Scotland, are quite unable to sympathise with the outcry against Scotch Sabbatarianism. It is when the product of the fields is transplanted to our large cities, that it degenerates into a poisonous plant. The truth is—not that the Puritan mode of keeping Sunday is in all cases bad, as we believe in rural districts it is often far otherwise—but that Sabbatarians claim, against all evidence, Scriptural authority for their practice, and endeavour to impose it on others for whom it is unsuitable and injurious. How to keep the Christian day of rest is eminently a question for the exercise of Christian *liberty*, and *with regard to which* every man ought to be fully persuaded in his own mind.

***

THE Anti-Sabbatarians are working with a will and a wisdom equal to their day and generation, at the task of obtaining a relief from the absurd and antiquated legislation on the subject of keeping the Sabbath day. The managers of the Brighton Aquarium were proved to have violated the law by opening that institution to the public on Sunday, and we hear prosecutions are threatened against other institutions, such as the Zoological Gardens, which were up to the present time supposed to be within the pale of the law in admitting the public on the sacred day. The large deputation that not long-ago waited upon the Home Secretary to obtain an expression of his views on the subject, made the startling announcement that £10,000 could be obtained as cumulative damages against the Railway Company that advertised the cheap Sunday trains to Brighton, with the addition at the foot of a notice that the Brighton Aquarium would be open on that day; and £5,000 against the newspaper which inserted the advertisement. The Home Secretary expressed his opinion extra-judicially that he believed he had the power to remit the amounts should they be decreed, but the legal adviser of the Railway Company expressed his dissent from this opinion. It may well be asked if we are really in our waking senses in the latter half of the nineteenth century with such an absurd and self-condemned piece of legislation still in the statute book as the Act of George III., which has recently been exhumed in the case of the Brighton Aquarium. Perhaps other surprises of the same description are in store for us, all tending to show the urgent necessity for the commencement of the great work of codifying the huge chaotic mass of legislation known in the English Statute Law, the mysteries and the depths of which are in the last degree obscure and unfathomable.

***

MR. MCMINN objects to our comments in a recent article on a passage in his pamphlet about the assessment of Kheree. We must demur to his statement that the passage was scored out in all the copies distributed by him. It is not so in the pamphlet in our possession. Events which occurred in Oudh about the time Mr. McMinn distributed several copies may perhaps have suggested the prudence of subsequently avoiding responsibility for a statement which we now learn for the first time was, if not incorrect, at least calculated to raise an incorrect inference. But our comment on the statement as it stood was of course a perfectly fair criticism, and Mr. McMinn's "hint" that it was "scandalous, if not libellous," betrays some ignorance of the law of libel.

THE WEEK.

THE news from Burmah, by last mail, is very meagre. Business, which revived when the Karennee question was disposed of, has again become restricted owing to rumours of further negotiations on the subject of escorts. It is said that the King of Ava is "levying duty twice over on the goods now being returned to Mandalay." The only warlike intelligence is that the *Asia* recently took down from Calcutta three hundred barrels of gunpowder.

SIR DOUGLAS FORSYTH has been presented, through the Foreign Secretary, with the following letter of thanks by the Supreme Government:—

I am directed by the Governor-General in Council to acknowledge the receipt of your several letters enclosing copies of your communications with the Burmese Government regarding the reception at Mandalay of the Chinese frontier officer Li, and reporting the conclusion of the negotiations with which you were entrusted for the settlement of the difference between the British and Burmese Governments as to the independence of Western Karennee. Your letters of the 14th and 21st of June to the Burmese Minister for Foreign Affairs were in entire accordance with the instructions which you received upon the subject of the reception of Li. His Majesty the King of Ava anticipated the communication which you were instructed to make with regard to Western Karennee and offered to enter into an agreement definitively and formally withdrawing the claim which had been raised by the Burmese Government to sovereignty over that country. The preliminary question regarding the reception of Li having been disposed of, you accepted the offer made by the King and signed the proposed agreement on behalf of the Viceroy. His Excellency the Governor-General in Council approves of the course which you have taken. By the communication which you made to the Burmese Minister for Foreign Affairs when you signed the agreement, and your letter to him of the 23rd of June, in which you placed that communication upon record, you have fully carried out the instruction which you received with regard to the demarcation of the boundary between Western Karennee and the territories of the King of Ava by a British Officer. His Excellency the Governor-General in Council has learnt with much satisfaction that the negotiations placed in your charge have been brought to a satisfactory conclusion; and I am to convey to you the thanks of the Government of India for your services upon this occasion. Colonel Duncan and Captain Strover will be acquainted through the Chief Commissioner of British Burmah of the terms in which you have expressed your thanks to them for the assistance which they rendered to you during your Mission to Mandalay.

ONE of the neatest exemplifications of the old adage "robbing Peter to pay Paul," has recently been shown in the province of British Burmah. Lieutenant Raikes, who accompanied Colonel Hamilton in his fatal raid upon the dacoits in the Pegu subdivision, has been promoted to officiate in the 3rd grade of Assistant Commissioners, above the heads of three officers who had not the good fortune to meet with a similar adventure. An officiating appointment of this description, conferring extra emolument, without a particle of extra responsibility, is invariably granted to the senior assistant of the lower grade. In this case the Local Government, with somewhat exceptionable economy, have succeeded in rewarding Lieutenant Raikes by robbing the unfortunate officer who has thus been practically superseded.

Apropos of the recent allusion to the protest of Russia against the occupation of Khelat by our troops, we quote the following slightly corroborative evidence. A correspondent of the Kurrachee paper, writing from Upper Sind, says: "There seems to be some sign that a campaign is on the *tapis*, if we are to believe the report that all the owners of camels and of carts have been warned to have their respective means of locomotion ready for Government service when ordered. There is probably to be an invasion of the Khan of Khelat's territory; but to fight against the rabble, which is all the Khan can pit against the disciplined British troops, would be a sorry victory. But I suppose the campaign must be undertaken to bring the Khan or his refractory subjects to their senses. Whether it will lead to a war with Affghanistan, and eventually with Russia, remains to be seen."

CHOLERA, we regret to say, is spreading and increasing almost throughout the whole of India. At Simla, Kussowlie, Dhurmsala, Mussoorie, and in the Western and Southern Presidencies the disease is daily causing a large number of deaths. It is to us no matter of surprise that the summer retreat of the Governor-General is so unfortunate. For years Simla has borne a bad character from a sanitary point of view. Time after time its hygienic shortcomings have been complained of, but apparently these complaints have been neglected. The local journal "trusts a strict and careful investigation will be ordered, and steps taken to ascertain as far as possible the origin of the cause of the disease having broken out at these stations. Our Mussoorie contemporary says that all the cases that have occurred at that sanitarium have been imported." The following letter to the editor of the *Englishman* is so important that we quote it in full: "It has been a matter of surprise to me and many others that so little mention has been made in the Calcutta newspapers regarding the *great* mortality in Simla from cholera. This dread malady, the *crux* of the homœopath and the allopath alike, has been raging here for the past month. The doctors have been trying to put a good face on it in order not to create a panic. Their motive is, no doubt (as I told the Viceroy), a laudable one. The deaths from cholera among the poor natives average 10 per day. This is equal nearly to the present mortality from cholera in Calcutta, the population of which is to that of Simla as 50 to 1. I thought Simla was a sanitarium! *Trojafuit.* The Government of India cannot, with any *sense of duty*, remain here another day. On Tuesday last 23 registered cases of cholera

were sent to the hospital. This beats Calcutta. I know of two fatal cases that were not sent to the hospital on Tuesday. There may have been, and probably were, others. The disease has broken out in the jail, and the short-term civil prisoners have been released, while the long-term ones have been sent away elsewhere. One of the jail sentries was taken with cholera; he had been ill for a very short time; the gun fired, and the man fell dead from the shock. Several Europeans and children have died, and a large body of clerks have petitioned the Viceroy to break up camp. Dr. Bryden's child died of the disease a week ago. If there is any man who knows anything about cholera, that man is Dr. Bryden; yet he and his coadjutors were powerless to save his child." A telegram from Kurrachee says: "Cholera has broken out at the Ghizri Sanitarium. Captain Fleming, 56th Regiment, and Mr. Sequera, the purveyor, have died. The troops at Ghizri have been removed to Landi, fourteen miles distant." Reports are coming in daily of the appearance of the epidemic in other parts of the Peninsula.

ALTHOUGH the present outbreak of cholera at Simla is a grievous calamity—particularly when we consider that many loving fathers and husbands have made great pecuniary sacrifices to place their dear ones out of reach of the dangers lurking in the plains during the unhealthy season, the temporary evil will result in permanent good. There is no knowing how many invalids, in search of health, have year by year fallen victims to the bad water, or other consequences of the defective sanitation of the so-called sanitarium, Simla. Nor does Simla stand alone in this respect. At most of our hill-stations, strong and healthy people are always subject to what is termed hill-diarrhœa, and, although other reasons may be assigned for the condition of the water which produces this unpleasant effect, we attribute it to dirt and bad drainage. Anyone who has been privileged to approach the stagnant and putrifying pools of water in which the hill *dhobies* wash from month to month the clothing of a whole station, would be inclined to wonder that typhoid fever and other dreadful diseases did not rage perennially. The drainage and solid refuse matter collects at the bottom of khuds, and is only carried off when the dry channels become mountain torrents. But there always remains, in many spots, a bottom deposit of the most objectionable nature, through which water percolates prior to its reappearance as a bubbling spring, whence drinking water is supplied to many households. We remember that the men of the Rifle Brigade, quartered at Subathoo in 1861, suffered much more than they had [illegible] and dilatory and dysentery were the prevailing diseases, attributable, no doubt, to polluted water. Things have been allowed to drift for many years, and the air of the hills has been relied on to counteract the consequences of human neglect of the laws of health. Now, however, that the question has been brought home, in a most forcible and painful way, to Simla in general, and members of the Government in particular, reform will be sudden and complete. But this is an unintelligent way of doing business in this nineteenth century, although the principle is applied to politics as well as sanitation.

THIS week bring us, from China, a translation of the celebrated letter recently forwarded by the King of Burmah to the Emperor of China. It runs thus: "Meng-tun, King of Burmah, respectfully lays a petition before the Throne of the great Emperor of the Heavenly Dynasty.—Your vassal (here the same character as that employed by Ministers of the Chinese Government, to designate themselves in their memorials, is used, with the addition of *Siao*—small—before it) would, with all humility, set forth that under the universal sway of his Holiness the 'streams and hills' are all objects of his fostering care, the kingdoms of the distant ocean become converted to his civilising rule, and as the sunflower bows before the sun, so does all mankind turn with adoration towards the Imperial person. Succeeding to your barren and far off dependency of Burmah, your vassal is impressed with the deep favors conferred by your Heavenly Dynasty when permitting his country to be enrolled amongst the territory of Yu (the founder of the Hia Dynasty); and, in offering up according to rule the tribute prescribed, the land of Burmah is thus included under the heaven of Yau and all within the Realm join with one voice in the Sung cry to His Imperial Majesty. (Note.—Sung is a mountain where an echo supposed to proceed from the spirits of the Hill was audible, crying out 'happiness! long life! male issue!!') Recently, owing to war and rapine on the borders, communication has long been intercepted; but the horrors of strife are now happily ended, and the universe returned to tranquillity. It is fitting, therefore, that your humble vassal should at once offer tribute. This letter has, consequently, been respectfully drawn up in letters of gold, and is accompanied by an image of the god of Longevity, five tame elephants, and with articles of manufacture and productions of the country. These are sent under the care of an Envoy as representative of your vassal; who is charged to respectfully convey them to the palace gate, and to humbly crave that his great Majesty, the Emperor, will deign to receive the offerings and will further graciously lend ear to the feelings of obedience, respect and submission entertained by your vassal. While writing this letter your vassal is overcome with pleasurable feelings of extreme gratitude, and in concluding his petition he humbly wishes his great Imperial Majesty long life for ten thousand thousand years." The list of presents included 10,000 chests of gold leaf, and an equal number containing silver.

WE have advices from Formosa, of a heavy engagement between the Imperialists and Aborigines, resulting in the abandonment of an entrenched position by the former. With characteristic veracity the Chiniese claim a victory. Extensive preparations are being made on the part of the Imperialists, and there is a rumour that the foreign drilled troops, under the command of Captain MacMahon, are expecting orders to proceed to Formosa for service. Shen Pao-chen, the Imperial Commissioner there is about to relinquish his office. The Footai of Fuhkien will give his special attention to the Government of the island.

ANOTHER terrible and destructive typhoon has visited unfortunate Macao, causing great damage to property and considerable loss of life on the water, though happily it has not been so disastrous in its general effects as that which occurred on the 23rd September last. The destruction at sea amongst the native craft is reported to have been very great and the loss of life serious, but no definite particulars have yet been received. On shore the damage done is also extensive, more especially in the inner harbour. At the Praya Grande, the chief sufferer from the fury of the typhoon was the Government-house. This is almost a wreck; the greater part of it came down with a frightful crash, burying about eleven persons in its ruins. The Aide-de-camp of the Governor was much injured, and was carried to the Military Hospital of St. Januario. His Excellency himself had a very narrow escape from being overwhelmed in the falling mass A soldier fortunately saved him just in time.

LONDON LETTER.

(FROM OUR OWN CORRESPONDENT.)

JULY 2ND, 1875.

MACMILLAN'S Magazine for July has just appeared with an article on "the Political Situation in India" by Mr. Routledge, late Famine Correspondent of *The Times* in India. The arrangement of the paper is confused, but it has an importance as being the result of "notes" made while travelling over the greater part of Bengal and Bombay. These "notes" show that everywhere there is a dissatisfaction with the general state of things in the minds of the natives, and an equally deep depression in the minds of English officials; a general feeling, in short, that affairs are out of joint, and an equally widespread presentiment that a storm is brewing. Especially interesting in reference to this, are the "notes" of his interview with Sir Dinkur Rao. That eminent statesman, it appears, has given up the use of the English language in a kind of despair, being convinced that the English Government no longer desires to do justice to its native subjects. "Once," he said to Mr. Routledge, "I spoke of English faith as of something written on a table of stone with a pen of iron, now I speak of it merely as a promissory note; you promise but you do not fulfil." This, it is well to remember, was spoken before our action in the deposition of the Gaekwar had given such an unpleasant significance to the observation. There is of course nothing new in these notes of warning. During the past decade they have been sounded again and again, but Indian officialism is like the deaf adder which stoppeth its ears, charm one never so wisely. A *Bureaucratic Government* does well enough so long as nothing is required of it but to grind blindfold in the mill of routine, turning out tabulated statements by the ream, and yards of ridiculous statistics; but angry flesh and blood is a matter about which it neither knows anything nor can by any means be brought to understand.

The 1st July is the day on which the Act for the Regulation of Public Worship comes into operation, and Mr. Gladstone has come out with an article in the *Contemporary Review* to suggest the spirit in which the new Act should be accepted by loyal churchmen. The article is admirably written and full of sound sense.

The main proposition it enforces and illustrates, is that the cause of the present discord and anger in the Church arises from introducing a doctrinal significance into all disputed questions of ritualism. Keep that element out, and these disputes on the subject of Eastward or Northern position and the like would at once be manifest in their essential littleness. People would perceive the absurdity of risking the very existence of the Church on such trifling details as these. This is no doubt excellent advice and very good sense, but it is also perfectly useless. The High Church party care nothing for elaborate vestments and an ornate ritual except as the symbols of certain doctrines; the opposite party do not rave against these practices except as being the outward signs of (what they consider) a pernicious theology. Of course, if you eliminate the doctrinal significance from questions of ritualism, not only would the questions be argued without bitterness, but there would be no question for which either party would care a rush. The battle is whether the English Church is to be based upon the principle of sacerdotalism or not, and to this conflict there can be no termination except by a radical reconstruction of the articles, the canons and the prayer-book, for the simple and sufficient reason that the Established Church in England was purposely so constructed as to admit both parties to the quarrel. They both have a right to claim a part in her communion. The aggressive attitude assumed at the present moment by the sacerdotal party in the Church is due to that wave of feeling which is passing over all Europe. Materialism and sacerdotalism are ranging themselves on either side for a great battle of Armageddon, and I heartily wish they would, like the Kilkenny cats, swallow each other up and so trouble the world no more.

Talking of sacerdotalism naturally carries one's thoughts to France. It is hardly too much to say that the preservation of Europe from falling again under the yoke of Rome, depends upon the existence there of a Republican form of Government. Either a Legitimist monarchy, or an Imperial restoration, would unite itself closely to Rome. France would become a great Propagandist centre to rivet the chains of the Church again, not only on her own people, but on Italy and Belgium. There is on this subject a profoundly interesting paper in the last *Fortnightly*, by M. Laveleye. M. Laveleye is a hearty admirer of Germany, its soldiers, statesmen, and people; he thinks there is nothing harsh or specially arbitrary in the ecclesiastical laws, but he recognises their impolicy, their utter futility. He points out the great mistake which has been committed in alienating a large section of the population by a series of measures sufficiently severe to exasperate, but quite insufficient to subdue. He shows how, if this legislation be insisted on, and perhaps made still severer, these feelings of exasperation in the German Catholics will become intensified into a religious fanaticism that will make them hail even a foreign invader with joy, as emancipating their faith from an intolerable burden. It is needless to point out how such feelings would be encouraged and fostered by the erection of an ecclesiastical monarchy in France. The Empress, who would return to France with her son in the event of an Imperial restoration, is a more fanatical Catholic than the Comte de Chambord himself. M. Laveleye produces evidence to show that she, more than any other influence, hurried the Emperor into the war of 1870, and avowedly as a religious crusade. "This," she said, "is *my war*; and God will give us the victory, because we shall then overthrow Protestant Prussia." This is what comes of Imperial "Saviours of Society." Your Imperial Saviour becomes subdued by a fascinating and elegantly dressed Empress, wholly destitute of brains, and half-a-million of men are carved into mincemeat because she has certain ridiculous convictions regarding the will and purposes of the Deity. It is a pity the Emperor did not fall back upon the simple faith of his uncle, and entrench himself there—that Providence was not Roman Catholic, but always favored the strongest battalions.

What, then, are the prospects of Republicanism in France? Thanks to the unexampled patience and self-restraint of the Republican party, they are good. The Constitution voted on the 25th February, after long voyaging in dangerous seas, amid sunken rocks and unforeseen squalls, is at last in sight of harbour. Even now the Marshal and his Chief Minister—M. Buffet—are doing their best to wreck it. They are trying all they can to provoke the Left to come to a rupture with the Ministry, which would give the latter an excuse for sending in their resignation. The Marshal would then fall back on the old "Government of Combat," headed by the Duc de Broglie, which would not only delay the dissolution of the Assembly until next year, but would cause the elections to be held under the auspices of a Ministry which would strain every nerve and use every device possible to return a Legitimist majority to the Assembly. On the other hand, a large Republican majority is not without its dangers. One thing is certain—that no Republic can have stability in France which has not the support of moderate men. M. Gambetta sees this, and provided he can impart his own clear-sightedness to those whom he leads, all will go well. But he holds the fiercer Republicans of the extreme Left like so many greyhounds straining in a leash. The speech the other day of M. Louis Blanc, denouncing the Constitution as a disgraceful compromise, though it was an almost solitary outburst, reveals the stormy and violent forces which up to this time Gambetta's master-mind has restrained in quiet and order. But could he accomplish so much, supposing these extremer spirits found they were a majority in the Chamber? Who can say? We must wait and see. All I would say is, that all who hate Ultramontanism ought to be the hearty well-wishers of the one great statesman that has risen in France since the fall of the last French monarch.

Here in England, I think, the subject of chief interest is the charge brought against Colonel Valentine Baker. The talk is that the young lady will be persuaded to withdraw the worst parts of her charge, and so reduce it to a case of simple assault. The Colonel has distinguished friends, and the strongest pressure is being brought to bear on the young lady and her family to induce them to agree to some such compromise. I give you this as the gossip of London. How far it is true I have not an idea. I hope it is as false as it ought to be.

LITERARY GOSSIP.

(FROM OUR OWN CORRESPONDENT.)

PARIS, JULY 3.

M. MIGNET has published his long looked for *History of the Rivalry between Francis I. and Charles V.* This history is chiefly based upon documents in a great measure hitherto not made public, and presents a striking *tableau* of the great struggle between the two famous monarchs during the sixteenth century. Perhaps Mignet may be considered as one of the chief historians of that century, which he has studied in all its phases, and tracked in its remotest corners, not only as it affects France, but the whole of Europe, as exemplified in *Marie Stuart*, in *Philippe II, Charles V. at the Monastery of Yuste*, and *Calvin at Geneva*. In his present work he enables the reader to touch, as it were, with the finger, not only the actions of Francis and Charles, but also their motives, their passions, their characters, and their living physiognomy. Readers will peruse with pleasure the proceedings which led up to the battle of Marignan, as well as the description of the battle itself; and of the terrible passage across the Alps by Francis, accompanied by 72 pieces of artillery and 30,000 men, many clad in armour, for gunpowder was only then just beginning to make itself felt. After the hard-fought but complete victory of Marignan, Francis, who always swore on the faith of a *gentilhomme*, called Bayard, and said he wished to receive the order of chivalry from him who had fought so many battles against so many nations, and was renowned as the first of chevaliers. Bayard refused, asserting that an anointed King was the knight of knights; Francis insisting, Bayard drew his sword, and touched the King's shoulder. Then addressing his sword he congratulated it upon the honor it had accomplished, and said that he would preserve it as the choicest among his honored relics. The portrait of the Connétable de Bourbon, the last of the feudal princes, is a masterpiece. In power he was not far distant from the King; even in obedience he could not but be an object of suspicion, as he would be formidable in case of revolt. The Connétable was the successor and son-in-law of the Duc de Bourbon; the latter held an independent Court at Moulins, surrounded by his nobles, who paid him feudal devotion; he had a numerous guard, levied taxes, assembled the governing bodies, named tribunals, and could bring an army into the field. If the Kings of France had their necropolis at St. Denis, the Bourbon Dukes had theirs at Souvigny, and could muster 1,700 officers of their household at their funerals. The Connétable in question was as dangerous as he was powerful; was equally formidable in serving, as in resisting; was as audacious as persevering; displayed a cold mildness, was terribly proud, and very ambitious. He was ultimately deprived of his estates, reduced to combat the king, and ready to invade his country. When a fugitive, he changed the old motto of his house—*l'Esperance*, into the terrible device—*Omnis spes in ferro est*, all my hope is in iron. The grand adventurer described himself here well; the proud and vindictive vassal, of whom it was said his fidelity would resist the offer of a kingdom, but would

not tolerate an affront. From being the glorious servant of his country, he became its fatal enemy; who replied to insult by treason, and to spoliation by war; who conquered François at Pavia, and besieged Pope Clement VII in the Castle of Angelo, while the latter was praying for his happiness, and who tragically met his death under the walls of Rome.

Machiavel, by M. Nourrisson, is another contribution towards comprehending the man of marble. For more than three centuries, philosophers and historians have been laboring with a curiosity and industry mixed with admiration, sometimes with fear, to recognise him. Have they yet discovered his true name? The Italians call him "the sovereign thinker;" Shakspere designates him as a murderer, and Rousseau describes him as an honest man and citizen. M. Nourrisson, combining great aptitude and advantages, aims to make a complete character out of all that has hitherto been written, on the famous theoretical politician. It is to be regretted his valuable book is overladen with notes. Machiavel he holds to have been a penetrating genius, piercing very far, but in depth rather than in height; his genius, by study and race, had much of the old Roman about it; hard, devoted to liberty, to the State above all, and born for government; but he also partook of the Italian of the sixteenth century—refined and corrupt. He was Pagan, for he was without God and without moral law, hence the horizon of his view was destitute of light, and the real source of his bad maxims was his manner of thinking upon the laws which govern the world. He was an ambitious and industrious place-hunter, for he was relatively indigent considering his expenses, and, instead of reserving for the Republic the secrets that he believed powerful, of an art at once fraudulent and pitiless for governing men, he offered them as a marketable commodity also to the Medicis, whom he did not like. Machiavel did honor to the human mind, but not the human heart—if it be possible to honor a mind where heart is absent. M. Quinet, who was not a detractor of the Florentine patriot, nevertheless said that Machiavel's political theory was "without God, without Providence, without Religion, and was neither Pagan nor Christian"; he believed in the power of the stars and the spheres, as did everyone else at his time, in determining human movements; and that it was possible for the air to be filled with celestial intelligences knowing the future and capable of warning man. But he nowhere admits that it is God who gives the law to conscience, and engraves on our hearts the distinction between good and evil. Macaulay painted the Italians of the sixteenth century, the age, fraud, treason, hypocrisy, all the repulsiveness of political infamy mixed with great beauty of intelligence, and a cruelty which sprang, not from the order of the blood, but from cool and profound meditation. This was the school wherein Machiavel learned his diabolic theories, with a faith in the horrible not to be surpassed. His "Discourses" were intended for Republicans, and his "Prince," for Kings, yet Rousseau selected the latter; the inspiration of both books are the same; their ends only differ. In the eyes of his countrymen, Machiavel's pure patriotism redeemed his faults. Outsiders do not accord to him that absolution, while admiring his genius, which had the depth and eloquence of Tacitus, the power and delicate analysis of Aristotle, who was also his model and master. Machiavel despised man; he saw wickedness, and believed it powerful—solely powerful. This was his infirmity and blindness. Ignoring the true end, he misunderstood the true means, for it is not true that evil conducts to good. It is by good that we ought to march towards the good, for that is the road by which Providence calls us. Denying all this, Machiavel of course scorned human progress.

M. Leon Boucher, in *Cowper, his Correspondence, and his Poetry*, supplies us with a complete study, which had been a thesis before becoming a book. England, according to the exhaustive analysis of the author, has had greater poets than Cowper, but none more English; and this is why he is so popular at home, and so little known abroad. Nearly all French historians of English literature leave him unnoticed; Taine only alludes to him; but Saint-Beuve devoted to him one of his finest *Causeries*. Apart from their real value, the importance of Cowper's works consists in the fact that he was the first in point of date, that broke with the traditions of the seventeenth and eighteenth centuries. He was the first who dealt in simple, intimate, or homely poetry—a kind of poetry not appreciated, by-the-by, in France. Like Wordsworth, Cowper can be placed in all hands without danger, for both express only healthy emotions, the honest joys of family, of home, the gentleness at tranquil landscapes. Serenity is the predominating note in Cowper. On reading him, none could imagine he was twice insane, and all his life tormented by the idea of an imaginary crime. He felt he was damned, and in Mrs. Unwin and John Newton, he found but stimulants for his religious melancholy. Cowper had a sad heart and a gay mind, and to Lady Austen is to be attributed the restoration of much of his gaiety, and the inspiration of his *Task*. He sought in poetry a diversion for his sad thoughts, thinking nothing about the welcome his verses would receive from the public; he wrote for himself alone, and thus was new because he was sincere. He was not so much a descriptive poet, as a poet of the country. England, but not France, has an innate taste for such poetry. French poetry is a grand lady, inhabiting willingly the town, and feeling more at ease in a *salon* than among fields. Cowper loved nature, and conveyed that passion into his poetry; he luxuriated in calm, where meditation could make the hours pass as moments, where the heart could give useful lessons to the head, and where science even without books could become more wise. In his correspondence, *too, Cowper displays* great literary power: it was Harlequin, as he said himself, in the death-chamber. That other good fairy, Lady Hesketh, failed to dissipate his misanthropy; his hallucinations at last became more sombre; he had not even the last consolation of the unfortunate—the hope of death, as he imagined he would not die, but would be mysteriously carried off to some place of torment.

Respecting Napoleon I. and his historians, it is said that Thiers praised the great soldier too much, Michelet abused him to excess, and Lanfrey undervalues him: but all three are unanimous that he was an enormous liar, and that his reign was that of permanent organised untruth. Victor Hugo finds in the Second Empire the expiation of the First, and holds that Napoleon III. killed the Bonapartist legend. M. Lanfrey's fifth volume of the *History of Napoleon I.*, has already reached a third edition. The work, it will be remembered, was commenced under the Second Empire, and, interrupted by war, has now been resumed. Originally it was considered as a weapon against the Government of the late Emperor, as every denunciation of the First was accepted as a satire on the Second Empire. This motive, though it no longer exists, has not diminished the interest in the work—which must be read with other histories to form an estimate of the subject—but has led to the present being superior to the other volumes. M. Lanfrey accuses the nation of having shared in the intoxication of Napoleon's successes, till sobered by events in Spain, when conscripts evaded service by thousands, and after the Russian campaign, in masses. The five years and-ing four years [illegible] the military genius displayed by Napoleon after Essling, and his invincible energy, recompensed by victory, cannot be questioned. But the world is not unanimous on other points; no one approves of the divorce of Josephine and the marriage with Marie Louise: the conduct of Napoleon towards Pius VII meets with no approbation, and, apart from the question of the Pope being a Christian chief, he was an old man, a prisoner without defence,—conscience struggling with force. Napoleon's conduct towards the Republic of Venice was continual treason, crowned by brutal violence; the death of Duc d'Enghien was murder; the proceedings at Bayonne prior to the invasion of Spain, were revolting and cowardly. The mysterious death of Pichegru, the unjust suspicions against Moreau, the aversion inspired by Bernadotte, are less clear. Napoleon was at the height of his fame when he invaded Russia; but it was also the moment when his devouring pride crushed his genius. He had all Europe at his feet, save the impregnable lines of Torres-Vedras. Napoleon thought so little of events in Spain, that he contemplated "abandoning his army" there, as he did the army of Egypt, and as he did, still later, the *débris* of his army after Moscow and Waterloo. By striking Russia at the head and heart—places that he ever aimed at—he calculated to appease rising troubles at home, and frighten all resistance abroad. Lanfrey says Napoleon lied ever and always, even with the certitude that the untruth would find no credit. He resembled the bully who boasted, "no one I know believes my word, but who dare tell me so?" His most odious acts of tyranny he took care to preface with liberal observations. He nominated senators, and those deputies only were elected that pleased him. But the Corps Legislatif had little to do; thus in 1811 its chief sessional act was to nominate a deputation, with the President at its head, to deliver an harangue before the King of Rome, then two months old and in his cradle. The Government made a solemn reply on behalf of the baby. Napoleon only allowed four political journals to exist, and viewing editors as servants of the State nominated them accordingly. He created nothing after the Revolution, but he put everything in its place with a conception only equalled by its marvellous execution. He believed, like many others since, that he could accomplish everything by the sword and the prison. Mind and

conscience being unseizable, escaped him. He could be moral, but he looked upon morality and immorality with perfect indifference. He regarded a human being as a fact, a thing—but never as his equal; humanity was for him only a matter of figures. He was not sanguinary, but when he found cruelty pay, he practised it; he disliked shedding blood, as he did money when it was unnecessary; but he never hesitated to sacrifice everything to his ambition. With him conscience was only another name for poetry and deception, and the only rewards mankind expected, he held to be money and titles.

The *History of Civilization* by Von Hellwald has appeared in a French dress, and is being eagerly perused. The author only pretends to treat old matters in a new style, and in accordance with modern science. He describes magnificently the origin of the world, of humanity, of society, of institutions. The French Revolution he accepts as a proof that the French were the most advanced people of their day; and that neither their literature nor the American War of Independence, produced it. Another cause was to be found in the changing, versatile, and irritable character of French, so much akin to the ancient Gauls and Romans. Von Hellwald disbelieves in the "Rights of Man"; he has no more rights than any other organized being, none assuredly because he is man. In past ages, he asserts, religion inflamed the masses; to-day it is liberty. He declares war to be the natural state of man, peace being but an interlude for the combatants to draw breath. In due course, the struggle for life will terminate, organic will become inorganic matter, and the earth, silent and solitary, deprived of atmosphere and life as the moon, will continue to revolve round a pale sun. The following are a few other books to be found on library tables: Von Pauld Lindeau's *Essays on Contemporary History and Literature*; Etienne's *Complete History of Italian Literature*; Ampère's *Correspondence*; and Comte de Rémusat's *History of English Philosophy and Literature.*

THE LIEUTENANT-GOVERNOR AT DACCA.

(FROM AN OCCASIONAL CORRESPONDENT.)

THE Lieutenant-Governor has been to Dacca. "Has been," alas! for *fuit Ilium*; and now, our little round of festivities over,

"We feel like one who treads alone
Some banquet-hall deserted,"

and the only consolation that remains to us is to think that all was for our own satisfaction and the benefit of posterity. At 9 A.M., on the morning of Sunday, the 18th instant, mid salvoes of artillery fired by the ever-loyal Khajeh Abdool Gunny Meah, now a full Nawab, the barge *Rhotas*, with His Honor on board, swept with considerable velocity up the river and soon after came to anchor in mid-stream. The news spread, so to speak, like lightning; the police of the town, girt with the truncheons of office, flocked (we mean *marched*) to the landing-place; and several unfortunate natives of the lower classes, who, carried away by an intelligent curiosity, ventured too near the sacred precincts, were "taught" by our brave chowkeydars somewhat after the energetic fashion adopted towards the men of Succoth, and will doubtless hereafter remember the hole from whence they were digged. Soon after, the Commissioner, the Judge and the Collector, with other officials, took boat and went on board; we in the ardour of our loyalty went too; but for that time, our view of our respected ruler was confined to his hinder man, as he sat on deck with his back to the town, contemplating the opposite horizon. At 11 A.M., His Honor, after successfully scrambling on to the landing-stage erected for the occasion (for the water was low and the stage was high), attended church, though the congregation was not so considerable as had been expected. On his return, finding it hot work lying still, he determined to inspect Naraingunge, and accordingly steamed off thither at once, and came back here the next morning. Then, in a carriage borrowed from the patriotic Nawab, His Honor drove off at an early hour to visit our water-works, now in process of construction, and the new medical school.

But the great event of this day was th e durbar. To avoid any more scrambling, the barge was moved close to the landing-stage, and by 5 P.M., a large and warm assemblage of the European residents of the station and of the Baboos and Mahomedan great men of the district, gathered together on either side of a dais surmounted by arm chairs gorgeous in velvet and gold. The scene was a gay and festive one, and unruffled even by the slightest breeze; and as the sun shone forth all the while, as Artemus Ward would say, "regardless of expense," people passed the time of waiting in thinking over the pleasant hours that they had spent under punkahs elsewhere. The worst of it was that we could see the ladies who sat in the saloon behind with a punkah working vigorously over their heads all the while. Then followed the presentation of the native celebrities present, who would delay about coming up to the throne, and who would persist in commencing to *salaam* at ten yards distance from it. However, it was over at last, and then Mr. Buckland mounted the dais, and, with a few unimportant blunders, read out the *sunnuds* conferring the titles of Nawab and Khan Bahadoor upon Gunny Meah and his son Assunoolah respectively; who had meanwhile arrayed themselves in a sort of bathing-gown affair, with green embroidered pantaloons peeping out underneath. Sir Richard, with considerable dexterity, tied the orders round their respective necks, and after a speech in which he enumerated the many excellent services performed by the Nawab and his son, he somewhat precipitately retired. His example was speedily followed by the perspiring assembly, eager to tear off their dress-clothes at the first convenient opportunity. There was to have been a great station dinner at the Nawab's on that evening, but it had to be indefinitely postponed on account of a sudden family bereavement, and the Commissioner gave a *burra-khana* instead. The next day at early dawn His Honor suddenly determined to go the round of the Dacca schools, and the various masters were reduced to the verge of desperation in consequence, and were fain to rush out into the highways and hedges to collect their scholars in time for the gubernatorial visit. In the afternoon the Madrissa was inspected, and then followed the distribution of college, gymnastic, and of Madrissa prizes at the Dacca College. His Honor first went over the class-rooms and was duly impressed with the smallness of the accommodation and the necessity of enlarging the college without further delay. At the prize distribution, the Moulvie of the Madrissa read out the names of the prize-holders, who rushed forth at the word from a dark entry, but the prizes on the table, like the hero of the song and "his Brother John," had "got completely mixed," and delays ensued whereby everybody's ardour was considerably cooled down; moreover, some of these naughty boys deliberately marched up to that august platform with their native shoes on, to the no little disgust of Sir Richard. An inspection of the gymnasium succeeded, after which His Honor departed, with a smiling face, amid a good deal of desultory cheering from the boys, grateful for things in general, and for two days' holiday in particular.

The last scene in "this eventful history" was a dinner-party given by the Lieutenant-Governor on board the *Rhotas* to the ladies and gentlemen of the station. As for the dinner itself, there was plenty of ice, and there was a strong flavour of that and of other things about most of the comestibles. Of all things, provisioning by contract is a mistake. After dinner there was an evening party, and native gentlemen flocked to the scene, and, together with all the beauty (and we have more than most mofussil stations) and fashion of Dacca, formed a festive and Arabian-n ight-like spectacle on the brilliantly lighted deck. Smiles were the order of the day; and people promenaded over the smooth floor or made faces over the coffee till nearly 12 o'clock, when everybody made off through a drizzling rain for their carriages over the shining and uneven planks of the landing-stage.

The next morning the *Rhotas* departed, and thus ended one of the most successful visits of the Lieutenant-Governor to this station. We are glad to say that the aged native lady, who on a previous occasion waylaid his Honor at the ghaut with a petition and laid hold of the gubernatorial foot, stayed at home this time.

OUR LIBRARY TABLE.

Baroda Complications and Press Etiquette.—By H. P. St. G. Tucker. A contemporary expresses considerable surprise that the *Pall Mall Gazette* should have refused to publish Mr. Tucker's vindication of Colonel Phayre, after the severe strictures which it had made editorially upon the conduct of that officer at Baroda. "Surely," says the writer, "the Editor is not in the habit of burking opinions!" The expression of this surprise is strange, as it is all but an avowed rule of the London daily papers to take their line, and to stand by it right or wrong. The only exception to the rule we have known, was the *Daily News* while under the editorship of Mr. Walker. Our contemporary says rightly, that "the Government of the country and the community have a serious interest in knowing whether in listening to the London press they are really not listening to garbled public opinions or to the vent of the spleen of individuals. Like all other institutions, the press, in point of morality and character, is simply on a level with the community it represents. The *Daily News* under Mr. Walker commanded the respect of the few, but was never acceptable to the many. Its morality was higher than that of the people, and they had, therefore, no sympathy with the principles on which it was conducted. The London press simply reflects the morality of the Stock Exchange and of nine-tenths of our public men, who never

dream of making a conscience of their views on political questions. The Editor of the *Pall Mall Gazette* was talking his sincerest, when he told Mr. Tucker that it was better for Colonel Phayre that Mr. Tucker's vindication of him should be burked, and so were all the other able Editors who followed suit. None of them suspected that they were canting; nor were they consciously doing so. It was simply the sincere insincerity of the age that they were exemplifying, to the astonishment and confusion of poor Mr. Tucker, who says: "In my simplicity, I had supposed that, if one Editor should refuse to do his obvious duty in such a matter, every other organ of public opinion would be ready to give the person so injured an opportunity to expose the injustice to which he had been subjected. This, however, would seem not to be the standard by which a large and influential portion of the English press regulates its conduct under such circumstances. It appears to me important that a practice by which the public are prevented from hearing all sides of public questions should be widely known, and submitted to the final judgment of enlightened public opinion—and, if judgment be pronounced against it by the general assent of those who are best able to judge, should be discontinued." The Indian press in spite of its faults, has a higher morality than that of London, simply because it reflects the life of a small and somewhat select community, marked upon the whole by more earnestness of purpose than prevails generally at home. What Indian journal that had attacked Colonel Phayre, would have refused to publish a reply? Certainly not one, and in the main because the "community" would resent such injustice promptly, while there is no sentiment of the kind to be outraged at home, when the *Pall Mall* takes this course.

Government Almanac of Different Eras—By W. A. Bonnaud. This compilation comprises the years from 1842 to 1875, and is arranged most clearly for ready reference. It is a book which must be useful to all who have dealings with the natives of the country, as a means of verifying the dates of documents. It contains, in addition to the English, the Bengalee, the Velaity, the Fuslee, the Hindee or Sumbut, and the Hijree Calendars arranged tabularly, so that the corresponding date of any of these calendars with any other can be seen at a glance. It should command a large circulation. The work is published by Messrs. Thacker, Spink and Co.

Proceedings of the Asiatic Society.—June. In this number we have an interesting account of a disastrous whirlwind that occurred lately in the Mymensingh district. It was simply, though on a large and tremendous scale, such a swirling eddy in the hot sultry air as may often be observed on a hot day catching up leaves and dust, whirling away over a field or so in a rapidly developed pillar of dust and then subsiding and dissipating as quickly as it had arisen. In this instance the duration of the whirlwind was probably less than twenty minutes at the outside; the breadth of its path 250 yards; the length of its course from formation to dissipation a little over two miles. The time of its occurrence was about an hour after sunset. The cattle were in the cow-houses, the people for the most part buried in their huts. Due west from Shakhairlia *Khal* the great river Jamuna flows in a single stream some three miles wide, with the Pubna shore beyond. Looking south-west from the same spot, there lies in the midst of the stream a large *chur*, the breadth of water between the *khal* and this *chur* being about a mile. Somewhere in this mile-broad stream the eddy arose. Boats moored along the *chur* felt no disturbance. The day had been hot without a breath of wind. Clouds lay in the south-west quarter only. About an hour after sunset, the eddy, already a roaring whirlwind, carrying with it a swirling water-spout some ten feet in height, judging from the height of the water-mark on the bank, struck the eastern bank of the river at Shakharilia *Khal*. Here were moored eighteen large boats, most of them freight-carrying masted boats of many maunds burden. All these were instantly overturned, shattered, stove in, or flung on shore; one large boat was lifted bodily into the air, carried over the bank 15 feet in height, and dashed to pieces in a field some 30 yards inland; another small boat, carried a somewhat shorter distance, was found in a field, with the keel smashed in and the ends split open. A large boat lifted up, overturned, and flung down on the beach, struck down a man, crushed him into the sand beneath it and killed him. Another man, carried off his feet, was dashed down and killed. A third man struck down, and his skull fractured by some fragment, lingered some half-hour and died. The whirlwind passed on north-eastward over a half mile of *maidan* covered with *cheena* crops. Here no trace of its progress appeared, and the crops were unhurt. Then came the village of Uladah, stretching north and south half a mile. In a moment the hurricane had passed through, leaving a strip 250 yards broad of utter devastation, while all remained untouched to the north and south of its path. In this strip not a house was left standing; the roofs were whirled off, the walls stripped; the wooden posts torn away with such violence as to break up and disintegrate the earthen *bhitus* in which they had been fixed. All the plaintain trees were wrenched off or uprooted; twelve large mango trees were torn up by the roots; all the trees that remained standing were stripped of their branches, large and small, which were snapped off close to the trunk. The bamboo clumps were twisted round and laid flat, the stems being broken near the roots. In this village 140 huts were destroyed, 17 people were hurt, some badly, and seven cattle killed. A dead cow was found among the broken branches of a mango tree thirty feet above the ground. The whirlwind continued its north-east course across a *maidan* of more than a mile, covered with *cheena* for the most part. Here, again, it left no trace, except where a long slip of bushes ran along an ail parallel with the direction of the storm. These were flattened. Then the storm struck the northern end of the village of Chaubaree, part of the path passing clear of the village to the north, and encountering nothing but a fence a foot high edging a field; this it destroyed, breaking off and throwing down the branches of which it consisted. That part of the whirlwind which struck the village encountered first a dense mass of tall "baint" jungle, such as would afford cover for leopards. This was beaten down flat, as though it had been thoroughly trampled by beating elephants. Beyond the "baint" lay the bamboos and houses of the village; these were destroyed as in the former village, the devastation here being equally complete, and the breadth of the path the same, some fifty yards of it passing clear of the village to the north.

Leaves from an Amateur's Musical Note-book.—By Arthur Whitten. Our author has long been known in Calcutta as one of its most popular amateur vocalists. His book is a compilation of some of the most familiar songs selected by him, and which are introduced in the course of a series of lectures on musical entertainments, designed for use in encouraging penny readings or other recreations of a similar character. The reading matter contains a short sketch of the history of music, and essays upon the various styles of song. Many very interesting anecdotes are introduced, which are well calculated to keep an audience amused, and at the same time to impart a certain amount of instruction. We trust that the book will be widely used for the purpose it is intended to supply. It is worth reading by all who take an interest in music, and it will prove especially valuable to those who devote themselves to providing cheap and healthy entertainments for the poeple. It has been printed at the *Englishman* press, and can, we presume, be obtained from the local booksellers.

L'Inde des Rajas.—By M. Louis Rousselet. The following description of a north-wester in Calcutta during 1867 is the gem of the book: "During my stay in Calcutta, I was witness of one of these cyclones of a relative intensity. On the preceding evening the barometer had undergone some pretty smart oscillations, when, about an hour after noon, the sky, which had been bright all the morning, was suddenly overcast. I was on the Esplanade, and on the first symptoms I observed a great bustle in the port; the vessels struck their topmasts, and lowered their yards, evidently making ready for a squall. All of a sudden I saw everybody taking to flight, as if chased by some enemy. Yet the air was quite still, and I was at a loss to account for this panic, when at the end of the Esplanade, by Fort William, I saw a sort of cloud of gray dust careering rapidly over the ground. It was my turn then to run for it, not without some trepidation, for I saw that I was absolutely alone on the vast plain, and I had several hundred yards to go before gaining the shelter of the houses. At last I reached the end of the 'Rue Dhurrumtollah' when I heard shrieks behind me; some ten yards off a palanquin had been set down by the bearers, who were betaking themselves to the nearest shelter, and had abandoned their fare, an unfortunate European lady, who in her fright was quite unable to get out of her conveyance. At the very moment when I came to her rescue, the dust-storm was upon us; I felt myself completely wrapped in it, and carried by an irresistible force, then my legs failed me and I fell to the ground. I sat up; the dust had been swept on, and the rain was coming down in torrents, while the wind blew with a fury which prevented my standing upright. The poor lady had luckily managed to get out of the palanquin, which the storm had blown against the railings of the Esplanade, and there she lay prostrate and dreadfully frightened. I managed to get to her, crawling along in a very ridiculous posture, and having helped her to her feet, we managed at last to reach the Hotel Gallais. It was with some difficulty I succeeded in gaining admittance, for all the doors were carefully barricaded. For a quarter of an hour the wind raged with increasing violence; at last the walls began to shake to that degree that the hotel-keeper assembled the whole of his guests in a place which is to be found in the middle of a Calcutta house, whose thick walls, cyclone-proof, are so constructed as to prevent the entire destruction of the house. Very fortunately, however, the efficacy of our refuge was not tested to the utmost; the wind fell, the thunder and lightning ceased, and after a time all was calm and the sky as serene as if nothing had happened. The streets, now that the storm was over, presented a fearful sight: tiles, branches of trees, sign-boards, fragments of palanquins and of clothes covered the street from end to end. Amid these wrecks might be seen hundreds of dead crows and kites and a few adjutants; these poor birds, unable to weather the storm, had been dashed to death against the houses."

The Inner Life of Palestine.—By Isabel Burton. This is a charming book, written by a charming lady, and should find many readers. We unfortunately have space for two extracts only, but these will suffice to show the engaging character of the work. This is how our authoress set up house:—

"My husband always gives me the entire command of the stable, I bought a camel, and a snow-white donkey which is the most honourable mount for grand visiting. I also found in the bazars a splendid snow-white Persian cat, which I bought for a franc. The boy must have stolen it, or sold it because it ate too much. I had brought over with me a young pet St. Bernard, two brindled bull-terriers, and two of the Yarborough breed, and I eventually added a Kurdish pup of a very good race. I bought three milk goats for the house, and I received two presents, a pet lamb and a Nimr (leopard), which became the idol of the house. The domestic hen-yard was duly stocked with all kinds of fowls, turkeys, geese, ducks, and guinea fowls, and the garden and terrace in the house-top were cultivated and planted with English seeds—there I kept my pigeons. When I had got all these things together, my greatest difficulty was to prevent them from eating one another. It would not be a 'happy family.' Captain Burton declares that it was like 'the house that Jack built'—the pigeons and domestic fowls picked up the seeds and ate the flowers, the cat ate the pigeons and the fowls, the dogs worried the cat, the leopard killed the lamb and harried the goats, till one sprang into the river out of sheer despair, and was drowned. It also frightened

the horses, camel, and donkey to death by jumping on their backs, and uttering those shrieks which leopards indulge in if annoyed."

In the following, the reader may find a word-photograph of Mrs. Burton herself :—

"The lamented Mr. Deutsch said to me before I left England, 'Poor Mrs. Burton, how I pity you! There is no society or gaiety in Damascus —only thirty Europeans, and scarcely any English.' I suppose it never occurs to anybody that a woman who enjoys society can do without it, but indeed we can. Our lives were so wild, romantic, and solemn, that I could not even bear to sing; to dance would have seemed a profanation. . . . . My work consisted of looking after my house, servants, stables, and animals; of doing a little gardening, of helping my husband, reading, writing, and studying; trying to pick up a little Arabic, receiving visits and returning them, seeing and learning Damascus thoroughly, looking after the poor and sick of my village and its environs. There is also galloping over the mountains and plains, and shooting, either on foot or on horseback."

POETRY.

RELIGIOUS AND MORAL SENTIMENTS FROM THE SANSCRIT.

Mahâbhârata, xii, 529, 6641, and 9917. "*As having nothing, and yet possessing all things.*"

(2 Corinthians, vi. 10.)

How vast my wealth, what joy I taste,
Who nothing own, and nought desire!
Were this fair city wrapt in fire,
The flame no goods of mine would waste.

Mahâbhârata, xi. 75. "*For we brought nothing into this world, and it is certain we can carry nothing out.*"

(1 Timothy, vi. 7.)

Wealth either leaves a man, O King!
Or else a man his wealth must leave.
What sage for that event will grieve,
Which time at length must surely bring?

Mahâbhârata, xi. 75. "*The foolish discontented; the wise content.*"

Though proudly swells their fortune's tide,
Though evermore their hoards augment,
Unthinking men are ne'er content:
But wise men soon are satisfied.

Vriddha Chânakya, xiv. 6. "*Men should think on their end.*,"

Did men but always entertain
Those graver thoughts which sway the heart,
When sickness comes, or friends depart,
We would not then redemption gain?

Mahâbhârata, iii. 17401. "*All men think all men mortal but themselves.*" (Young's *Night. Thoughts.*)

Is not those men's delusion strange
Who, while they see that every day
So many sweeps from earth away,
Can long themselves t' elude all change?

Dampatîsikshâ, 26 : Prasnottara-ratnamâlâ, 15. "*Who are the really blind, deaf, and dumb?*"

That man is blind whose inner eye
Can nought beyond this world descry;
And deaf the man on folly bent,
On whom advice is vainly spent.
The dumb are those who never seek
To others gracious words to speak.

Manu, ii. 238. "*A man may learn from the humblest.*"

From whomsoever got, the wise
Accept with joy the pearl they prize.
To them the mean may knowledge teach,
The lowliest lofty virtue preach,
Such men will wed, nor view with scorn
A lovely bride though humbly born.
When sunlight fails, and all is gloom,
A lamp will well the house illume.

Mahâbhârata, v. 1272; xii. 11023. "*Men are formed by their associates.*"

As cloth is tinged by any die
In which it long time plunged may lie;
So those with whom he loves to live
To every man his colour give.

Hitopadesa iv. "*Casting pearls before swine.*"

He only threshes chaff who schools
With patient kindness thoughtless fools.
He writes on shifting sand who fain
By favours worthless men would gain.

Subhâshitârnava, 64. "*Heirs often spendthrifts.*"

How many foolish heirs make haste
The wealth their father saved, to waste!
Who does not guard with care the pelf
He long has toiled to hoard himself?

Mahâbhârata, xii. 5497 ff. "*A house without a wife is empty.*" *Description of a good wife.*

Although with children bright it teems,
And full of light and gladness seems,
A man's abode without a wife
Is empty, lacks its real life.
The housewife makes the house; bereft
Of her a gloomy waste 'tis left.

That man is truly blest whose wife,
With ever sympathetic heart,
Shares all his weal and woe; takes part
In all th' events that stir his life;
Is filled with joy when he is glad,
And plunged in grief when he is sad,
Laments whene'er his home he leaves,
His safe return with joy perceives,
With gentle words his anger stills,
And all her tasks with love fulfils.

J. MUIR.

LETTERS TO THE EDITOR.

FALSE RENT STATEMENTS IN OUDH.

To the Editor of the Friend of India.

SIR,—Mr. McMinn, in his now celebrated pamphlet on the Settlement in Oudh, says a certain Raja filed forged rent rolls in his Court. Your comment is, that, if so, he ought not to remain an Honorary Magistrate. If that is not a fair criticism, I don't know what is. I have not the paper by me now and I forget the exact words, but that I think was the purport of the comment, *viz.*, to furnish an instance of the Oudh Government's weakness in dealing with talookdars.

You might say that Mr. McMinn, now made an Officiating Deputy Commissioner, seems, therefore, to have adopted official theories. He then got frightened about this passage in his pamphlet, which was not only circulated, but even written and printed without any orders at all. So in the copies which he subsequently circulated he scored out the passage regarding the forgeries, at least from what he says I believe he did so, though I never saw any copies of the pamphlet in which the passage was scored out.

A SETTLEMENT OFFICER.

RAILWAYS *versus* CANALS.

To the Editor of the Friend of India.

SIR,—Some time ago, B. asked me in the *Economist* how canal could carry a traffic of 700,000 tons in some ten months. I beg to send for his information the following extract from the *Mail* of the 28th May last to explain how such things are managed in the United States: "Twenty thousand tons of coal are sometimes unbunked at Pittsburg in a flotilla of flat-bottomed boats, *towed by one steamer*, and conveyed 1600 miles down the Ohio at something under a shilling a ton, *including the cost of bringing back the empty barges.*" This cost is at the rate of about 1-70th of a farthing a ton a mile for the traffic both ways, or about 1-35th of a pie a ton a mile. Tthis circumstance, coupled with the fact mentioned in the Budget of the Government of India for this year, that the receipts from the Mid napore canal have increased 200 per cent. in one year, may explain the principles on which "the enthusiastic old projector" did his work so successfully in India, and what the strength of the professional jealousy has been which has deprived India of all these benefits.

Canals in India not only affect the means of conveyance of all products at the cheapest possible rates, but they secure the land from famine, if only constructed on right principles, for ever; the food supply of the people being thus secured their industry can be turned to other things to increase the capital stock of the country. In time they will become of as great importance as they are England, and railways will be able to work without creating a deficit of 1½ millions sterling a year in the revenues of the country: but to construct these works before the food supply of the people has been secured in the most economical and secure manner, and to tax the country 5 or 6 millions each time a famine occurs, to convey food by them, when it can all be raised on the spot, and then to declare these are the only means available for enhancing and securing the finances, appears to be about as absurd a principle as can well be acted on. It has been observed that proverbs express the experience of peoples in different countries; and in England we all know what the cart before the horse means. Judging, then, of irrigation and railways in India from our experience, it is easy to see on what principles we have been acting.

A. B.

INDIAN INTELLIGENCE.

BENGAL.

WE have received the following information with regard to the loss of the *Bombay* and the *Lutchmee* in the river Megna during the late gales. It appears that immediately on hearing of this disaster, Captain Saker, commanding the steamer *Simla*, proceeded to the assistance of the two vessels and succeeded in saving the lives of all on board. The *Bombay*, we understand, broke in two and sank in deep water, as also did the flat. Nothing now is to be seen of either of the vessels, and only about 80 packages, which were floating, have been recovered; and it is believed that there is no chance of saving any more of the cargo, although the Captain and crew of the flat have remained on the spot for the purpose of attempting further recoveries. Captain Hayley, the engineers, and the steamer's crew, were brought down to Calcutta by the *Simla*. The ill-fated steamer was, we are informed, at the time of her loss, bound upwards with a general cargo.

GOVERNMENT has, we are glad to learn, called for a return showing the names of all the men who have been dismissed from railway employ, with their length of service, and whether they were

married or single. Many of the men dismissed have from ten to fifteen years' service, and were turned adrift with fifteen days' pay only.

THE Positive Life Assurance Company has just issued a circular, showing the amount of new business done at its Calcutta Branch from 1st January 1875 to the 20th July. The number of new policies issued during that period is one hundred and thirty, and the total sum assured Rs. 7,54,600. Compared with the corresponding period of 1874, the increase of business is upwards of a lakh of rupees.

THE *World* understands that "some modification has been made in the arrangements for the Prince of Wales's Indian tour. His Royal Highness will probably return to England in the month of March, it having been pointed out to him that the heat in the Read Sea after that period might possibly be trying to his health."

A SHORT time ago the shareholders of the Peninsular and Oriental Steam Navigation Company were told by the Directors at a general meeting that the Company was not in a position to declare a dividend upon the working of the last half-year. As proprietors of one of the largest and most important Joint Stock Companies in the world, whose scrip has always been looked upon as among the best and safest properties in which money could be invested, it naturally caused the shareholders considerable disappointment to find that they were to receive no income from their investment, and a considerable amount of public correspondence and private discussion ensued, aiming at the discovery of the reason why. With the superior facilities at its command, and the hold on the confidence of the public which had been obtained in the course of long years' working, it was expected that the P. and O. Company would have been able to have held its own against all competition, independently of the advantage accruing from the Government mail subsidies; but for some reason or other not yet explained, it appears that the Company has not been successfully managed. We hear that the immediate result has been the adoption of a policy, which, unjust as it may be, appears to have become an established system in dealing with large concerns of this kind. The salaries of the officers and other subordinate establishments of the Company have been seriously reduced, causing in many instances considerable distress, while the many thousands of pounds sterling absorbed annually by the guiding spirits who direct these clippings of the executive are held sacred from the hands of the spoiler. Whether an improvement in the management, with a view to rendering the Company more popular than its competitors with the travelling public, would not have been a more judicious course than that of causing discontent in the ranks of its establishments and inflicting a pecuniary loss upon those who could least afford it, is a question for shareholders themselves to debate; but at present there can be no doubt that competing companies are offering much cheaper rates for passage between Europe and the East; and what little differences may exist here and there in point of comfort are not sufficient to deter the public from practising economy in this respect.

Apropos of the Sea-serpent, Col. Hamilton Parrott says:—"We have been shown a specimen of tape-worm lately found in the belly of a Kalabosu fish. The fish, when purchased, was dead, but apparently in good condition, and about five pounds in weight. On its belly being opened, the worm dropped out, and began to wriggle about with great liveliness. This frightened the scullion, who was preparing the fish for the cookroom, and he cut the worm up into a dozen bits. The fragment shown us was about five inches long and five-eighths of an inch in breadth. The total length of the worm was over four feet. It was of a buffy color, and marked with transverse lines, indicating that its body was formed of a series of flattened rings; the two sides were slightly serrated and marked with small pores. The animal is a veritable cestoid, probably of the family of Tatrarhynchus. Worms of this species are found both in cold-blooded animals like fish and reptiles and in birds and animals; it is not likely, however, that they or their ova would survive the process of boiling or frying, to which fishes are subjected before they are eaten, and our fishivorous readers need not be alarmed at the discovery. The specimen, we understand, has been sent to the Asiatic Society for identification."

THE undermentioned members of the Bengal Civil Service having obtained certificates of High Proficiency in Bengalee, have each been presented with the authorized donation of Rs. 1,000: Mr. C. P. L. Macaulay, M.A., Officiating Deputy Collector of Customs; Mr. C. W. Bolton, Assistant Magistrate and Collector, Rampore Haut; Mr. G. A. Grierson, Assistant Magistrate and Collector, Howrah.

THE Governor-General in Council, after taking into consideration the subject of the allowances of public officers travelling on duty by State Railways, has decided that officers who, under existing rules, are entitled to an allowance of three annas per mile, shall in place of such allowance receive double first-class fare, and such officers are entitled to one and half annas per mile shall receive double ~~second-class fare~~.

THE great boon of cheap ice appears to be now obtainable in Calcutta. We have paid a visit to the new ice manufactory, at No. 52, Park Street, where we saw a large quantity of clear ice which had been manufactured by the aid of Messrs. Siebe, West and Co's celebrated machinery. The ice is made from the municipal filtered water, in slabs of about two inches in thickness: these slabs are then laid one upon another, and thus frozen into thick blocks. In appearance the ice is all that could be desired, and it is perfectly tasteless. It is supplied at the rate of one and a half annas per seer, and the sales have already reached about 450 seers per day.

IN accordance with a requisition signed by a large majority of the most influential residents of this city, the Sheriff of Calcutta has convened a public meeting of the inhabitants, to be held at the Town Hall this afternoon, for the purpose of taking into consideration the arrangements to be made in honor of the Prince of Wales's visit to Calcutta.

JUDGMENT in the suit of *Brown* vs. *McDermot* was delivered by the Appeal Court yesterday, reversing the decision of Mr. Justice Phear. The suit was one for damages caused by the collision at sea of the ships *Natmoo* and *Moorhill*, which suit resulted in the lower Court in a judgment for the plaintiff. In reversing this decision, the Appeal Court directed each party to pay his own costs.

NORTHERN INDIA.

IT is reported from Peshawur that there is a rumour that the Ameer of Cabul is about to send troops to Bajour and Dhair, and that Mr. Shaw's return from Yarkund is delayed because the roads are impassable from snow. Nowroz Khan has defeated and taken prisoner Zurdad Khan, the Hakim of Lalpoora.

ANOTHER quarrel between the Soonees and Sheahs of Teera has taken place, and resulted in loss of life on both sides. The Peshawur correspondent of the Lahore paper hears that it is the intention of the Soonee sect, if possible, to drive out the Sheahs from Teera.

ACCORDING to present arrangements, the Prince of Wales will enter Delhi on the 11th of January and remain till the 20th or 21st.

CONTRARY to what might have been expected, considering the enlightenment of its inhabitants, the prejudice against vaccination continues very strong in Delhi: few of the upper classes will consent to have their children vaccinated. While the evidence of the protective value of vaccination and of its perfect harmlessness has been sufficient to convince civilized men of every nation and creed, the gentlemen of Delhi prefer to have their children exposed to the risk of being infected by a loathsome disease, which, if it do not kill, too often leaves its mark for life by causing loss of sight or loss of hearing, or the grievous bodily disfigurement of its victim. In Peshawur the disease continues to be very fatal.

AT the Imperial Council held in Simla on the 29th, Mr. Hobhouse moved for, and obtained leave to introduce a Bill for the improvement of law reports, the object of the Bill being to repeal section 2 of the former Act. Sir A. Arbuthnot moved for and obtained leave to introduce a Bill to provide for the establishment of Reformatory and Industrial schools.

SPECIAL cholera arrangements are being prosecuted vigorously at Simla. The progress of the disease has been arrested.

IF the report of the Landhoura case be correct, the amenities experienced amongst the members of the N. W. Province bar are slightly peculiar. Mr. Newton is alleged to have said: "I feel I am justified at this stage to declare that what has been done with reference to the witness Farnon has been most under-handed, and Mr. Warner has lent himself to it and been guilty of it.

The Judge—Mr. Newton, it is very improper of you to say so.

Mr. Warner (in a great state of excitement, voice faltering excessively as if crying)—I will not stand this. A man in my position, the Government Advocate, a member of the Calcutta Bar, to be told that I have acted in an under-handed manner by a low insolent half-caste idiot like him, whom three of the Judges of the High Court have declared unworthy to belong to the profession. I claim protection from the Court.

The Judge—Come, come, Mr. Warner you have retaliated in very strong language.

Mr. Warner—Yes I have, and I will not stand it any longer. I have stood it quite long enough. I will vindicate my conduct anywhere. I have left my sting in him.

Mr. Newton—Yes, by your language you have clearly shown what you are. The learned counsel has been crying with rage.

Mr. Warner—No, I have not; but there is no disgrace to cry under such circumstances.

Mr. Newton—I maintain I am perfectly justified in stating what I did. The Court is not aware of what has occurred, and very properly thought my observation improper."

BOMBAY.

AT a special meeting of the Bombay Corporation, convened by the Chairman of the Municipality to consider a motion in regard to the approaching visit of the Prince of Wales, the sum of Rs. 50,000 was voted for the expense of His Royal Highness's reception and entertainment.

DR. CUMMINS, of Calcutta, one of the passengers on board the P. and O. S.S. *Peshawur*, which arrived in Bombay with the overland mails of the 2nd July, died of sunstroke in the European General Hospital, where he was conveyed on the arrival of the steamer.

MADRAS.

THE *Madras Times*, referring to the arrangements for the safe custody and management of the ex-Gaekwar's affairs, says: Dr. Seward is the political officer in charge, and through him the revenues assigned to the dethroned prince are expended; while Mr. Simpson, formerly of the police, is the household intendant, or steward, and looks after the economy of the establishment. Dr. Harris is the ex-Gaekwar's physician, and takes medical charge of the large party in and about Doveton-house.

PRIOR to Lady Hobart's departure for England, a deputation of Mahomedan gentlemen waited on her Ladyship and presented her, on behalf of the Mahomedan community, with an address of condolence, to which the following reply was made: "Lady Hobart desires me to say that at the present moment it is impossible for her to offer any adequate reply to the address which you have read to her. The appreciation which you express of Lord Hobart's labours in this country gives double force to your words of sym-

pathy, which she feels most deeply. The high value with which you regard Lord Hobart's efforts, while he was Governor of Madras, to open to your community the advantages of education, is indeed to her a satisfactory proof—if such a proof was wanting—of the wisdom which he brought to bear on this question; for the thought of favouritism of any one community in this Presidency would have been incompatible with his high sense of justice. He found that circumstances had made it difficult to you to take advantage of opportunities which were open to all, irrespective of creed; he felt that differences of religion and language had *accidentally* shut you from these privileges, and the removal of such disabilities was all at which he aimed. In these efforts he was merely acting on the policy which had been adopted by Her Majesty's Government at home; and in these measures he has ever been supported by the present Viceroy of India. The privilege which has been offered to Lady Hobart to make friends with the ladies of your community is one which she has greatly valued; and their readiness to work with her and other English ladies, in the establishment of schools for Mussulman girls, has enabled her to give expression to Lord Hobart's desires to educate more fully young girls of all races in the Presidency. Lady Hobart is thankful, therefore, to find that you still wish her to be President of the Hobart School for girls, and though she may for a time be living in England, her active support and interest will be given to the well-working of this institution. Pray accept once more the assurance of Lady Hobart's appreciation of your deep sympathy."

ACCORDING to the *Ceylon Observer*, it is the custom that a Colonial Governor, who entertains a visitor of the rank of the Prince of Wales or the Duke of Edinburgh, should be given the option of an additional year's service in his appointment. It is expected that the Hon'ble Mr. Gregory will have this offer.

LADY HOBART has presented the recently established Mahomedan Girls' School with Rs. 10,000, for the permanent endowment of the institution.

IT is much to be feared that there will be a serious dearth of labour in the coffee districts of Ceylon this season. Cholera on the Indian coast has prevented immigration, and less than half the usual number of coolies have arrived in the island this season.

CEYLON is supposed to be a very cheap country to live in, but we observe that there is a controversy in the island as to the expediency of young planters drawing only two hundred and fifty pounds a year venturing upon wedded life. We gather from a letter in the *Ceylon Times*, from a gentleman enjoying that income and dating from "Up-Country," that a writer in another journal has been condemning the class in question for not taking to themselves wives, and imputing to the bachelors consequent immorality. From this starting-point both sides of the question are duly discussed. "Two Fifty per Annum" tells us that upon that income a bachelor even up-country can scarcely make both ends meet; and if this be the case he is quite right in not choosing to embarrass [illegible] and sacrifice the happiness of the girl of his heart. "Love in a cottage," he says, is [illegible] in a story or a melodrama but love without legs of mutton and pints of beer would soon suffer a blight. "A Briton," who takes the opposite side, "tells us that a chaste, modest, well-nurtured woman, strong to love, refined in tastes, as true Christian women are, having been wooed and won by a man, would give him self-respect. Her modest attire would be no burden to a man, and in their wedded life they would find a mutual rest and delight in a *united life of self-sacrifice*." This is all very well he is told in reply, but good girls such as those described, want new bonnets and dresses like other people, and all the comforts she has been accustomed to: and these cannot be supplied upon a small income.

MR. JOHN VAN SOMEREN POPE, M.A., has been appointed Principal of the High School, Mysore. Mr. Pope is a scholar of Trinity Hall, Cambridge, and has served in the Mysore Educational Department as acting Principal of the Central College at Bangalore; and as Inspector of Schools in the Head-quarter Circle.

THE *Madras Mail* hazarded the conjecture the other day that kissing is not in fashion in this land. Ayahs—with a view to presents—make a display of kissing their mistress's babes (poor babes!), but we have never seen a native man kiss a native woman, or *vice versa*. There are, however, some dark places of the earth where a professor would find it no easy matter to experimentalise. There are the Jacoons of the Malay peninsula. Of one of the ladies of this race we are informed officially that her "toilet had apparently cost her some trouble, she had her arms covered with numberless brass rings; she wore some dozen strings of colored beads, to which were hung more brass rings, round her neck, the beads fastened behind with a buckle of shells and boar's teeth; through her nose she had a long porcupine's quill, and her face was painted in stripes of black and red, beginning at her forehead and ending, in the shape of a pitchfork, on her mouth and chin." The zebra look of this young maiden might have been bewitching, but the thought of leading a lady with a long porcupine's quill through her nose under the mistletoe is not one that we need dwell upon.

ASIA.

MR. DISRAELI, believing that the Euphrates Valley Railway will never pay, objects to guarantee an expenditure of ten millions on it. The Russian Government, strangely enough, believes that a Central Asian Railway *will* pay. Perhaps some future historian when tracing back our loss of India to the refusal of Mr. Disraeli to risk a guarantee of ten millions for the purpose of checkmating Russia in Persia and Turkestan, will point out to our grandchildren the folly of a generation which called such penny-wise economy sound policy.

A LETTER from Constantinople in the *Exchange Gazette* of Berlin says that great activity has prevailed of late in the Turkish military departments. The heir presumptive, Prince Youssouf Izeddin, the Commandant of the Guard, the Minister of War, the commander of the Military Arsenal at Tophane, and other officers of the artillery, proceeded the other day to the plain of Tchoban-Tchesme in order to witness experiments with some new heavy siege guns. Nadir Pasha, the Instructor of Artillery, directs these experiments, which have produced, according to the unanimous judgment of the Experimental Commission, surprisingly favourable results. It is stated in the report of the Commission that the firing of the Turkish guns is equal in rapidity and far superior in accuracy to that of the guns manufactured by Herr Krupp. The correspondent thinks it probable that in consequence of this report, the gun-foundry of Tophane will be considerably enlarged. He adds that the Sultan, much to the displeasure of the Russian Ambassador, has not only given a very friendly reception to the Envoy of the Ameer of Kashgar, but has concluded an arrangement with the Ameer, in, virtue of which the Sultan is to have full suzerain rights over Kashgar, and promises to assist the Ameer in case of need, and appoint his successor should he die without issue. The Sultan has expressed his satisfaction at this arrangement by sending many valuable presents of cannon, rifles, and other military weapons to his new vassal, besides a sum of 5,000,000 piastres in cash.

ON the 11th of May, the Russian Expedition, accompanied by Herr Von Weinberg, the chief of the Turkestan Diplomatic Chancellerie, arrived at Karshi, the capital of the principality of Hissar. They were courteously received by the Ameer and one of his sons, who acts as Beg of the town of Kermine. The Ameer readily permitted the members of the Expedition to visit every part of his dominions, cautioning them, however, that the country between Hissar and the Amu was very unhealthy, and that the neighbourhoods of Shurvat and Kerki were infested by Affghan robbers. At Aman, on the 17th of May, Herr Von Weinberg was to have gone to Bokhara, the military and scientific members of the Expedition intending to proceed to Gusar to reconnoitre the main road leading from Bokhara to Baisun, and further on to Shirooat, on the Amu, and to Dinau and Regar, in the southern valleys of Hissar. The Expedition were in hopes of being able to traverse and inspect the entire principality from Baisun to Kulyab and Baldjuan, and from the Hissar hills to the mouth of the Surkhob. Lieutenant Vinshevski had completed an accurate map of the roads between Shahvisabsk, Kitab, and Karshi. Herr Von Schwarz had determined the astronomical position of Samarcand, Shaar, and Karshi.

THE Russian organ at Brussels, *Le Nord*, expresses a hope that, notwithstanding the suspicious attitude of the English press with regard to the alliance of the three Emperors, England will ultimately be induced to join that alliance. "Such a course," it says, "would be rendered desirable by the community, or at least the concurrence, of England's interests with those of Russia in Asia. The conviction that both these great Powers have similar and not distinct or antagonistic interests in Asia is gaining ground among English statesmen, and we feel confident that this conviction will find representatives in the Lower House. The above question has for some time been the subject of numberless comments in various newspapers. Combinations have been suggested which by a single stroke of the pen were to settle all the difficulties of the Central Asian problem; England and Russia were to divide between them immense districts which belong to neither Power, which they probably have no desire of possessing, and which in any case could only be acquired after the lapse of many years and at the price of endless sacrifices. . . . An exaggerated interpretation of an article in an important Russian newspaper has afforded to the English press the innocent amusement of proudly rejecting, in the name of England, overtures which have never been made to her. It is certain that the two Governments do not dream of such ambitious plans or such radical solutions: but if they will act in a more modest sphere, they will only the more securely attain the object of arriving at an understanding in the common interest of both countries, which is at the same time the interest of civilization and progress.

A CORRESPONDENT of the *Mail* writes: "While going across a bit of country seldom travelled I fancy by Europeans, on an open waste of high ground, with here and there a few rocks, I saw a black animal running along which I thought from its peculiar gait was a mad dog; and, just as I was about to proclaim what I thought to my horse-keeper who carried my rifle, the talliary in front of me, who was showing a short cut across country to my camp, turned round and said, 'Look Sar, black jackall!' 'But,' said I, 'who ever saw a back jackal?' 'Oh yes,' said the talliary, 'it is jackal; there are four on this *maidan*.' On looking at the animal again more closely, I saw that it was a jackal with its hot weather coat on. I dismounted, and began to stalk the beast, wishing to get its skin as a curiosity, when I observed a second black jackal, and then a third, all having the same mad dog look, and so wretchedly thin were they that I could see their ribs protruding, and the stomachs of all three had a tucked-up starved appearance. So with their jet black colour in the dusky evening I regarded them with a certain amount of horror as they stared at me in company. They exhibited no fear, keeping a hundred yards or so away from me as I tried to approach, evidently regarding me as a curiosity. They seemed to say to each other, by tone, 'that's a *white man*.' At times they would lie down, or roll on the grass, or in a sitting attitude scan the *maidan*, in fact they looked for all the world like three fiends. Having only one cartridge, and wishing to make the most of my chance, I took advantage of a rock close by the three jacks, made a circuit, and when well under cover of the rock I slipped off my boots and ran, as I thought, very cleverly up to my game under the shelter the rock

afforded. On reaching the spot I peeped over, but the jacks were not to be seen! I felt riled at not having caught a weasel asleep with its tail in the fire for once. Once more I looked over my cover, wondering where the jacks had gone, when I thought I saw something move on a stone. Then I twigged three small back heads just visible over a rock some sixty yards of. With a rest, and deliberate aim I fired at the easiest of the three marks and killed one of the trio. The skin is black with a few silver grey hairs along the back and sides of the belly. In size these animals were between an ordinary jackal and a silver fox. The one I killed was the largest of the three, its teeth are partially black, and the only peculiarity I noticed about the animal besides its colour, was its ears, which in shape were foxy and full of hair. I have never seen or heard of black jackals before."

NOTHING further has been heard with respect to the case of the steamer *Carisbrooke*, and it is probable the reference to Pekin will entail a long delay. Meantime, the steamer has been released under bail for $140,000, and taken into dock at Hong-Kong. The surveyor is positive the hole in the vessel was caused by a shot, and not by a bolt from the rudder, as asserted at the trial by Mr. Deputy Commissioner Brown, who fired the shots, in excuse for his action.

THE news from Achin is unimportant. Colonel Pel, who has held the civil and military command since General Van Swieten left, has been relieved by Colonel Van Kirchem. Neither the Dutch nor the Achinese seem to be making any movement of importance the invading force appear to have adopted the policy of merely holding on to their positions, trusting by tiring out the patience of the enemy, to effect their ultimate submission.

LITERARY.

DR. MULLENS, who has lately published a valuable work on Madagascar, considers the Island in remote ages to have formed a portion of that great submerged continent which some naturalists believe to have extended thence to the Malay Peninsula, of which a few peaks only now remain at Seychelles, Rodriguez, Mauritius, &c. The principal physical feature of Madagascar is its central and axial mountain mass, which commences at its northern extremity, but terminates short of the southern end of the island. These huge central islands are supported by three principal terraces, which are more distinguishable on the east than on the western coast. Towards the south they merge into the wind-swept plains where M. Grandidier found the shells and bones of the Æpyornis. The great plateau abounds in hills of gneiss and granite, which have been broken through by volcanic forces in the localities above described; but water has also exerted a mighty agency in moulding the present form of the land, as is evident from the large deposits of red clay, in which a large portion of the island is absolutely buried. It is noteworthy that this red clay is observed in the Seychelles Island also. Dr. Mullens believes the Malagasy people to be a single race, and that there is no evidence whatever in support of the late Mr. Crawfurd's theory, that the main portion of the original inhabitants were Africans, for that the only African connection now discernible is one on the surface. He divides the Malagasy into three tribes *viz.*, the Betsimasaraks, the Sakalavas and the Hovas. He shows the total population to have been considerably over-estimated by former writers, and places it at 2,500,000—less than half of Ellis's estimate. The learned Doctor says, "the Malagasy are a Malay people following Malay customs some of them possessing Malay eyes and hair and features, and all of them speaking a Malay tongue at the present hour." On the other hand Sir Bartle Frere was struck by the extraordinary similarity of the people to the Japanese. A good deal is due to the likeness in figure and visage, and the lank hair; but there is also much in their grave, solemn, persistent character to remind one of the Japanese.

M. DE LESSEPS has just published an interesting work entitled, "Letters, Journal, and Documents serving for the History of the Suez Canal," He states that, after having long allowed his idea to remain a castle in the air, he was anxious in 1852 to submit it to the then Viceroy of Egypt, Abbas Pasha, but was warned that he had no chance of a favourable hearing. He, therefore, allowed the question to sleep till September, 1874.—"I was busy among masons and carpenters in adding another story to the old mansion of Agnes Sorel, when the postman came into the courtyard with the Paris letters. The workmen passed on my letters and papers from hand to hand. What was my surprise to read the death of Abbas Pasha, and the accession of my youthful friend, the intelligent and sympathetic Mohammed Said. I quickly descended from the building and hastened to write to the new Viceroy to congratulate him. I reminded him that politics had given me leisure which I should profit by to go and offer my homage to him as soon as he let me know the date of his return from Constantinople, where he had to go to receive his investiture." On Arriving at Alexandria in October, M. de Lesseps was warmly received by the Viceroy, who being about to proceed to Cairo, invited him to accompany him. The journey occupied twelve days, no railway having then been constructed. M. de Lesseps availed himself of the opportunity of unfolding his scheme; but he was not without misgivings, for Mehemet Aly, the Viceroy's father, when a canal was proposed to him, declined to sanction it, apprehending difficulties with England, and Said Pasha had declared shortly before his accession that if he ever became Viceroy he would pursue his father's policy. He listened, however, with the greatest attention, and said, "I am convinced. I accept your plan. We will discuss during the rest of the journey the means of carrying it out. It is a settled thing; you can count on my support." M. de Lesseps thereupon put the finishing strokes to the statement he had been preparing for two years, and on reaching Cairo the Viceroy informed the foreign Consuls of his intention to promote the Canal. He directed two French engineers in his service to explore the Isthmus, and they reported in favour of the scheme, which thenceforth, however, had to contend with diplomatic and pecuniary difficulties."

ECCLESIASTICAL.

JERUSALEM is the cause of contention not only in itself but others, a character which it has borne for eighteen hundred years. The latest sectarian dissension which has afflicted it has sprung from internal sources, and has doubtless furnished a world of comment to the Jews, heretics, and infidels who beheld it. A correspondent writing from the Holy City, under date of the 5th June, says that on Ascension-day (old style), an encounter took place between Greek and Armenian priests, who had been allowed by the Latins to make use of a chapel belonging to them, and built over what is believed to be the Saviour's footprint. Some dispute concerning precedence rekindled the hostility of the rival parties, and soon the interior of the chapel was turned into a battle-field. The priests fought up and down the sacred edifice, until they were separated by a company of Turkish soldiers. Two Greek priests were wounded in this affray, and so eager were the combatants, that one of the soldiers, in trying to restore peace, is said to have lost his eye during the scuffle.

THE following story is told about what the Sultan of Zanzibar said to the Archbishop of Canterbury when his Grace, with an eye to business, introduced the subject of missionaries in the course of a morning call: "I trust," said the Archbishop, "that your Highness will not object to English missionaries having free access to your dominions?" "Certainly not," replied Seyyid Burghash, with profoundest gravity; "I think that no obstacle should be placed in the way of so great a people as yours being brought to a knowledge of the true faith."

MILITARY ORDERS.

GORDON, Major H. W., of the Bengal Staff Corps, to Europe on furlough for two years.
HINGSTON, Lieutenant C. W. J., admitted to the Bengal Staff Corps.
LESTRANGE, Mr. E., first class Assistant Apothecary of the Subordinate Medical Department, to Europe on furlough for eighteen months.
MANSON, Rev. G. W., Chaplain of H.M's 92nd Highlanders, leave for sixty-one days.
TUOLY, Surgeon F. J., 12th Native Infantry, to officiate as Civil Surgeon of Mardon.

CIVIL GAZETTE.

IMPERIAL.

BUTT, Mr. G., extension of furlough for one month.
BOLTON, Mr. C. W., Assistant Magistrate, presented with Rs. 1000.
BROOKE, Major H. F., of the 109th Foot, furlough for six months.
CLARKE, Surgeon-Major J. J., of the 3rd Bengal Cavalry, appointed to the Medical Charge of the Bundelkhund Political Agency.
DUFF, Lieutenant-Colonel A. G., to officiate as Deputy Commissioner of the 1st grade.
GRIERSON, Mr. G. A., Assistant Magistrate, presented with Rs. 1000.
GRIMES, Mr. G. D., to officiate as Extra Assistant Superintendent of Port Blair and the Nicobars.
HOBDAY, Lieutenant J. R., *Topographical Sur[illegible]*, to be an Assistant Commissioner, 3rd grade.
MACAULAY, Mr. C. P. L., officiating Deputy Collector of Customs, presented with Rs. 1000.
PURSER, Mr. W. E., extension of furlough for three months.
PERCY, Mr., M. officiating Postmaster, furlough for six months.
WATSON, Mr. G. E., extension of furlough from 15th October to 1st November 1875.
WALL, Surgeon R. M., of the Bombay Medical Establishment, appointed Civil Surgeon at Bushire.

PUBLIC WORKS DEPARTMENT.

GRAINGER, Mr. J. N., General Superintendent, Public Works Stores, three months leave.
MANSFIELD, Mr. E. M., to officiate as Executive Engineer of the Second Calcutta Division.

BENGAL.

BUCKLAND, Mr. C. E., to act as a Joint Magistrate and Deputy Collector of the 1st grade.
BRADBURY, Mr. E. A., Manager of the Cooch Behar Zemindaries in Rungpore and Julpigoree, to act as a Joint Magistrate and Deputy Collector of the 1st grade in Purneah.
BAYLEY, Mr. S. C., Commissioner of the Patna division, furlough for fourteen months.
BOLST, Mr. A. E. C., Assistant Superintendent of Police, Chittagong Hill Tracts, leave for three months.
BUTLER, Captain E. J., leave for three months.
CAMPBELL, Mr. H. F., promoted to the fourth grade of Sub-Deputy Opium Agents.
CAMPBELL, Mr. H. F., Sub-Deputy Opium Agent, Goruckpore, transferred to Futtehpore.
CUMBERLAND, Mr. A. H., appointed to the third grade of Assistant Sub-Opium Agents.
CHARLES, Surgeon-Major T. E., leave for three months.
DRUMMOND, Mr. H. F., promoted to the first grade of Assistant Sub-Deputy Opium Agents.
DULEELUDDIN, Moulvie, Deputy Magistrate, Patna, leave for two months.
FRITH, *Lieutenant J. S., to be Aide-de-Camp on the Personal Staff of the Lieutenant-Governor.*
FRENCH, Surgeon-Major J. G., to be Health Officer for the Port of Calcutta.
GUISE, Mr. R. F., officiating Assistant Superintendent of Police, Backergunge, transferred to Rungpore.
GAYER, Surgeon-Major E. J., Civil Surgeon of Mozufferpore, to act as Civil Surgeon of Dacca.
HARDING, Mr. F. H., to have charge of the Jungypore division of Moorshedabad.
HARRIS, Mr. G. L. T., officiating Additional Judge of Backergunge and Jessore, to act temporarily as Additional Judge of Rungpore and Dinagepore.
HOBSON, Mr. G. D., promoted to the second grade of Assistant Sub-Deputy Opium Agents.
LIVESAY, Mr. J. J., Joint Magistrate and Deputy Collector, Purneah, to act as Magistrate and Collector of Fureedpore.

MITTER, Baboo I. C., Deputy Magistrate, transferred to the sudder station of the Baraset district.
MANSON, Mr. A., Deputy Collector, Tipperah, transferred temporarily to Dacca.
MOSLEY, Mr. H., re-appointed to act in the second grade of Magistrates and Collectors.
NATH, Baboo S. C., Deputy Magistrate, Cuttack, leave for two months.
OSBORNE, Mr. H., promoted to the third grade of Sub-Deputy Opium Agents.
PETERSON, Mr. F. W. V., re-appointed to act in the second grade of Magistrates and Collectors.
ROY, Surgeon G. C., Burdwan, to act as Superintendent of Prison Camp at Dehree and Medical Officer of the Civil Station.
SAYCE, Mr. H. D., promoted to the fifth grade of Sub-Deputy Opium Agents.
SAYCE, Mr. J. D., Sub-Deputy Opium Agent, posted to Goruckpore.
SMITH, Surgeon-Major D. B., officiating Civil Surgeon of Dacca, to act as Professor of Midwifery, Medical College, and Superintendent-General of Vaccination.
TUTE, Mr. A. C., to have charge of the Baraset division of the 24-Pergunnahs district.
WINTLE, Mr. C. F., Sub-Deputy Opium Agent, Futtehpore, transferred to Bettiah.

MADRAS.

BLAXLAND, Captain J. S., to act as Special Assistant to the Agent to the Governor of Fort St. George, Vizagapatam.
CURRIE, Mr. G., Deputy Coroner of Madras, to act as Coroner.
JOHNSON, Mr. E. C., Special Assistant to the Agent to the Governor of Fort St. George, Vizagapatam, two years' furlough to Europe.
KIDD, Rev. J. T. D., Chaplain of Trinity Church, Bangalore, leave for one year, seven months and twelve days.
LEFANU, Mr. W. J. H., Acting Head Assistant to the Collector of Salem, leave for one month.
PLUMER, Mr. C. G., to be District and Sessions Judge of North Arcot.
RAU, Baboo C. N., to act as Assistant Professor of English and Mathematics in the Presidency College.
STANBROUGH, Mr. H., Coroner of Madras, leave for one month.
SASHIENGAR, Mr. D., Professor of Vernacular Literature in the Presidency College, leave for two months.
SULLIVAN, Mr. J. F., to act as Assistant Superintendent of Police Malabar.
SINCLAIR, Mr. D. Secretary, Church of Scotland, to be a Fellow of the Madras University.

NORTH-WESTERN PROVINCES.

LEEDS, Mr. R. J., Joint Magistrate, 1st grade, to officiate as Magistrate and Collector, Agra.
ROBERTS, Mr. C. H., Extra Assistant Commissioner, Lulleetpore, to be a Magistrate of the 1st class.
SPEDDING, Mr. R. D., Joint Magistrate, 1st grade, to officiate as Magistrate and Collector, Goruckpore.

OUDH.

BENNETT, Mr. W. C., officiating Settlement Officer, Gonda, three months leave.
GIBBON, Mr. R. F., Assistant Commissioner, Roy Bareilly, invested with the powers of a Magistrate of the 2nd class.
[illegible] Mr. R. District Superintendent of Police, Kheree, leave for one month and [illegible]

COMMERCE AND FINANCE.

FRIDAY NIGHT.

THERE is no new feature to report this week with reference to the money market. Money continues easy both at the Banks and in the open market, but there is no disposition anywhere to encourage speculation; although accommodation is cheap, it is not very readily obtainable.

The statement of the affairs of the Bank of Bengal closed up to the evening of the 27th instant, has been issued. The cash balances are shown as Rs. 4,37,44,724-3-5; Treasury balances amount to Rs. 5,18,33,516-13-6; Government securities account stands at Rs. 1,44,05,718-4-4; Bullion Rs. 7,147-10-3. The public demand upon the Bank does not show any important difference in a comparison of these figures with those of the statement dated 30th June, but the Cash balance is reduced to the extent of about 12 lakhs. The accounts of the new Bank of Bombay, closed up to the 24th July, evidence an increase of Rs. 4,47,602 in the Cash balance in the Bank, and Treasury balances have also increased about Rs. 6,55,000. The general items of the account show no very material difference from those of the statement for the previous week.

Exchange on London has been steady; a certain amount of business was done for the last mail at 1-9 5/16 for six months' bills, but 1-9⅞ has been the quotation chiefly given. Rates close at much the same as last week, *viz*:—

Bank Bills' six months' sight...	...	1-9⅞	*a*	
Ditto three ditto do. ...	...	1-9⅝	*a*	
Ditto Demand... ...	...	1-9 5/16	*a*	1-9⅜

and the market is steady.

Government paper has shown some *little fluctuation*, and rates are *slightly lower than last* week. On Thursday, 4 per cents were sold at Rs. 102; a slight advance has since occurred, and the following are closing rates: 4 per cents Rs. 102-2 to 102-4, 4½ per cent, 1872, Rs. 103-2 to 103-4, 5½ per cents Rs. 109-2. The business in the two latter descriptions has not been considerable.

In Bombay exchange on London is reported quiet, the demand rate is quoted at 1-9½, and six months' bills at 1-9 15/16. Government paper is also inactive. Fours are quoted at Rs. 102-6, other descriptions are at nominal rates. Telegrams from London dated 24th July, report Enfaced 4 per cent paper at 91¾; Consols for account 94⅜. A later telegram, dated 29th, states that the rate of discount then ruling was 2½ per cent.

With regard to the share market we have only to repeat our former remarks; the depression still continues, and immediate prospects do not appear to have improved. The dealings have been restricted in most instances, to small transactions, and the number of them has not increased. Bank of Bengal scrip has advanced to Rs. 1417½, National Banks Rs. 114 cash, Rs. 117 for one month, Bowreah Cotton Mills Rs. 86, Bengal Coal's Rs. 1,385, Budge-Budge Jute's Rs. 70, Barnagore's Rs. 97, Seebpore's Rs. 77, Oriental's Rs. 77, Fort Gloster's Rs. 78 for 2 months, Howrah's at Rs. 19 cash. There has been considerably more enquiry for Jute stocks, and it is anticipated that the recent disasters to grain crops in Europe will cause a demand for both Jute and Jute bags. In Tea shares there has been a steady business, Bishnath Contributory shares are now at Rs. 106, and Singels have been done at Rs. 104, but showed a slight recovery yesterday; the advance has been checked, however, by a report that cholera has broken out among the coolies employed on the plantations. East India's keep steady at Rs. 85, and transactions are recorded almost daily. Central Cachar's are Rs. 153, Lukhimpore's Rs. 129, Durrung's Rs. 76, Eastern Cachar's, new shares, at Rs. 35 premium.

Freights have again improved, and there have been heavy engagements for Seeds and Grain at enhanced rates, both *viâ* the Canal and the Cape. There is but a small amount of unfixed tonnage now in the port, and the Jute season being so near, rates are likely to advance considerably.

Our last week's report concerning Indigo, may be reiterated. In Tirhoot and the North-West prospects are good, but in Lower Bengal they are still unfavourable. The July sales concluded in London on the 21st instant with 6,400 chests sold. There is but little doing in Bengal Cotton for Europe. The reports from Liverpool are slightly more encouraging, but business in this market shows no improvement. Rice has been in demand for Europe, but no important business has been reported. In Seeds the market continues strong, and a steady business has been done for Europe. Jute is still quiet, except with regard to the new crop, in which some considerable transactions have taken place for forward delivery.

LATEST TELEGRAPHIC NEWS.

26TH JULY.

London, 23rd July.

IN the House of Commons last night, Sir G. S. Jenkinson put a question to Government relative to the recommendations of the Select Committee appointed to consider the Euphrates Valley Railway project. Mr. Disraeli, in reply, said he would rejoice if it could be accomplished, but that Government must hesitate before guaranteeing the expenditure of probably ten millions sterling. He believed, however, that such a line would never pay, except for the traffic that would arise from the passage of troops and summer tourists over it.

Mr. Hardy, replying to a question, said that the term of the service of Cavalry in India would soon be reduced to ten years, [illegible] would be reckoned.

Lord George Hamilton, answering an enquiry, said he preferred not to communicate the despatch embodying the recommendations of Indian officers for compensation to the Committee, till a reply from the Viceroy had been received, which, if favorable, the recommendations would be immediately carried out.

With reference to the Burmah question, Lord George Hamilton, in reply to Mr. Richards, said that negotiations with the Court at Mandalay were not yet concluded, but that he still hoped that an amicable settlement of the only remaining difference with Burmah would be arrived at.

The Russian Reconnoitring Expedition to Turkestan has received homage from the Teking and Merv tribes.

London, 23rd July.

THE House of Commons this afternoon was a scene of unparalleled excitement, in consequence of Mr. Disraeli having withdrawn Mr. Plimsoll's Merchant Shipping Bill. Mr. Plimsoll vehemently urged Mr. Disraeli not to consign thousands to death by the withdrawal of the Bill. Alluding to ship-owners in Parliament, Mr. Plimsoll said he was determined to unmask the villains who were sending sailors to certain death. On being requested to retract this statement he refused, and presented a protest against the proceedings, and immediately afterwards left the House. Mr. Disraeli then moved that the Speaker should reprimand Mr. Plimsoll, and the House finally agreed to afford him an opportunity of apologising, by requiring him to attend on the 29th instant.

St. Petersburg, 24th July.

THE Telegraphic Conference has adopted the word rate system for India, the maximum number of letters allowed per word being ten.

London, 24th July.

Messrs. Alexander and William Collie have been liberated on bail.

The following promotions have been gazetted in the Royal Artillery: Lieutenant-Colonel F. M. M. Ommaney to be Colonel; Majors C. B. Lemesurier, J. A. Price, A. H. King, and R. R. Jones to be Lieutenant-Colonels; Captains G. B. B. Hobart, William Strahan, and H. J. F. Shea to be Majors.

Brevet appointments: Colonels G.H. Vesey and J. G. Boothby to be Major-Generals; Lieutenant-Colonel W. J. Bradford to be Colonel.

Obituary—General Sir Thomas Holloway.

Paris, 24th July.

THE National Assembly adjourns from the 4th proximo to the 4th November. The proposal for a dissolution has been rejected.

28TH.

London, 27th July.

SEVERAL meetings have been held in London, expressing sympathy with Mr. Plimsoll, and denouncing the recent withdrawal of his Merchant Shipping Bill.

The ship *Stuart Hahnemann*, homeward bound from Bombay, capsized and sank on the 14th April. Nine of the crew were saved and 37 lost.

The following reliefs embark for India this year: 14th Hussars; 21st Brigade Royal Artillery; 2nd Battalion, 16th Regiment; 1st Battalion, 25th Regiment; and 33rd and 34th Regiments.

29TH.

London, 27th July.

THE Turkish forces have attacked the insurgents in Herzegovina, and two days' sanguinary but indecisive fighting have ensued.

The Alphonsist troops are besieging the town of Urgel. Operations elsewhere are at present suspended.

The heavy rains in the West and other parts of England have ceased, and the weather is now fine.

London, 28th July.

THE Government this evening will introduce a temporary but thorough-going measure replacing Mr. Plimsoll's Merchant Shipping Bill which was withdrawn. This concession is considered due to the pressure of public opinion.

A lock-out has taken place at Oldham in nearly all the mills.

London, 28th July.

THE firm of Duncan, Sherman & Co., New York, has failed. Liabilities about five million dollars.

London, 29th July.

IN the Commons last night, the new Merchant Shipping Bill was read for the first time. This Bill purposes for one year enlarging the powers of the Board of Trade to stop unseaworthy ships from going to sea. The Government have promised to introduce a complete measure next session.

Obituary—Bishop Thirlwall.

30TH.

London, 29th July.

A TRUE bill of misdemeanour has been found against Colonel Baker.

SHIPPING.

ARRIVALS.

July 19th—Str. Meinam from Galle *viâ* Madras Coast, Str. Sir John Lawrence from Kyouk Phyoo, &c., Str. Ethiopia, from Straits, Moulmein, and Rangoon. 21st—Str. Chancellor from Liverpool *viâ* Suez Canal, Turkestan from London. 22nd—Str. Sultan from London *viâ* Suez Canal, Scythia from Madras, Duncairn from Liverpool, Star of Erin from Belfast, Cauldise from Pondicherry. 23rd—Str. Abyssinia from Bombay *via* Coasts, Str. Pekin from Southampton *viâ* Suez Canal, Night Hawk from Madras, Ganges from Marseilles. 25th—Str. City of Venice from Liverpool *via* Suez Canal, Olive Branch from Bombay.

DEPARTURES.

July 20th—Str. Thales for Straits and Hong-Kong, Str. Hindostan for Straits and Hong-Kong. 21st—Str. Malda for Bombay *viâ* Coasts. 22nd—Marchioness of Londonderry for Mauritius, Str. City of Carthage for London *viâ* Suez Canal. 23rd—Milford for Continent. 24th—Str. Sir John Lawrence for Chittagong, Str. Mecca, for Rangoon, Moulmein and Straits.

LIST OF PASSENGERS.

ARRIVALS.

THE P. & O. Co's S.S. *Peshawur*, Commander C. S. White, arrived at Bombay on Tuesday week last with the following passengers:—

FROM SOUTHAMPTON—Colonel C. Pollard, Major F. W. Ward, Dr. Beatson, Mr. A. M. Ker, Mrs. C. Hawkins, Hon. L. C. Innes, Captain Mackenzie, Mr. A. Campbell, Captain Smalley, Captain J. McK. Hartigan, Mr. W. Bell, Mrs. Blodwell-child and infant, Mr. J. Cluton, Miss Buck, Rev. Dr. Cummin's ayah, and Com, mander F. Clayton, R.N.

FROM VENICE—Mr. Rimington, Dr. H. Commins, Dr. Cooke, Mr. J. Rickie, two Misses Rickie, and Master Rickie.

FROM BRINDISI—Mr. H. Joll and Mr. C. T. Castle.

FROM ADEN—Captain and Mrs. Furlong and native male servant, Mrs. Tait and Govindjee (native deck).

DEPARTURES.

THE P. and O. Co's S.S. *Delhi*, Captain G. Lee, sailed from Bombay on Friday week last with the following passengers:—

FOR SOUTHAMPTON—The Rev. J. Taylor, Mrs. Lamb and native female servant, Mr. J. M. Stewart, Mr. Nathl. Scott, Lieut. Pigou, Mr. H. James, and Lieut.-Colonel Clarke.

FOR BRINDISI—Mr. C. T. Buckland, Major Balmer, Captain J. B. B. Dickson, Mr. R. H. Renny, and Captain Drummond.

FOR VENICE—Mr. and Mrs. Allen, infant, and European female servant, and Mr. Mate.

FOR SUEZ—Mr. W. Chisholm.

FOR ADEN—Mr. Walsh, and native male servant, Sergeant Gallagher, Mrs. Gallagher, and native servant.

DEATH.

NAPIER.—On July 17th, at Simla, Alice Maud, youngest daughter of Lord Napier of Magdala—aged 7 months.

ADVERTISEMENTS.

NOTICE.

MR. CHARLES BRIGDEN, late of Messrs. Westfield and Co., hereby states that his connection with that Firm ceased on the 2nd July. Mr. Brigden will henceforth be associated with Mr. E. Nicholson; and for the ensuing three months will be engaged in completing up-country orders. At the end of that period he will open business under the title of "Brigden, Nicholson & Co.," in Calcutta.

No. 2107.] Calcutta: Saturday, July 31, 1875. [Vol. XLI.

SUPERSESSION.

THE grievances of Indian officers are as old as the Amalgamation; and there was a time, not many years ago, when all India was agitated from Lahore to Quilon on a topic that became slightly wearisome to non-military residents of cantonments. The grievances complained of were so clear, and at the same time galling, that it appears strange to us now, that the Government of India did not admit their hardship at once; however, as we all know to-day, the State thought proper to ignore or neglect the representations of its military officers on the subject, when the result was a most discreditable war between the Government and the officers, waged in Parliamentary battle-fields, with an amount of obstinacy on one side and bitterness on the other, that has left its traces in the absence of all *esprit de corps* at this moment from the Indian military service. The Government lost, at every point, a battle it should never have fought; and in the end the injudicious opening out off the Staff Corps to all who would enter it, with the extraordinary increment of field officers in the Indian Army, cost the State much more than the effectual redress of the grievances at the outset would have done. Recollecting this, and the economy of action in good time, we would draw attention to a matter in which the Indian military service, now and in the future, is most deeply interested, and which contains, in fact, almost a repetition of the carelessness or injustice which caused Indian Officers, some time since, to appeal in a body to Parliament for protection. This, in a word, is the supersession of Staff Corps officers by their juniors, the "locals." It will be remembered that supersession was one of the greatest grievances of Indian officers in the past, or, we should rather say, the fear of it, for the House of Commons fully admitted the justice of protection on this score, and it was caused to be understood that Indian officers should not be superseded by their juniors *under any of those alterations and changes of organisation* that the Government were necessitated—most injudiciously we think—to introduce into the Indian Army. Especially was the Staff Corps, in its original form, protected by Government's promises against the great evil of supersession. That Corps was to embrace "all the talents." Promotion therein was to be so rapid as to induce all Indian officers to aspire to its ranks, and, indeed, it was never contemplated that any officer, British or Indian, could rise so speedily in time of peace to the grade of Lieutenant-Colonel as the Staff Corps officers. The Staff Corps might, perhaps, have answered its original purpose —that of a *corps d'élite*—had it been permitted to retain its first formation, but Lord Salisbury's rash step of settling all Indian officers' grievances by jumbling them up together, and throwing them all into the Staff Corps, was a death-blow to its usefulness, and, from that moment, the Corps became the scandal and the misfortune, we may say, of the Indian service. However, and even then, if every Indian officer had elected to enter the Staff Corps in response to Lord Salisbury's invitation to do so, something might have been made of it; but unluckily for the Government and the Staff Corps together, a number of officers, distrustful of the State and its promises, declined to enter the Government's pet Corps, and have been rewarded in consequence by a rapidity of promotion that is the astonishment and the grievance of thousands of officers of the British and Indian services, superseded through its effects.

It is no light thing this supersession. The abolition of purchase in the British Army was mainly brought about through the scandal of this thing, and it is an extraordinary fact that, while the Imperial Government has been at the expense of millions to annihilate purchase and supersession together, the Indian Government winks at the enormity under its very nose. Local Lieutenant-Colonels of sixteen or seventeen years' service, are made to command Staff Corps Majors of five and twenty years' service, and all the good things, such as wing and regimental commands, that were to be specially reserved for Staff Corps officers, under the promises given with the formation of that institution, are snatched from them to be given to those local officers who from the very first contemned the State's wishes in the matter. Naturally, the discontent caused by the supersession of this kind is even now very great, but, such as it is, it will be enormously enhanced by-and-by, when more local officers are promoted to supersede Staff Corps and British officers, many years their seniors; and will create such bitterness and vexation of spirit in the service, as no time and no half-measures can eradicate. The only remedy for the evil is some such action as will secure Staff Corps officers from that supersession by their juniors, which is now as contrary to the spirit of our military service as is purchase itself; and the sooner the Government of India takes steps in the matter, the better the chance will be of averting new grievances and new blunders in the future; of which we have had enough already. It is sometimes said—of course this is the local officer's view of the matter—that the officers superseded have nothing to complain of. The local, in effect, says to the Staff Corps officer, "You were foolish to put faith in the promises of Government, and it was your own fault that you entered the Staff Corps. I was wiser, and trusted to the Parliamentary guarantee in Mr. Henley's clause, that the Government was helpless to 'improve' me, if I did not wish it, and the consequence is, that I am a Colonel while you are a Major. If every one went into the Staff Corps there would have been no such luck; but fortunately for us, you see there were only a few, comparatively, that were acute enough to see their interest in the State's blunders." But, it appears to us, that reasoning of this kind is no defence of a great injustice. If local regiments were provided for only local officers, and their supersession, if any, was all among themselves, we could recognise this argument as fair enough; but it is impossible to allow that a blunder on the part of the State, justifies a certain number of officers in the supersession of others; seeing that supersession is now—as it has always been—a thing abhorrent to the spirit, and, we believe, the guarantees of the Indian military service. For our own part, we think, the injustice done by this supersession so flagrant, that we believe Staff Corps officers would be justified in bringing the matter before Parliament as another grievance; nor do we think that the injustice would remain unredressed, were the House to be made acquainted with all the circumstances and hardships of the case. It is, we think, a cruel and grievous wrong that a Staff Corps officer who may have served four or five-and-twenty years in India, safe under Government guarantees from all supersession, should find himself at the end of this long period of service, superseded and commanded by a local Lieutenant-Colonel several years his junior, simply and solely because the State made a mistake in military organisation, and is too economical to redress it at its own expense. The cost falls, in fact, on the Staff Corps officer. His appointment is taken from him in order to give the highly-paid local officer employment, and he himself is commanded, very probably, by the man who was his subaltern, when he himself filled the rank of Captain! The general condition of the Native Army is, at present, so unsatisfactory that we cannot consider a grievance of this kind without some anxiety. Supersession and good discipline, we believe, to be incompatible in an Army unaccustomed to the griev-

ance here set forth, and we feel very well assured, that in countenancing a practice like this, the State is doing a more unwise thing than if it went to some present expense to abolish an evil and great injustice together.

HABEAS CORPUS.

FOR a long time it was a doubtful question whether the High Courts in India had the power of issuing writs of *Habeas Corpus*, and most of our readers will remember the time when the late Mr. Anstey came over from Bombay to Calcutta to argue the question in favour of an incarcerated Wahabee. The last Criminal Procedure Act, that of 1872, put an end to all doubts by enacting that neither the High Court nor any Judge of a High Court should have power to issue a writ of *Habeas Corpus*, Mainprise, *De Homine Replegiando*, nor any other writ of a like venerable and mysterious nature, beyond the presidency towns. The High Court of the North-Western Provinces, therefore, not having any Presidency town, is entirely debarred from rescuing any incarcerated Hindostanee from the hands of his oppressor by a writ of *Habeas Corpus*. This being the present state of the law, a case has lately come before that Court, which has given them the opportunity of making one of those startling decisions for which they are famous. Two men, Gholam Ismail and Meeran Buksh, were tried by the Judge of Allahabad, on a charge of murder, and acquitted. The Government appealed to the High Court against the conviction, and the Superintendent of Police, as soon as he heard that the appeal was filed, directed the apprehension of Gholam Ismail and Meeran Buksh, to guard against all risk of their not being forthcoming in the event of a new trial being ordered. The arrested persons were sent to the Magistrate, who, as he says himself, regarded them as in the position of persons against whom a reasonable suspicion existed of their having been concerned in a cognizable offence, and so liable to arrest. He accordingly committed them to jail, to be kept in custody, till the decision of the appeal. The prisoners thereupon applied to the Judge of the Sessions Court, praying him to refer the case to the High Court, under Section 296, Criminal Procedure Code, or to quash the Magistrate's order as illegal and *ultra vires*. The Judge decided that the Magistrate's order was illegal, sent the case to the High Court, under Section 296, and, pending the decision of that Court, admitted the petitioners to bail. The reference was heard by a Full Bench of four Judges. The officiating Chief Justice and Mr. Justice Pearson held, that the High Court had no power to interfere, as the Magistrate's and Judge's proceedings were not judicial proceedings. The other two Judges held the opposite view. The result of this ruling is, that if a Magistrate illegally imprisons a man by a proceeding, which he meant to be a judicial one, but which does not come within the definition of judicial proceedings in the Criminal Procedure Code, neither Sessions Judge nor High Court can interfere, and the victim of the illegality must remain in durance vile.

The case turned on the question of whether the proceeding of the Magistrate, committing Ismail and Meeran Buksh to jail till the decision of the appeal, was or was not a judicial proceeding. Such a proceeding is defined by the Code to mean, "any proceeding in the course of which evidence is, or may be taken, or in which any judgment, sentence, or final order is passed on recorded evidence." The officiating Chief Justice held, that the words "evidence is, or may be taken," must be understood as equivalent to "evidence is, or may be legally taken," and he also held that the Magistrate's proceeding in this case was not one in which he could legally take evidence. As, therefore, no order had been passed on recorded evidence, nor any evidence recorded, and as no proceeding had been held in the course of which evidence might be legally taken, he ruled that the proceeding in question was not a judicial proceeding within the meaning of the definition. From this he argued that the Court had no power to interfere under Section 297, as that section only gives the Court power to set aside illegalities and such material errors *in judicial proceedings*. As then the Court had no power to issue a writ of *Habeas Corpus*, the absurdly awkward result was this, that if a Magistrate committed such grossly material errors as to prevent the proceedings which he supposed to be judicial from being judicial within the definition of judicial proceeding, as construed by the officiating Chief Justice, the High Court must look on while he imprisoned, flogged, or did anything else he liked to the parties before him. Not being a legal journal, we cannot give a very authoritative opinion on the question of whether the High Court of the North-West is right or wrong in its construction of the law, nor can we enter into an elaborate criticism of the arguments of the learned Judges. We cannot, however, help thinking that the minority of the Court were right, and that they had power to cancel the order of the Magistrate, and direct the immediate release of the accused. As to the illegality of the order of the Magistrate, there can be no doubt whatever. The persons, whom he committed to custody, had only just been acquitted after a very careful trial by the Sessions Judge. The Police Superintendent chose to consider that he knew better than the Sessions Judge, and in the face of the acquittal he arrested the accused on suspicion of being concerned in the very crime of which they had just been acquitted. Under these circumstances the Magistrate was bound to refuse to commit the arrested parties to custody, and he should have at once ordered their release. But when the arrested persons were brought before the Magistrate, we think that the proceeding before that officer was a judicial proceeding. We cannot see why a Magistrate is debarred from legally taking evidence in a case wherein a person, illegally arrested by the police, is brought before him. Take this very case of Gholam Ismail and Meeran Buksh. Their arrest by the police was illegal, because they had already been acquitted of the crime, on suspicion of committing which they had been arrested. Suppose Mr. Robertson, the Magistrate, had known nothing about the previous trial and acquittal, and suppose that, when the accused were brought up by the police, counsel had appeared, and asked for their discharge, on the ground that the police had arrested them on suspicion of being concerned in a murder, and that they had already been tried and acquitted of that very murder. Will any one contend that under such circumstances the Magistrate could not legally take evidence as to the alleged previous acquittal? This is, we have said, a legal journal, but [illegible] cannot be the slightest doubt [illegible] persons arrested by the police are brought up before a Magistrate, with a view to obtaining from him a warrant of committal to jail, is a proceeding in which a Magistrate always may legally, and in some cases is bound, to take evidence. The mere fact that a Magistrate happens to know that the arrest by the police is illegal, cannot render it illegal for him to take evidence, in order that it may appear on the record that he was bound to discharge the prisoners. The arguments of Mr. Justice Spankie on this point seem unanswerable. It is to be regretted that his opinion did not prevail with the majority of the Court. Startling rulings like the one we have been considering are nearly always wrong, and when it is possible to construe the law so as to meet the justice of a case, it is a great mistake not to do so. Mr. Hobhouse will, we suppose, unless the High Court re-consider and correct their judgment, have to pass a little Bill to amend it for them. We certainly would not recommend his extending the power of issuing writs of *Habeas Corpus*.

THE DISTRICT OFFICER.

BENGAL.—II.

IN a late issue we tried to show the limited knowledge acquirable by Government, through its officers, of the actual condition of the cultivating classes. We said we should endeavour to point out how far this state of things might be remedied, and how far the resources at our command might be directed towards a better knowledge of this condition. We shall now try to show how, without any alteration in the powers at present vested in officers, this might be done; and, secondly, how an alteration of those powers might aid in the work. In the first place, it is, of course, well known, that each Bengal district is under the Collector-Magistrate, and one or more sub-divisional officers, as the case may be.

ESTABLISHED IN 1820.

C. LAZARUS AND CO.,

(Incorporated with Shearwood & Co.)

CABINET MAKERS, UPHOLSTERERS,

BILLIARD TABLE MANUFACTURERS,

BY APPOINTMENT

To His Excellency the Viceroy and the Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh,

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking-board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible, and annoyances and inconveniences are done away with, and the interest in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction that an Amateur can put it together in half-an-hour without the assistance of an Electrician. The Battery will last for months without being refilled, and when it needs to be renewed can be done at any time for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co. are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments every day. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificent and most varied Assortment of

PLATE GLASS MIRRORS,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

ever imported into the Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—an opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with *a visit than* by any description in a trade Advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturers' prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burmah, Persa, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured, and are the only ones appreciated in the places enumerated.

"THE FAMILY FRIENDS"

Is the name bestowed by the discerning and grateful Public on

DR. E. J. LAZARUS'S

DOMESTIC MEDICINES.

Parents, Guardians and persons residing in out districts, where medical aid was not available, or when circumstances prevented their calling in a physician, have used them for a number of years, and very many thousands of cases have been cured by their judicious use. They consist of

Infantile Fever Powder.

Of the greatest value for CHILDREN suffering from *Fever* in consequence either of *Cold, Derangement of the Bowels* or *Teething*, as also in various *Eruptions of the Skin, Thrust, Diarrhœa, Opthalmia*, &c. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Tonic Antiperiodic Pills.

Invaluable in *Ague, Intermittent Fevers of all kinds, Ague and Spleen;* and all those diseases that partake of a *Periodic character.* Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Spleen Pills.

Has cured thousands of cases of Enlarged Spleen—See full directions in Pamphlet. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Family Aperient Pills.

Mild, prompt, safe and uniform in their action. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Family Antibilious Pills.

More especially suited for acute diseases, such as *Continued Fever, Headaches from exposure, Bilious attacks,* &c. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Restringent Mixture.

A pleasant, safe, certain and effectual remedy for *Diarrhœa or Looseness of the Bowels*, certain form of *Dysentery, Incipient Cholera, Cholic, Griping Pains, Flatulency, Cramps in the Stomach,* &c. Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Cholera Drops.

Full directions given in the Pamphlet. Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Family Laxative.

A safe, certain and useful purgative; *may be taken alike by young or old.* Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Family Carminative.

Of the utmost value in attacks of *Cholic, Griping Pains, Wind in the Stomach, Diarrhœa*, and other disorders to which young children are subject. Rs. 2 per bottle.

☞ *Does not contain opium in any shape.* ☜

DR. E. J. LAZARUS'S

Balsamic Expectorant Drops.

Of the greatest benefit in *Coughs, Colds, Hooping Cough, Chronic Pleurisy, Hoarseness, Asthma, Pain in the Chest, Difficulty of Breathing, Bronchitis, &c.* Rs. 1-8 per bottle.

DR. E. J. LAZARUS'S

Family Hair Tonic.

Stands unrivalled for the production of ELEGANT (LUXURIANT) GLOSSY and BEAUTIFUL HAIR. Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Family Embrocation.

For *Sprains, Sore Throat, Stiffneck, Quinsey, Pain* or *Stiffness of the Joints, Chronic Rheumatism*, &c. &c. &c. Rs. 1-8 a bottle.

A Printed Pamphlet giving full instructions will be found wrapped round each bottle.

Prepared only by MESSRS. E. J. LAZARUS & Co. at the MEDICAL HALL, BENARES, from the original receipt of EDWARD JOHN LAZARUS, M.D., and sold by all Medicine Vendor

NEW BANK OF BOMBAY (LIMITED).

E. D. SASSOON, Esq.

FIFTEENTH REPORT.

The Directors have the pleasure to submit to the Proprietary the accounts of the Bank for the half-year ended 30th June last. They have been audited, and the Auditors' Report is annexed.

The Cotton crop proved to be a full average one, and the staple was in steady demand throughout the season. The Directors did not re-open the Dhollera and Wudwan Branches finding that there was little probability of their being able to work to a profit. The returns from the Branches in operation have been generally of a satisfactory character.

A few small failures have taken place in the bazaar. The Bank has made no bad debt during the six months.

The accounts show a net gain of Rs. 6,71,354-11-4, and, adding to this Rs. Rs. 1,14,890-14-8, the balance brought from the half-year ended 31st December last, there is a sum total of Rs. 7,86,245-10-0 for distribution.

In accordance with the Articles of Association, the Directors recommend the declaration of a dividend at the rate of ten per cent. per annum,

which will absorb	Rs.	5,00,000 0 0
The transfer to Reserved Fund	„	2,25,000 0 0
In reduction of cost of premises	„	20,000 0 0
To Bad and Doubtful Debt Account	„	10,000 0 0
Leaving a balance to be carried forward of	„	31,245 10 0
	Rs.	7,86,245 10 0

The Directors regret to repeat that they have not been favoured with any communication from the Government of India regarding the very important questions still at issue—*viz.*, the Bank's Charter of Incorporation, and the removal of the local agency of the Bank of Bengal.

Mr. H. R. Cormack resigned his seat at the Board on leaving India, and Mr. A. J. Macdonald has rejoined the Board by desire of the Directors, subject to the approval of the shareholders in terms of Clause 70 of the Articles of Association.

Mr. R. Valentine Reid and Mr. Dinshaw Manockjee Petit retire from office on this occasion, and are eligible for re-election.

The shareholders will have to elect Auditors for the ensuing year, and to fix their remuneration. The present Auditors being eligible, offer themselves for re-election.

By order of the Directors.
M. BALFOUR,
Secretary and Treasurer.

Bombay, 13th July, 1875.

AUDITORS' REPORT
For the Half-year ended 30th June, 1875.

Bombay, 13th July, 1875.

To M. BALFOUR, Esq.,
Secretary and Treasurer, New Bank of Bombay, Limited.

DEAR SIR,—We have to report that we have audited the Bank's Accounts for the half-year ending the 30th June, 1875.

The General Ledger, Stock Ledger, the Security Ledger, and the Branches' Ledger have been duly examined by us. The balances given in the Balance-Sheet agree with the Bank's Books and the returns made by the several Branches. We have counted the Cash and Currency Notes in the Bank's till in Bombay, and found them to agree with the figures given in the Balance-Sheet. The value of Government Securities and Specie belonging to the Bank is correctly stated.

The Securities deposited for safe custody, as also those in possession of the Bank against Loan and Cash Credits, we have carefully examined and have found them in order in comparing them with the Registers.

The Abstract of the Balance-Sheet and Profit and Loss Account are correct, as showing the true position of the Bank at the end of the year under report.

We are, Dear Sir, yours faithfully,

SAM. W. READ,
EDULJEE NUSSERWANJEE SETTNA, } Auditors.

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered.

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion on DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets*, from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

VOLKART BROTHERS,
Bombay, 1875. Agents, Rubattino Steam Navigation Company.

Eastern Bengal Railway Company.

Through service to Chuttuck, Sylhet, & Cachar.

The Steamer "*Queen of Seebpore*" and Flats, plying in conjunction with this Railway, will, until further notice, perform the service to Chuttuck, Sylhet, and Cachar every third week, instead of fortnightly as heretofore, commencing as from Sealdah on Saturday the 22nd May 1875.

Goods for despatch should be delivered at the Sealdah Terminus by 1 P.M. of the Thursday previous.

Full particulars as to the dates of departure, rates and fares, &c., may be obtained of the Enquiry Officer, Sealdah Terminus, or of the District Agent at Dacca and Naraingunge.

AGENT'S OFFICE, Sealdah Terminus, 10th May 1875. (Sd.) GEO. LOW CALDER, *Acting Agent.*

Eastern Bengal Railway.

NOTICE.

WEEKLY Communication by Railway and Steamer between Calcutta, Dacca and Naraingunge for Sylhet, Cachar, Tipperah and Eastern Districts.

This Company's Steamers leave Goalundo for Dacca and Naraingunge every Sunday morning, returning from Dacca and Naraingunge every Wednesday, reaching Goalundo on the Friday.

Passengers should leave Sealdah by the 7·30 A.M. or 8 P.M. Train on the Saturday preceding the departure of the Steamer, and goods for despatch should be delivered at the Sealdah Terminus before 3 P.M. on the Thursday previous.

Further particulars can be obtained on application to the Company's Enquiry Officer, Sealdah, or the Company's Local Agent at Dacca and Naraingunge.

E. B. RAILWAY, AGENT'S OFFICE, 17th November 1873. FRANKLIN PRESTAGE, *Agent.*

ASSURANCE COMPANIES.

STANDARD LIFE OFFICE.

THE DEATH CLAIMS paid by the STANDARD COMPANY, during the past nine years, have been upwards of £1,200 per business day.

THE FUNDS during the same period, after payment of Claims and Expenses of every kind, have increased from £2,600,000 in 1865 to £4,800,000 in 1874.

NEW ASSURANCES, to the amount of £1,000,000 Sterling, have been placed upon the Company's Books in each of the years since 1865—some of them years of doubt and anxiety in the Assurance World. This result, it is believed, has been maintained by no other Office in the United Kingdom, during the same period.

BONUS YEAR 1875.

The next division of Profits will take place at 15th November 1875.

ANNUAL REPORT 1875.

Copies of the Annual Report, containing the Balance Sheet, &c., may be obtained on application.

GEO. LUCAS KEMP,
Secretary, Calcutta Branch.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman of the Annual Meeting 7th August,* 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY,
CALCUTTA.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1834.

Head Office, 1, King William Street, London.

Insurances effected with or without participation in Profits.

Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, ESQ., East Indian Railway Co.
WILLIAM THOMAS BERNERS, ESQ., of Messrs. Ashburner & Co.
GEORGE MILLER, ESQ., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, ESQ., Barrister-at-Law.
JOHN MATHESON LYALL, ESQ., of Messrs. Lyall, Rennie & Co.

Assurers under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest, that on a business where *stability* is the first necessity, an *undeviating* rule which limits the *distribution of all profits to the existing* condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed,* whilst the Assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past twelve years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of *50 per cent. of their yearly Premium,* the sum allotted for Bonuses this year being *£37,030.*

ALL BILIOUS COMPLAINTS and every disorder depending on either functional derangement of the Liver or obstruction of the hepati or biliary Ducts, such as Indigestion, Jaundice, Heartburn, Dyspepsia, Pain in th Right Side and Shoulder, Blotches, Habitual Costiveness, Offensive Breath, Depres sion of Spirits, Oppression after Meals, Nervous and General Debility, Restlessnes Wasting, &c. &c., have their appropriate remedy in

Dr. E. J. LAZARUS'S
ESSENCE OF CHIRETTA.

That it is the only preparation that has a really *beneficial* influence on the Liv has already been proved, *beyond all doubt,* by the 97,500 cases in which it has be tried. It has already saved *thousands* of valuable lives (*see the numberless Te monials in the Pamphlet of Directions that is wrapped round each bottle*), and l enabled very many thousands more to continue their residence in India in the joyment of perfect health and comfort; hence it has, with all truth, been genera styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the Medical Hall, Bena from the original receipt of E. J. LAZARUS, M.D., and sold by all Medicine Vend at Rs. 4 each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof its value*—against whom the Public are warned. Please observe that every bot is capsuled, and bears on its labels the facsimile of our signature.

THE GRAND INDIAN ALTERATIVE TONIC.

DR. E. J. LAZARUS'S
ESSENCE OF HEMIDESMUS.

THIS preparation of the INDIAN SARSAPARILLA UNUNTAMUL is equal, if n superior to the more costly Jamaica or Honduras Sarsaparilla. INDIAN MEDICA AUTHORITIES, both European and Native, with one accord bear testimony to i valuable alterative tonic, diuretic and diaphoretic properties, pronouncing it most efficacious remedy in all those diseases arising from an *impure state of t blood,* and most strongly recommend it in SCROFULOUS COMPLAINTS, BOI PIMPLES and BLOTCHES of the SKIN, CONSTITUTIONAL DEBILITY, CACHEX especially of Children, CONSTITUTIONAL SYPHILIS, CHRONIC RHEUMATIS certain diseases of the Skin, &c. &c.

Prepared only by Messrs. E. J. Lazarus & Co., Medical Hall, Benares, from t original receipt of E. J. LAZARUS, M.D., and sold by Medicine Vendors at Rs. 2 per bottle.

NEW PLAN

BY THE

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATES, with 80 per cent Invested Solely for Policy Holders.

Example.

A, aged 30, wishes to Assure Rs. 1,000.

		With Profits.
Annual Premium at Indian Rate ...	Rs.	36 0 0
Annual Premium at English Rates ...	„	23 10 8
Difference ...	Rs.	12 5 4

The "ORIENTAL" charges (*A*) the English Premium *of Rs. 23-10-8 only*. The Extra Premium for India, *Rs. 12-5-4*, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with *Compound* Interest at 3 per cent is equal to the sum assured, *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses, and Forms of Proposal can be obtained from any of the Agents, or from

D. McLAUCHLAN SLATER,
Fellow of the Institute of Actuaries,
Manager and Actuary.

9, ELPHINSTONE CIRCLE, BOMBAY.

FRAMED PICTURES.

CASH PRICES.

LARGE COLORED PHOTOGRAPHS.

Reproductions of some of the best works of popular modern Painters, carefully colored by hand in exact imitation of the originals. They are mounted on Card-board under sunk mounts, and are framed in neat, plain, gilt moulding. The measurements given are for the actual size of the Pictures.

NOT RECONCILED YET—Size 19¼ by 14 inches. In handsome Frame, 31 by 24 inches. Rs. 64.

A Lover's quarrel has taken place, and the couple are parting with offended yet wistful looks.

FRANZ BIDDING FAREWELL TO THE BISHOP OF BAMBURGH —Size 10 by 13¾ inches. In handsome Frame, 22½ by 18 inches. Rs. 34.

The Page is kissing the hand which the stern Prelate extends to him, while some lovely women look on, by no means indifferent, at the departure of the handsome youth.

THE EMPEROR CHARLES V. AT TITIAN'S STUDIO—After BECKER—Size 11 by 13¾ inches. In handsome Frame, 22½ by 18 inches.

Charles V. is sitting for his portrait, and the Painter having dropped his brush, the Emperor is picking it up, greatly to the dismay of his Courtiers.

THE FIRESIDE—Size 14 by 10½ inches. In handsome Frame, 22½ by 18 inches. Rs. 34.

A picture of domestic happiness. In a luxurious apartment, by the fireside, are seated a Husband and his beautiful Wife. She is reading to him as he takes his ease while smoking his pipe. To the right a kettle is suggestive of a cosy tea bye-and-bye.

THE MORNING GREETING—Size 13 by 10½. In handsome Frame, 22½ by 18 inches. Rs. 34.

A bright, happy Maiden, with fresh sunny morning face, is opening wide the casement to greet the opening day.

EDGE OF THE WOOD—A study from Nature, by H. P. Robinson, size 11 by 15¼ inches. In handsome Frame, 27 by 20 inches. Rs. 40.

A beautiful view of Forest scenery.

SOUTHBOROUGH WOOD, KENT.—A study from Nature, by H. P. ROBINSON, size 11 by 15¼ inches. In handsome Frame, 27 by 21 inches. Rs. 40.

A companion Picture to preceding, showing the rich and varied coloring of the Woods in Autumn.

MARE AND FOAL—After J. STURGESS, 14½ by 10 inches. In handsome Frame, size 19 by 17 inches. Rs. 26.

A beautiful chesnut Mare with her Foal drinking at a Pond. A Field and Farmhouse in the distance.

CHROMO-LITHOGRAPHS.

Being *fac-similes* of the following popular works of great English Artists. They are handsomely mounted on cardboard, and are framed in richly gilt mouldings of various designs and dimensions. The measurements given are for the actual size of the pictures :—

IN MEMORIAM—MISS EDWARDS, size 24 by 15 inches (upright). In very handsome Frame, size 38 by 30 inches. Rs. 45.

An Ivy-twined Cherry Tree occupies the foreground of this Picture. Close to it is standing a beautiful Girl, who pensively kisses the intertwined hearts carved upon the Tree in days of yore by her lost love.

GRACE DARLING—T. BROOKS, size 18 by 12¼ inches. In neat Frame 28 by 23 inches. Rs. 24.

Represents the heroic Girl speeding across the angry Sea on her errand of mercy.

THE PRIDE OF THE RIVER—T. BROOKS, size 18 by 12¼ inches In neat Frame, 28 by 23 inches. Rs. 24.

A companion Picture to the preceding, representing a beautiful Girl rowing past the Ferry and flower-laden banks of the River.

THE BOAR HUNT—ROSA BONHEUR, size 21 by 13½ inches. In handsome Frame, 30 by 23 inches. Rs. 25.

The end of the struggle. After a gallant fight old Tusker has been overcome, and the victors are rejoicing over his prostrate body.

SAVED.—T. BROOKS, size 20¼ by 13¼ inches. In handsome Frame 30 by 23 inches. Rs. 25.

A shipwrecked Mariner has been cast upon a Rock. The angry waves are raging around him, but in the distance a Boat is seen coming to his rescue.

THE FIRST LESSON—ARMFIELD, size 18 by 12¾ inches. In handsome Frame, 28 by 23 inches. Rs. 20.

A smart little Terrier has just caught a Rat, and her three Puppies are watching the proceedings with great interest, evidently taking notes with a view to distinguish themselves in like manner at no distant date.

FULL PRACTICE.—ARMFIELD, size 18 by 12¾ inches. In handsome Frame, 28 by 23 inches. Rs. 20.

A companion Picture to the preceding. An exciting Rat hunt in the Stable. Six Terriers are keeping up the chase with great animation.

STARTLED DEER—J. S. NOBLE, size 14 by 10 inches. In neat Frame 24 by 19 inches. Rs. 16.

THE RIDE ON THE PONY—BIRKET FOSTER, size 24 by 14 inches In very handsome Frame, 38 by 27 inches. Rs. 45.

The scene is a Meadow by the river side, where flocks of Sheep are reposing pleasantly environed by Trees. A little Child is being placed on the Pony's back, and a group of her playmates are looking on enjoying the fun.

MARGATE—J. WEBB, size 25 by 16¾ inches. In very neat Frame, 38 by 30 inches. Rs. 32.

Registered No. 19.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2108.] Calcutta: Saturday, August 7, 1875. [Vol. XLI.

TENANT RIGHT IN BENGAL.

SIR RICHARD TEMPLE has on several occasions declared that tenant right is growing in Bengal, and not in the vague sense in which we say that all rights are better guarded now than they were of old, but in the plain and tangible form of an increase in the proportion of cultivators who belong to the privileged class of occupancy ryots. As an instance of the kind of language to which we refer, we quote the following sentence from Sir Richard's minute on the Agrarian Disturbance Bill. "The really serious disputes arise between the zemindars and the ryots having the right of occupancy—mainly men who have been twelve years and upwards in possession, a class who are constantly growing in numbers, and representing larger and larger proportions of the aggregate of the ryots, and who probably are at present the most important section of the ryots."

This view, like most of those taken by the present Government, would be pleasant if it were only correct. Sir Richard Temple's despatches are seldom of a gloomy character. Whatever their subject, and whatever their object, "the scent of the roses will cling to them still." Nothing would please us more than to discover that the class of occupancy ryots is being largely recruited from that of the pariahs. For the latter have been altogether neglected by our laws, and at present do not possess tenant right in any form. They may be evicted without notice, and without compensation for improvements made by them, or even for the crops on their farms, whenever it is the interest or the caprice of the landlord to seize their holdings. On the other hand, occupancy ryots have a tenure which, in theory at least, is nearly perfect. Their title is not so good as to enable them to ruin themselves by sub-letting, dividing, or mortgaging; and yet it is strong enough to protect them in the enjoyment of their farms for ever, providing also for the landlord's interest, by giving him a claim to a reasonable increase of rent as the country advances, and land becomes more valuable. As long as we refuse to take any care for the pariahs we must be glad to see their numbers diminishing, by the elevation of their best men to the rank of occupancy ryots. Such a result is desirable for political and agricultural reasons, as well as in the interest of the tenants themselves. For we cannot expect that, in a country where all ryots are taught by tradition to expect security of tenure, and where the landlords take no share in the work of improving the soil, any class will be contented, or the resources of the land held by it will be duly developed, as long as its members are liable to be capriciously ejected.

It is therefore to be regretted that Sir Richard Temple has not given any reasons for the conclusion at which he has arrived upon this subject. In examining its soundness we are therefore obliged, as Mr. Lowe says, to puzzle the matter out for ourselves. Fortunately for us this is no difficult task, as the law itself indicates the direction of the movement of ryots from class to class, and the few facts which bear on the matter are notorious. In the famous Act of 1859 it was declared that "every ryot who has cultivated or held land for a period of twelve years has a right of occupancy in the land so cultivated or held by him, whether it be held under pottah or not, so long as he pays the rent." Thus sixteen years ago every tenant whose holding had existed for twelve years was a member of the privileged body. The same law holds good now, and therefore when we say that the proportion of occupancy ryots has increased, we mean that there are more ryots who have been twelve years in possession than there were in 1859. Such would be the case if Bengal had been in 1859 inhabited by a Tartar horde, unable to remain quietly for twelve years in the same place, and if these barbarians had been since then induced to settle. But it is clear that there has been no alteration in the character of the people of such a kind as that. The ryots of Bengal were in 1859, as they are now, a body clinging to their lands and their homes with a tenacity unknown to European nations. The great majority of them were then, as now, the holders of tenures which had existed more than twelve years. It follows that there has been no increase in the proportion of occupancy ryots. But the rule we have quoted is, in the law, immediately followed by the following exception: "nothing contained in the last preceding section shall be held to effect the terms of any written contract, for the cultivation of land, entered into between a landholder and a ryot, when it contains any express stipulation contrary thereto." This introduces a new element into our calculation. The twelve-year tenants do not all belong to the occupancy class, but only such of them as have not contracted themselves out of their privileges. In comparing their numbers at any two periods we have to consider how many ryots had made such stipulations at each. The number of ryots who have remained in possession for twelve years is, as far as we know or can conjecture, a constant figure, not liable to change, for it depends on the character and customs of a people who do not easily depart from their old traditions. That of the "stipulators" is something new and variable, and upon it depends the proportion borne by the occupancy ryots to the whole body of cultivators. Now in 1859 there were no ryots who had made "a stipulation directly contrary to" Section VI. of Act X. And that for the very good reason that the section had not previously existed. Men do not make a contract to renounce legal rights until those rights have been conferred. It was indeed at one time contended that a lease for a term of years was substantially such an agreement, it being understood that when a man took land for a certain period he covenanted to give up possession when that period had expired. And as there were some, though not many, ryots who in 1859 held under such leases, this view, if accepted, would have had the effect of creating a class of stipulators. But the High Court has ruled that such a lease is no bar to the growth of the right of occupancy, the stipulations not being, as the law says, express. And therefore we come to the conclusion that in 1859 no ryots came under this exception. On the other hand, it is certain that since 1859 contracts have been so framed as to prevent the acquisition of the privilege. There are therefore stipulators now. It follows that during the last sixteen years the proportion of the cultivators who enjoy occupancy rights has been diminishing, and not, as Sir Richard Temple declares, increasing. It is more difficult to answer the question, at what rate has the movement gone forward? Any man may tell how the wind blows, but few can measure its velocity. But this much we can confidently say, that the downward tendency has been more rapid than would at first sight be supposed. The rate of mortality among occupancy tenures is very high. Our great rivers are continually washing away old villages, and with them the rights of their inhabitants, and though they throw up new lands as regularly, these become the exclusive property of the zemindars. Ryots die, leaving no heirs to succeed them, and their interest in the soil lapses. They occasionaly leave their old farms to take to new occupations. In bad seasons they neglect to pay rent, and then fifteen days after a decree has been passed their tenures are forfeited. When land thus reverts to the landlord he may, if he pleases, take from the new ryot an agreement which will prevent him from ever acquiring the right of occu-

pancy. Sir Richard Temple advises landlords not to exact such deeds, and says that it is their interest to foster tenant right. But, as long as human nature remains what it is, landlords will always wish to keep their estates free from claims such as those of occupancy ryots. They do so in England and Ireland and in every civilized country. And this is a matter in which we can hope for no change.

> Rusticus expectat dum transeat omnis, at ille
> Labitur, atque labetur in omne volubilis aevum,

It is particularly foolish for the present Government to give such good advice, as it does not act on it. The Board of Revenue, which is under Sir Richard's orders, has resolved to make the ryots contract themselves out of their rights on wards' estates, when such was the custom of the deceased proprietor. If the Government itself cannot keep its hands off the ryots' tenures, how can we expect that private men will do so? At present the more educated and active zemindars make it a rule to take such agreements from all new tenants, and the more avaricious try to extort them from old ryots. The Registrar General's return of leases granted is the death-roll of the privileged tenures. It is already a long list, counting its ten of thousands, and it will increase yearly, as the ordinary zemindars learn to imitate their more advanced brethren. It must come to this, that no new tenures will grow up to take the place of those which fall before the scythe of time. In the end all occupancy rights over the whole of Bengal must inevitably perish.

We think that the failure of the present Government to perceive this fact is a great evil. The pilot cannot steer safely if he mistakes the direction of the current, and thinks it is carrying the ship on its course, while it is really taking it directly on to the reef. The whole of our policy in the landlord and tenant question is entirely warped by this delusion. We do not want to see the land tilled only by tenants-at-will, for we know that they will be rackrented and treated with harshness; that they will be poor and miserable and so discontented as to be at all times a source of political weakness, if not of danger, and so helpless as to form a burden in periods of scarcity greater than we can bear. If those in power clearly understood that this is what we are coming to, they would certainly provide the remedy. Nothing could be more easy, as we have only to adopt the principle of the last Irish Land Act, that all contracts purporting to deprive tenants of the privileges it confers are and must be held to be null and void in law and in equity. A course adopted by the Imperial Parliament could not be looked upon as extravagant or unjust. The real obstacle in the way of such legislation is sheer ignorance. We not only shut our eyes to the danger ahead, but permit ourselves to be deluded into the belief that we have left it behind, and are now going directly away from it. Sir Richard Temple's eyes might have been opened by a late petition from the zemindars of Dacca, asking him to enable them to get rid of the occupancy rights faster than they can at present manage to do, by declaring that such tenures shall be forfeited, not as now fifteen days after the date of an unsatisfied decree for rent, but at the moment that such a decree is passed. It is found that during the fifteen days' grace the ryot generally scrapes the rent together, if he has to borrow at a hundred per cent, and as the landlord's object is not to get his money, but to grasp the privilege, he thinks that the law should be changed. It is strange that any one should suppose that under landlords, who are animated by such a spirit, tenant right should be growing and increasing.

THE ZEMINDARS AND EDUCATION.

AT the Anniversary meeting of the Madras Hindoo Proprietary College, a short time ago, Mr. Carmichael, in his address to the students, drew a melancholy picture of the life of the average Madras zemindar as he is under our *Raj*: "Unacquainted with the sons of other families of a similar rank in the same district, they grow up in isolation, and spend their lives in demoralising pursuits, or if they happen to have a little energy left, in carrying on litigation with the neighbouring zemindars." At home, and in the wilder parts of Scotland, Wales, and Ireland, we may sometimes meet with families who live in much the same fashion as this; only that poverty, and not wealth, is usually at the bottom of the self-imposed seclusion. The father is poor and proud; the mother a household drudge, the children uneducated squireens, or petty Lairds, and the discomfort and discontent of the family arrangements are such as to strike every stranger with dismay. Nevertheless, the malcontents have a kind of bitter consolation for their poverty and misery, in a pride that never fails them, and with all their conceit and ignorance they are positively happy when quarrelling with some neighbouring Laird on a question of precedence, or when ventilating their grievances against Society and the Laws. The sons often take to evil courses and low company, and the daughters disappear in the great gulf of unprotected women; nor can any thing be pictured more hopeless or wretched than the whole struggle for existence displayed by such a family, too proud to dig, to beg ashamed. Such as the life is, however, it resembles the zemindar's in all but the poverty. The man, though wealthy, has even less education than the squireen, who may have picked up something in the way of knowledge at a hedge school. He is the tool of Brahmins and loose women, and with all the wealth at his command to lead the enviable life of an English nobleman or country gentleman, his existence is actually that of a sot in a pigsty. In old times, there were wars and feuds to stir his sluggish blood, and let it run. Zemindar fought zemindar with spear and sword instead of with the lawyers' pen, and there were, of course, many roads open to Mogul favor and advancement when times were as turbulent as those of the Barons with us, and as in the wars that founded many of the noble families now gracing our Peerage. There was some scope for the zemindar's ambition when education counted for nothing and Indian Kings would have chopped off the heads of those who knew more than themselves; but this outlet has long been closed up for our Indian squires, and just now—as Mr. Carmichael truly says—they have no excitement but litigation. Lawyer, attorneys, pleaders, and vakils prey upon them, and dissipate their estates with the aid of the Brahmins. The zemindar, as the noblest man in the district, is the most ignorant of all, and the pariah—the out-caste, the wretch with whom to eat would be a degradation—may all the while be flaunting the learning acquired in our Government schools under his landlord's nose—a clod-hopper as it were, asserting his superiority in the face of a Duke of Somerset! And there is little or nothing in the way of amusement to distract our zemindar's attention from this sore vexation. According to Mr. Carmichael: "There are no social gatherings, no pleasures of the chase shared with one another; a stupid sticking for precedence and ceremony separates neighbours and kinsmen." What an existence—a country life without sport, occupation, education, or amusement, and diversified, in its horrible monotony, only by lawyers' bills and letters!

The Madras Government has long recognised the importance of education for those who are the great landed proprietors of that Presidency, and this Hindoo Proprietary School is an effort in that direction. It is found that when zemindars, making a compromise between ignorance and education, consent to take private tutors into their households, the result is too often that the pupil becomes the master. The young zemindars must go to school to do any good; but it is, of course out of the question—and even unreasonable from an English point of view—that the heir to a noble family, and to possibly great wealth, should be called upon to form one of a class composed of peasants' sons, or of those much beneath him in the social scale. The Madras Hindoo Proprietary College is an attempt to give the zemindar a local Eton or Harrow for his son's education, and we wish it all the success an Institution so excellent in design deserves from every friend of India. A school, such as this, is we hope but the stepping stone—so to speak—across the obstacles which divide Englishmen and Indians on the great question of higher education. For our own part, we consider that a man of the influence and position of an Indian zemindar can be only fitly educated in England, and away from the prejudices and superstitions of which no local school or college can be perfectly free; but we are not so hasty as to advise education of this sort in a hurry; it must

come with the many other good things we look for from a closer connection of English and Indian interests in the future.

In the mean time, local Etons must serve the zemindars' purposes in the way of education for their sons. It will be better for the latter to be taken away from the debasing influences of obsequious servants and toadies, if only to a school in which they may meet their fellows; and there can be no doubt that even such education as the Madras Presidency has now provided for her native noblemen has upon occasion turned out some admirable examples of what enlightenment can do for the upper classes. There is the Rajah of Vizianagram, for example, himself a great zemindar. His name is proverbial, not only in Madras, but all over India for liberality of thought and action; and he is as close an approach as possible to that standard to which it is desirable to elevate his order,—influential as it is in India. The present ignorance of the large landowners would alone account, in a great measure, for the asserted *unpopularity* of our rule here. Taking the above picture of a Madras zemindar's life from one year's end to another as correct, is it possible that either the man himself or his tenants can be in any way enamoured of a condition of things which is felt to be burdensome, though they may not be able to explain how or where the shoe pinches? There is no railer against the Government, the Laws, and all that is, and isn't, like the "bonnet laird" or the squireen we have quoted before; for his dissatisfaction springs from ignorance, and attributes to others the calamities he brings on himself. Let one of those idle, whisky-drinking young men get a fair chance in life, in the Army, a China merchant's office, or the like, and, with travel and some knowledge of the world, all his rough points are softened or disappear, and we soon have a loyal and useful subject of the State in the place of the young rebel. The effects of education in one part of the world cannot be very dissimilar from those in another; and we may fairly hope that when the landed proprietors of India come to obtain that knowledge of men and things that will enable them to improve, and take an interest in, their estates and tenants, we shall indirectly gain a hold upon the affections of the people which is said to be wanting now, even while we have their reverence.

ORTHOGRAPHY OF INDIAN PROPER NAMES.

OUR Allahabad contemporary has lately taken occasion to run a tilt against the system of spelling adopted by the Oudh Government, in a list of names of places in that province recently promulgated. "The *Pioneer*," we are told, "opposed the Hunterian system of transliteration until further controversy was useless;" and, for this reason, it arrogates to itself the greater right to insist upon absolute adherence to the system, now that it has approved of it. Our contemporary's censoriousness might be entitled to look for a little effect were it to purge its own columns of faults of this nature, as some proof of its qualifications as censor. "Physician, heal thyself!" In one single column of the same page of the *Pioneer*, in which the article we refer to occurs, we find the following abominations in orthography, among other lesser ones:—Rajkoomar, Thakoor, 'Takhut' (for 'Takhit,') 'Bhownugur,' 'Goojerat.' These examples are violations of every system, whether phonetic or purist. The shortest sound of '*u*' is rendered in the first two by '*oo*'; a 'u' is interpolated in the third in defiance of every rule and school; '*ow*' in the fourth is supposed to represent 'áo'; and the central '*e*' in the last is almost as bad as the '*u*' in 'Takhut.' If the *Pioneer* has accorded its adhesion to Dr. Hunter's system, why does it not adopt it, and write Rajkumár, Thákur, Takht, Bhaonagar, Gújrát.

But to return to our contemporary's criticism of the Oudh list. Fault is first found with the omission of the long accent on a final *i*. For this the *Pioneer* itself immediately and insensibly gives the plain and sufficient reason; "No syllable or word in Hindustani (we beg pardon, Hindoostanee) terminates with the short *i*; the vowel is always long." Exactly so; and, this being the case, why uselessly stick a long accent over it? The same reason no doubt dictated the omission of the unnecessary long accent over the vowels in the termination '*abad*.' In these matters Oudh has followed the sensible example of the Government of the *Pioneer's* own provinces. What, however, can we say for a paper which finds fault with the absence of the long '*a*' from the first syllable of Lalgunj (*sic*), and the second syllable of Nowabgunj (*sic*); and which dogmatically asserts that the '*u*' in the termination *pur* ought to be accentuated as long, the Hindustanee word being pronounced like the English word *pour?*" Imprimis, it is an impertinence for a writer to condemn non-adherence to a given system (which he has himself ceased to oppose), while in his very critique itself, he sets its rules at defiance. With what face can he point out another's omission, or supposed omission, in one syllable of a name, while he himself, when quoting it, makes a far worse error in every other syllable of the name? Why a '*u*' in 'gunj,' and whence an '*o*' in 'Nowab,' in the text of an upholder of Dr. Hunter? But the '*a*' in the first syllable of Lalganj is *not long*, though it is sometimes so written;—at any rate, it is at least quite as correct to take it to be the equivalent of the letter *ain*, as of long '*a*;' and the balance of educated native opinion is, we believe, in favor of the former. As to *pur*, the *Pioneer* is undoubtedly wrong. This termination to Indian (generally Hindi) names, is *never* written long, nor has it ever the sound of the English word '*pour*,' save in the mouths of careless or ignorant Europeans. Its '*u*' sound is that, or nearly that, of the '*u*' in the English word *put*, which the *Pioneer* says it is not. As for the incorrectly intruded '*e*' in Fatehpur, the Oudh list no doubt copied it from the North-West Provinces list, where it will be found flourishing alongside of several other errors; and into which it found its way, no doubt, from the same source which inserted it—equally unwarrantably—to the *Pioneer's* Goojerat. The writer in our contemporary is clearly more 'up' in "Alice in Wonderland," than in the orthography of Indian names, but he will doubtless improve with longer residence in the country.

BADMINTON.

OF all the popular out-of-door games introduced to India, that of Badminton appears to have taken the best hold upon the affections of Anglo-Indians. Every one plays it—*Qui hys*, Mulls and Ducks—with an ardour amusing in this land of tropical indolence and *ennui*, and at the present date to be unable to flourish a Badminton bat with a certain amount of execution is to confess one's self without the pale of fashionable social life. The extraordinary popularity of the game is, we think, mainly due to its resemblance to Raquets. It is a mild parody of the more manly recreation long institutional in this country, and it has the advantage of Raquets in this, that no court is required, nor is the game confined to the male sex. Ladies are enabled, by grace of Badminton, to wield the Raquet without peril to their bright eyes, and can mix with the other sex upon terms of athletic equality not noticeable in other of the out-of-door amusements we indulge in. Neither are the facilities the pastime affords for innocent flirtation or matrimonial business to be overlooked. At the trifling cost of a few yards of net, bats, and balls, the Indian *Materfamilias* is relieved from the charges of those costly seductions that in other days went by the names of *Burra Khanas* and Balls.

Badminton, by a pleasant social fiction, is supposed to adequately represent the heavy tolls the anxious mother owes to society, and a decanter or two of indifferent sherry, a dozen or so of sodawater, with a plate of wine biscuits, has come to be accepted as the festive offering of the Indian mother on the shrine of hospitality. It is no wonder that, under these circumstances, the Anglo-Indian matron discovers beatitude in Badminton. No more vexatious cooks to harass her mind and empty her purse together. No more labor of balls other than those appertaining to the game. The troubles of sit-down suppers have disappeared with the introduction of *alfresco* refreshments, and waxed floors are but an idle reminiscence in view of the few yards of grass or gravel that suffice for the purpose of Badminton players. The economical housewife escapes even lighting, and is indebted nothing to the afternoon sunshine that illuminates her court and her company. *Materfamilias*, we believe, entertains a really sincere admiration for the game which brings young people together at the very smallest possible expense, but it is doubtful whether the affection of that elderly generation her husband represents is quite so natural as it professes to be, seeing

that the amusement is a trifle laborious and apoplectic, and something very dissimilar to the quiet of the dessert and claret of a byegone era. Nevertheless, *Paterfamilias* does his duty stoutly by the new fashion. He strips to his shirt sleeves in the pursuit of pleasure, and with an antiquated gallantry worthy of the cause, stoops to pick up ladies' errant balls until the blood rushes to his brain and he can pick them up no longer. If this amiable father has daughters he will play till he drops. It is harder work, to be sure, than sipping a cool bottle of post-prandial wine in the same good cause of hymen, but needs must when some one drives, and that *some one*, we fancy, must be often credited by stout gentlemen with the incubation of the game of Badminton. But there is sincerity again in the passion of damsels for this play. What do these young things wot of Badminton sherry, or apoplectic tremors? Their maidenly souls soar above the item of refreshments, and in the dresses appropriate to the pastime they find a compensation for all the ills that flesh is heir to. The game affords delicious facilities for exhibiting costume. The very latest fashion in which the female form divine is but ill concealed by robes its beauties would disguise, has admirable justice done it in a recreation where action, not repose, is in the ascendant, and if the curious spectator had any doubts whatever about the English woman of the day being a mermaid or a monster, a single glance at a Badminton player in the fashion would disabuse his mind of any such preposterous idea. Lambs do not frisk more delightfully on the turf than do the young women of a Badminton tournament. Indeed, the scene has a pastoral character of its own, and if the old gentlemen present could be induced to play pandean pipes, and the young men to adorn their knees with bunches of pink ribbon, the looker-on might imagine himself in Arcadia, but for the bottles of sodawater cooling on the mango branches. It is Corydon and Phillis over again, engaged at shuttle cock; a toy typical of the innocence of the players here disporting themselves in the midst of a wicked and a weary world. Certainly the gentle shepherd may be, nay probably is, an astute officer in Her Majesty's Indian or British Army, or else a Civilian worth three hundred a year whatever befalls, and his fair partner, too, one given to many worldly vanities, yet Badminton is kind—pastoral as we have said—and hides away all earthly considerations in the enchantment of gazing upwards at the ball. Of course, there is a scale in Badminton as in other things. There is the grand entertainment of the Ruler of the Land, or of the Military Mess where the game is conducted on a gigantic scale, and the refreshments are in proportion, where exquisite moselle cup, and reviving ices abound, and military music adds materially to the pleasures of the scene. Here we have a garden party,—a species of entertainment that bids fair to oust its rivals from their time-honored positions in this very buccolic age—and where Badminton is played, if we may so express it, by wholesale. Half a hundred shuttlecocks are in the air together, and as many bats are deftly wielded by the players. The like number of Chaperones, keen of sight and beaked of nose, look on from garden chairs in a really pastoral manner, estimating perhaps the monetary value of the fleeces of the gambolling flock, and mentally separating the black sheep from the white ones. It is a gorgeous pageant, on the whole, and the modern worship of the divinity that presides over shepherds could not be more fitly conducted than in the groves we lay out for the diversion of Badminton. The greatest and the smallest are priests, more or less, of the craft. Governors, Commanders-in-Chief, Judges, and Bishops are not in their age above the pastime of their childhood, and when the skipping-rope and the game of marbles are added,—as they doubtless soon will be—to the many attractions of a garden party, we shall be able to admire even more than we do at present the apparent verdancy of the century we call our own.

There are lesser garden *fêtes* that could, perhaps, hardly flourish at all but for the aid afforded them by Badminton. Something more than sherry and sodawater is requisite in these times to drag youth from billiards or long-armed chairs to the conversation of the lassies. Aunt Sally won't do it, nor yet the antiquated charms of croquet. The shuttlecock, in its innocence, a warrant of no evil intentions, steps in to meet the requirements of the situation, and the homely expression of "pot luck" is made applicable to the outside compound. There is even a certain amount of cheerfulness dispensed gratis at the domestic garden party of the day, that was absent at a dinner accepted on luck, and despite the weevilly character of the refreshments at a modest "at home" of the Badminton class, one may be better employed there of an afternoon than in courting melancholy at the bandstand to the wailing strains of the overture to Zampa. As vigorous recreation, tending to develop muscular Christianity in the *blasseè* devotees of the goddess of society, it is impossible to speak too highly of Badminton; the only pity is that it is not *de rigueur* for every one to play, whereby the conversational criticism of lookers-on might be avoided. It is an amusement, in fact, almost as open to remark as the valse, and the only check upon the tongues of the idlers, that we know of, is the breathlessness induced by active participation in the amusement. Considering the present mania for the game, and the liveliness exhibited by all classes in its pursuit, it is difficult to prognosticate the unlimited future of Badminton; but we cannot overlook the influence it is now exercising upon all things, even unto politics in this country. Let the rage for the game extend a little further from Governors and men in authority, and we may expect before long to see fair Parsees in tournay with mild Hindoos, and the Moulvie and the Brahmin enjoying a garden *fête* together. The natives indeed countenance a species of Kaffer recreation in which neither bacon nor dancing are prominent features of the entertainment.

RESPONSIBLE WRITING.

IAGO has very aptly described the functions of a public journalist, if we read his description without the light of its surroundings.

"Gentle lady, do not put me to't. For I am nothing, if not critical." And this is what all public journalists are expected to be; they are nothing if not critical, but it is evident from Desdemona's question:

"What woulds't thou write of me if thou shoulds't praise me?"

that the worldly cynic applied criticism to one, and *not to* all, of the functions of a public critic. When the Republican Press of France complained of the absence of critical intelligence in the advocates of the second Empire, one of the ablest of the Imperialists made the well known remark that the censure of their adversary betrayed ignorance of the functions of a critic.

Criticism may be condemnatory, appreciative, or even laudatory, but to be worth the name it should be intelligent and conscientious. To be intelligent it must be the work of one who has mastered the subject; to be conscientious it must be written under a sense of responsibility. In England, the leading journals are not less remarkable for the ability than the sense of responsibility which characterizes their supporters. Whether a public journal represents political, social, monetary, or religious interest, it is bound to follow, and it does follow, the tradition *of its party. These traditions are generally* so well known that, given a subject of public importance at a certain time, an intelligent observer of public events may safely prophesy the view the *Times*, the *Globe*, or the *Standard* will take of the question. We are not discussing the intrinsic value of the opinion of the leading journals on the great questions of the day: we are simply illustrating the position that, right or wrong, our London contemporaries would discuss public questions under a due sense of responsibility as the guardians of public opinion. In India the case is somewhat different, and the difference is, certainly not to our credit. We do not lack ability. If the truth were known, some of the leading Indian journals are either conducted or supported by writers not unknown to literary fame in England. We have enough of independence to give our leading journals a weight in the Councils of our Government, but some of our contemporaries have unfortunately acquired a sort of independence which can hardly be distinguished from license, and which is not incompatible with the degradation of being free to obey high commands. No press in the world would be tolerated by the public, if the majority of its members were stamped with such *freedom*, and the Press in India, which has so much to be proud of, is not disgraced by a disreputable majority of "free lances." It is impossible, however, not to notice that in certain once respectable quarters the stream of pecuniary success has quite overridden all sense of self-respect and the consideration due to others. We do not refer here to the Vernacular Press, that subsidised incubus which will one day require penal legislation to eradicate it. Those who are "open" to a paying offer, or free to do what they, under the impulse of the moment, may consider right or wrong, seem to follow a standard of virtue quite their own. It is taken for granted that the Indian public, being to a very large extent an official public, are interested in official intelligence, and that official intelligence can only be acquired by a submission to the Official Will. Those who have any thing in common with the advocates of such a canon of our public duty will better appreciate than we can do, the advantages which its adoption may secure, but we feel certain that their number, if not their temporary influence, is insignificant.

We do not object to a Government Organ, if it is possible to have any such representation under the peculiar circumstances of the Indian Government; but what we decidedly regret is, that any respectable member of the Indian Press could be brought to such a state of *independence* that it would systematically renounce a sense of public responsibility in its discussion of public matters. When such a disease has swayed the editorial mind the symptoms are perfectly deplorable. Unscrupulous advocacy, constant trimming, unjust censure, undue praise, personal motives for every opinion, are maladies which nothing but death can destroy. For a Government advocate the difficulties in India are so peculiar that they are worth noticing. No Government would venture to offer a public retainer in the face of the vigilant Press, and the very smallest "sop" is so eagerly watched, and so vigorously denounced, that the relation between the client and his agent is one of invidious *confidence. The result is* remarkable, and those who have noticed the manner in which the Baroda Commission was discussed by one of our contemporaries, must have noticed it with regret if not with shame. We had now a bold onslaught on the enemy and then a feeble piece of equivocation, and as the light came directly at times and at long intervals we had a course of groping in the dark and vain prophecies, until it made one wonder if such a variety of public exhibitions could be the handiwork of one and the same man. In course of time we noticed a revival, and the old jaunty style was put on as if nothing had occurred. The "dignified silence" of a Government is one thing, and the silence of a public journal which has no revelation to make, is quite another thing. Hardly less discreditable is the steady persecution of an unpopular public man or a private enemy. The indecent haste to denounce one whom it is not considered fashionable to praise, has in a certain quarter acquired the proportions of a public scandal. The most outrageous canard which otherwise would have been put to the severest test of inquiry is taken down in the fever of personal pique, and while the object of this ill-guided energy is placarded for public amusement, the public itself has reason to wonder at the implied compliment of such conduct.

Neither exceptional means of acquiring news, nor great ability, nor the most thriftless profusion, will save the reputation of a public journal that is conducted without a due sense of its public responsibility. Whether a consciousness of this obligation will always lead to success, it is impossible to say; but that its absence will not be redeemed by success we do not doubt.

THE PAST AND THE PRESENT.

IT is often asserted that, in the old days of patriarchal government, the English rule was more popular with the natives than it now is, and that the adoption of the modern regular system has alienated from us their sympathies. The admirers of the old *regime* also affirm that the efficiency, as well as the popularity, of our Government has suffered by the change. In these opinions we cannot concur, for we are convinced that both the efficiency and the popularity of the old administration have been greatly exaggerated, and that, whatever may be the faults of our present system, it produces better work than that which it has superseded, and is no less popular. It is alleged, and with a certain degree of truth, that natives must be ruled by men not measures; and that an energetic, upright man, acting on his own judgment, and unfettered by law or regulation, is the ruler best fitted to administer justice and maintain order in this country. Undoubtedly, such men have sometimes won popularity and at the same time attained considerable success in administration, but the gain was always counterbalanced by much evil. "No man," says Mr. Elliott, in his Hoshungabad Settlement Report, "will "ever be so popular as Wassly Sahib (*i. e.* Colonel Ouseley 1823-39) "was, or fulfil so thoroughly the native idea of a hakim. He "lived among the people, entertained them in large parties, was a "guest at their festivals and shared in some of their ceremonies. "Justice was administered in a simple untechnical manner, and "even the jail prisoners obtained leave of absence for two or three "months together, and, being put on their honor, always came back. "But among all this friendliness and mutual good feeling and "sociability, there was a great deal of distress and suffering in the "district, and it was a time of retrogression or very slow progress. "This is partly attributable to the unfortunate over-assessment "and partly to the evil habit of interference which is the bane "of the patriarchal system."

This interference was prompted by the desire to protect the weak and poor against the strong and rich, and, in order to attain this end, *bunyas'* shops used to be opened by force, and seed grain seized for distribution; the price of grain both for seed and food, was fixed by authority; exportation was prohibited; capitalists were obliged to forego interest on loans, and so forth. Such conduct of course drove away capital and impoverished the country. It is recorded that, from the time when arbitrary government was exchanged for the administration of law, the district steadily increased in wealth until it became one of the most flourishing districts in India. The case of Hoshungabad shows that, in spite of the great evils attendant on it, the patriarchal system, when administered by a specially well-qualified man, might be very popular, at least with certain classes. From Mr. Shore's Notes on Indian affairs, a book published during the period of Colonel Ouseley's reign at Hoshungabad, we may learn how complete was the inefficiency of many of the Company's servants, and how deep was the hatred of the natives for our rule. Concerning the personal qualifications of the Civil Service in those days, Mr. Shore says that, "provided a man be "not an absolute idiot or notoriously corrupt, mere incapacity "to perform the duties expected from him in an efficient manner "forms no bar to his promotion. I do not mean to say that the "local Government makes no distinction between a stupid and "an able person; no doubt some distinction is occasionally shown. "The former may be twelve or fourteen years in attaining to the "office of a Collector or a Judge, while the latter may receive the "appointment in ten, but this is the whole."

There is still too much leniency shown to known incapables, for, even through the portals of competition, marvellously dull men occasionally effect an entrance, and, when once started, pursue, in undisturbed uselessness, the even tenor of their way. But an officer at all approaching in character Mr. Shore's "absolute idiot," is now a rarity, and there is good reason to think that corruption among European officials is still rarer. In Mr. Shore's time, a certain Collector who had embezzled two lakhs of rupees, the property of the State, though dismissed from the service, was welcomed by society and recognized as a leader in fashionable circles. Officers, too, are said to have shamelessly and without reproach boasted of the transactions by which they had "done John Company." There can be no doubt that, since that time, official morality and the tone of public opinion have both greatly improved, and that in these respects the present contrasts very favourably with the past. Some persons will grant that in the old days work used to be done in a rough and ready manner, and that great laxity prevailed in social and official morality, but will say that, in spite of these drawbacks, the personal rule of those days was more agreeable to the native than our modern system of law. Yet such an acute and sympathetic observer as Mr. Shore felt convinced that the natives entertained "a strong feeling of disaffection towards the British Government," and an equal "dislike to the English themselves as a nation." Much of this dislike and disaffection was then, as now, based on political grounds; but much of the hatred felt towards us is, and has always been, caused by the indiscreet arrogance of many of the ruling class. A large number of the political reforms which Mr. Shore advocated have been effected or initiated, and, in their dealings with Europeans, natives are probably better treated than they used to be; but still, as we learn from the native comments on the Baroda affair, the disaffection and dislike remain. Let us by all means, so far as possible, eradicate the abuses which give rational support to such feelings; but if we still fail to win the loyalty and affection of the people, let us console ourselves with the thought that we are at least no more unfortunate than were our *patriarchal* predecessors, who enjoyed as little as we do the confidence of their subjects.

GOETHE'S FAUST.

II.

LET us survey with rapid glance the outer man, the Faust whom the world knows, before we pry into the secret soul, the hidden Me, of Faust, known to himself and the Deity—and unfortunately, as it appears, to the devil. For, not to speak it irreverently as some of our poets have done, we are, by and by, to be spectators at a fearful game—a contest between the good and evil powers for possession of a man. Taking Faust as a typical being, this is a rather alarming view of our situation, which the poet puts before us, although it is far too correct a view to be quite original. Indeed, we are all pretty familiar with it, in one form or other, so much so, that it is in danger of ceasing to be able to startle us, and the language in which it is presented to us is generally either too euphemistic or too trite to be picturesque or startling; especially now-a-days that the Devil has been laughed out of existence, and so large a number of us seem prepared politely to bow the Deity

after him. Yet it is a fact and a grave one, phrase it how we will, that, for each individual among us, good and evil are hourly contending; and our general unconsciousness of it, as we strut along the boards of our penny theatre, with so much sweet self-satisfaction, is almost sublime—to the Devil, who thinks he is sure of us, perhaps it is ridiculous.

Let us observe Faust then, as the battle rages round him; and, perchance, as in a mirror, we may get a glimpse of ourselves. Take first as superficial a glance as possible. There he is, a grave, severe, and learned man of books, and scientific research, in his high-vaulted Gothic chamber—

> Shut in by heaps of books up-piled
> All worm-begnawed, and dust-besoiled,
> And to the ceiling from the ground,
> With old smoked papers hung around;
> All circled round with chemic glasses,
> Crammed full of instruments and cases.

That brow early o'er-furrowed by the tracks of godlike thought, that eye where contemplation sits, the whole air of the man, and all his surroundings, mark him out at once as one who has trodden the world, and its *vanitas vanitatum*, under his heel; who has chosen wisdom for his portion; whom we should deem it the highest privilege to know and look up to as "guide, philosopher, and friend." Still it is desirable to have the opinion of others about this man of learning, for he may be a poor book-worm after all, who knows much and does little, whom the world finds no use for, and is glad to leave unnoticed in his Gothic chamber. But, "enter Wagner," Doctor, and Professor of wisdom in one or other of its branches, and, though he is evidently full of self-conceit observe how reverently he bows himself into the presence of Faust Mark how deferential are his tone and words. The Professor is eager to be a pupil here, and has come with due respect, in hopes of learning something valuable from the master mind. But, perhaps the respect of one man of books for another affects us little, and we wish to know what outsiders think of Faust. Forth to the fields then! In the old German town it is high holiday, and out of the town, to the gay green fields, is pouring a happy, motley throng, all let loose from toil, and all bent on enjoying themselves in simple, hearty, jovial merriment, as honest German folks know well how to do. Here are decent burghers, and smartly-dressed, spruce burghers' daughters; and buxom servant girls as well, of whom the young ladies are not a little jealous, for the students, yonder, are idiotic enough to prefer the maids to their mistresses. This young under-graduate is quite a philosopher in his flirtations, and has found out that—

> The maid whose week-day broom the chamber dresses,
> When Sunday comes, gives you the sweetest kisses.

He is the son of a policeman, doubtless. Let him pass. Here is a group of journeymen discussing with due warmth the respective qualities of the beer and *et ceteras* of the public houses that claim their patronage. Beggars mingle with the throng, of course, and soldiers swagger and sing. And, by the way, that is a magnificent soldier's song—a perfect hurricane of martial vainglory—a swaggering, gay, triumphant ditty, which would be insolent were it not so true. Its blaze is somewhat dulled in crossing the German Ocean perhaps, but here is Blackie's version of it:

1.	2.
Castles with turrets	The trumpet invites us,
And battlements high,	With soul-stirring voice
Maids with proud spirits	To where joy delights us,
And looks that defy!	And death us defies.
Such are the prizes	On storming maintain we
A soldier may claim,	Triumphant the field,
The greater the venture	Strong fortresses gain we,
The greater the fame!	Proud maidens must yield.
	Thus carries the soldier
	The prize of the day,
	And merrily, merrily,
	Dashes away!

But Faust? Here he comes, and Wagner with him; which latter prim personage no one notices, but see how the crowd forsakes its jollity, and turns away from the dance and song under the old linden, to crowd about the learned man and public benefactor, to pay their blithe greetings, and tell how proud they are to see him there to grace their holiday with his presence. True, he has of late been strangely hidden from them among his books and scientific apparatus, but not long enough to lose the grateful recollection and deep respect of old and young. A sensible old peasant is the mouthpiece of the people, and when he has in a homely speech referred to the services of Dr. Faust to his fellow-citizens, when he, a brave young man, risked his life in the hospital to save them from the cruel plague, all the peasants shout in chorus:

> Long may the man who saved us live
> His aid in future need to give!

We have thus had three views of Faust, and we cannot but be favourably impressed by all we have seen. The epitaph, and perhaps the biography, of such a man ought to deserve perusal. But, patience a little! We have not seen Faust himself yet at all What, have we not made his acquaintance in his private study, and observed him both in conversation with his professional brethren and as the observed of all observers among his fellow citizens? Very true, but we have seen only Faust's mantle nevertheless; we are now to look with the poet's eye under the clothing, and into the very heart of the real, living, miserable man. Prometheus chained to his rock, or Tityus, whom the foul bird's beak could only not annihilate, was not more godlike or more wretched than this profoundly learned and much belauded Doctor. His disease, we may say at once, is—if not a simple, at least an exceedingly common one. He has discovered with grief and disgust that, after what he deems the most heroic labour and self-denial, his life hitherto has proved an utter failure. He has gone through one part of the experience of the wisest, foolishest king of Israel, who, though he had given his "heart to seek and search out by wisdom all things that are done under heaven," and had "gotten him more wisdom than all they that dwelt in Jerusalem" had found out, or fancied he had, that it was all *vanitas vanitatum*. So Faust has travelled the mazy sphere of science,

> Law, Medicine and Philosophy
> And thee, alas! Theology,
> With study most severe,

and can truly declare that (if knowledge means wisdom) he is "wiser than Wittenberg's hall can boast with her doctors, priests, parsons, and all." But what is the result to himself?

> Here stand I now with all my lore
> No wiser than I was before.

How true it often proves that "he that increaseth knowledge increaseth sorrow." And so it must ever be, while knowledge is pursued as the end of life, and not as the means by which we may attain that which is the end of life. Faust has made the mistake, which has unfortunately outlived the age of the alchemists, and is still to be found in our own day, of supposing that the human intellect can by eager and patient investigation, discover the secret of Nature; and that a knowledge is attainable which can cure all the diseases of humanity and bring that which all men long after, and which we call happiness. The heart of every man craves after a *summum bonum*, and the most universal test of a *summum bonum* is held to be its power of conferring happiness. An intense longing for happiness is characteristic of Faust as of most men. In this he differs not from the multitude of his fellows. His nature is, indeed, more eager than that of most men, and his longing for happiness is, perhaps, more intense than that which the multitude feels; or it might be nearer the truth to say that his ideal of happiness is loftier than that of most men, and that his efforts to reach it are, on that account, more frantic. His longing was for nothing less than a perfect ecstasy of joy, and to feel that this joy must be eternal. What peculiar claim he had to such an everlasting inheritance, he does not seem to have fully considered, but to have deemed that it was his by right, simply because he felt a need and a desire for it. We can surely, all of us, sympathise in some degree with such a state of mind. But, as his pursuit of this ideal ecstasy of happiness grows more desperate, he becomes willing to forego its eternity, and fancies that he is sincere (though we doubt it), when he says to the tempter—

> When to the moment I shall say,
> Stay, thou art so lovely, stay!
> Then with thy fetters bind me round,
> Then perish I with cheerful glee!
> Then may the knell of death resound,
> Then from thy service thou art free!

But before he has reached this state of mental desperation, he has been for some time under the influence of the tempter, and his craving for happiness has become a delirium, which cares not for means, but rushes blindly on in defiance of law and reason towards it, determined to gain either that or destruction. This stage of delirium is not reached till after many years of patient, anxious toil, spent in the study of the sciences. And, in the earlier stage, Faust, the student and scholar, claims, in spite of the fundamental errors which proved his ruin, our admiration and esteem. He was no ordinary man. He saw clearly enough that happiness or any *summum bonum* of life lay not in the common ways of the world. His ancestral wealth which might have bought him various pleasures he had disregarded, and treated as dross in comparison with knowledge. He believed that happiness was not of the body but of the mind, and forsook the world and its paltry pleasures to follow after knowledge as his divinity. He had the noblest instincts but they were misguided. He meant to aim at the sun, but it proved a flickering firebrand. He sought to obtain happiness, which he thought was life, upon the tree of know-

ledge on which grew the apples of death. He had to learn, by the most fearful experience that, as Byron says, "the tree of knowledge is not that of life"—that knowledge is not wisdom, and brings not happiness. That strange faith of the alchemists that it was possible to discover the elixir of life, is in Faust spiritualised into a belief that man can apprehend "the world's in-dwelling energy," and, having dived into the deep source and fountain of life, can revel henceforth in a life free from all entanglements, weaknesses and miseries. His faith is at bottom the Pantheistic one, that a man's happiness is reached when he mingles fully and freely in the universal soul of all things. In fact, his desire is the infinite desire of man, not only to know, but to be, God. Nothing less than that will satisfy this boundless craving of man's nature. As Carlyle says, it would take nothing less to make one shoe-black happy than a whole universe to himself. This intense, boundless craving was felt by Faust with perhaps unusual force, and he erred at the outset by supposing that the way to satisfaction lay by the path of knowledge. And when he had studied the whole circle of the sciences, and, so far as knowledge could make him wise, felt that he was wiser than all the wise men of his time, and yet that the craving in his heart was no whit satisfied, the weakness of his nature showed itself, and he gave way to frantic despair. He had made two grave mistakes. He thought that all good lay in the direction of knowledge, and knowledge being of the mind, he had neglected, or, indeed, sought to smother, all the instincts of his human nature which did not seem to aid his progress towards knowledge. He voluntarily sacrificed part of his nature and expected to enjoy complete satisfaction with the other half. His next and still graver mistake was that he made the attainment of selfish enjoyment his chief end. He made great sacrifices, and performed great labours, but he did so because he expected to reap the greater happiness. He did not pursue knowledge for its own sake, or for the sake of his fellow men, but to satisfy that inner want of his own. His aim was completely to satisfy and gratify self, and he endeavoured to do so by sacrificing the half of himself. He attempted to "throw away the worser part and live the purer with the other half," and the result was disappointment and despair. He has trod the path of knowledge to its utmost verge, and peeped beyond it into the enchanted ground of magic, but has found *no satisfaction to his hungry soul.* And the deep, dark disappointment, and the desperate prospect *if he venture to proceed further* in his quest, cause a frightful rebound to his strong human nature. All the floods of human feeling and earthly passion, that have hitherto been dammed up by an almost superhuman force of will, overflow his whole being now, with resistless impetuosity, and hurl their victim, who has hitherto been their master, madly against the rocks of destiny. Science, Philosophy, and Religion have failed to satisfy his nature, and, now that he turns his back upon these, he is caught unawares by the mad torrent of sensuality, and plunges on headlong from folly to folly into the black, boiling ocean of crime. How he yields himself to the cunning allurements of Mephistopheles; how, under his guidance he seeks, by the pursuit of different forms of pleasure, to fill the void within him; how disappointment and misery meet him everywhere; and how at last, in his mad career, he sweeps into ruin the sweet, simple, trustful Margaret, and himself disappears from view, we know not whitherward—to some of these points we shall direct a hurried glance in a future issue, if the wind that bloweth where it listeth permit.

EDITORIAL NOTES.

A SIGNIFICANT fact is quoted by Mr. Grant Duff in his notes of Indian Travel: "An officer, Colonel Douglas, who in 1808 served on out-post duty at Tanna, twenty miles north of Bombay, then the northern frontier of the British possessions in Western India, lived to command fifty years later as brigadier at Peshawar, a frontier station more than a thousand miles as the crow flies, in advance of his quarters as an ensign. Almost the whole of the intermediate territory had in the mean time fallen under the rule, more or less direct, of the British Crown." We are apt to forget this fact when we talk with alarm of Russia's advance in Central Asia. That may or may not be alarming; but "if," says the *Examiner*, "England and Russia were to show their mutual good will by agreeing to give up, if that were possible, their recent acquisitions, Russia would have to part with stretches of barren desert, while England would part with thousands of square miles of the most fertile territory in the East."

IT is the belief of many that the cause of the unprofitable character of trade with the East, is owing to an undue expansion of that trade, but figures at our command show this idea to be entirely erroneous. Ten or twelve years ago the imports from India ranged between forty and fifty millions sterling, the imports in 1864 having been 52,296,000*l*, while, since 1870, the average has been about 30,000,000*l*, the total for last year having been 31,214,000, which was less than in 1872, though more than in 1873. Of course, as is well known, the imports from India in 1863-65 were of quite exceptional magnitude, owing to the memorable and extraordinary demand for raw cotton, which resulted from the American cotton famine. But, even if we take a later date for comparison with the present time, there is still no remarkable increase of the imports from India, the totals in 1868 and 1869 being still about 30,000,000*l*, as they are now, and the two years, 1867 and 1870, in which the lower figure of 25,000,000*l* was touched being entirely exceptional. The exports to India again ranged between eighteen and twenty millions, in 1867-70, as they had done in the four years preceding, and it is only in 1874 that there is a comparatively sudden increase to 24,000,000*l*. This last change would undoubtedly show a great expansion, though not so great, or so long continued as to have caused the complaints of unprofitableness which have been current, not for two or three years, but almost ever since the years of the cotton famine. While the imports have changed, there has been one remarkable change in the exports to the East. This is the great increase in the cotton piece goods exported. To India the increase is from about 500,000,000 yards in 1863-66 to upwards of 1,000 million yards at the present time, the total last year being 1,118,935,000 yards. To China there has been a similar increase from 46,458,000 to about 400,000,000 yards, the total last year being 393,316,000 yards. These figures as to one article curiously enough correspond with the impression as regards the eastern trade in general. The expansion is so great, especially in recent years as regards India, though since 1871 there has been rather a falling-off in the export to China, as to suggest that it must be forced. "It must be admitted, however," says the *Economist*, "that the increase is so enormous and so long continued, as to show the increase of a real demand as well, while of course a very small excess of supply at any time would be sufficient to account for considerable depression in the trade."

***

ADMIRAL ROUS has evoked a cry of horror by his audacious advocacy of cock-fighting in the columns of the *Times*. We have no doubt that the plucky Admiral is quite sincere in his conviction that the sport is not more cruel than many which are popular at the present day, and that a cock-fight is not only an exciting spectacle but a sight that inspires the unfeathered bipeds who behold it, with emulation which breeds courage. Some of us may wonder a little that papers of high standing should have thought it necessary, in this age, to write seriously contesting the Admiral's view of this matter. But in all probability there is a very large number of individuals, and many of these other than so called roughs, who sympathise with him, and would heartily enjoy the sport were it legal, and a little less strongly condemned by respectable public opinion. It is said to be spreading greatly in Cheshire and in Nottingham, and we can easily imagine that not a few old men will have a secret sympathy with the younger folks who, we presume, attend to witness the noble combats. Whatever the case may be in these two counties, we know that in some parts of Great Britain there are men not yet old who remember, and some times relate, not without enthusiasm, the famous cockfights of their boyhood. On a certain day a regular tournament of cocks was held at the parish school. For this, cocks were kept in training for weeks and months, and when the day arrived the youth of the district assembled in high glee, and he was a great man who was fortunate in the possession of a champion cock. Small bets, if we mistake not, were laid on the favorite champions. The schoolmaster laid aside the usual insignia of office, and presided over the tournament, for which responsible service he was rewarded by the possession of the defeated cocks, who were thus both beaten and eaten. This, as we have said, was a common practice in some districts of our native land, in the memory of men who are not yet old, and we mention the fact merely because we sometimes forget how very recently many of the practices which we now look upon as belonging to a long-vanished and barbarous age, were common and popular, and were hardly frowned upon, if they were not encouraged, even by the pious. The film that divides us from the state of barbarity is not quite so thick as we sometimes think it is, and it might surprise us could we hear the opinion of posterity upon some of our own popular amusements. A large number of men still

take great pleasure in beholding a keen dog-fight and not a few are hardly ashamed to manifest their enjoyment at the sight of a dog worrying a cat. Happily, however, such amusements have passed irrevocably under the ban of public opinion, as have almost all the cruel sports of the lower classes. And perhaps when public opinion has become a little more logical the condemnation will reach loftier regions.

***

THE authorities of Cornell University have decided in favour of admitting women as freely as men, both to the classes and to examination for degrees. Before this step was taken the President visited the different colleges in the United States where both sexes are admitted, and his observations have decided him to try the experiment. Mr. Sage, a wealthy citizen of Brooklyn, has spent £60,000 in erecting a Girls' College on the estate belonging to the University, and the one condition attached to the gift is "that the Cornell University shall provide and for ever maintain facilities for the education of women as broadly as for the education of men." In England the obstacles in the way of women who wish to graduate in medicine have recently been under consideration, and, as many, even those who disapprove of ladies studying medicine, disapprove equally of putting legal hindrances in the way of those who are bent on so doing, there is every reason to expect that the barriers will before long be broken down.

***

THE discussion in the disestablished Church in Ireland has now been concentrated on the Athanasian Creed. The mutilation of the creed, proposed by the Synod, has caused great dissatisfaction, and the proposal, which we noticed before, to retain the whole Creed as it stands without excision of clauses, but either to allow the officiating clergyman to omit its recitation, or to direct the omission, in recitation, of the "damnatory clauses"; is the proposal which seems to find most general favour. "The impression gains strength that the entire *Quicungue Vult*, with a new rubric will appear in the revised Irish Prayer-book of 1877."

***

IT is gratifying to note from the Education Report of 1874-75 that the cause of elementary education in England is prospering, on the whole, exceedingly well. Since 1870 additional accommodation has been provided in Public Elementary Schools for 1,105,882 children. The whole number that can now be accommodated is 2,871,826. It is calculated, however, that there ought to be in Elementary Schools some 3,250,000 children, so that, though progress has been so far satisfactory, much has yet to be done. But the chief difficulty is not in the matter of providing accommodation but in securing attendance. The number actually on the rolls of inspected schools is only 2,497,602; and of these only 1,457,075, (including those who attend under the half time regulations) had, during the past year, made the number of attendances sufficient to qualify for examination, and entitle the Schools to the government grants. The compulsory system, which has been found to work well in Scotland, seems also to be gaining favour in England, and to be succeeding well in the districts where it has been introduced by the Boards. But opinion still wavers as to the expediency of making the system universal. In the meantime, it is pleasant to observe that not only is a far larger number of children under instruction than before 1870, but the strength and efficiency of the teaching power has vastly increased. The number of pupil teachers has more than doubled, the number of assistant teachers has increased by 62 per cent, and the number of certificated teachers by 67 per cent. The examination tests have doubtless increased the toil of teaching, and have secured that the work, as far as it goes, shall be thorough; and, at the same time, the emoluments of teachers have, as a rule, risen very considerably in value. On the whole, while the great educational difficulties can scarcely as yet be said to be diminished, the prospect as regards the future intelligence of the English masses appears to be a cheerful one.

***

SLOWLY, perhaps, but yet one by one, now here now there, educational monopolies are being done away with. We gladly note every movement in this direction, and therefore observe with satisfaction that the Dublin University is about to grant degrees to Nonconformists. At a meeting of the Senate of the University, held some weeks ago, the Provost intimated that "as regarded degrees, before very long an arrangement would be made, by which the degrees would be open to all."

***

WE noticed, not long ago, that a meeting had been held in London with the view of arriving at a compromise between Churchmen and Nonconformists on the burial question. The proposal to allow religious services to be performed by recognised Nonconformist ministers, has been rejected by the Central Nonconformist Committee, and, indeed, it may be said that that Committee has refused to accept any compromise at all. They are determined to accept nothing less than "the legislative recognition of the national character of "the parochial churchyards." They state that, besides religious communities, "there may be others who, from honest conviction, are unable to enter any religious community whatever, and yet may desire to express over the graves of departed friends their estimate of their lives and character," and they decline to accept any compromise which refuses to concede this privilege to all. They think that to do so would be to place themselves in a false position before the nation, and to cast suspicion upon the motives by which they are actuated and the objects they have in view in the struggle to establish perfect religious equality in the relations of the Church and the State."

***

THE following is a specimen of papal logic, but its infallibility is not quite evident. We ought to acknowledge that we are indebted for it to the *Indo-European Correspondence*. Signor Minghetti, the President of the Italian ministry, speaking on the Public Safety Bill, said: "Yes, gentlemen, there are scoundrels yet living, there are some in Sicily as in the rest of the Peninsula; there are some everywhere, for modern civilization drags after it a long and ugly tail of new crimes and new faults to which we must oppose new remedies." The Pope, addressing a numerous deputation of young men from the *Society of Catholic Youth in Italy*, says with reference to the above: "Even one of the head revolutionaries has acknowledged that modern civilization, *and therefore the governments based on it*, carry with them a long and ugly tail of faults and crimes. Now such a government does not deserve that any of you, or any of those who think like you, should ever, under any plea whatever, become its adherents." Let us change slightly the form of the argument. Modern civilization has given opportunities for the rise of new faults and crimes. The Italian government, which is based on modern civilization, deplores this fact, and is framing special laws to cure, if possible, the evil. Therefore the Catholic youths in Italy ought, under no plea, to become adherents of the Italian Government. The *Indo-European*, in a note of encouragement, classes Signor Minghetti among the race of Balaams, probably on account of the obstinate animal that Balaam had to deal with.

***

THE opium question has been discussed from all sides, and one view of it, which is implied rather than insisted upon, is perhaps more curious than valuable; though, if it has any weight, it tells in favor of the government monopoly rather than against it. It is said that opium does not, to any alarming extent, inflict physical injury on the Chinese, but that its effects are different upon different races, and are exceedingly injurious among the Assamese and Bengalese. At present the high price of opium puts it beyond the reach of the mass of the inhabitants of Bengal, and if one of the consequences of an abandonment of the monopoly by the Indian Government were to be to make opium cheaper to the Bengalee, the result would be a great deterioration, physically and morally, among a race where such deterioration would perhaps be destructive.

***

A MEMORIAL is proposed to be erected in memory of Lord Byron, and we believe the fitting time to do so has now come. While his popularity as a poet can hardly be said to have waned—indeed, we believe one of our contemporaries is right in his opinion that Byron is the most popular of all English poets—his evil influence has, we believe, lost almost all its power. True there are passages in his poetry which can hardly be called healthy reading, but the same is true of others, and as true of Shakespere as of Byron. And though opinions may differ about the quality of his genius, there can be no doubt about the general beauty and fascination of his writing. For force and energy and complete mastery of the powers of the language he is almost unequalled; and some of the most magnificent specimens of English rhetoric are to be found in his pages. He was not a good man, and he may not have written with the loftiest of motives, but there was a side of our English nature which had to be expressed, and Byron was given us to express it. He is one of the *Infantes Perduti* whom we admire while we blame, and whom if we cannot altogether love we deeply pity. And we must not forget the tragical close of this poet's life and the grandeur of his self-devotion to the cause of the Greece he so dearly loved. Could his destiny have spared him but a little longer he might have done much

to redeem the errors of his life. As it was, he died almost in youth, and if he sinned he suffered and has truly received his meed of blame. Let his genius now receive the tribute it deserves.

***

ONE of the last living links that connected the name of Byron with Greece has been broken. It is not many years since we learned that the "Maid of Athens" had in her old age become an object of charity. Now we learn that a monk has lately died in the Greek convent of the prophet Elias in Zitza, who remembered the poet well. Byron spent several days in his house, and has described the situation of the convent and the monk's hospitality in Childe Harold's Pilgrimage. The monk's name was Nicephorus, and he died at the age of 117 years.

***

MR. G. H. LOUTTIT, writing in the name of an ironwork firm which *lately* built several vessels for the King of Burmah, affirms from *special information that* the King's forces are not in a fit state for war, and that he is "not such a fool as to go to war" unprepared. Mr. Louttit's informant is "a shrewd, intelligent, straightforward Scotchman, whom the King appears to delight to honour," and who was sent out by the firm to superintend the building of His Majesty's navy. The King assured this gentleman that he had no wish for war, and bade him tell his friends so; his only desire was "to teach his men and keep them employed."

***

AN enthusiastic redresser of wrongs is generally a little irascible, and many of the best and warmest-hearted men are liable to occasional explosions of righteous indignation, during which they sometimes forget one or other of the proprieties. Mr. Plimsoll experienced one of those moments when he saw his Bill, the fruit of so much time and toil, which had exposed him to so much obloquy from some, and won him so great popularity with many more, and which he hoped was about to rectify a great wrong and save many a sailor's life, tumbled away among the abortive measures of the session. His words were indiscreet, and he has apologised for the use of them, but they will be far from damaging his popularity. We may blame the words perhaps—at least we must admit they were contrary to rule—but a hearty outburst of honest anger in a good cause will go to the heart of the people much more readily them any number of fine speeches. Government, however, opened its eyes to the fact that *its* popularity would suffer in no small degree; and we trust the temporary measure that has been introduced, and is making progress through Parliament, is as thorough as it professes to be.

***

As in the army of Napoleon every soldier was said to carry a field marshal's baton in his knapsack, so in a Native State every subject may have the portfolio of prime minister, or head favourite, in his metaphorical possession. The story of the Gackwar has told us what class of people were made His Highness' chief companions and favourites. And although from English ideas, it was deemed strange or almost impossible, that a native prince could consort with the lowest of the low, we have only to turn to other States to show that such companionship is as much the rule as the exception. Who, it may be asked, brought the Ulwar chief "to grief," if it were not the low companions of the Durbar for whom the nobles of the land were ignored? The history of Scindiah's escapades, which have been kept pretty well secret, would evidence that he was not assisted in his little peccadilloes by men of noble births and good estate. The present prime minister of Jeypoor formerly occupied a position very many grades below that to which he has now by the favour of the Chief been exalted. Cashmere is said to be no better in his companionship. And so on throughout the list, we might refer to many examples of eunuchs, courtezans, menials, as well as the superior class of zemindars and thakoors rising to high estate. All this is quite in accordance with native ideas; just as the periodical free communion of the chief with the people when the former comes out in pomp to join their amusements at the Hoolee or other festivals is calculated to place the whole *en rapport*. But under British rule nothing of this kind occurs. The only occasion on which the Governor-General, or the Governor, or even a Lieutenant-Governor or Chief Commissioner shows himself in public, as representing the Government, is at some State Durbar, to which the majority of the chiefs are as unwilling to come as the proverbial school-boy with satchel on back is averse to go to school. And as regards our social intercourse, of which we hear so much as the bond of union between the two races, it is widely different, and must ever be widely different, from that which characterizes the internal life of either race. The social intercourse between the rulers and the ruled in British provinces has not indeed a vestige of resemblance to that prevailing between the rulers and the ruled in native provinces, where not only community of feeling and of ideas is a bond of union, but where to some extent—more in some States than in others—the strong feeling of clanship dominates.

***

MR. COCHRANE lately suggested to the House of Commons, that the first thing was to assure ourselves of the principles of the policy which were in future to be pursued in Central Asia, and in the second place to keep the execution of that policy entirely under our own control. We must first decide upon what we wish for and then leave ourselves perfectly free to act, having no understanding with Russia whatever. And as a more practical suggestion, he added that the key of the position at the present moment was Affghanistan, and that he thought that we ought to have a Resident of great consideration and dignity at the Court of the Ameer of Affghanistan, and also at each considerable town. He considered the visit of the Prince of Wales to India as a good opportunity for exerting our influence; for we might follow the example of Lord Mayo and receive the Ameer at Lahore, which, he believed, would have a perfectly extraordinary effect upon our relations with Affghanistan. We must also, he said, bind that country in every way to England by commercial treaties, and, as Russia contemplated the extension of her lines of railway, so we must develop in every possible way our communications with Affghanistan.

Sir G. Campbell differed from Mr. Cochrane, and held that our true policy in regard to the advance of Russia in Central Asia was one of masterly inactivity. He observed that the Ameer had no real control over the number of independent tribes which inhabited his country, and that he had really no power to sign any treaty which would be observed by his subjects, and that the best thing that we could do was not to talk and make a fuss about the question, as it only tended to make matters worse. If Russia chose to possess herself of the poor and wretched country of Turkistan we could not help her doing so, and we could not hope to advance into Affghanistan and subdue the free and independent Affghans without a large expenditure of blood and treasure. Mr. Bourke, with official caution, observed that the adoption of the measures which Mr. Cochrane had intimated ought to be left entirely to the Government of India. And so the alarm remains unremoved, and there seems no more probability than ever of an arrival at a definite solution of the question. It is certainly by no means positive that Residents in Affghanistan would render our hold over the Affghans safe. Indeed, so far from exercising much influence, their lives would be scarcely secure, for we believe that the Ameer would be unable to guarantee their safety.

***

THE *Spectator* calls attention to the indifference felt in Europe at the news of the dreadful destruction to human life by the earthquake of Cucuta, as compared with the deep sympathy manifested for the sufferers by any great calamity in Europe itself. As many as "16,000 persons are believed to have been killed, and a new volcano arose from the ground near Santiago, belching forth flames and lava." It took six weeks for the news of the catastrophe to reach London, and it is only recorded "as an incident of a certain interest to the scientific." This indifference is probably owing not so much to the distance of the scene of the calamity, and the want of intimate relations with the locality, as to the fact that such convulsions of nature are so common in that quarter of the world, that the news of them scarcely excites surprise. We become hardened to the seeing and hearing of evils that become so common as merely to indicate the normal condition of things. And in this case it is a condition for which there appears no remedy, so long as people will inhabit those tracts of country which are periodically given up to the terriblest devastation.

***

A CONTEMPORARY supplies an outline of the Chief Commissioner's scheme of colonization for the Central Provinces. The Charwa jungle, a tract of waste land in the Hoshangabad district, in the Nerbudda valley, is the spot proposed for the experiment. It consists of over 100,000 acres of rich soil that can be easily cleared and cultivated, is close to the Great Indian Peninsula Railway and to the high road to Bombay, and the climate, notwithstanding a locally bad reputation, is said to be not inferior to that of Northern India. It is proposed to draw the colonists from the over-populated tracts of Oudh and the North-West Provinces, whose inhabitants are distinguished for the superiority of their cultivation. If possible "some members of the land-holding classes,

or of the old dispossessed land-holding classes," will be induced to head the emigration, and lead along with them large numbers of cultivators who would be bound together by ties of relationship, friendship, and attachment to their leaders. This would lessen the risk of the early colonist becoming dispirited by small reverses at the outset, and deserting the colony. As an inducement to the leaders, it is proposed "to promise them a certain amount of land free of revenue for ever, after they have cleared a certain area and fairly established a village." It is thought that five per cent of the land brought under cultivation would suffice for this purpose; and the family would remain the village managers on behalf of Government. The colony would contain ten villages, each village made up of fifty families of an average of four members each. Each village would be filled by a community bound together by the strongest ties, and under a headman who would be the Government agent, and would collect the rents as soon as these could be fairly demanded, receiving a percentage as remuneration. The system of land tenure would thus be in conformity with the ancient system of the greater part of India. To establish the colony an expenditure of about a lakh of rupees would be required. This the Chief Commissioner offers to provide from his provincial savings, "on one condition only, namely, that he is allowed to credit to provincial revenue all rents that may be obtainable from the colony until the expiry of the current settlement of the Hoshungabad District, that is, for about twenty years to come."

***

MR. GLADSTONE having asked if the Church of England is worth preserving, has answered that it is; but seems to think that its preservation depends to a great extent on abstinence from litigation between parties in the church, on matters of ritual. Opinions differ a good deal as to the value of his paper, but the weight of opinion is not very strongly laudatory. The *Spectator*, as it has a habit of doing in dealing with Mr. Gladstone, "damns it with faint praise." It is "sound and sensible though perhaps a little weak," and its meaning is enveloped in too dense a cloud of words. Enemies of the Establishment, and perhaps a number of its friends, are inclined to think that, though he concludes that it is worth preserving, his warnings and cautions as to how its destruction is to be warded off are significant of its approaching fate; and that that is the chief significance of the paper. It is not likely that his advice will deter the contending parties from litigation, and if there be truth in the conclusions that secessions will follow on litigation, and that secessions will so weaken the front that the church at present can present to its adversaries, that she will no longer be able to withstand their attacks, it would follow that disestablishment, at no distant date, is to be anticipated. We do not say that this is the necessary inference from Gladstone's paper, but, at any rate, that paper can do little to strengthen the church or retard the work of destruction. But if it do little good, it will do little harm perhaps, being, as the *Spectator* says, "a little weak;" still it might have been better for the Established Church that a man, in the position which Gladstone holds, had not shown so clearly that the Church of England is so greatly in need of careful preserving. When the physician informs you that your constitution has still a good deal of strengh in it, and that you may live for a long time yet, if only you take very great care of this thing and the other, you are perhaps more discouraged by his cautions than cheered by his consolation. We are speaking merely of the general impression left on the mind by this essay, not on the question of the disestablishment of the Church of England, which, notwithstanding Mr. Gladstone's "ifs," we believe is yet far distant and at present exceedingly undesirable.

***

THE notorious scandal case in America is one on which we have no wish to dilate. But no event can be ignored which takes a strong hold of the mind of a people, and which, by the expressions of opinion and sentiment which it evokes, serves, in some degree, to indicate the moral tone of nations and churches. And it should seem that unsavoury trials like that of the Tichborne Claimant, and the recent trans-Atlantic one, give peculiar opportunities for feeling a people's pulse, so as to gain some knowledge of its moral health or morbidity. The popular feeling, which was so strongly in favour of the Claimant, seems to have proved one thing as to English morality—that fair play is still in England the cardinal virtue. It may have laid bare a great deal of ignorance and class prejudice, and an apparent want of moral sensitiveness; but we think it showed that in the minds of the people lay deep down the basis of all the virtues—the love of fair play, accompanied, perhaps, by a too sturdy indifference to the most flagrant breaches of other moralities, so long as it appeared that justice was being denied. The popular feeling towards the Claimant did by no means indicate a state of sound moral health, but we think it showed that the moral constitution had a strong, sound bottom, which would stand the shock of a good many passing ailments. We believe it has been said, with all respect to Mr. Whalley and some others, that it was on the whole the irreligious multitude who favoured the Claimant, and that pious folks were mostly prevented from sympathising with him by the fact, that, whether he was the real Sir Roger or not, he was certainly a very bad man. And it is perhaps worth observing that, as there was a class of persons whose love of justice, or of what they supposed to be justice, made them apparently blind to the other moralities, so there was a class whose pious feelings were so strongly horrified by the claimant's sins, that their sense of justice seems to have been laid asleep. A man, these people thought, who could confess such horrid *things* as the claimant admitted, could not but be in the wrong, and ought to be summarily dealt with. That these two classes did not divide between them the whole nation is, happily, true; but they made up a considerable portion of it.

Now, in the present American case we believe these two classes will again be found on opposite sides, though the class that defended the Claimant will, in as far as it troubles its mind about the matter at all, condemn the accused, and the other class will be his defenders. The religious communities which admired Beecher before seem still to uphold him. He has probably gained in popularity at home; and in England, whatever the bulk of the nation may think, what a certain class of religious people thinks, may be seen from the fact that the large congregation in the City Temple, London, rose at the invitation of Dr. Parker to demonstrate its sympathy with Mr. Beecher, and to approve of the proposal to send him a telegram expressive of enthusiasm at the result of the trial. It is not for us, at present, to condemn the man or his supporters—nine of the jury were in his favour, and but three against him—but we cannot help thinking that when it was predicted that the saints shall judge the earth, a class of persons was contemplated very different from the bulk of those in the congregations of Dr. Parker and Mr. Beecher.

***

THE action taken by the Judges, during the course of the Tichborne trial, drew attention to the subject of contempt of Court; and it was evident that the Court of Queen's Bench had strained the definition of the offence. Comments on a case before judgment has been delivered, may be very improper, but when made outside the Court they cannot, without violence to language, be regarded as contempt of the Court's authority. In the late Craddock case, Mr. Justice Denman used his undefined power in so arbitrary and passionate a manner, that the attention of the Home Office was drawn to the case, and the punishment inflicted by the Judge remitted. It is indeed manifest that, in England, no one knows exactly in what the offence of contempt of Court, consists and that an irascible or touchy Judge may sometimes be tempted to vent his ill-humour, while professing to maintain the dignity of the bench. Legislation is needed to define both the offence, and the powers of the Judges in dealing with it. In this as in so many other respects the Indian law is superior to that of England. Our codes define the offence, lay down the procedure to be followed by the insulted Court, and limit the amount of punishment that can be awarded. No Indian Court can sentence a man summarily, as Mr. Justice Denman did, to a year's imprisonment with hard labour for a supposed contempt. An Indian Judge or Magistrate must record the facts constituting the contempt; in fact must try the offender before he can be punished, and the sentence is appealable under the same rules as govern other cases.

***

THE codes limit the definition of the offence so as to include only acts committed in the actual presence of the Court, such as intentional insult or interruption to the presiding officer, or a refusal to answer a question or sign a statement. Besides the powers above referred to, which all Courts possess, Magistrates trying criminal cases, are empowered to commit summarily to custody for a period not exceeding seven days a refractory witness, unless meantime he should repent; when he does so he is to be released. In India, so far as the law is concerned, it appears that there is nothing to prevent any one from commenting freely either verbally or in writing on the points of a case still under trial. Journalists generally have the good taste to refrain from publishing remarks which might prejudice the Court; but even if

they transgress the limits prescribed by good taste and a desire for fair play, the only punishment for the offence is the censure of public opinion. In England any such indiscretion is, according to the recent rulings, punishable as contempt of Court. Even if the silence of the Indian law may occasionally give opportunity for undue license of criticism, this result seems preferable to the working of the English common law as lately administered. Probably it will not be long before an attempt will be made to reform the English law on this subject, and to impose checks on the arbitrary discretion of the Judges. The moderate provisions of the Indian Codes have proved quite sufficient to uphold the dignity of the bench, and would supply a good basis for legislation at home.

***

THE *Pioneer* says: "Mr. Howey, of the 3rd Buffs, has accepted the apology tendered by the Nepaulese Colonel for having assaulted him on the railway platform at Howrah. The now memorable occurrence has given rise to an amount of official correspondence greatly disproportioned to its merits, and furnished the pretext for more than one mischievous invention with regard to the action of the Viceroy in connection with it. The correctness of the following brief statement is, we are assured, agreed to by every one concerned, and it seems to us to epitomize all that need wisely or usefully ever have been said on the matter at all: 'No written assurance whatever was given by the British officer referred to through the Adjutant-General; but the Nepaulese officer, on becoming aware from a communication from the Adjutant-General and the Government that the British officer did not intentionally push against him, or know who he was, expressed his regret that he misunderstood the action of the British officer, and tendered an apology, which the latter has accepted, and expressed his regret that the unpleasant affair had occurred. No blame has been imputed to the British officer by the authorities." All's well that ends well, but what does our contemporary mean by "mischievous invention?" If it had been able to contradict in set terms the statement that Lord Northbrook originally called upon the British officer to apologise to his assailant, it would have done so long ago; but not being quite equal to the task of disproving *facts*, it takes refuge in vague generalities. Once before it did the same thing on this very subject, and it was then defied to disprove the "invention." How is it that none of the correspondents of *the Pioneer*—who have kindly furnished it with all later particulars—have been able to tell us, through its columns, that *Lord Northbrook did not* call upon Mr. Howey for an apology? Simply because they object to deal in the "inventions" which the *Pioneer* does not hesitate to attribute indirectly to the *Statesman* or to ourselves.

THE WEEK.

A WELL-ATTENDED meeting of the citizens of Calcutta was held at the Town Hall on Saturday last to make arrangements for the reception of the Prince of Wales in the metropolis of India. Sir Richard Garth moved the first resolution to the following effect: "That as the inhabitants of Calcutta are rejoiced to hear that it is the intention of His Royal Highness the Prince of Wales to honor this city with a visit, and thus to afford them an opportunity of expressing their loyalty and devotion to Her Majesty the Queen and the Royal Family, it is expedient that they should unite in one common demonstration for the purpose of doing honor to His Royal Highness on his arrival at the metropolis of British India." Mr. Morgan, the President of the Chamber of Commerce, moved the second Resolution—"That an Address be prepared from the Municipal Corporation, in which all classes be invited to join, for the purpose of welcoming His Royal Highness the Prince of Wales to Calcutta, and conveying to His Royal Highness the earnest expression of the loyalty and devotion of the community towards Her Most Gracious Majesty the Queen of England and His Royal Highness the Prince of Wales." Mr. Paul, the Advocate-General, moved the third Resolution—"That public subscription be invited for the purpose of defraying the cost of illuminating, on a scale befitting the importance of the occasion, the principle public thoroughfares of the Town in honor of the arrival of His Royal Highness the Prince of Wales.', Mr. Allardice, Master of the Trades Association, moved the fourth Resolution—"That the Corporation of Calcutta be requested to illuminate all property under their control, and that this meeting does record its hope that the residents of the Town will illuminate their private residences and places of business." Baboo Kristodas Pal moved the fifth Resolution—"That certain gentlemen be named a General Committee for the purpose of collecting subscriptions, and adopting the measures necessary for illuminating the chief thoroughfares of the Town to the extent of the funds subscribed, and also for doing all that may be necessary for giving effect to the foregoing resolutions, and that the aforesaid Committee be authorized to appoint an Executive Committee for the management of all matters of detail." Sir Richard Garth is Secretary of the General Committee.

AN influential public meeting has also been held in the Bombay Town Hall to consider the reception of the Prince of Wales. The following resolutions were carried by acclamation: "That the Municipal Council prepare a suitable address with the Government's permission; that the Port Trust and Esplanade Fee Fund Committee co-operate with the Municipal Council; that a public entertainment be given to the Flying Squadron and to the Bombay School-children; that public subscriptions be raised for illuminations, decorations, and other preparations; that a public memorial of the Prince's visit be established out of the surplus funds." A Committee was appointed and the following gentlemen are the Secretaries—Messrs. Jacombe, Maclean, and Dosabbhoy Framjee. Twelve thousand rupees was subscribed on the spot.

THE programme of the Prince of Wales' tour through the Indian territories of Great Britain has been so far modified as to include a fortnight's sojourn in Ceylon, where, however, his visit will be confined entirely to purposes of sport, though it is not improbable His Royal Highness may show himself to the people of the island on one public occasion. No doubt this departure from the original plan is due to the pleasant recollections carried away by the Duke of Edinburgh. In order to make sure of suitable weather so necessary for Ceylon sportsmen, the Prince of Wales will reach Colombo on or about the 11th December. The monsoon rains will then have ceased, and travelling in the north will be practicable. An elephant krall at Korangalle and a week amongst the elephant jungles around Trincomalee will occupy His Royal Highness for the two weeks to be devoted to Ceylon. Owing to this visit being one entirely for sport, the public demonstrations are not expected to be on a large scale. Several Ceylon sportsmen of note, now in England, have been consulted in reference to the best course to be adopted for carrying out the island programme. The Prince will land at Bombay about the 8th November. He will be received there by the Viceroy. A separate house has been engaged for His Excellency, as he does not wish to be a burden on the Governor of Bombay, who will be fully occupied with the Prince. Lord Northbrook's stay at Bombay will be short, not more than four or five days, after which he will return to Calcutta. The Prince will probably remain at Bombay for a week or ten days, then proceed to Beypore, thence to Tuticorin, thence to Ceylon, and from that country he will come to Calcutta by steamer, where he will stay for fifteen days. His Royal Highness will next proceed to North India, where he will be a guest of the local Governors and Chief Commissioners. The Viceroy has invited some of the leading Native Princes to the Capital to meet His Royal Highness, including the Maharaja of Kashmeer, the Maharaja Scindia, the Maharaja Holkar, the Maharaja of Jeypore, and some other minor Rajas. From the Terai the Prince will go to Bombay and embark for England about the middle of March.

CHOLERA is still spreading. There has been a fresh outbreak at Simla, where, however, we are glad to report that the disease is now rapidly abating, but the pest has not yet left Kussowlie. Pondichery, too, is on the list of affected places, while the deaths in the South continue to increase daily.

AT the Meeting of the Council, on the 29th ultimo, the Hon'ble Mr. Hobhouse moved for leave to introduce a Bill for the improvement of Law Reports. An Act was lately passed with the object of improving Law Reports, and one of the sections of that Act was framed for the purpose of giving to decisions of High Courts an extent of authority which they do not possess at the present moment. The Secretary of State, however, considered, very justly we think, that the provision might lead to some embarrassment, and accordingly, while he assented to, and approved of, the rest of the measure, he intimated that he could not allow that particular portion of it to become law. He suggested that, instead of disallowing the whole Act, the Supreme Council should repeal it, and re-enact such portion of it as was unobjectionable. The Bill Mr. Hobhouse proposed to introduce was simply for that purpose, and he presumed that the Council would have no objection

to re-enact a portion of that which they had already enacted. The motion was put and agreed to.

THE latest news from Cabul informs us that Shere Ali is introducing throughout his territories "a system of rural Militia." The plan does not seem to be popular, but it is being carried out cautiously, and apparently with the hope that the people will become gradually reconciled to the innovation. A portion of the rifles from Peshawar have reached Cabul, and Ursulla Khan is receiving the remainder at Lalpoora, and forwarding them on. The Khyber Mullicks are still at Cabul, and it is proposed to hold a review of the troops in their honor. It is reported from Lalpoora that the new chief Zurdad Khan has had an encounter with Nowroz Khan, in which, owing probably to Nowroz Khan's intimate knowledge of the country, Zurdad was defeated and eventually had to retreat, after losing a number of his followers, and having his horse wounded under him. The Ameer has been indisposed lately, and had gone to Kindkee for a change, but was expected to return to Cabul shortly.

ANOTHER rebellion has been nipped in the bud at Mandalay. This time the rebels belong to the Royal family, being headed by the Mekhara Prince, who quarrelled with his father and then fled from the palace. "A select and numerous body of troops was despatched—three thousand men, it is said, were ordered out in pursuit—and the undutiful son was brought back before he had time to carry out his intentions, which, rumour says, were to raise the 'Umbrella' of rebellion among the Shans; with the view to attacking the palace and seizing the throne." The King does not, it appears, get on with Englishmen so satisfactorily as he could wish in the matter of contracts, and he has signed one with a Mr. Ferrelli for the construction of a railway from the Frontier to Mandalay.

DURING the past week Allahabad has experienced a rainfall almost equal to that which recently fell in Toulouse. On Thursday week the streets were flooded, half the compounds lakes, and a great number of native houses, stables and trees, were destroyed in every direction. The bulk of the water, however, made its way in the direction of its natural reservoirs—the rivers; but finding the bund in the way revenged itself by turning into a splendid sheet of water the space which stretches from the Fort to Government House, and from the bund to Kydgunge. The bund, therefore, constructed originally to keep the river out of this space, now prevented the flood from getting into the river, so it remained where it first collected, daily widening and deepening. Meanwhile the Jumna, reinforced up-country by the heavy rainfall of Thursday and Thursday night—which appears to have been pretty general—over-flowed its banks near Kydgunge, and through the gap poured a very handsome contribution into the rain-flood already collected in the lower ground. The Fort road was flooded for half-a-mile, and the dâk bungalow and other buildings thereabouts have been completely insulated and partly submerged, the water rising above the verandah level; the outskirts of Daragunge and Kydgunge as well as all stray assemblages of huts between the two villages have, of course, melted into the water, and the Model Farm is a lake. The Bank of Bengal and the Kutcheries were closed on Monday and Tuesday. The *Pioneer* writes:

As the rains up-country annually swell the Jumna and Ganges to proportions beyond their usual containing capacities, the two rivers once on a time arranged at this point of junction—Allahabad—to make use of the great plain stretching up from the Fort to the old station as a common ground for spreading themselves out upon and swelling in. Akbar, however, interfered with the arrangement by constructing two bunds which compel the Ganges to continue its course directly to the Jumna. This year, however, the Jumna, being fuller than usual, rushes past the Fort with more than its usual velocity, and prevented the more placid Ganges from rolling its brown waters into the common stream, and the Ganges therefore has had to crumple back upon itself, and, sulkily swelling in its bed, has turned the great expanse of field and fallow that used to stretch from Papamhow to Daragunge (the artillery practice ground included) into an island-dotted lagoon—the islands being however the upper halves of mango topes. Akbar's bund therefore on Saturday ran out like a causeway into the sea to Daragunge and crowds of pedestrians went from end to end all day "admiring the view." But the engineers in charge foresaw danger, and began betimes to extend Akbar's work in the direction of the station, but with no effect as far as the river is concerned; for steadily rising all Sunday, the Ganges on Monday morning overtopped the sluice-gate at the end of the bund and began to trickle down into the plain in which (as above described) the rain-flood had already collected. On Monday night there was a sudden rush of water down the Jumna and a corresponding back-rush of the Ganges. The result is that a fine river is now roaring over the sluice-gate along behind Trinity Church within 100 yards from Mr. Waterfield's house where it falls in a very respectable rapid into the Government Model Farm. The flood, it is to be feared, is not yet at its worst.

A telegram dated Allahabad, the 4th instant, states: "The Jumna reached its greatest height here yesterday, marking 164 out of 167 feet on the Bridge gauge. The river is now falling and the floods subsiding. Mooteegunge, Kydgunge, and Daragunge have suffered most. Numbers of huts and *kutcha* houses have been destroyed. Hundreds of families have become houseless, but no lives were lost. Yesterday the Tonse rose several feet above the footway of the Railway bridge. The girders were blocked here and there by the *debris* of houses and carcasses of bullocks and goats. The country is flooded for some miles round the villages in the vicinity of the bridge, and numbers of villagers remained on trees for thirty hours. They were picked off by boats; the river is falling since last night. Several bodies floated down to-day, and it is thought there has been a serious loss of life in the Tonse Valley."

AT the last meeting of the Viceroy's Council, an Act was passed for the revision of the Indian Customs Tariff. All export duties are abolished except those on indigo, paddy, and rice. The general rate of Import duty is reduced from 7½ to 5 per cent. *ad valorem*. The tariff valuations of cotton piece goods are reduced, so as to relieve trade to the extent of Rs. 8,08,000 annually. An Import duty of 5 per cent. is imposed on long-stapled raw cotton, and all valuations for Import and Export duty generally are to be revised.

LONDON LETTER.

(FROM OUR OWN CORRESPONDENT.)

LONDON, JULY 9.

WE have been a good deal exercised in our minds during the past week by the news about Burmah. The telegraph reported that the King of Burmah declined to allow a British force to pass through his territory. Of course in Europe such a demand would be too outrageous for even the German Empire to make upon the smallest independent State. It amounted to nothing less than a requisition made on the King of Burmah to allow us to march through his dominions in order to attack a Government with which he was at peace. But I am bound to say that the British public paid but little heed to this aspect of the demand. It has been sufficiently educated to understand that in India we cannot allow our career to be shackled by the more sensitive morality of the West. As the representatives of progress and civilisation in a heathen land, it has become aware that we are bound by no fixed principles, but make up our political morality and code of international law, bit by bit, as the occasion calls for them; but that there is always at bottom one axiom. Whoever obstructs the development of British trade is a villain who must be rooted out. This axiom, and a liberal use of the word "substantial," are all that your Anglo-Indian statesman needs to justify anything he thinks fit to do. The British public was willing to concede him this much. But granting this, it appeared foolish to put forward such a demand unless we were in a position to enforce it on the spot. Unless we wished to march an army into Yunnan at once, such a demand, if yielded, could bring us no good; if refused, it compelled us either to acquiesce smilingly in a slap on the face, or go to war to extricate ourselves from a ridiculous blunder for which we alone were responsible. Was then this demand due to the inscrutable wisdom of the Indian Government, or the result merely of a confirmed habit of blundering? I fear this painful question would have been decided in the latter sense but for the telegram of this morning, which says that no such demand was made at all. But telegraphic messages about Burmah have given such vague and contradictory sounds that I doubt if much faith will be put in this last utterance. An article, evidently inspired, appeared in the *Times* a few days ago, on our relations with Burmah, which spoke of massing troops and steamers at Rangoon, in order to bring the King to his senses, or, should that fail, of sending an expedition to Mandalay and annexing the country; and people will experience considerable difficulty in reconciling this with the later telegraphic message. Of this, at least, we may be certain, that no further action will be taken in the matter until after the visit of the Prince of Wales to India; and that even then every effort will be made to ward off the extreme measure of having to annex Burmah. The alignment of the British frontier with that of China opens

up a prospect in the future from which the boldest statesman recoils with terror. We should, to begin with, have to add at least fifty thousand men to our standing army to garrison our new territories and protect our trade,—a serious addition to the burdens of the tax-payer; the process of eating into the Chinese frontier would, perforce, commence almost immediately, and once begun no human power would avail to stop it until the Celestial Empire was completely devoured by Russians from the North (who would begin to eat with immense rapidity the moment they perceived that we had fleshed our teeth in that gigantic carcass) and ourselves from the South-West.

The "Beecher-Tilton case" has come to an abortive termination, the jury being discharged without having been able to come to an agreement. A verdict of "not proven" in this particular case is equivalent to a judgment of guilty; but neither Mr. Beecher nor his friends appear to think so. Immediately after the trial, the former made a speech to his congregation, the profanity and effrontery of which are almost beyond credibility. Allowing Mr. Beecher the benefit of his verdict of "not proven" (a tremendous concession, which I fancy few would be willing to grant), enough has come out in the course of the trial to show that the man is an utter impostor, that his relations not merely with Mrs. Tilton, but with Tilton, Moulton, and others of his congregation, were scandalous and immoral to a startling degree, and yet this man, with all these stigmas indelibly marked upon him, addresses his congregation in words to this effect: "Whoever is in need of love or sympathy let him come to me, and he will find them; whoever is seeking after God, and cannot find him, *will find him reflected* in me." The italics are mine. Could the force of impudence reach further than this? And yet his congregation continue to believe in this detected charlatan; they have voted him a large salary, and assured him of their unalterable affection. But not only they; so strong it seems is the spirit of party that even here in England three prominent Dissenting ministers, and at least one congregation, have sent over to America "fraternal greetings" to Mr. Beecher, and assured him that the facts elicited at the trial have only deepened their love and admiration of his Christian character. As the *Pall Mall Gazette* observes, the anxieties of Dissenting husbands will be much increased if Dissenting ministers generally accept the kisses, embracing, and other marks (to quote his own language) of "confidence and love," which Mr. Beecher bestowed in such abundance upon Mrs. Tilton, as the signs and evidence of a lofty practical standard of Christianity. Conceive of a parallel case in England, and we shall understand better the moral gulf which divides the Old country from the New. I ought, however, to say that the New York *Nation* emphatically asserts that Mr. Beecher's authority and reputation are entirely destroyed in the opinion of every respectable and sensible man in America. The vagaries of the Plymouth Church congregation are not to be supposed common to the people of America, any more than "the fraternal greetings" of Mr. Parker and the congregation of the City "Temple" express the feelings of England generally.

The organisation of the French Republic progresses in the steady and orderly manner which has for some time been characteristic of the conduct of public business there. A short time ago the three sections of the Left met together and agreed to a self-denying ordinance, in order to expedite the passage of the Constitutional laws. This ordinance was to the effect that the Left would abstain from long speeches or the proposing of amendments, and subordinate every consideration to the one urgent need of the country, the completion of the Constitution and the dissolution of the present Assembly. On the seventh of July the second reading of the Constitutional Bills was passed after a very short debate, only twenty-five votes being recorded against them. These may be taken to represent the strength of the extreme Legitimists, the Bonapartists, and the irreconcilable section of the Left, headed by Louis Blanc. The utterly impracticable character of this last fragment of politicians was remarkably illustrated by a recent speech of Louis Blanc on the anniversary of Garibaldi's birthday. Garibaldi is a Republican whose career if read aright is full of useful practical guidance to the extreme French Republican. The great Italian Republican is a man of the extremest political and religious convictions; but his whole life, with the exception of one or two unfortunate episodes, has been a witness to the fact, that a man who desires to effect anything for humanity must accept men as they are; must work with such tools as are to be had, and not spend the precious hours in unavailing lamentations that these are not what they ought to be. Though a Republican, in frankly acknowledging Victor Emmanuel as King of Italy, Garibaldi has been enabled to confer upon his country benefits which without that acknowledgment he could never have rendered her. And he finds his reward in the unique position he now holds in Italy. Few more thrilling sights, I fancy, have been witnessed in the world than the reception of the old General the other day in the Chambers on the occasion of his bringing forward his scheme for the improvement of Rome. The House was crowded from top to bottom. The schemes were voted without one dissentient voice, and then the whole Assembly—spectators as well as deputies—rose to their feet as with one impulse to give the greeting of the nation to the man "whose sword sprang never from its sheath except to cleave a chain." The beneficent character of this last scheme of Garibaldi's gives an epical completeness to a career of glorious self-sacrifice. But Louis Blanc turns aside from all the great and fruitful actions of the Italian Liberator to fix his attention upon the sad and sterile episode of Aspromonte. I do not blame Garibaldi even here; believing that he was lured to make this attempt on Rome by the Italian Cabinet itself. The secret history of that expedition has still to be written. But to Louis Blanc what was so admirable in this affair was the want of compromise; the going straight at an end even though the end was confessedly unattainable. This, he said, was the attitude which the French Republican ought to assume. And this is just what he and his friends have done. They think that no bread is a great deal better than half a loaf. Happily for France, the commanding character of M. Gambetta has effectually broken up the strength of this party. There is nothing at present ahead to hinder the dissolution of the Assembly early in September, except the question of the mode of election by departments or *arrondissements*. I explained the difference of these two methods in a previous letter, and the reasons which caused the Left to hold so tenaciously to elections by departments, or *scrutin de liste* as it is technically called. But a compromise has been proposed here too; and if this be accepted, there is no doubt that before the end of the year France will for the first time since the commencement of the century be in full possession of herself, having a duly organised and legally constituted Republican Government—not one the mushroom product of a street-fight—and being ruled by a Senate and House of Deputies composed of the veritable representatives of the nation. The violence of the Bonapartist journals seems to show that they feel their hopes vanishing away. M. Cassagnac in his despair has challenged Gambetta to fight; and, the challenge not being accepted, has announced his determination to kick him at an early date. Up to the despatch of this letter, it has not been announced that he has carried his intention into act. A very good argument might be adduced against duelling from the practice and its effects in France. It is often argued for on the ground that it is an effective deterrent against violent language and ungentlemanly conduct. French society shows that it deters from neither the one nor the other. Rather it gives the bully a license to indulge in both—provided he is willing to render "satisfaction." Duelling is, and can be, an arrangement agreeable only to the brutal and ferocious. The man who is a gentleman needs no such deterrent to preserve him from ungentlemanly conduct, while it compels him to risk his life should some one else offend against those cannons of conduct. Supposing a man—a practised swordsman or a dead shot—insults me gratuitously, who am short-sighted, perhaps, or inexpert at fencing, is it not a monstrous thing that, in addition to this injury, I should be expected to set myself up as a target for that man, to be run or shot through the body? A law of honor, which makes honor depend upon correctness of eye or manual dexterity, is surely as singular an inversion of truth as can well be imagined.

SCIENCE GOSSIP.

(FROM OUR OWN CORRESPONDENT.)

PARIS, JULY 10.

HOW to purify drinkable water is a problem yet to be solved. Clarification is not the one thing needful, as the filter only arrests the substances in suspension, allowing the dissolve d organic matters, the most dangerous of all, to pass. Sugared water permeates as unchanged through the filter as ordinary water. Carbon filters even do not purify; on the contrary many complain that they deprive the water of a portion of its oxygen, and thus facilitate its fermentation. Cistern water ferments the most readily; well water is rich in lime and sulphates, and spring water is pure when unconnected with cemeteries and sewers. The city of Paris is now supplied with a spendid network of sewers, possessing a total length of 482 miles, but at the expense of the bordering suburbs. The refuse of the city is discharged at two points, Clichey and St. Denis, to the extent of 286,000 cubic yards daily, representing an annual deposit of solid matter in the bed of the river, equal to 125,000 latons, which has to be dredged up. Now the volume of the Seine, where this discharge is received, is only fifteen times greater than the volume of the daily sewage itself. That the river is poisoned is proved by the emanations of gas, the bubbles of carburetted hydrogen being so numerous that the gas has to be collected and burned. The impurity of the water is detected by the quantity of organic matter it contains and the diminished percentage of oxygen. Thus a quart of water taken at Ivry, where the Seine enters Paris, contains double the quantity of oxygen as a quart of water taken at Asniers after the exit of the river from the city. The distinction between healthy and infected water is often difficult to make, as neither color, odour, taste, nor even chemical analysis can decide. Injurious matters may remain in an inert state, without modifying the good qualities of water, save its color; the odour may not be perceptible, yet the water be not the less insalubrious, as in that from paper, fecula, and sugar factories; it may be positively offensive, and still not unhealthy, as in the case of sulphuretted waters, and chemical analysis can be deceived, according as the samples are preserved more or less long in bottles. M. Gerardin gives a fair general definition for good water—that, wherein animals and vegetables of a superior organization can live, water may be considered impure where fish cannot exist. Certain plants are excellent indicators; fountain cresses will only grow in impure, and the Veronicas in good, water; hemlock and rushes thrive in objectionable, and sedges in obnoxious, water; no mollusk will live in infected rivers, and the course of the Seine, from Asniers nearly to Rouen, practically illustrates these remarks, as if traced on a map. The alga have an organization more complicated, and infusoria appear when a river is infected. The quality of river water varies with meteorological changes. During hot and stormy days fish come to the surface to find that oxygen which is deficient in the depths of the river, and, if the latter changes for the worst, the fish may be observed in close columns near those spots where a current of pure water exists. Sulphate of alumina has been found to clarify, but not to purify, sewage, and at Paris the experiment is being made of purifying the sewage by distributing it over a sandy tract of land, where the roots of plants will absorb the organic matter, the soil filtrating it. The water thus acted upon finds its way through the natural strata of the soil, passing under Mont Valerien into the Seine.

Unrectified oil of turpentine is an antidote against poisoning by phosphorus, owing to the quantity of oxygen it contains, the latter being absorbed by phosphorus with great avidity. Messrs. Thiernesse and Casse have conducted a series of experiments, and have conclusively shown that the employment of pure oxygen produces equally beneficial effects.

M. Bourlor draws attention to the variations of climate, especially as bearing upon France. History, he states, concurs in proving that, in the earliest times, the climate of France was most rigorous. The ass, an animal not delicate, was unknown north of the Pyrenees; Cæsar relates that the reindeer was to be met with near the frontiers of Gaul in company with the wild bull; whales were to be seen in the gulfs of Gascony and Lyons, and in severe winters the Rhone was frozen so that armies and *materiel* of war could cross it. The Alps and the Pyrenees, 2,000 years ago, presented glaciers and snow peaks, with which, Agassiz asserted, those of to-day were but pigmies in comparison. Then the vine was not cultivated beyond the Cevennes, and, failing to introduce its culture more northward, Domitian ordered the experiment to be relinquished. But in the year 281 the climate became so ameliorated that vine culture extended in time, as far as Paris in the fourth century, and to Alsace and Britany in the ninth, and later to Normandy and Flanders. But in the sixteenth century the climate had become so changed, that the vine was no longer cultivated in the north-west of France; the orange and lemon ceased to succeed in the plains of Languedoc, and the culture of cane sugar had to be given up in Provence. The growth of olives is retrograding more and more southwards. If delicate plants were centuries ago capable of being successfully grown in higher latitudes, owing to the cutting down of forests, drainage, and cultivation, why have they not been able to maintain themselves?

Connected with this subject is the fact, recently brought under the notice of the Academy of Science by M. de Candolle, the eminent Swiss naturalist, that the same amount of heat does not produce the same effects on vegetation in all latitudes. Vegetables grow more rapidly in the north than in the south, and in Russia and Sweden, in order to have precocious cereals, it is necessary to obtain seed, not from southern, but from *northern, provinces.* On the other hand, trees from a northern, planted in a southern, climate vegetate more slowly. M. de Candolle experimented on seeds brought from St. Petersburg, Edinburgh, the South of France, and Italy; those of a northern origin germinated most rapidly. Cold winters compel vegetation to repose, and drives the sap towards the centre of the plant; this concentration imparts force, whereas in the case of mild climates a little growth is ever going on at the expense of the plant's strength. In one case there is provision, in the other a slight but continued expenditure. The mechanical action of a degree of heat is the same, but varies with the matters acted upon.

It is important to bear in mind that while science can produce organic compounds, it cannot fabricate the smallest quantity of organized matter. Wœhler in 1829 composed urea in his laboratory, by means of cyanic acid and ammonia; but no chemist has been able to create a particle of bark, a morsel of skin, or a hair. Organic substances, devoid of the attributes of life, can be produced, so that in the artificial preparation of camphor, M. Riban makes known no new power. He acts upon camphene, a substance derived from oil of turpentine by means of a potash salt and diluted vitriol, heating the mixture, and allowing it to crystallize; it has the identical properties of natural camphor.

The terrible inundation at Toulouse naturally brings up the question of meteorology, the most complex of modern sciences. It is held that the disappearance of forests in Europe has *completely affected the production and distribution of rain; but many circumstances* may intervene to cause a variation in the rainfall, which is greater in hot than in temperate climates, the consequence of greater evaporation, and diminishing from the equator towards the poles. At Paris the annual rainfall in 23 inches, at Madeira 31, at Cuba 93. In India as much as 15 or 16 inches will fall in a single day; that is a quantity, which, if collected, would cover the ground to that depth. If the period from November to May be dry, no flooding of rivers is to be expected during the heavy rains of summer in the basins of the districts in the north of France. But much depends on the porosity or imperviousness of the soil. In the former case, the rain is slowly absorbed; in the latter it runs over the surface. But when a river is fed from melted snow and glaciers, it is impossible is foretell a rise. The chain of the Cevennes mountain is granitic, and the soil consequently impermeable; it is on the west of the range that the Garonne receives its tributaries, and when, as has just occurred, the warm and persistent rainfalls in the basins of the Pyrenees and the Cevennes, the snow on the mountains quickly melts, and adds to the volume of the rivers, which thus feed the main stream. This has been the case with the Garonne, a rather shallow river passing Toulouse through a wide, flat region. It is found that these inundations, whether of the Garonne, the Rhone, or the Loire, come in cycles of twenty or ten years, according to the region. It is also observed that periods of drought and humidity arrive in cycles also; that the activity of the sun's own surface is marked by varying cycles as interpreted by spots; and that the moon's declination or variations, above or below the equator, occur also in cycles, but no law has yet been discovered to connect these suggestive coincidences. St. Swithin's Day was formerly the 20th June, but by the reformation of the calendar, the anniversaries of the twelve saints were suppressed, thus affecting all the others. Instead of the twentieth, St. Swithin's anniversary became the 8th of June. Now, there is always a grain of truth in old adages, and the proverb about the saint in question, that can be traced back to the thirteenth century, had some foundation when the 20th June was the anniversary, because it is a scientific fact that if it rains about the summer solstice, the fall will continue for some time, though not perhaps quite forty days.

Dr. Tholozan, medical adviser to the Shah of Persia, and just returned to Paris, is an authority on cholera. The origin of this epidemic is hotly disputed, and theories on the subject are numerous. Dr. Tholozan holds that originally, at the commencement of the present century, cholera was introduced into Europe from Asiatic countries, but that for the last sixty years the outbreaks of that plague are the consequence of the revival of the germs of the malady, which sleep but never die, and thus present the same characteristics as on the Ganges. It is erroneous then to maintain, that every choleraic contagion is an Indian importation.

Mr. Emerson, an English chemist, recently wrote an article on flies, setting forth that they were not plagues, but friends of man, inasmuch as they gathered on their wings and legs animalcula, and when they alighted to rub their legs and wings, the object was merely to gather the animalcula into a ball, and swallow it as a mouthfull; he was able to test these observations by the microscope, as he believed the animalcula were young flies, "the fly carrying its young attached to its body." Dr. Chereau denies this assertion, flies being oviparous, like nearly all insects, depositing their eggs, which in due time become larva, and later flies. The young of all insects arrive in the world as large as their parents; it is the larva only that develop, and if a dozen of these be taken from the carcass of some dead animal and placed under a glass, th ey will duly emerge full-shaped flies, commencing at once to make their toilette with their legs and wings, although having had no opportunity for catching animalcula. Flies are very ravenous and so prolific that Linœus was not perhaps too hyperbolic when he said, "three flies would consume the carcass of a horse as quickly as a lion." Only the puceron among insects bring forth their young as living larva and De'Geer and Réamur having dissected the uterus of several, found upwards of twenty thousand eggs in a single uterus, each in its separate cell.

Some new pencils have appeared which permit the tracing made upon paper to be copied, by simple pressure, just as a copy of a letter is made from special ink: they are manufactured from a paste composed of black lead, kaolin, and a violet blue aniline soluble in water: it is the aniline that is traced on the copy.

M. Giraudière draws attention to a podometer, valuable not only for tourists, but for scientific excursionists. It is very simple, each step the pedestrian takes being registered on a marked dial. The errors are seldom greater than five per cent, as M. Girandière has tested during his geological excursions.

When a saucer of water is placed under the receiver of an air pump and the air pumped out, the water commences to boil, and immediately becomes a solid mass of ice. After the air or the pressure is removed the water boils, and in passing from a liquid to a gaseous state, the water in borrowing heat from the surrounding bodies become so cold as to solidify. M. Carré has practically applied this fact to freezing decanters of water; the decanter is covered with an India-rubber tube, a few strokes of the piston remove the air, the watery vapor passes off to a receptacle of sulphuric acid, needles of ice immediately form, and in the space of a minute the water in the decanter becomes a solid block of ice. The machine is invaluable for households and hospitals, is easily worked, but consumes sulphuric acid largely.

OUR LIBRARY TABLE.

Selections from the Asiatic Journal.—Messrs Higginbotham and Co. The late Mr. J. J. Higginbotham, while engaged in searching for biographical materials to compile his "Men whom India has Known," met with much interesting and valuable information connected with India, now almost beyond the reach of the public, in the *first series* of 28 volumes of the "*Asiatic Journal.*" It then occurred to him that these sterling articles could be saved from perishing, if an attempt were made to secure a sufficient number of persons to subscribe for the republication of all those of the highest permanent value in one royal octavo volume of about 1,000 pages, so as to defray at least the actual cost of printing. Accordingly a prospectus was put forth, and it succeeded beyond his most sanguine expectations. The various Governments of India and of the Native States, and the public in general gave the project their very liberal support. It is, however, much to be regretted that Mr. Higginbotham did not survive to see the completion of the work. The Publishers trust that this attempt to resuscitate so much important matter connected with India will be generally appreciated. It is their purpose to continue a series of reprints of a like nature, but much will depend on the further support given to this undertaking.

Indian Wisdom.—By Monier Williams. This erudite work consists of examples of the religious, philosophical, and ethical doctrines of the Hindoos, with a brief history of the chief departments of Sanskrit literature. One of the best portions of the book relates to Menu's Institutes, a specimen of the verse translation of which is given below:—

Daily perform thy own appointed work
Unweariedly; and to obtain a friend—
A sure companion to the future world—
Collect a store of virtue like the ants,
Who gather up their treasure into heaps;
For neither father, mother, wife, nor son,
Nor kinsman will remain beside thee then,
When thou art passing to that other home,—
Thy virtue will thine only comrade be.
* * * * * *
Single is every living creature born,
Single he passes to another world,
Single he eats the fruit of evil deeds,
Single the fruit of good; and when he leaves
His body like a log or heap of clay
Upon the ground, his kinsmen walk away;
Virtue alone stays by him at the tomb,
And bears him through the dreary trackless gloom.

Professor Williams believes that "The whole moral tone of the Rámáyana is certainly above that of the Iliad." And again:—"In exhibiting pictures of domestic life and manners, the Sanskrit epics are even more true and real than the Greek and Roman. In the delineation of women, the Hindoo poet throws aside all exaggerated colouring, and draws from nature. Sita, Draupadi, and Damayanti engage our affections and our interest far more than Helen, or even than Penelope. Indeed, Hindoo wives are generally perfect patterns of conjugal fidelity; nor can it be doubted that in these delightful portraits of the Pativrata, or 'devoted wife,' we have true representations of the purity and simplicity of Hindoo domestic manners in early times. . . . Nothing can be more beautiful and touching than the pictures of domestic social happiness in these poems . . . . In depicting scenes of domestic affection, and expressing those universal feelings and emotions which belong to human nature in all time and in all places, Sanskrit epic poetry is unrivalled, even by the Greek Epos. It is not often that Homer takes us out of the battle-field; and if we except the lamentations over the bodies of Patroclus and Hector, the visit of Priam to the tent of Achilles, and the parting of Hector and Andromache, there are no such pathetic passages in the Iliad as the death of the hermit boy, the pleadings of Sita for permission to accompany her husband into exile, and the whole Ordeal scene at the end of the Ramayana. In the Indian epics *such passages abound*, and, beside, giving a very high idea of the purity and happiness of domestic life in Ancient India, indicate a capacity in Hindoo women for the discharge of the most sacred and important social duties."

The Law of Enhancement of Rent in Bengal.—The pages before us have been written with a view to show that the law of enhancement of rent for Bengal, as it stands in the Statute Book or as expounded in the reports of decided cases, is radically defective. The writer hopes to prove that the Legislature has hitherto alternately favored the zemindar and the ryot without trying to solve the real difficulty. The importance of the subject need not be dwelt upon, especially after the recent agrarian riots in the Pubna district; and the present Government appears to be fully conscious of this importance, as it has already introduced a Bill to prevent such disturbances; but the provisions of this Bill, unless materially altered by the Select Committee, will, it is feared, be inadequate to meet the object in view. It is fair to mention at the outset that the writer comes from the landowner class, but he hopes that he has not altogether overlooked the interests of the ryot. There are two points which require consideration—defects in the law, and defects in its administration. The second is oftener a matter of complaint than the first, chiefly with the zemindars. There has been so much keen discussion about the permanent settlement of Bengal, that it seems to have at last split up the public into parties holding different opinions upon the subject; and judicial and executive officers, particularly those who are actuated by a desire to reform, not unfrequently interpret and carry out the provisions of the law in accordance with some of these opinions. Putting aside nicer shades of difference, our author classifies the opinions under three principal heads—(1.) That the permanent settlement was financially a mistake; the demand of the Government upon the produce of the land ought not to have been restricted as it has been by that measure; hence, if possible, it should be set aside.—(2.) That the zemindars were not entitled to that settlement; if anybody ought now to have the benefit of that measure it is the ryot, and it were better if enhancement of rent could be disallowed altogether—(3.) The opinion in support of the permanent settlement. But what seems to be somewhat strange, is that some people mix up the first two opinions into one. An advocate of the rights of Government sometimes denounces the zemindar's right to enhance rents; and an advocate of tenant rights sometimes tries to hedge himself in the argument that the financial resources of the Government ought to be more elastic. They both seem to overlook that the permanent settlement cannot be redeemed without a heavy compensation being paid to the zemindars, and that to be duly reimbursed for this compensation, and in order to attain the desired elasticity of the revenues, the Government must copiously enhance the rents. Perhaps it would be answered that the ryots could be saved from illegal exactions if the permanent settlement were set aside. Although this answer does not affect the question as regards the law of enhancement, yet it may be observed that illegal exactions are partly due to the fact that the rights and liabilities of the parties are not accurately defined, and partly also to the intellectual and moral character, as well of the ryots themselves as of those who are put in the charge of collecting rents from them.

As a rule, the latter of these may be said to belong to the same class whether they serve the zemindars as gomashtahs and piyadas, or the Government as tehsildars and chuprassies. To employ a better class of men would, in the present state of this country, cost more money than either the zemindars or the Government could afford for the purpose. The general superiority of district collectors to zemindars, as a supervising agency, is marred by an absence of sympathy for the ryots as men and individuals, by a total inexperience of their necessities and foibles, and by an inveterate fondness for forms and rules. And whatever superiority there may yet be in favour of the collectors is again completely balanced, if not actually overbalanced, by the greater license which ministerial officers and menial servants of the Government are allowed to exercise in comparison to zemindars' servants of equal ranks. In fact, khas collections of rent by the Government had been tried before the permanent settlement and found to fail. A disregard, however, of some of the facts noticed above often makes the advocates of the interests of Government and those of tenant rights range themselves on the same side, merely from a common sentiment of opposition to the zemindars, without having any real sympathy for each other's views.

The Ship in the Desert.—By JOAQUIN MILLER. The space at our command compels us to be brief with reference to this new work of the well-known American poet, but the following excerpt will give a fair notion of the book :

O thou to-morrow ! Mystery !
O day that ever runs before !
What has thine hidden hand in store
For mine, to-morrow, and for me ?
O thou to-morrow ! what hast thou
In store to make me bear thee now ?

O day in which we shall forget
The tangled troubles of to-day !
O day that laughs at duns, at debt !
O day of promises to pay !
O shelter from all present storm !
O day in which we shall reform !

O safest, best day for reform !
Convenient day of promises !
Hold back the shadow of the storm.
O bless'd to-morrow ! Chiefest friend,
Let not thy mystery be less,
But lead us blindfold to the end.

Japanese Fancy Work.—The fine arts of Japan are abandoning their thrones. The art of China is dead ; still they paint porcelain and carve ivory, with dim recollections of bygone splendours, but the old and good art is gone, and can never come again. The art of Japan is deteriorating, and a few years more of intercourse with Europeans will finish it. The decorative arts of an Eastern people cannot bear the evil effect of the European market ; Chinese art has died of the demand for dinner sets, backgammon boards, work-boxes, and chessmen for exportation ; and Japanese art is moribund, now that Mr. Vantine can sell two or three hundred thousand fans a year, with glove-boxes and teapots in proportion. The workmen who have the exceptional skill required for the finest work to whom have descended those secrets of workmanship and that familiarity with design which we find so extraordinary will not continue to do fine work when cheap articles of sale have begun to pay well. When Shanghai was opened for trade, delicate inlaid work was to be bought there ; one large round table we know of which was bought for eighteen silver dollars ; similar work bought there now, at four times the price, is very inferior in design and workmanship. So a bronze vessel of exquisite finish, which cost forty silver dollars in Nagasaki a few years ago, a French bronze worker would not attempt to reproduce for less than six hundred francs. The native workmen hear of European prices, and there is every probability that the Japanese founders and engravers who did this wonderful piece of work are now engaged in making the common silver inlaid bronze vases and candlesticks, of poor workmanship and no particular design, for the European market.

INDIAN INTELLIGENCE.

BENGAL.

NOT far from 1,000 persons died of cholera at Pooree, during the recent Juggernath festival, in spite of excellent sanitary arrangements.

MAJOR-GENERAL S. BROWNE, C.B., V.C., will be chief of the Prince of Wales' Indian staff, which, as far as at present constituted, will consist besides of Major Henderson as Political Officer, Captain Grant as Quarter-master General of the Camp, and Major Sartorius.

SIR RICHARD TEMPLE made a State Progress to the Howrah Station on Thursday evening *en route* to Darjeeling. An army of Police, horse and foot, guarded the approaches to the station, and kept the road clear all the way up the Strand. A Guard of Honor of European Constables was drawn up at the Calcutta end of the Hooghly Bridge, and a select party of Native and European magnates assembled on the platform to bid adieu to the departing Governor. Even the cows were visibly affected.

THE last "general remarks" by Government about some parts of Bengal are "gloomy," and we may soon be gratified with an entirely new set of picturesque descriptions of withering crops and wasting peasants. The oracle now speaks as follows : "The fall has been insufficient in all the Rajshahye and most districts of the Cooch Behar, Patna and Bhaugulpore divisions ; more rain is also wanted in behalf of the districts of the Burdwan and Presidency divisions, and in parts of the districts of Mymensingh and Maunbhoom. Transplantation has stopped in many places for want of water, and serious consequences may be apprehended as to the fate of the main rice crops in most of these districts, unless rain falls copiously within a short time. Early or *aus* rice is being harvested in some of the districts of the Presidency, Rajshahye, and Dacca divisions. In Dinagepore half of this crop has been destroyed by the drought, and unless rain falls within a day or two the entire crop will be lost. In Behar the prospects of the *bhadoi* crops still continue good, except in Purneah and Bhaugulpore ; elsewhere the general prospect is favorable." The expressions "serious consequences may be apprehended" and "the entire crop will be lost" are sufficiently alarming, accustomed though we may be to the perpetual presentation of the dark side of the picture in the agricultural literature of the period ; but we may console ourselves with the reflection that famines as well as wars must be postponed till after the Prince of Wales has come and gone. It has been discovered, by the persons most interested, that honors and titles come more easily to those who entertain Princes than to those who feast ryots at the public expense.

THE following cuttings from three native papers are interesting : The *Amrita Bazar Patrika* "suggests that on the occasion of the Prince of Wales' visit to India, the people should try to disabuse the mind of the royal visitor of the impression which the authorities will try to stamp upon it that the people of India are living in great comfort and happiness under the British Government." The *Probhakur* "suggests that on the approaching visit of His Royal Highness the Prince of Wales, all sections of the community in Bengal should unite in making a common demonstration in welcoming the Prince. The Rajah of Burdwan should head the Bengalee community, and accept the office of president of the committee that may be formed for collecting funds and *divising* means of doing honor to the Prince. He should take the lead and proceed as head of the Bengalees to welcome the Prince on his first arrival. The Princes of Mysore, the Nawab of Moorshedabad, and all respectable Mahomedans should give up the idea of a separate reception and join the Bengalees in the demonstration." With reference to the question of expenses, the *Samaj Durpun* says that "it is a matter of gratulation to India that the Prince will visit India, and if such an honor entails expenses, the Indians should bear it with the greatest pleasure. If a Hindoo Raja or a Nawab had paid such a visit, it would have obliged us to incur immense expenditure on account of presents, and refusal or lukewarmness would have involved violence and forcible seizure, not to say anything of the spoliation which would have been committed by the attendants. Under such circumstances there can be no question about our welcoming our peaceful Prince with joy and rejoicing. In fact it must be said that it is India's great good fortune that the Prince is coming to pay his visit after crossing boundless seas. We stop our ears against the grumbling, if any, that such an honor will entail large expenditure upon India."

ON Friday week last, the Lieutenant-Governor of Bengal held an evening party at Belvedere to invest Koomar Narendra Krishna Bahadoor and Baboo Shama Nund Dey with the title of "Raja" and "Roy Bahadoor" respectively. At 10-30 o'clock P. M. Raja Narendra Krishna and Baboo Shama Nund Dey were conducted by the Private Secretary before the Lieutenant Governor, who stood in front of the silver throne placed at the upper end of the hall, supported by Sir Richard Garth and the Hon'ble V. H. Schalch, C. S. I. The Rajah, who is past the middle age, looked quite gay and young in his dress of honor and plumed turban. The ceremony opened with Sir Richard Temple tying round his neck a pearl necklace and the Rajah presenting a nuzzur of a hundred and nineteen gold mohurs. The sunnud conferring the title of Rajah was then read out by Mr. E. C. Buckland, Private Secretary. It ran as follows :—"In recognition of his consistent efforts in matters of public progress and improvement, His Excellency the Viceroy and Governor General of India has been pleased to confer upon Koomar Narendra Krishna, of Sobha Bazar, Calcutta, the title of Rajah as a personal distinction." In the course of a brief speech Sir Richard Temple congratulated the Rajah on obtaining this high distinction. It gave him great pleasure to invest two members of the well-known Sobha Bazar Raj family with the same title within a few months of each other. That family had always distinguished itself by its loyalty and services to the British Government. It was therefore justly entitled to the honors which its different members had enjoyed from the very commencement of the British rule in Bengal. As regarded Rajah Narendra Krishna himself, His Honor might truly say that he (Raja Narendra Krishna) was a public spirited man in the best sense of the word. He had always taken a leading part in all movements of a public nature. He was in fact looked up to as a leader by a large section of the native community. As a zemindar His Honor had much pleasure in saying that the Rajah was a worthy representative of the great landed classes of Bengal. He had been more than once favorably reported on by the Presidency Commissioner. In conclusion, Sir Richard Temple said : "You have doubtless seen many Viceroys and local Governors come and go ; you have doubtless seen many changes introduced into their policy ; but I am sure you have seen no change in one respect, *viz.*, the kindness and hospitality of the British Government towards your family and the great landed aristocracy of Bengal."

NORTHERN INDIA.

MR. EASTWICK, after his visit to Hyderabad, will proceed to Simla, where he will be the guest of the Viceroy.

THERE has been very heavy and continuous rain at Simla. Several landslips have occurred on the new road from Kalka, and Tongha and cart traffic has been stopped in consequence.

THE royal wedding between a daughter of Nawab Moomtaz-ud-Dowla and a nephew of the ex-king of Oudh, which lately took place in Lucknow, is said to have cost the father of the bride full six lakhs, besides the household property and jewels given.

AN infuriated elephant belonging to the Maharajah of Bhurtpore has killed four persons and wounded several others, besides destroying a number of houses, and up-rooting fifty or sixty trees. A whole battalion of sepoys had at last to be called out to capture the animal.

SEVERAL Native Chiefs have already commenced making the necessary preparations for the reception of the Prince of Wales. The Maharaja of Bhurtpore is said to have sent out an agent to Calcutta to make large purchases of clothing materials for his troops, who, it is said, are to be supplied with new uniforms on the occasion, and has also indented for several musical instruments for regimental bands.

A BILL was introduced by Mr. Hope, at the last Council Meeting, to amend the law relating to Customs duties. It is believed that the Bill contemplates the abolition of the greater portion of the present export duties. The Reformatory Industrial Schools and Law Reports Bills will be introduced, and referred to Select Committees. Sir D. Forsyth asks leave to introduce a Bill to declare and amend the law in the Central Provinces.

ABOUT fifty summonses were issued on the 4th August against employés in the Government Press at Simla, in consequence of an inquiry now being held by the Deputy Commissioner regarding an attempt made a few days ago to send by post to the *Englishman* private Foreign Office correspondence. The packet was seized by a Police Inspector on its way to the Post Office. An investigation is also being carried on in the Foreign Office, with a view to ascertain how far the employés of that office are implicated.

THE following is an extract from Captain Molloy's diary at Ladakh up to the 11th of July: "During the past fortnight several merchants have arrived in Leh from the south, the greater part of them having preceded their goods, which they have sent *via* Kulu. There are reports, too, of a good many more being on the road, among them some traders new to this route. One of the late arrivals is a Pathan, who last winter took a consignment of Yarkand goods as far as Assam, where, by his account, he must have done some very profitable business. He talks of the country as a kind of Garden of Eden, and evidently looks to it as a rich field for future ventures in the way of commercial speculation. I must say I think the Afghans are decidedly the most enterprising class of traders who patronise this route."

THE *Pioneer* records an occurrence which nearly proved awfully fatal. In the Dehra Ghazi Khan district, several new embankments are being prepared to keep the Indus from over-flowing in the place of old bunds. In the space between the old works and the new, in the Jainpore Tehsil, lies a number of small hamlets and huts, containing some one thousand individuals. These men never apprehended any danger. But one morning, the Assistant Engineer was sailing over the flood in his boat when he was surprised to see the poor people perched upon the highest points about, calmly awaiting death, should the water rise higher. Immediately boats were sent to rescue them, and had it not been for the accidental visit of the Engineer, they would have all died.

IN the matter of presents, during the tour of the Prince in India, the authorities have been most careful to make a selection which shall do no discredit to the donor, and which shall be really valued by the recipients. They will not be presents of enormous intrinsic value, but they will have special features of their own which will make them exceptionally suitable. Portraits of the Queen and of the Prince, royal seals and signets, handsome books in special bindings, lamps, china, carriages, articles really good and valuable in themselves, but not as in the case of jewellery of exceptional money worth. It is hoped also that the Native Princes will in this respect restrain their magnificent lavishness and offer to His Royal Highness such articles as will not dwarf his own liberality. The giving and receiving of presents are not what either the Prince or the Government desires to encourage; the system is believed to be fraught with evil to the Princes themselves, but, as it is a custom of the country, the Prince desires to conform to it in a reasonable degree. Lord Hartington's suggestion, that His Royal Highness should refuse costly gifts, expresses the prevailing feeling on this subject, but when he added that those gifts should be limited to the products of the country, one's mind turned to rice, opium, indigo, and tea, and pictured His Royal Highness on the part of an Indian merchant.

BOMBAY.

THE Kusmore bund in Upper Sind has been breached by floods.

THE Alienation Department in the Bombay Presidency was abolished on the 1st instant.

NANAJEE VITHAL, late *kamdar* of the jewel department of Baroda, is to be prosecuted for embezzling Rs. 34,000.

THE Endowment Fund for the European General Hospital at Bombay now amounts to more than Rs. 30,000.

THE young Gaekwar of Baroda will, it is reported, visit Bombay for the reception of the Prince of Wales in November.

THE Young Thakoor of Bhownuggur lately read Longfellow's *Psalm of Life* at a penny reading given in the capital city.

MULHAR RAO has sent an application to the Viceroy for permission for his solicitors to see him. He wishes to confer with them about presenting an appeal to Parliament.

IT was rumoured in Bombay last Monday that the ex-Gaekwar of Baroda had been removed from Madras. We believe the rumour to be well-founded, and that Mulharao was taken from Madras on Sunday morning and sent to Kurrachee.

A BONFIRE has been made of some of the pictures which used to adorn the palace of Baroda. Probably the artists who minister to the peculiar tastes of Oriental sovereigns anticipate that this destruction of works of art will ensure to them large orders in the future, but we hope that the young occupant of the *guddee* may be so trained as to disappoint their expectations.

THE second municipal election at Bombay has lately been concluded. In the Fort ward of 656 voters, only 317 votes were registered, and in the Market ward of 1,038 only 254 votes were given. The other wards show an equally low proportion. The question as to whether the representatives of mercantile firms, not being partners, were entitled to votes, is likely to be referred to the law-courts.

A CASE of a very painful nature will shortly be heard before one of the Mofussil Magistrates, resembling in every respect, except the position of the parties concerned, the case of Colonel Baker. It appears that an official of the G. I. P. Railway, while travelling in the same carriage with a lady from Kurjut to Narell, conducted himself in such a manner that she raised an alarm. Fortunately the guard of the train heard her cries and stopped the train. The offender has been suspended by the railway authorities.

HIS HIGHNESS THE GAEKWAR and the Ranee Jumnabaee are becoming more popular daily. Since the establishment of the new *régime* great improvements have been effected in the several departments of the State. Important public works are to be immediately commenced, under the superintendence of Mr. Hill, C. E. At the express desire of Sir Richard Meade, K. C. S. I., a new and short road, leading from the Post Office in Camp through *Nawab-ka-Bagh* to the Railway station, is to be constructed.

UNDER the heading "A Panacea for Cholera," we observe an article in one of the Bombay papers, which states that a certain "Mr. Karshedjee Behramjee Devacha, a resident of Tanna, who has been in search of a remedy for cholera for many years past, has at last succeeded in discovering what he is confident is a specific for the disease and which he describes as "cholera mixture or cholera pills." These, he states, he has repeatedly tried on many poor people in his own district who were suffering from very severe attacks of cholera, and with unvarying and thorough success. "Mr. Devacha, at last, thought it advisable to bring his new experiment to the notice of the public, and secured certificates from many respectable gentlemen of Tanna, and also from the surgeon in charge of the Tanna Charitable Dispensary." We have heard of so many "panaceas," "certain cures," and "unfailing remedies," that we confess we do not place implicit reliance in the above.

A BARODA correspondent of the *Times of India* writes:—Ornaments of the value of about seven lakhs of rupees, which were presented by Mulharao to Luxmeebaee's father, have been extracted from the box in which they were locked up. The box was under attachment and was sealed. The bottom board was removed, and the ornaments were taken away. State jewels, of the value of about thirty lakhs of rupees, are also missing from the State jewel department. The affair is regarded with some surprise, as great care had been taken to secure the valuables, and they were in charge of a careful and trustworthy officer, Gunputrao Maharajah, a relation of Gujanund Vittul, in whose custody they have been since the arrest and suspension of Mulharao. Sir Richard Meade and the Assistant Resident both continue to receive threatening letters from some cowardly scoundrels at Poona headed "*Death! Death!! Death!!! Look out for your life We have taken our sacred oaths to kill you.*"

THE sad news conveyed by telegraph of the loss of the *Stuart Hahnemann*, with 39 lives, has caused a deep commotion amongst those interested in the shipping trade of Bombay. The ship was 2,322 tons, builders' measurement, and 1,997 tons net register, and was built in 1874, by Messrs. A. McMillan and Son, Liverpool, and was owned by Messrs. Stuart and Douglas of the same port. She made her first voyage to Bombay with a cargo of coals and was laden there with 13,637 bales of cotton, being one of the largest cargoes ever carried by a ship from that port. When in harbour she was anchored off Apollo Bunder, and the *Gazette* says her tall masts with seven yards on each, and her graceful lines, and appearance generally, attracted the attention of every one visiting the bunder. In fact she was a noble looking ship, and, to those uninitated in the mysteries of ship-building, appeared to be as near perfection as a ship could be. Through the courtesy of Captain Van Norden, visitors were daily allowed to see the ship, and several of the masters who went over her did not hesitate to say they considered her a dangerous ship, for they calculated that, being so heavily sparred, and all iron rigging, which had to be worked by the donkey engine, if the vessel met with sudden bad weather, she must either capsize or have her masts blown out of her; and the masts seem to have been too strong to give way. Unfortunately these predictions have come too true, and there can be but little doubt that Captain Van Norden, in his desire to make a quick passage, "carried on" too long, and his vessel met the fate of the *Captain*.

MADRAS.

A MEMORIAL Hall in honor of the late Lord Mayo will be built at Bangalore at a cost of Rs. 365,000.

A THIRD French official, M. Denis Frederic Virence, Commissaire of Pondichery, has died after a few hours' illness.

THE Raja of Pittapore, in Madras, has been bound over to keep the peace for a year, and to furnish two securities of Rs. 1,000 each for assaulting a policeman.

A TELEGRAM from Secunderabad says: "Sub-Lieutenant Carlyon, of the 107th Regiment, has been fully exonerated and released from arrest by His Excellency the Commander-in-Chief. He was reprimanded as requiring advice. No fault was found with his military duties, and his intelligence was praised."

AN *employé* in the Nizam's P. W. D. has been getting into trouble for marrying his deceased wife's sister, having been indicted under Section 193 of the Indian Penal Code. Both the bridegroom and the bride's father were charged with knowingly making a false declaration to a public officer and pleaded guilty, throwing themselves on the mercy of the Court. They urged as an extenuating circumstance " that similar marriages and declarations in connection therewith have occurred in and still take place in India and England, and they also know of some cases in Chudderghaut even."

IN a recent suit connected with the Bank of Madras, the Head cash-keeper of the Bank was called and gave his evidence as follows, after referring to the ledger :—

Mr. Miller.—What is the total amount of Ragavaloo's dealings with the Bank during the year 1866.

M. Cingara Charry.—I don't know; there were two Ragavaloo Naidoos that had dealings with the Bank and these dealings were both put under the same name.

Kernan, J.—I suppose you mixed them up so as to make them clearer to explain when asked about them (laughter.)

Mr. Miller.—But has the mistake only just been found out and has it not been altered ?

Witness.—I don't know.

Kernan, J.—What sort of transactions are those you have pointed out in the Ledger ?

Witness.—Discounts on Bills.

Kernan, J.—What Bills ?

Witness.—Accommodation Bills.

Mr. Miller.—And is it your duty to enquire about the parties and recommend the business to the Directors if you think it is safe ?

Witness.—Yes.

Kernan, J.—But did you know they were Accommodation Bills at the time ?

Witness.—Yes, my Lord.

Kernan, J.—And did the Directors also know it at the time ?

Witness.—They did my Lord.

Cross-examined by Mr. Advocate-General.—And how long did these transactions continue ?

Kernan, J.—You need not enquire Mr. Advocate-General: in all probability they are going on now.

Mr. Advocate-General.—Who was the other party to these Accommodation Bills ?

Witness.—Veerasawmy, the Interpreter at the Police Court.

Kernan, J.—I shall most certainly transfer my account to the Oriental Bank after this (laughter.)

Mr. Advocate-General.—And I shall sell my shares (laughter.)

BURMAH.

FOUR dacoits concerned in the murder of Colonel Hamilton have been tried and sentenced to be hanged, but have appealed to the Judicial Commissioner. Colonel Duncan has left Rangoon for Mandalay.

ASIA.

A COMPANY is being organized to work the Lingga, or Silantik, coal mines, in Sarawak without delay—an undertaking which must materially increase the prosperity of the country, as it has been estimated that the output of coal per year of from 80,000 to 100,000 tons will be almost sufficient to supply the Singapore market. This coal has been proved to be of first-rate quality, and quite equal to the best West Hartley.

A CHINESE PAPER has heard " on good authority that Dr. Bushell, physician to the British Legation at Peking, was assaulted by stones at one of the gateways of that city on the 21st ultimo, and that on the same day a Russian gentleman was roughly handled by the populace. This is the extent of our information, which is meagre enough; still it leaves an unpleasant impression. It is not often we hear of foreigners connected with any of the Legations in Peking being treated with incivility, and in the present instance the attacks seem to have been of a determined nature."

FROM Alexandria it is announced that a firman from the Sultan has been received sanctioning the cession to Egypt of the port of Zeyha, on the Gulf of Aden. This augments the Egyptian tribute to the Porte by the sum of £15,000 yearly. Zeyha has hitherto been administered by its own Sheikh, and was in effect independent of the Porte, although recognizing its suzerainty and paying dues equivalent to a sum of £ 800 per annum. It is also stated that the Sultan has invited the Khedive to pay a visit to Constantinople during the summer. The Khedive has issued a decree ordering the adoption of the Gregorian calendar by the Egyptian Administration from September next. Munzinger Bey, Governor of Eastern Soudan, has been created a pasha.

SIR WILLIAM JERVOIS returned to Singapore on the 29th June from a visit to Penang and Malacca, during which he paid flying visits to Klang, Perak, and Salangore. The visits to Tunkoo Dia Odin and the Sultan of Salangore were very cordially received, and H. E. was much pleased with the progress made by the Resident and Assistant Resident in placing the administration of those countries on a satisfactory basis, and introducing order and system where no system formerly existed. Matters are now apparently going on very smoothly throughout the protected Native States, and there seems every reason to hope that the internecine disturbances which have so long prevented the development of their resources will not recur, but that the chiefs will find peace and prosperity more profitable than freebooting and the levying of blackmail.

A TRAVELLER in Borneo relates the following anecdotes about alligators :—" A few months ago two women were taken up in Simanggang for poisoning a relative. They were found guilty and condemned to imprisonment for a period of years. The younger one protested that she was innocent, and prayed that she might be swallowed by an alligator, were she then telling a falsehood. The same evening she went down to bathe close to the fort, and a faint scream she had barely time to utter announced that her prayer had been heard! The Assistant Resident of Sintang informed me, that when stationed at Bunut, the river occasionally rose up to the level of his house. An alligator, taking advantage of high water, appropriated a monkey, fastened by a string to a post in the verandah. The second officer of the *Madura* assured me, when steaming in the Upper Kapuas, he once saw on the banks of the river, an alligator lying still as death with his jaws wide open. Two monkeys were playing in front of him, but finding no notice taken of their gambols, became bolder and bolder in their manœuvres, gradually approaching him nearer and nearer. Unfortunately a bend in the river occurring at the moment prevented the officer from seeing the *finale*, which in all probability witnessed the disappearance of one of the players down those still placid jaws."

THE *Goloss* is still taking pains to explain the meaning of the famous article supposed to have been inspired by the friends of the Czarewitch. The general attention it excited was, it seems, due to the busybody politicians of Vienna, from which capital were first issued the telegrams that startled all Europe by predicting the early rupture of the three Emperors League. So far from there being any prospect of this event, an *entente* so admirable as that existing between these great monarchs should have the effect of bringing in other Powers; and this process will naturally work through single members of the triad making approaches suitable to their particular interests. Such, it is implied, was the recent advance of Russia, through the columns of the *Goloss* towards ourselves. The St. Petersburg writer laments that at Berlin so natural a proceeding should have been misconstrued into a sort of treason against the alliance itself. The *National Zeitung*, which is particularly referred to here, disclaims such imputed jealousy. " The great mistake of the *Goloss*," it says, " is to represent it to be to the interest of Germany that there should be any tendency to ill-feeling between Russia and England." If we were so misunderstood, adds the Berlin journal, this must have been due to incorrect telegrams from London. In short the arts of the British press, aided by the duplicity of that of Vienna, are answerable for the whole of the unpleasantness that arose between the two Northern Powers, according to this latest version.

A LETTER from St. Petersburg in the *Schlesische Zeitung* communicates some interesting intelligence about the newly formed Trans-Caspian district. The Russians attach great importance to the position of Krasnovodsk, the capital of this district, which is to be connected by a line of steamers with Astrakhan on the one side, and the Caucasian coast towns on the other, and which they hope to make an emporium for the goods coming from Khiva, and those sent from Europe for the Central Asian market. In order to attain this object it is absolutely necessary to provide for the security of the caravan road between the oasis of Khiva and the harbour of Krasnovodsk, along which postal communication is maintained by mounted Khirgiz officials. Although caravans have several times passed along this road without injury, they are entirely at the mercy of the Tekke-Turcomans, who during the last market season plundered so many of the caravans that the quantity of goods which actually reached the market was very small. These Tekke-Turcomans are not easily got at, for their country extends to the borders of Afghanistan, and is separated from the Russian possessions by broad spaces of desert. Their hostility to the Russians, too, is so great that, though such of them as have been captured on their plundering expeditions have been severely punished, this does not seem to deter them from taking every opportunity of injuring Russian interests. According to the last accounts from Krasnovodsk, the Russian Governor, General Lomakin, who was so successful in his expedition to the Valley of the Attrek last year, will shortly proceed with a body of troops along the whole of the caravan road as far as Khiva, in order to ascertain the best means of protecting the road in question. The correspondent adds that the construction of the railway from Samara to Orenburg, which will be the first of the Central Asian lines, is now in full progress, and a huge iron bridge is being built across the Volga. This line will, it is hoped, be ready for traffic in the course of next year.

THE following is the official account of the death of the last chief who upheld the cause of Sultan Soliman in Yunan : 'Tso Tsung-tang, Governor-General of Shensi and Kansuh, reports on the reconsideration of, and re-investigation into the heroic conduct of a former Acting Prefect of Kwei-teh, Cheng-shun, and his family and subordinates, all now deceased. Cheng-shun entered into his duties on the 8th moon of the first year of Tunn-chi (1862), just at the time when the Mahomedans raised the standard of rebellion. All the neighbouring towns fell, one after another, to the fury of the insurgents, but Kwei-teh, owing to the energetic and gallant defence of Cheng-shun, held out bravely for six years. Forlorn and unassisted, the hearts of the people were strengthened to resistance by the exertions of their Prefect; but during the night of the 16th of the 2nd moon of the 6th year of Tung-chi, the rebel chiefs, with over 1,000 followers, surprised the town. Cheng-shun ascended the battlement and fought manfully—hurling down a rain of stones on the enemy; but treachery had already shown itself within the walls. The gates were opened and the rebels poured in. Cheng-shun now gathered together his followers, and with sword and knives fought hand to hand in the streets. Seventeen of the rebels had fallen before them, when a band attacked them in the rear, and Cheng-shun was felled to the ground by a stone hurled at his head. The insurgents crowded around him, but Cheng-shun railed at them in a furious tone. They cut off his left arm, and he railed with increased vehemence. Finally, they cut off his right foot and quartered him. Cheng-shun's two brothers then led their mother to the scene of his death, and the three, while weeping with grief and abusing the perpetrators, were despatched by their spears. Valour of so rare a character should

be specially commemorated, and the mark of honour previously conferred by the Throne on Cheng-shun is considered to be inadequate. It is now suggested that higher posthumous distinctions should be granted, and that the Imperial consent should in addition be given to the dedication of a temple to the memory of Cheng-shun and his family.

WITHIN a quarter of a century Russia has moved down from the north of the Caspian Sea, 500 miles south and 1,400 miles east, until she is now within 250 miles of Peshawur, with her influence extending where her arms have not reached. As Sir H. Rawlinson states in his recent work on "England and Russia in the East," instead of two empires divided by half the continent of Asia, there is now only a narrow strip of territory intervening between their frontiers, occupied either by tribes torn by internecine war or nationalities in the lowest stage of decrepitude, and traversed by military roads in all directions. The railway system, rapidly developed in European Russia, is now stretching its arms into Asia. Her possession of the valley of the Oxus, like her conquest of the Caucasus, cannot be considered as an ultimate point, but only as a resting place or stage in advance. Turkestan with its simple nomad population can scarcely be *the goal* of her wishes : and it might altogether seem as improbable that Russia should remain content with the comparatively barren districts of Central Asia, while India, the gem of the East, lay beyond, as that a burglar should be satisfied with robbing the hen-roosts when his centre bit was capable of opening a way into the house which he knew to contain goodly stores of silver. Mr. Cochrane lately observed before the Commons that no country excepting Germany had been making such rapid territorial progress as Russia during the last half century. She had her gaze fixed on the East, and on the West, and there was a phrase that there was always an Eastern iron in her fire. She had recently made a great addition to her territorial power in Central Asia, and the question raised by that state of things was one of momentous interest to England. Count Rostoyschine, formerly Governor of Moscow, has said that Russia, to overcome England, must divide Turkey according to her ancient plan, taking Moldavia. Roumania, and Constantinople dividing the remaining territory between Prussia and Austria, securing Egypt for France and sending 50,000 men through Persia to India to drive England out of all her Eastern possessions. Now it may be remarked parenthetically that, without any suspicion of overweening vanity, we may affirm that a considerably larger number than 50,000 men would be required to make any impression on British India, unless the Sikhs and other warriors of the North-West transferred their allegiance to the invaders. And it can hardly be conceived as probable that our comrades in arms of the mutiny could desert the English for the hard despotism of Russia. Still the possibility of course remains that a Russian army might march upon our Indian gates at a time when we might be unhappily involved in European war, and when we could with difficulty spare reinforcements from England. Yet even in that event we surely need be under no apprehension lest the successors of the conquerors of Alma and Inkerman should forthwith succumb to their old enemies.

THE *Challenger* established seven deep-sea observing stations between Mindanao and the Admiralty Islands, and at each of these sounded, took samples of the bottom, took a series of temperatures at different depths, and got specimens of water from the surface, the bottom, and intermediate depths, for the determination of the specific gravity and for chymical analysis. At five of the seven stations, the trawl was sent down and a fair representation of the deep-sea fauna was procured. The greatest depth on this line—2,500 fathoms—was found between the Molucca Passage and the Pellew Islands. The samples of bottom varied in character according to the depth, very much as in the Atlantic. The average temperature of the sea surface during this part of the cruise was 82·5 deg. Fahrenheit. The serial temperature soundings seem to show that a great part of the Western Pacific is not entirely in free communication with the Southern Sea, for the water, after sinking rapidly in temperature until it reaches 34·5 deg. Fahrenheit, at a depth of 1,500 fathoms, maintains that temperature for all greater depths. The section from the Philippines to the Admiralty Islands may be considered to have been taken, roughly along the Equator, as it was all between lat. 5 deg. N. and lat 3 deg. 3 min. S. The section, 2,250 miles long, from the Admiralty Islands to Japan, was practically meridional. The observing stations in the second section were 12 in number and pretty regularly distributed with regard to distance. The greatest depth was found on the 23d of March in 4,575 fathoms. This is the deepest trustworthy sounding on record, with the exception of two taken by the *Tuscarora*, off the east coast of Japan, in 4,643 and 4,655 fathoms respectively, but no sample of the bottom was procured on either of these occasions. The sounding in 4,575 fathoms was taken in the morning. Only a very small sample of the bottom came up, and the depth was so unexpected that it was decided to repeat the sounding to avoid all possibility of error. In the meantime the ship had drifted a little, and the second sounding, which was most satisfactory in every respect, gave 4,475 fathoms. The tube of the sounding machine contained an excellent sample of the bottom, which was of a very peculiar character, consisting almost entirely of the siliceous shells of *radiolaria* Three out of four Miller-Casella thermometers sent down to these depths were crushed to pieces by the enormous pressure they had to bear—between five and six tons on the square inch ; the fourth withstood the pressure, and registered, when corrected for the pressure, at 1,500 fathoms, the usual temperature for that depth, 34·5 deg. Fahrenheit, so that at that place there is a layer of water at that uniform temperature occupying the bottom of the ocean trough of the enormous thickness of 3,075 fathoms (18,450 feet). The soundings in this section were usually deep. They commence near Admiralty Island, with a depth of 1,100 fathoms, and a characteristic globigerina ooze. The next sounding gives "red clay" at 2,670 fathoms, and this is continued at like depths until the western verge of the Carolines is reached, where there is "gray ooze" at 2,325 fathoms, and "globigerina ooze" at 1,850. Between the Carolines and the Ladrones there is the sounding in 4,575 fathoms, "red clay," with its character almost entirely masked by the quantity of siliceous shells.

LITERARY.

THE second volume of Mr. Beames's 'Comparative Grammar of the Modern Aryan Languages of India' is just out and embraces copious dissertations on the nouns and pronouns of Hindee, Punjabee, Sindhee, Gujaratee, Mahrathee, Oriya, and Bengalee. The work, when completed, will be one of the most learned and scholarly contributions to Indian literature produced since the rapid development in this century of the science of comparative philology.

SIR JAMES BROOKE left all letters and papers connected with his career in Borneo, in the hands of Mr. Spencer St. John, whom he named his literary executor. The preparation of a work which it was the wish of the late Rajah should be undertaken by no one but Mr. St. John has been retarded by that gentleman's diplomatic appointment to Peru, but the publication of the book will not be long delayed. It is not, however, designed to supersede the works through which the story of Sarawak has already become familiar, having been undertaken more as a personal tribute of regard to the late Rajah than with a view of giving any new details of his career. The last decade of the Rajah's life was, as regarded his adopted country, uneventful.

WE have, not for some weeks, recorded the pleasure with which we see *Figaro* duly placed on our table. A slap on the back in last week's number reminds us of our duty, though we would by no means insinuate that the slap was intended to have that effect. Our snubbed correspondent intimates that his "'orn" is pretty certain not to annoy *Figaro* any more. His epitaph will be that which Lord Byron unjustly said of Keats that he was "killed by a critique." But that is a small matter, compared with the fact that the pages of *Figaro* are at least as entertaining and suggestive as ever. "Caro" does his work well, in spite of the difficulties under which he labours, and the letter-press is far superior to anything of the kind we should have expected to see in such a paper in Calcutta.

WE see that the Goverement of the Punjab turns an honest penny by selling books of all kinds at the Central Depôt, Lahore. Ten per cent. discount for cash is allowed on books worth fifty rupees and upwards. In the catalogue published in the *Punjab Gazette*, we notice the items of leg-guards, batting-gloves, stumps, &c., under the head of "cricketing gear ;" so that it would be more correct to say that the Government goes in for general dealing. Some of the titles of the works are striking. "Great Things done by Little People" is, we presume, a collection of Acts passed by Supreme and other Councils in India. It is to be had for Rs. 1-6. The value set upon the different works does much honor to the discrimination of the appraiser. Keshub Chunder Sen's English visit is to be had for five rupees ; whilst "Lives of the most eminent English Poets, with critical observations on their works, by Samuel Johnson, L.L.D." are obtainable for As. 14-6. The introduction of a pie column is doubtless intended to show how very accurately the valuations of the books has been arrived at. Plutarch's Lives, for instance, cost Rs. 34-10-3, and we have no doubts the item of the three pie could, if necessary, be accounted for in the most logical manner.

WE have received a specimen copy of the famous "Calcutta Pantheon," limned by Caro and published by the proprietors of the *Oriental Figaro*. It is a fine work of art, and certainly surpasses anything of the kind yet produced in this country. It is also, we think, the best of Caro's many Indian sketches, and places him in the front rank of our artists. There is a dash and freedom in the figures of the Pantheon, which none but a true disciple of the art could produce. It is a pity that there is so little scope in India for an artist of Caro's abilities. In any other country but this, he would long since have been engaged in transferring to paper the many beautiful scenes to be found here ; but we seem to be utterly without enterprise of this sort, and doubtless the only object Caro has in remaining is the opportunity of distinguishing himself during the visit of the Prince of Wales. He has, we are glad to hear, entered into an arrangement with the *Graphic*, and we shall thus not entirely loose the results of his able pencil. He has also decided upon forming a large album, descriptive of the tour of His Royal Highness. This will contain about fifty plates and form a beautiful record of the trip, and the places through which the Royal party will pass.

THE VISIT OF THE PRINCE OF WALES TO INDIA.

MR. DISRAELI'S SPEECH IN PARLIAMENT.

MR. SPEAKER.—In rising to move that you do leave the chair, I will take this opportunity of making the statement which I promised respecting the contemplated visit to India of His Royal Highness the Prince of Wales. The House is aware that His Royal Highness has for some time contemplated this visit. His Royal Highness, as the House knows, is a great traveller ; there are very few countries which he has not visited ; but I need not dwell on the great importance of travel to a person filling the high, important, and responsible post which His Royal Highness does in an age of travel. I wont say, as a great writer did, that travel is the best education, but I think I may venture to say that it is the best education for Princes. His Royal Highness always felt an interest in the dominions of the Queen, and it was therefore fitting that he should make that memorable visit to Canada, which both to the Canadians and to himself was equally

satisfactory. (Hear, hear.) His Royal Highness now contemplates travels of a more extensive, perhaps I may say of a more important, character. The House must be aware that the rules and regulations which were adopted and which recently prevailed in the visit to our own colonies would not be adapted to a visit to India, an ancient land of many nations. In the colonies His Royal Highness, generally speaking, met a population of his own race, and I may say of his own religion and his own manners. In India he will have to visit a variety of nations, of different races, of different religions, of different customs and manners; and it will be obvious to the House that the simplicity of arrangement which might suit a visit to our own fellow-subjects in the colonies would not equally apply to the condition of India and its population. There is one remarkable characteristic of oriental manners, well known to gentlemen in this House, which did not prevail in the previous travels of His Royal Highness to any great extent—that is, the exchange of presents between visitors and their hosts. This is a custom so deeply rooted in orientals, and, I may say, particularly in Indian life, that although it was obvious to the old Government of the country that it was one which might lead to great corruption, although the Government of the Queen which succeeded have been animated by the same conviction, and although they prevented those they employed from materially benefitting by this custom, because the latter relinquish the presents and State gifts which they receive, still they found it impossible formally to terminate it, and it has attained an important development among the Indian population. Well, the Council of India upon this point received an intimation, or more than an intimation, from the Viceroy that mere presents of ceremonial, which have of late years been discouraged, need not, in the opinion of His Excellency, be adopted in the present case. But I may remind the House that, although an arrangement of that kind might be effected, still, His Royal Highness is about to visit immense populations—populations of upwards of two hundred millions—and that he will be the guest or make the acquaintance of many Chiefs and Rulers; that there are among these great populations, I believe, at least 90 reigning Sovereigns at this time; and no doubt His Royal Highness must be placed in a position to exercise those spontaneous feelings, so characteristic of his nature, of generosity and splendour, which the character of the country likewise requires to be gratified. (Hear.) I mention these circumstances in passing. The House is aware that by the arrangement now prevailing in India, if a present is received by any one employed by the Government of the Viceroy, that present is yielded up to the Government; that it is dealt with by a particular department of the State; that it is sold (a laugh), and the proceeds of the sale placed to the account of the Government. I think the House will agree with Her Majesty's Ministers that there would be something most undignified (hear, hear), something most distasteful, if on a visit like this by the Heir to the Crown of Great Britain, any details of this kind should be entered into. (Hear, hear.) I hope also the House will agree with another conclusion of Her Majesty's Ministers—that not only should we not adopt this custom which has generally prevailed with regard to subjects, but that really it would be advisable, if we can arrange it, and I think it can be arranged, that this question of presents should not be the subject of any discussion whatever (hear, hear), and that we should not come to any specific vote upon a subject of that character. I think it is impossible not to see that all the grace and dignity of gifts are lost if those who receive them are aware of that too mechanical and commonplace manner in which things are arranged which should spring from the spontaneous feeling and impulse of the donor. (Hear, hear.) Having made these few observations, I will now tell the House what are the arrangements which we propose to make, and in duration of the visit of His Royal Highness will be probably six months, and, as far as I can form an opinion, he will leave Europe about the middle of October. About the 17th of October, I think, the *Serapis* and the *Osborne* will be at Brindisi. The *Serapis* will be for the accommodation of His Royal Highness and suite; the *Osborne* attends the *Serapis*, first of all in case an accident should occur, which I hope will not be the case; and secondly, because when they enter the great rivers of India, there would be a difficulty with regard to the draught of water. Besides, this, the detached squadron has been ordered, under Admiral Lambert, to rendezvous at Bombay, both in order to strengthen the Indian station and to give that pomp and circumstance which becomes the heir of one who, I hope, is still the Sovereign of the Seas. (Cheers.) Whether the detached squadron will meet the Prince at Bombay or Aden is not yet settled, and I think it is a point which must be left to the decision of His Royal Highness. My right hon. friend the First Lord of the Admiralty will place upon the table an estimate of the expenses of this visit, as far as the Navy is concerned. That estimate for carrying the Prince and his suite to India and bringing them home in due time will be about £52,000, about four-fifths of which must fall upon the present financial year, and the other fifth upon the one that follows. When His Royal Highness touches the Indian soil he becomes the guest of the Viceroy. The Viceroy has strongly expressed the opinion and the wish that this should be the case. He is deeply interested in the visit of the Prince, which he has counselled strongly from the first, and has expressed in language which I have read that it would be of great benefit to this country and to India. But although he is to become the guest of the Viceroy in India, the expense to the Indian Government will not be very considerable, for it will be confined entirely to the rites of hospitality. I do not know that it is necessary for me to give to the House an estimate of that cost to the Indian Budget. I have seen an estimate, and it is not one of very considerable amount. I should say that probably £30,000 will be the cost under that head. It is my duty to inform the House of the position in which His Royal Highness visits India. He does not go there as the representative of Her Majesty, but as the Heir-apparent of her Crown. It is, therefore, obvious that some difficulties which, under other circumstances, might be contemplated as arising from the position of the Viceroy and His Royal Highness cannot prevail in the present instance because no one has been so earnestly anxious for this visit as the Viceroy himself, and no one has been more careful and fruitful in devising expedients which may secure for His Royal Highness that position which would satisfy the country and himself. (Hear, hear.) For reasons of this kind it has been arranged that His Royal Highness shall hold an investiture of the Star of India, which will probably be the most important ceremony in which the Princes and Chiefs of India will participate. There are many other things by which I feel perfectly convinced that without taking a step which would be full of political inconvenience, by interfering in any way with the legal and constitutional character of the Viceroy, his Royal Highness will be placed throughout his travels in a position which will impress the mind of India with his real dignity and influence. I have shown to the House what will be the expenditure incurred in carrying the Prince to India, and in preparing and securing his return to this country. I have intimated to the House the probable expenditure which will be defrayed by the Indian treasury during the time His Royal Highness is in India, and which, as I have observed, will be strictly limited to the rites of hospitality; it is necessary for me now to tell the House the sum we think it necessary to propose that the House should vote for what I may call the personal expenses of His Royal Highness. I do not wish in any way to advert again to the subject of presents. We consider that His Royal Highness should be able in a manner worthy of his character and position to gratify all those impulses for which, under the circumstances of this case, when he becomes the guest of those Indian Chiefs, and often not only the sharer of their hospitality but of their pastimes, he should be properly provided; and the amount we propose to move in committee on the first fitting opportunity is the sum £60,000. (Hear, hear.) We believe that is a sum which will allow His Royal Highness to accomplish all that he can reasonably desire, and will maintain his position with becoming splendour. (Cheers.) We propose, also, that that sum should be subject to an audit, and that the auditor should be Sir William Anderson. He will be in constant communication on the subject with the Chancellor of the Exchequer, but the accounts will be strictly confidential. The money will be expended on the responsibility of Her Majesty's Government, and we appeal with confidence to the House to agree to the arrangement we have made. (Cheers.) I do not know that there is anything I need add further than to express a hope that Providence will keep guard over this precious charge, and that His Royal Highness may, after his visit to India, return to his native land with that enlarged experience which becomes the heir of empires. (Loud cheers.)

Preparing the "Serapis."

The *Serapis*, iron troopship, is being vigorously prepared at Portsmouth for the accommodation of the Prince of Wales during his forthcoming voyage to India. The temporary alterations are very extensive, and necessitate more or less important re-adjustments being made on the whole of the three decks. A large deck-house will be erected on the poop, where the present *chart-house* is placed, or immediately over the staircase leading from the saloon. It will be fitted and furnished in a luxurious manner, and will answer in every respect, though somewhat smaller in dimensions, the purposes of the deck-houses on board the royal yachts. In the saloon on the upper deck seven cabins have been removed on the starboard side, and the whole of the ladies' cabins and those used by the commanding officers of troops have been removed on the port side. The remaining portion of the cabin accommodation is being fitted for the reception of His Royal Highness, whereby he will be supplied with sleeping, bath, and dressing rooms on each side of the ship, one suite being set apart for the outward and the other for the homeward voyage, so that only the shady or cool side of the ship need be used each passage. The body of the grand saloon itself will be divided into three portions, each being separated by massive curtains. The uttermost part will be used as reception-room, the old hatch-way and its coamings having been removed and boarded over, and a new staircase formed 15 feet forward, in order that the requisite space may be secured; the intermediate compartment will be used as a drawing-room and the fore compartment will be converted into State dining-room, and will be fitted to accommodate 62 guests. The whole of the rooms will be splendidly decorated, and will be furnished with couches, chairs, &c., *en suite*. On the main deck, the midship cabins in the saloon have been removed so as to form a broad and clear passage to the new temporary staircase, already mentioned, leading to the upper saloon. The after entry port on this deck will be arranged to receive visitors, who, on entering, will proceed through the main saloon and so on to the reception-room on the upper deck. The remaining cabins on each side will be appropriated to the guests of the Prince, and additional cabins will be constructed on the starboard side to accommodate the number expected. It was at first intended that the captain should use the suite of rooms on the upper deck not required by His Royal Highness, but this arrangement has been altered, and the captain will go forward with his officers, for whose accommodation a war-room and cabins are being built in the fore part of the main deck. There will be little alteration in the lower deck. The cabins will be appropriated to the use of the servants of the Prince and his guests, and the fore part of the ship formerly devoted to the messing of troops will be occupied by the additional crew which will be required. The ship has already undergone a complete overhaul, has been supplied with new boilers, and made a very successful trial trip on the mile a short time ago. Outside the *Serapis* will be encompassed by a broad moulding composed of two rounds and a hollow, the former being painted red and the latter yellow. With this exception her outward appearance will be unchanged. She will be provided with a State barge and a new steam pinnace for the purposes of the Royal excursion. The whole of the alterations mentioned above are temporary only, and on the return of the ship she will, for troop service, be refitted exactly as she was before, The *Serapis* will be accom-

panied by the Royal yacht *Osborne*, which, on her return from St. Petersburg with the Duke and Duchess of Edinburgh, will be painted white, after the manner of the Indian troopships. It is now generally understood that the *Serapis* will be commissioned by the Hon. Carr Glyn, late Flag Captain at Portsmouth to Admiral Sir Rodney Munday.

MILITARY ORDERS.

BARNES, Major C. H., to England to appear before a medical board.
BARKER, Lieutenant J. S. S., to England to appear before a medical Board.
BULLER, Lieutenant G. J., to England to 20th October 1876.
BUIST, Lieutenant Colonel D. S., to Doonga Gully to the 15th October.
HORE, Captain F. S., to remain in England to 15th December 1875.
HUNGERFORD, Surgeon Major R., to England to appear before a medical board.
JACKSON, Major W., to Naini Tal to the 15th October.
PIGOU, Lieutenant C. G. S., to Europe for six months.
SUART, Lieutenant W. H., to Mussoorie to the 31st October.

CIVIL GAZETTE.

IMPERIAL.-

ACKLOM, Mr. R. E., to officiate as District Supdt. of Police of the 4th Class.
ASHBURNER, Lieut-Colonel J., to officiate as Deputy Commissioner of the 2nd Class.
BLOOMFIELD, Captain A., to officiate as Deputy Commissioner of the 3rd Class.
CRAWFORD, Mr. J. T., to officiate as Judge of the Civil Court at Lucknow.
DRYSDALE, Mr. T., to officiate as Assistant Commissioner of the 1st Class.
FEDDEN, Mr. F., Assistant of the 3rd grade in the Geological Survey of India, to officiate in the 2nd grade.
GRACE, Major C. H., to officiate as Deputy Commissioner of the 2nd Class.
GOODRIDGE, Mr. J. P., to officiate as Assistant Commissioner of the 2nd Class.
HAMMOND, Captain H. A., to officiate as District Supdt. of the 3rd Class.
PROBY, Mr. D. G., to officiate as District Supdt. of the 4th Class.
RICKETTS, Major M. P., to officiate as Deputy Commissioner of the 2nd Class.
THOMPSON, Major W. B., to officiate as Deputy Commissioner of the 1st Class.
WARD, Captain H. C. E., to officiate as Deputy Commissioner of the 3rd Class.

MILITARY.

BEATSON, Deputy Surgeon-General J. F., to be Surgeon-General.
BARR, Lieutenant J. E., admitted to the Bengal Staff Corps.
CARR, Captain F. S., permitted to retain the appointment of Adjutant of the 5th Punjab Cavalry, Punjab Frontier Force, for a further service of two years.
DAWSON, Lieutenant-Colonel F. promoted to the rank of Colonel.
HODGSON, Lieutenant-Colonel H. N., promoted to the rank of Colonel.
HUTCHINSON, Lieutenant J. B., promoted to the rank of Captain.
HANNEN, Major G. G., to officiate as Chief Garrison Instructor.
MILFORD, Captain R. C. W., promoted to the rank of Major.
SHAKESPEAR, Captain G. R. J., to officiate as a Deputy Assistant Quarter-Master General.
TOPHAM, Captain R., promoted to the rank of Major.
VICE, Lieutenant C. F., admitted to the Bengal Staff Corps.

BENGAL.

BRETT, Mr. A. C., appointed to act temporarily as District and Sessions Judge of Furreedpore.
CAMPBELL, Mr. F. J. G., Deputy Collector Monghyr, transferred to Bhagulpore.
CHOUDHRY, Baboo T. L., Sub-Deputy Collector, Chittagong leave for six months.
COUNSELL, Mr. T. A., appointed to act as Head Assistant, Judicial Department, Bengal Secretariat.
COTTON, Mr. H. J. S., to be Assistant Secretary to the Government of Bengal.
DUTT, Baboo S. B., Officiating Deputy Magistrate, Purneah, to have charge of the Mudhepore division of the Bhagulpore district.
FORBES, Mr. L. R., Deputy Magistrate, promoted to the 5th grade.
FISHER, Mr. C. A., Assistant Superintendent of Police, Jessore, appointed to conduct the Kheddah operations in the Bhootan Dooars.
GAEL, Mr. J. D., appointed to act temporarily as Cantonment Magistrate of Dum-Dum.
GRAVES, Mr. F., Assistant Superintendent of Police, to be in charge of the District Police of Jessore.
GAYER, Surgeon-Major E. J., to be Civil Surgeon of the 24-Pergunnahs and Medical Inspector of Emigrants.
KILBY, Mr. S. J., to act as District Superintendent of Police, Rajshahye.
MOHENDRO, Baboo N. B., Deputy Magistrate, Rajshahye, promoted to the 2nd grade.
MACKENZIE, Mr. H. W., Deputy Magistrate, promoted to the 4th grade.
MITTER, Baboo N. C., Sub-Deputy Collector, Hajeepore, transferred to Barrh in the district of Patna.
MARTIN, Mr. W. B., leave for three months.
PERSHAD, Baboo R. N., Sub-Deputy Collector, Barrh, transferred to Hajeepore in the district of Mozufferpore.
PRICE, Surgeon G., of the Medical Department, appointed to act as Civil Surgeon of Pubna.
SMITH, Mr. W. M., Deputy Magistrate, Doomka, Southal Pergunnahs, promoted to the 3rd grade.
SEN, Baboo R. S., appointed to act as Sub-Deputy Collector in Chittagong.

BOMBAY.

BLANC, Surgeon-Major H. J., to be a Magistrate of the 3rd class.
GOODFELLOW, Major G. R., Acting Political Superintendent, Akalkot, passed an examination in the Arabic language according to the Higher Standard.
GRANT, Major G. C., to be Judge and Sessions Judge at Kurrachee.
PHILLPOTS, Mr. S. H., to be Judge and Sessions Judge at Hyderabad.

MILITARY.

BEEKE, Captain J., re-appointed Quarter Master.
CANDY, Lieutenant J. M., 20th N. I., passed an examination in the Marathi language.
DOIG, Captain A. J., to be Major.
GORDON, Major J. R., to remain in England to 14th October 1875 on leave of absence.
HARTIGAN, Captain J. M., to officiate as Quarter Master.
HARRIS, Captain T., 66th Foot, passed an examination in the Persian language.
HARE, Major the Hon'ble R., to remain at Poona to 31st August 1875 on leave of absence.
JAMES, Captain C. F., Staff Corps, on furlough to Europe for two years.
PRINGLE, Lieutenant A., to Bombay to 31st October 1875.
PRICE, Lieutenant R. L., Staff Corps, to be Captain.
SANDERS, Captain T. W., to be Major.
SWINHOE, Captain C., Staff Corps, to be Major.

MADRAS.

BLISS, Mr. H. W., to act as District and Sessions Judge of Madura.
BRANDT, Mr. F., Acting District and Sessions Judge of Chingleput, to act as District and Sessions Judge of Godavery.
D'ROZARIO, Mr. V. P., to act as Subordinate Judge of Calicut.
EASTALL, Captain C. E. L., to act as Superintendent of Police, Jeypore.
HALLETT, Captain W. H., to act as Magistrate of Police for the town of Madras.
JOHNSTON, Mr. J. W., Deputy Collector and Magistrate of Salem, to act as Superintendent of Prisons for the town of Madras.
MCCARTHY, Mr. S. T., Acting Sub-Collector and Joint Magistrate of the Kistna District, to act as Sub-Collector of the Chingleput district.
MARTIN, Mr. C. W. W., to act as Sub-Collector of Madura.
MCGOUN, Major A., to act as Commandant of a Battalion of the Nair Brigade.
PARKER, Mr. G. A., Acting Judge of the Court of Small Causes, Cuddalore, to act as District and Sessions Judge of Vizagapatam.
WELDON, Major T., leave for three months,
WOODROFFE, Mr. F. H., to be District and Sessions Judge of Godavery, but to act as District and Sessions Judge of Ganjam.

NORTH-WESTERN PROVINCES.

BATTEN, Mr. H. G., Extra Asst. Commissioner, Kumaon, eight months' leave.
BOUTFLOWER, Mr. W. N., to officiate in the 3rd Grade of the Educational Service.
CADELL, Major R. W., District Supdt. of Police, Muttra, three months' leave.
CONCANNON, Mr. J. W., Deputy Collector, Ghazipore, three months' leave.
COLVIN, Mr. E., Magistrate, Moradabad, leave for one month.
DODD, Mr. C., to officiate as Principal, Agra College.
GRIFFITH, Mr. R. T. H., to officiate as Director of Public Instruction.
GOUGH, Mr. A. E., to officiate as Principal, Benares College.
HOWE, Mr. W. A., to officiate as Magistrate and Collector, Shahjehanpore.
PEPPIN, Mr. W. B., District Supdt of Police, Jaunpore, three months' leave.
REID, Mr. F. L., to officiate as Professor of English Literature, Muir Central College.
TIDY, Mr. W. M., Joint Magistrate, Saharanpore, leave for one month.
TWIGG, Mr. J. H., Officiating Joint Magistrate, Meerut, leave for seventy seven days.
WHALLEY, Mr. P., to officiate as Magistrate and Collector, Moradabad.

PUNJAB.

CUNNINGHAM, Mr. A. F. D., Assistant Commissioner, Bannu, eighty-eight days' leave of absence.
CLARK, Mr. W. O., Assistant Commissioner, Jhang, ninety-two days' leave of absence.
HOMAN, Mr. T. H., transferred to the Bannú district.

BONUS YEAR 1875.

INCORPORATED BY ROYAL CHARTER AND SPECIAL ACTS OF PARLIAMENT.

NORTH BRITISH & MERCANTILE INSURANCE CO.

ESTABLISHED 1809.

President—HIS GRACE THE DUKE OF ROXBURGHE, K.T.

Vice-Presidents.

HIS GRACE THE DUKE OF SUTHERLAND, K.G. | HIS GRACE THE DUKE OF ABERCORN, K.G.

Chairman of the General Court of Directors.

THE RIGHT HONORABLE LORD LAWRENCE, G.C.B., G.C.S.I.,

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

CAMPBELL'S PLANTATION

HAVANA CIGARS.

"No. 7," a large Havanah pattern Cigar, about 60 to the pound.

"No. 6," a smaller Havanah pattern Cigar, about 85 to the pound.

Can be purchased only at Messrs. Campbell & Co's Depots at

CALCUTTA, ALLAHABAD, LAHORE, POONAH, BOMBAY.

"No. 7," Rs. 30 per 1,000, inclusive of all charges. | "No. 6," Rs. 23 per 1,000, inclusive of all charges.

Application should be made to the lerk in charge of any of the above Depôts.

If 2,000 Cigars are taken, a Discount of 10 per cent. is allowed.

If 10,000 are taken, Discount of 20 per cent. | If 30,000 are taken, Discount of 25 per cent.

Terms—Cash prepaid.

MESSRS. CAMPBELL & Co. have sent a stock of their Havanah patterns Home, and are prepared to deliver them free of all charges to any Railway Station of the United Kingdom at the following rates, duty paid:—

"No. 7" Rs. 80 per 1,000. | "No. 6" Rs. 60 per 1,000.

Prices in Bond in London.

"No. 7" Rs. 35 per 1,000. | "No. 6" Rs. 25 per 1,000.

"No. 7" costs therefore about 7 Cigars to the shilling anywhere in the United Kingdom.

"No. 6" nine to the shilling.

Orders for large quantities, or orders for supplies to England, should be addressed direct to

MESSRS. CAMPBELL & CO.,

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourishing frame."—*Civil Service Gazette.*

Manufacture of Cocoa.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ½ lb. and 1 lb. tins, labelled thus:—

JAMES EPPS & CO.,

HOMŒOPATHIC CHEMISTS,

48, THREADNEEDLE STREET, & 170, PICCADILLY.

Works—Euston Road, and Camden Town.

(Makers of Epps's Milky Cocoa and Cocoa Condensed Milk.)

MOFUSSIL ORDERS will receive immediate attention. Sketches of articles will be sent, on application by letter, to any address, and in cases specially where despatch is of consequence, goods will be selected and sent at once on inspection; when the selection of goods is left entirely to Hamilton & Co., their Constituents may rely upon a choice being made from the newest and most tasteful portion of their stock.

HAMILTON AND Co., in ordinary.

Meadow Street, Bombay.

CALCUTTA METAL MART.

THE undersigned have a large stock of Machinery, Metals, and Miscellaneous Articles of all descriptions, and are prepared to give estimates, or contract for the supply of any materials which they have not in their godowns.

They are also prepared, for a moderate commission, to import any articles from England at actual cost, and are in a position to get the best quality at the lowest possible price.

The following are generally in stock or on the way :—

Portable Engines.

Clayton & Shuttleworth's

		4 H. P.	6 H. P.	8 H. P.	10 H. P.
Prices, with Single Cylinder	Rs.	2,700	3,250	3,900	4,500

		10 H. P.	12 H. P.	16 H. P.	20 H. P.
Do., with Double Cylinder	Rs.	4,750	5,000	6,250	7,500

Reversing Gear.

Extra, at Rs. 200 to Rs. 400, according to size.

Stationary Engines.

Tangye's (suited for Tea Gardens), with vertical boiler mounted on base plates, occupy little room, and are well adapted for use with Tea or other machinery requiring small power. Fire-places are constructed to burn either wood or coal.

		2 H. P.	3 H. P.	4 H. P.
Prices	Rs.	1,400	1,500	1,650

Fire Engines.

Holman's, with suction and delivery hose complete.

Centrifugal Pumps.

Gwynne's—are largely used all over the world where a rapid discharge of water is wanted.
A 6-inch pump worked by a 6 H.P. Portable Engine will discharge about 700 gallons of water per minute.
A 7-inch pump worked by an 8 H.P. Portable Engine will discharge about 900 gallons per minute.
An 8-inch pump worked by a 10 H.P. Portable Engine, will discharge about 1,100 gallons per minute.
Prices, with pipes and other fittings complete.

	4 in.	5 in.	6 in.	7 in.	8 in.	10 in.	12 in.
Rs.	460	600	750	900	1,050.	1,300	1,500.

Centrifugal Pumps.

The same sizes, but of slightly different shape, may be had mounted on wheels, and will be found useful by Contractors and Engineers who require Portable Pumps.

Special Steam Pumps.

Tangye's, are very compact and simple in construction.

Disintegrators.

Norton and Hawksley's for grinding to a fine powder artificial manures, ores of all kinds, shale, asphalte, lime, chalk, coal, coke, clays, barks, myrobalans, leather, drugs, sugar, seeds, and grains of all descriptions, besides many other articles.

Prices.

No. 1, Rs. 450; No. 2, Rs. 1,050.

Extinctures.

Dick's—can be carried by one man, and always kept ready for instant use in case of fire. They have proved very efficacious at Home; and in Warehouses, Mills, and Ships; as well as for Private Dwellings, they form a great safeguard against damage by fire.

Prices.

NEW BANK OF BOMBAY (LIMITED).

CAPITAL Rs. 1,00,00,000, DIVIDED INTO 20,000 SHARES of Rs. 500 each.

FIRST ISSUE 10,000 SHARES OF Rs. 500 each=Rs. 5,00,000 PAID UP.

RESERVED Issue 10,000 Shares of Rs. 500 each, called up in full.

DIRECTORS.

HAMILTON MAXWELL, Esq. (of Messrs. W. Nicol & Co.)
R. VALENTINE REID, Esq. (of Messrs. Finlay, Scott & Co.)
A. J. MACDONALD, Esq. (of Sir Charles Forbes & Co.)
DINSHAW MANOCKJEE PETIT, Esq.
AHMEDBHOY HUBIBBHOY, Esq.
KESSOWJEE NAIK, Esq.
E. D. SASSOON, Esq.

FIFTEENTH REPORT.

The Directors have the pleasure to submit to the Proprietary the accounts of the Bank for the half-year ended 30th June last. They have been audited, and the Auditors' Report is annexed.

The Cotton crop proved to be a full average one, and the staple was in steady demand throughout the season. The Directors *did not* re-open the Dhollera and Wudwan Branches finding that there was little probability of their being able to work to a profit. The returns from the Branches in operation have been generally of a satisfactory character.

A few small failures have taken place in the bazaar. The Bank has made no bad debt during the six months.

The accounts show a net gain of Rs. 6,71,354-11-4, and, adding to this Rs. Rs. 1,14,890-14-8, the balance brought from the half-year ended 31st December last, there is a sum total of Rs. 7,86,245-10-0 for distribution.

In accordance with the Articles of Association, the Directors recommend the declaration of a dividend at the rate of ten per cent. per annum—

which will absorb	Rs.	5,00,000 0 0
The transfer to Reserved Fund	„	2,25,000 0 0
In reduction of cost of premises	„	20,000 0 0
To Bad and Doubtful Debt Account	„	10,000 0 0
Leaving a balance to be carried forward of	„	31,245 10 0
	Rs.	7,86,245 10 0

The Directors regret to repeat that they have not been favoured with any communication from the Government of India regarding the very important questions still at issue—*viz* : the Bank's Charter of Incorporation, and the removal of the local agency of the Bank of Bengal.

Mr. H. R. Cormack resigned his seat at the Board on leaving India, and Mr. A. J. Macdonald has rejoined the Board by desire of the Directors, subject to the approval of the shareholders in terms of Clause 70 of the Articles of Association.

Mr. R. Valentine Reid and Mr. Dinshaw Manockjee Petit retire from office on this occasion, and are eligible for re-election.

The shareholders will have to elect Auditors for the ensuing year, and to fix their remuneration. The present Auditors being eligible, offer themselves for re-election.

By order of the Directors,

M. BALFOUR,
Secretary and Treasurer.

Bombay, 13th July, 1875.

AUDITORS' REPORT
For the Half-year ended 30th June, 1875.

Bombay, 13th July, 1875.

To M. BALFOUR, Esq.,

Secretary and Treasurer, New Bank of Bombay, Limited.

DEAR SIR,—We have to report that we have audited the Bank's Accounts for the half-year ending the 30th June, 1875.

The General Ledger, Stock Ledger, the Security Ledger, and the Branches' Ledger have been duly examined by us. The balances given in the Balance-Sheet agree with the Bank's Books and the returns made by the several Branches. We have counted the Cash and Currency Notes in the Bank's till in Bombay, and found them to agree with the figures given in the Balance-Sheet. The value of Government Securities and Specie belonging to the Bank is correctly stated.

The Securities deposited for safe custody, as also those in possession of the Bank against Loan and Cash Credits, we have carefully examined and have found them in order in comparing them with the Registers.

The Abstract of the Balance-Sheet and Profit and Loss Account are correct, as showing the true position of the Bank at the end of the year under report.

We are, Dear Sir, yours faithfully,

SAM. W. READ.
EDULJEE NUSSERWANJEE SETTNA, } Auditors.

The greatest attention is paid to the religious and moral training of the pupils. There are exhibitions, open to all, to Oxford, Cambridge, or Trinity College (Dublin), value £40 per annum, and tenable for four years.

The charges for board and education, without extras, vary from 35 guineas to 45 guineas per annum, according to age. The College is in a veay salubrious situation, near the sea.

Further particulars can be obtained on application to the Principal.

The COLLEGE REOPENS on THURSDAY, August 5th.

ASSURANCE COMPANIES.

STANDARD LIFE OFFICE.

THE DEATH CLAIMS paid by the STANDARD COMPANY, during the past nine years, have been upwards of £1,200 per business day.

THE FUNDS during the same period, after payment of Claims and Expenses of every kind, have increased from £2,600,000 in 1865 to £4,800,000 in 1874.

NEW ASSURANCES, to the amount of £1,000,000 Sterling, have been placed upon the Company's Books in each of the years since 1865—some of them years of doubt and anxiety in the Assurance World. This result, it is believed, has been maintained by no other Office in the United Kingdom, during the same period.

BONUS YEAR 1875.

The next division of Profits will take place at 15th November 1875.

ANNUAL REPORT 1875.

Copies of the Annual Report, containing the Balance Sheet, &c., may be obtained on application.

GEO. LUCAS KEMP,
Secretary, Calcutta Branch.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit."—Extract from the Speech of the Chairman of the Annual Meeting 7th August,* 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY,
CALCUTTA.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policy-holders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 41 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society, which for twelve years continuously has now returned *Fifty per cent.* of premiums on the participating scale.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, or Quarterly,
at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary *Civil* Rates:
No extra Rate for unimpaired Whole-term Lives in India.

Available Funds ...	... **£ 1,012,185**	**16 8**
Annual Income ...	... **£ 172,151**	**18 11**

Claims promptly adjusted on proof of Death.

Total of Claims paid since 1834, £ 2,142,045 14 9

Copies of the last Report, Proposal Papers, &c., on application to the Society's Sub-Agents in the principal Mofussil Stations, or to

GISBORNE & CO.,

ENDOWMENT POLICIES
payable at 50, 55, 60 or 65 years of age, or earlier in the event of death.

Policies in force, upwards of £1,000,000,
(One Million sterling.)

Annual Premium Income, £50,000.

A. B. ANTRAM, Manager,
6, *Old Court House Street, Calcutta.*

ESTABLISHED 1840.

CHURCH OF ENGLAND
LIFE ASSURANCE INSTITUTION.

Head Office, 9 & 10, King Street, Cheapside, London.

Empowered by Special Act of Parliament, 4 & 5, Victoria, Cap. XCII.

CAPITAL—ONE MILLION.

(A list of Proprietors periodically enrolled in the High Court of Chancery).

TRUSTEES.

The Very Rev. the Dean of Armagh.
Jonathan Hopkinson, Esq.
William Gordon Thomson, Esq.
The Rev. Richard Wood, B.D.

DIRECTORS.

Chairman—The Very Rev. the Dean of Armagh.
The Rev. Edward Carr, LL. D.
William Emmens, Esq.
Charles Harrison, Esq.
Jonathan Hopkinson, Esq.
Richard Nugent, Esq.
Col. Thos. E. L. Higginson.
William Forbes Skene, Esq., W. S., LL. D
Herbert Taylor, Esq.
William Gordon Thomson, Esq.
The Rev. Richard Wood, B. D.
John Ralph Engledue, Esq.
Secretary,—Andrew Francis, Esq.

The financial position of the Institution on 31st December 1874, was as follows:—

Proprietary Capital		£1,000,000	0 0
Annual Life Income	Premia	76,424	0 0
	Interest	25,594	0 0
Realized and Invested Funds		598,970	0 0

RETIRING PROVISIONS.

Policies are issued by which these may be secured, and at the same time a surviving family be protected in the event of premature death.

ASSURANCES BY TERMINATING RATES OF PREMIUM.

Under this system, Assurances can be effected for the whole term of life, the annual premia for which cease after a given number of years.

FREE POLICIES.

Assurances by this system can never altogether be forfeited by non-payment of Premia.

CLERGY FUND.

One-tenth of the Proprietors' Profits is periodically set aside for the purpose of aiding Clergymen and Ministers to assure their lives for the benefit of their families.

COLVIN, COWIE & CO,

NEW PLAN

BY THE

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATES, with 80 per cent Invested Solely for Policy Holders.

Example.

		With Profits.
A, aged 30, wishes to Assure Rs. 1,000.		
Annual Premium at Indian Rate ...	Rs.	36 0 0
Annual Premium at English Rates ...	„	23 10 8
Difference ...	Rs.	12 5 4

The "ORIENTAL" charges (*A*) the English Premium of Rs. 23-10-8 *only*. The Extra Premium for India, Rs. 12-5-4, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with *Compound* Interest at 3 per cent is equal to the sum assured, *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses, and Forms of Proposal can be obtained from any of the Agents, or from

No. 2109.] Calcutta: Saturday, August 14, 1875. [Vol. XLI.

OUR EDUCATIONAL SYSTEM.

THE broad outlines of Sir Richard Temple's educational policy are now traced with sufficient clearness. He was too old in Statecraft to come in proclaiming a new programme, and a clean sweep of his predecessor's order of things. Yet, on the other hand, his educational minutes, from the early one on the abhorred Sanscrit to the later ones, indicating the relations to exist between the executive officers throughout the country and the inspection department of the Educational Service, all show alike that he is no mere follower in his predecessor's footsteps, nor acceptor of accomplished facts. Israel is now enjoying rest, and can look upon her institutions as something more stable than card houses, built and rebuilt in a breath. And so we propose to review, very sketchily, our educational system in Bengal, its aims and its prospects, as something firmly established.

We shall take the convenient distinction of Primary and Secondary Education; and, beginning with the former, map out the Bengal system. "The policy which the Lieutenant-Governor desires to pursue on the question of primary education has been set forth in the minute which he has lately recorded on the subject. He is anxious to work at that policy on the lines so well laid down by the late Lieutenant-Governor, and to build up the system on the foundation previously established." Now first what were the lines laid down so well by Sir George Campbell? They were laid down mainly in the years 1871 and 1872; and their direction was to make a real and substantial attempt to establish a good system of primary education of the simplest character in these great provinces of Bengal, and so to improve the humble classes of the people by making them intelligent human beings. This Sir George Campbell spoke of as the beginning of a work "of which even a successful beginning would be a great achievement." Primary education meant first of all reading, writing, and arithmetic in the indigenous language of each province. And to carry out the proposal to spread this throughout Bengal, the Government raised the existing grant of a lakh and thirty thousand rupees to five lakhs and thirty thousand. This large sum was to be employed, not in introducing a new educational agency, but in improving and multiplying that which already existed in the villages. This agency was the purely indigenous *pathsala* under the *gurumahasoy*. The Sanscrit *toles* or schools, and the Mussalman *muktabs* could not be regarded as primary, in the sense of giving an elementary knowledge of reading, writing, and arithmetic: they were semi-religious schools, and therefore did not come within the scope of the Government measure. The most common course of instruction in the *pathsala* is this:—(1) writing on palm leaves or plantain leaves; (2) bazaar arithmetic and zemindari accounts, with tables of weights and measures; (3) writing the forms of letters, pottahs, and simple bonds, and learning to adapt these to special circumstances; (4) reading and explaining simple vernacular books; (5) grammar, with the rules of compounding words; (6) very imperfect methods of measuring land. In many schools something more or something less than this is taught. The *Guru*, who could teach this course, had in most cases inherited his occupation of hedge-schoolmaster from his father. He held his school in an open shed or verandah, sometimes belonging to his own house, sometimes to that of some rich or benevolent resident of the village. He maintained himself from such fees in money or kind as the parents of his pupils were able to afford, and these varied from nothing, or a seer of rice, to four annas or even more; and his income ranged between Rs. 5 and Rs. 15.

This was the kind of school which the Government proposed to improve and multiply, by bringing existing schools under the supervision and advice of Government inspectors, and by aiding the villagers to establish more such schools. It was easy to see what had called these schools into existence. The little creatures squatting in them, with their bundles of palm strips and bottles of ink, were the children of petty shop-keepers, small landholders, ryots, weavers, fishermen, who had passed their lives in their native village, as their fathers had before them and as these children would after them. The demand had been, not for learning for its own sake or as a stepping stone to higher things, but for the sake of the pice it would bring to its possessor. And the supply, strictly regulated by this demand, had tended to foster little of that ambition of rising above manual labour, or village life, the fear of which led our ancestors to try and keep the English masses in ignorance. The modest undertaking of the *Guru* was to enable his pupils to take care of their own interests, in their own station of life; to be a match for their fellows in a bargain; and to meet the cunning *kachari-lok* of their zemindars with their own weapons. It was easy moreover to see, that to improve so natural a growth by artificial means might do more harm than good, and might lead to improving these simple schools off the face of the earth. And so Sir George Campbell was very strenuous, not to say nervous, in insisting that nothing should be done to force the growth of national education, or to plant in the bosom of the little naked village child the seeds of ambition. This, by the *way*, was only Sir George Campbell's exoteric teaching to his mechanical and wooden-headed agents. For he was no aristocrat, believing in the divine institution of poverty, and he rejoiced as he saw that by his ladder of learning, "the gifted son of a ryot" "might become a distinguished engineer, or physician, or agriculturist, or administrator of high degree, or a judge of the highest court!" But to return. To improve and multiply the educational agency thus ready to its hand, in these indigenous *pathsalas*, scattered, in some places sparsely, in others thickly, throughout Bengal, Behar, and Orissa, the Government began by distributing small grants-in-aid of Rs. 2 or 3 a month to the village teachers. It then set up normal schools for the better training of these teachers. It instituted an inspecting staff for themselves and their schools. Lastly; it offered rewards to teachers, and scholarships to pupils, to encourage them in their respective efforts. And what were the results? In two years, that is from 1872 to 1874, the number of children at *pathsalas* aided by Government rose from 63,935 to 303,437! Writing on this increase, the Director of Public Instruction said, "the success of Sir George Campbell's scheme has been most "complete, as far as regards the number of schools and scholars "which it has added to our educational rolls." And again, after admitting that there were defects in the administration of the scheme, "the broad fact remains that a wide scheme has been started, and is at work in every district, which may without difficulty be improved and developed into a really valuable system of national primary education for the people of Bengal." So far then all was well. And the only doubt that remained was how far this growth was natural, and so likely to become self supporting; and how far it was forced, and likely to need continued fostering by Government aid. But this is a doubt that hangs over every form of civilisation that has been grafted from the West upon the East, and is not peculiar to the question of the success of education in Bengal. In all matters Bengal is cheaply profiting from the dearly-bought experience of England. The long and weary efforts, with which the latter has climbed to her present point of view, are followed in Bengal with a hop, step, and jump. Some of the consequences of this

as affecting education, it will be worth while to point out in another paper.

THE N.-W. CIVILIANS AND THEIR GRIEVANCE.

THE grievance of these gentlemen is so real, and the remedy so simple and obvious, that for Government to be wringing its hands over the difficulty, as though it baffled the resources of statesmanship, is but a curious and melancholy proof of the fact that we are living in an age of what Carlyle, with great truthfulness, calls insincere-sincerity. No one denies that these gentlemen *have* a grievance. From the Viceroy and Secretary of State downwards, every one admits it; but then it is of such an order it seems, that there is no remedy for it. And we do not really know—though some of us perhaps suspect—that when we speak thus, we are simply canting and dealing insincerely with the facts. We do not intend to be insincere: we think we feel kindly to these gentlemen and that we wish to help them, but we really don't know how. Now what is the grievance? Ten to fifteen years ago then, a body of gentlemen, not very large in point of numbers happily, was drawn from the schools and universities of England into our service, under the belief both on their part and ours, that by the time they had served us thus long, our arrangements were such that they would certainly be receiving twice the emoluments they are really enjoying. There was a clear, full, understanding between us on the point, though a tacit one only. Had there been any doubt about it, any reasonable fear that the present state of matters would have arisen, we should have given them an explicit guarantee against it. What neither we nor they for a moment forecast, was of course not provided against. And with the full, absolute, uncontrolled power in our hands to set the matter right, and with the whole country desirous that it should be set right, as an act of mere honesty and propriety, we contrive to persuade ourselves that we are sincere when we look these gentlemen in the face and tell them with something of real distress, wholly unconscious of our insincerity, that we can do nothing for them. Away with such heartless conduct. Lord Northbrook, Sir William Muir, and Sir John Strachey, are the three authorities responsible to these unhappy gentlemen, responsible to the country, responsible to God for the remedy,—and should do justice to their own instincts and character by righting these gentlemen. What,—you cannot do so because they have no legal bond upon which to take us into Court, and compel us, as though we were all cheats and scoundrels, to fulfil the obligations of the engagement. Why cannot you do it? You are but the representatives of the public, and is it possible for you to mistake what the public will is in the matter? To a man we say—do these gentlemen justice! It is no civilian that writes this, but one of that public whose sense of justice you are offending by your course, and that sees with nothing but angry impatience the imaginary lines within which you suppose yourselves to be confined by your duties to us. Do you think *we* have really drawn those lines around you; and that we shall regard your stepping across them as an offence against us, or a violation of your responsibilities to us! Do you think so ill of us, that we really require the production of a legal bond on the part of these gentlemen, to compel us to be just to them? All this hesitation to do what is right is yours, not ours. We wish earnestly that these gentlemen should be righted, and we are ready to condone without remark the false steps by which you and your predecessors have brought the present state of things to pass. Do not visit upon these gentlemen the mischiefs which your misuse of the patronage in your hands has occasioned. We will not ask a single question as to the cause that has produced the dead-lock in all pay and promotion that is weighing them down, many of them having wives and children, with a life of misery and despair. Let the cause have been what it may,—bury it with our full consent and approval, and simply note it for future guidance. As to the remedy, what, we ask, prevents Sir William Muir casting up the average emoluments of civilians in the other presidencies, and raising the pay of our North-West officers to that level, by the simple device of "personal allowances" until matters have righted themselves? It is a melancholy fact that Governments too often in their conduct of affairs pursue a course that offends the public conscience. You are doing so gentlemen in this very case. You are not on a level with public opinion in the matter. In professing to be hampered by the absence of a formal legal engagement compelling you to do what is right in the case, you are setting a very evil example to that public in point of morality, while you are violating its unanimous wish in the matter. As to fearing that you will create a mischievous precedent by being just to these men—what you will really do will be to give a heavy blow to that thoughtless distribution of patronage which has necessitated the step. The Indian press should fasten the responsibility of our continued injustice in the matter, upon the three gentlemen we have named, and should pointedly refuse any share therein whatever. We appeal to Lord Northbrook, to Sir William Muir, and to Sir John Strachey to shake off the insincere-sincerity with which the question is being argued, and to gratify what must be their own secret wish, as it is the open avowed will of the public. The cost of redress is not worth talking of: while the load of misery it will lift from many a weary heart, is little imagined by most of us.

THE NEW TARIFF.

THE long promised Act for the revision of the Indian tariff passed its final reading in the Legislative Council at Simla on the 5th instant. The new rates on Wines and Spirits are very heavy, and in our uncertainty as to the part which alcohol plays in the system, and the extreme doubtfulness of abstinence therefrom in India being wise for Europeans, it may reasonably be questioned whether the enhancement is just to that community. The abolition of all export duties whatever, except those on indigo, rice and lac, is a simplification of the tariff to be very heartily commended. The reduction in the valuation of imported cotton goods is also a step in the right direction, upon the supposition that Government has definitely abandoned all notion of an excise upon the Bombay Mills, which must eventually learn to stand alone. Some very strong remarks have been made upon the announcement that imports of long-stapled cotton will henceforth pay a duty of 5 per cent., and the Government is charged with "strangling our local cotton industry for the benefit of Manchester." We are sorry to see the *Indian Statesman* speaking so strongly on the subject:—

"The Government, by its action, has pronounced it to be lawful "and right to crush any Indian industry that may jeopardise "the interests of Home manufacturers, and so long as this "ruling holds good, and can be supported by such a precedent "as that of the import duty on raw cotton, so long will Indian "capitalists decline to enter into competition with English "manufacturers who can dictate to the Governments of England "and India whatever legislation, favourable to their own "interests, they may desire. Instead of making a firm stand "for the interests of the land committed to their charge, our "local rulers have no duty but that of carrying out orders "received from Manchester and elsewhere, *viâ* the India Office, "and till this state of things can be altered for the better, "the development of local resources must remain *in nubibus*. "It only remains for all classes in India to condemn the infa-"mous policy of Government, and to agitate unceasingly for the "repeal of a duty which affects so disastrously the prospects "of the country."

This is strong language and is not justified, we think, by the facts. At present there is no import of long stapled cotton into India, or almost none, and the announcement of a duty thereon of 5 per cent. is simply a warning to the local mills, that they must not count upon any further protection, through the tariff arrangements of the Government, than they enjoy in their present freedom from an excise to counter-balance the import duties levied upon Manchester goods. It is necessary to remember that the local mills are "protected" to this extent, against the competition of Lancashire. The question therefore is really this—Is it not wise to tell the former plainly, that they are now enjoying

the utmost protection they can count upon ; and that in the manufacture of any finer qualities of yarn and fabrics which they may be tempted to try, they will have to compete with the English mills on more equal terms, *i. e.*, so far as Governmental arrangements are concerned.

No one can seriously contemplate the permanent protection of the Bombay mills, for if the industry is sound, it will be independent of all protection. Is it not better then that the mills should be told plainly the precise limits of the protection upon which they may count from our tariff arrangements ? And can it be held to be unjust to them that they should be required to pay an import duty upon long stapled cotton, while Manchester fabrics manufactured from such cotton, are subjected to such a duty ? For a duty on the raw material is far from being as onerous as the same rate on manufactured goods. Upon the whole, Government has acted judiciously in these new arrangements. The general rate of import duties has been reduced from 7½ per cent. *ad valorem* to 5. We regret only that this side of the tariff has not been dealt with as comprehensively as the other. Why not have struck out therefrom two-thirds of the enumerated articles, seeing that they yield almost nothing, and never will yield anything ?

THE strenuous opposition of certain of our English contemporaries to the import duty upon cotton, and Mr. Hope's hint that we may even have to impose an excise duty upon the Bombay mills, makes it desirable that we should say a word or two more on the subject. It is to detract nothing from the great ability of the speeches made in Council, when we say that neither Mr. Hope nor the Viceroy stated with sufficient simplicity and clearness the Governmental position. Whatever the views of the Government of India may be upon the subject, a deliberate policy of *protection* for any industry like that of the Bombay Cotton Mills, which long since passed its tentative or experimental stage, is impossible. The Government of India has no more power to establish a protective system of duties in India, than Mr. Disraeli at home. Public opinion—and we think we are entitled to say a consensus of opinion —is arrayed against the protective system, as injurious to the very nations that are unwise enough to adopt it. If Manchester can make better piece-goods at a given price than any other people in the world, all the world should supply themselves in her market, when the fact is once ascertained. In the same way, if France can make better gloves or shoes, or wines, at a given price than any other country, all other countries will do well to buy their gloves, shoes, and wines there, instead of attempting to produce these articles themselves, which by the supposition they can do only at a greater cost. While any nation is beginning an experimental industry of its own, the Government may extend "protection" to such an industry for a time. But the cotton industry of Bombay has been "protected" in this way for nearly twenty years ; and the protection has been a good deal more substantial than is generally supposed. For, while the import duty on twist has been but 3½ per cent., the rate on piece-goods has been 5 per cent. We have levied 5 per cent. therefore not only on the raw material, but on the whole cost of Manchester cloth, while the Bombay mills have paid nothing either on the raw material or the cost of manufacture.

In these circumstances, Manchester complains that it is not getting fair play from us. It points out that the industry we are thus fostering by a protective duty long since passed the experimental stage, and that, if it is really sound at bottom, we have no right to be cockering it up any longer. The reply of the Government of India has ever been, and has honestly been, the assurance that the "protection" which the Bombay mills have derived from our import duty on piece-goods was never deliberately intended, but has been from the first incidental only ; and that we maintain this import duty simply because it brings us in a revenue of nearly a million a year in a less objectionable way than any other we can devise in its room. The instant and natural rejoinder is : "If that be really so, why do you not levy "a 5 per cent. excise duty on the Bombay mills to counterbalance "your 5 per cent. import duty on our goods, and so place us on the "same footing ?" And the Government of India has no answer to the challenge, but to confess that it is glad to have incidentally helped an experimental industry in this way through its first stages. But every one must see that this reply will not do duty for an indefinite time. And the question therefore is : How much longer are the Bombay mills to have this incidental advantage continued to them ? For observe, that Manchester does not question our right to levy an import duty upon cotton goods for revenue purposes. It simply requires us to be honest and consistent when we proffer that excuse, and to show that we are so by putting an excise duty upon the cotton goods made in Bombay equivalent to the import duty upon Manchester goods.

Now, there is really no reply to this requirement, unless we are prepared openly to avow that we *believe* in protecting our own industry, and that we are going to make that protection deliberate which has hitherto been incidental only. But the Government does not *believe* in the protective system ; and even if it did, home public opinion is too powerful to permit it to adopt such a policy. It is a feeling of tenderness only to the interests concerned, and perhaps some small fear of Mrs. Grundy, that prevent our putting an excise duty at once upon the goods turned out by the Bombay mills. It must sooner or later come to that ; or we must abolish the import duties on Manchester goods, which means the abolition of the Custom House altogether, and is not therefore a likely consummation of things. The Bombay mills are already enjoying the highest protection that home opinion will ever allow us to extend to them ; and it is simply a wise and considerate course for the Government to make their real position clear to the mill-owners, that no false hopes may stimulate an enterprise which there is room to fear is already being over-done. And the course Government has taken in these new tariff arrangements to convey the warning seems to ourselves both considerate and judicious. To show the only direction in which it is possible to move, Government slightly diminishes the "protection" the mills have heretofore enjoyed, by reducing the tariff valuations of Manchester goods on which the import duty is levied. For the rest, it announces to the mills that if they wish to manufacture finer qualities of cloth than they have yet done, they will have the advantage over Manchester of paying duty on the raw material only, while Manchester will have to pay duty on the whole value of its fabrics : equivalent, we suppose, to three times the duty on the raw material. We confess that we see nothing but what is wise and considerate in this. As a fact, this new tariff declares to the Bombay mill-interests what our future policy perforce must be towards them. We have no choice in the matter. We cannot promise them further protection, even if we wished to do so : and we are bound to tell them honestly that even the measure of it which they now enjoy, is a vanishing quantity that will disappear before long. The Council might have made the real position of affairs clearer perhaps, but we hold that it was considerate and wise to warn the Bombay mill-owners plainly of what is inevitably approaching, and what the Government has no power to avert.

ONE of the greatest reforms perhaps that we could make in our Customs arrangements would be the selection of mercantile agency for administering the Customs machinery. The perpetual squabbles that occur between mercantile men and the Customs arise nine times out of ten from the latter being administered by men who have no knowledge of mercantile usages or practice. Every firm by turns has its grievance against the institution, and many of them serious cause of complaint. It is not easy to find in the public service an officer of Government who rightly grasps the spirit in which the office should be administered. A Commissioner of Customs, who understands his duties rightly, will look upon them as a necessary nuisance ; and will steadily aim at reducing the nuisance to the narrowest limits compatible with the public interests. He will never strain the regulations but in one direction—the merchants' favor. And a Government of *morale* or breadth will expect him to do this. It is a misfortune that we are compelled to have a Custom House at all ; but when its administration gets into the hands of a narrow man, full of a sense of his own importance and authority, the evil becomes intolerable. Even when the office is in the hands of a broad man, he is sure to be troublesome and obstructive, unless he has some knowledge of the course of mercantile business, and is able to see at a glance how the knot has got tied in cases of difficulty, and should be undone. Case after case of grievance is perpetually coming up, and hardly in one of them are the authorities right. They in every case strain the regulations in the wrong direction. Our own judgment is that the office of Commissioner of Customs should be administered by some one who has had practical experience of mercantile life, and is able to *see* through difficulties at a glance. In its turn, every house in the city has to "swear" at the Customs for some annoyance or other.

THE BURMAH MISSION: AND SIR DOUGLAS FORSYTH.

IT is difficult to understand the reason why so many of our contemporaries have so severely condemned the Government of India and their Envoy with respect to the late negotiations at Mandalay. The cry raised on the subject seems to us altogether disproportionate to the importance of the matter, and we cannot help thinking that were Burmah a stronger and more formidable power, the young lions of the daily press would not have strained so at their chains and roared so loudly. While most of them attack the Government for its alleged blunders, one of them in an article of undisguised malevolence insists that Sir Douglas Forsyth, the Envoy, is the most culpable party. We propose very shortly to recount the leading facts of the mission, as they appear to us. When, in the month of March, Sir Douglas Forsyth was first instructed on the subject, we believe we are correct in saying that the sole question he was appointed to settle was that of the independence of Western Karennee. On Sir Douglas' arrival in Burmah, the presence of the Chinese General Lee See Tahee at Mandalay, and the correspondence between the Envoy and Government relative to this, for a while delayed the negotiations. The King, however, after a good deal of finessing and haggling, presented an agreement to Sir Douglas, by which both parties were to bind themselves to respect the independence of the Western Karen country. This the Envoy found was so complete a concession to the wishes of the Government of India that he accepted it forthwith. The agreement or treaty has been published, and it seems to us to completely fulfil its purpose. Indeed, we have nowhere seen any serious objections raised against it, though it is true that one of our contemporaries found fault with its provisions, because they were not so framed as to bind the King of Burmah only and not the Government of India! So far then all is well, and we proceed to the other part of the negotiations which had reference to the instructions telegraphed to Sir Douglas while at Mandalay. The presence of the Chinese General at the capital had, as we have said, been communicated to the Government of India, and, as he was suspected of complicity in the attack upon Colonel Browne's expedition and the murder of Mr. Margary, the Government expressed their surprise at his reception and directed the Envoy to inform the King in writing, that as regards future missions, if one was sent, it would be necessary to send with it a British force to protect it from attack. Sir Douglas was expressly ordered not to ask for a reply to this communication. And it is this order which has been the subject of so much controversy. We have given the King of Burmah clear intimation of our intention under certain contingencies, and should the time ever come when we find it necessary to enforce our intention and we fail to do so, no doubt we shall have placed ourselves in a false position; but that is a contingency that we do not very much anticipate. We feel then constrained to acquit Government of any serious blunder in these negotiations. At the same time, on some minor matters, such as the shoe question for instance, we should have been pleased to see our rulers maintain more firmness, for there is strong reason for believing that the Envoy might have settled that matter satisfactorily had he been so empowered.

The conduct of that Envoy has been severely criticised, and in one quarter he has been rancorously condemned. But here again we are at issue with our contemporaries. We need not refer to Sir D. Forsyth's antecedent qualifications, but it is only fair that if his conduct in the Kuka case is brought up against him, his great success in the Kashgur mission should be borne in mind; but we shall confine ourselves to the matter under discussion. He has throughout been subject to much obloquy and had to play a thankless part. He was first derided for taking off his boots before the king, until it became known that he did so solely in consequence of his instructions. It was thought that with him rested the discretion of requesting a reply from the Burmese Government on the subject of British soldiers escorting a mission through the country; but, as we have shewn, he was directed not to call for an answer to his communication. He has been abused because, after his mission was over, he telegraphed the contents of a letter he received from the Burmese authorities to his Government. Such a blunder, if blunder it was, may be easily condoned. It is true that after receiving orders to stop at Mandalay he chose to disregard them. Here for the first time he exercised his own discretion, and if he exercised it wrongly so much the worse for him. But the Government to whom he was responsible have carefully weighed every circumstance in the case, and have informed us in a public letter that he employed a right judgment in coming away when he did. The Government alone have sufficient materials before them to judge of this, and if they have acquitted their Envoy, we do not know who else can cast a stone at him.

On the whole, then, as far as our knowledge of the facts goes, we cannot but hold that the outcry on this Burmah business has been uncalled for, and that if we have not achieved any very splendid diplomatic triumph, we have been guilty of no gross failure. The Karen treaty, which was the main object of the mission, has been satisfactorily executed. We have warned the Burmese monarch of our intentions regarding the next mission we have occasion to send through his country, and we are strong enough to carry them out. We might, as we have said, have preserved a bolder attitude on the shoe question and other minor points, but we are not greatly concerned about these. And lastly, we think the Envoy, as well as the Government of India, has been unjustly attacked. A position such as his is always a most difficult one, and we cannot see that he made any serious mistake at all.

INDIAN FRIENDSHIPS.

THERE is a popular delusion to the effect that India is a country peculiarly favourable to the formation of friendships. Exiles in a distant land, and thrown much upon each other for what amusements they can command, it is imagined that Anglo-Indians must form a kind of happy family in an Oriental cage; which is in some sort true, but not in the way contemplated. No doubt valuable friendships are made in India, but usually only in early life: for once the base metal of the rupee enters the soul of man or woman, there is no place for friendship there—the whole becomes concentrated on self-interest. It is pleasant to see an example of the best type of Indian friendship here, among strangers. There are Majors Damon and Pythias, for example, of the Staff corps, who came out together as cadets twenty years ago in the "Trafalgar" Indiaman. They have had losses, these too, in amalgamations and bonuses, and what not, and their tempers are a trifle soured as a consequence: nevertheless, the old affection subsists betwixt them, despite two wives and a round dozen of children equally divided between the twain. The Mutiny of 1857, a China War, and an Abyssinian Campaign,—to say nothing of respective furloughs to Europe,—have kept the two men pretty well apart in a period of twenty years, yet they have met once or twice to revive the recollections of shipboard and of the pranks they played as griffins in the land of their adoption. When apart, Damon has spoken of Pythias as the finest fellow in the world, and Pythias has reciprocated with a genuine admiration of his friend that has often proved a little wearisome, perhaps, to their mutual acquaintances. The two men are bound closely together by the remembrances of a joyous boyhood, and all between light-hearted eighteen and battered forty is but an oppressive Oriental dream, very different from the entrancing vision of the Prince of Wales. It is a pity that the wives of these old friends do not get on so well together as their lords; but wives of old friends have jealousies that are unknown to less fortunate people, whence, perhaps, the ruptures of old comradeship we occasionally meet with; incomprehensible unless attributed to the devil or to a woman. Friendships of this good old pattern have helped many a man on in life. David—Member of Council—may not have met Jonathan for an age, yet some trifle or other, light as air, brings the friend of his youth to his memory, and Jonathan gets such a lift in life as may land him some fine day on the bench beside his patron. This is the bright side of the case. It may be that Jonathan has so pestered the progressive but harassed David with his solicitations for advancement, that David has grown weary of him and shudders at his very name. However, we may take it as a rule that the Indian friendships between men and men formed early in life are valuable, lasting, and cordial. But we should hesitate to say that those between man and woman, or woman and woman, are quite as often of the like admirable character. The early friendships of the opposite sexes, more or less mixed up with the divine passion, do not usually stand the wear and tear of Indian existence, and we have known cadets and spinsters, who were all in all to each other on board the "Runchunder," say most ill natured things in disparagement of one another in later life, and on *terra firma*. As for those friendships of young women that run up like beanstalks, and wither as rapidly, it would be cruel to say that they are dependent on a bonnet, a dress, or a baby, yet philosophers have said so, on whom we cast the blame of the assertion.

Of the friendships formed in later life, we have not many favorable examples in India. A married Anglo-Indian, with a family to

provide for, has little time or inclination to make new friends, though thanks to the troublesome institution of "calling," he or his wife is bound to make many acquaintances. And it is too much to say that the latter are very valuable acquisitions. The visit made in state is returned with equal formality, after which the high contracting parties to a *pseudo* friendship enjoy the privilege of bowing from their respective carriages, and there is an end of it—unless where there are exceptions to the rule, and where a kind of autumnal sympathy springs up between ladies on the all engrossing theme of teething, or that little less amusing topic of *tête a tête* conversation, the croup. It is not friendship or anything like it; but a polite fiction accepts it as such, though probably neither lady would lend the other a five-pound note—no, not though she went down on her knees to ask it. There is practical utility, however, in acquaintanceship reaching to some years' experience of Indian life. One dame gets the patterns of the fashions from another in exchange for patent feeding bottles or boy's model knicker-bockers, and the thing sometimes, but rarely, produces a dinner, or a tiffin, or the dissipation of a Badminton *fête*, or something of that sort. In short, if we are to regard acquaintances only as useful, there is nothing to be said against them. It is when we commit the error of looking on them as friendships, that we begin to recognise the many bad qualities, which to much contemplation may seem even diabolical.

Perhaps the worst concomitant of Indian friendships is the difficulty of avoiding contention with people one lives with on familiar terms. Tempers, as a general rule, are not improved by residence in a tropical climate, by high feeding, and little exercise. A bone of contention that would be but a merry thought or a chicken's wing in England assumes the dimensions of a monstrous ossification in India. A slight, real or imaginary, will produce a life-long quarrel, and the best friends will part on account of the state of their livers. Those furious feuds that break out among apparently the greatest friends on Canal steamers, containing snug little societies, are altogether due to derangements of the liver or the digestive organs, and they are none the better but the reverse for this origin. It is scarcely more practicable to get out of a pugnacious company on board ship than out of similar peril of combustion in an Indian station. In either place, one's friend may be a little over arduous in his friendship, and there are moments in the life of every man or woman, when the truest friend may be a veritable bore. Perhaps owing to the circle of mischances, it occurs to the friend—one's own familiar friend—to seize these moments for his visits when the result is enmity, to say the very least of it. Possibly, friendship flourishes best apart on Indian soil, and certainly the friendship of *chits* and letters is very conspicuous in Anglo-India. Putting aside those persons who write chits every half hour of the day, with or without provocation, there are men and women—but especially the last—who keep up an everlasting and evergreen friendship with some one or other, by the aid of their writing materials. These are the people who keep diaries, and have probably nothing to enter therein. However that may be, this is a description of friendship that never wearies a certain class of Indians that writes and writes and writes—sometimes, we think, with a view to posthumous publications. Did not the Hon'ble Emily Eden, and Lady Falkland, and other distinguished people write letters that were printed? Has not the world heard of Madam DeSevigne, of Horace Walpole, and of many other famous correspondents? Doubtless, the Maiden Aunt in the British Isles, and her literary niece in India, who write by every mail, have sinister designs on Paternoster Row independent of pure friendship; or is it possible that all the letters that pass between the Governor of Bigley and his Eton friend in Wales, Jones Jones M. P., are friendship unadulterated with book-making? Certainly, friendship conducted by correspondence is open to suspicion, though the friend who writes us letters as a duty, expecting replies thereto, is a person of the quality of whose friendship we have no doubt whatever. That friendly letters may have a value of their own is, nevertheless, beyond dispute. Witness Dowb's letters on behalf of friends to friends, and all the profits they produce him! But with due allowance for those old Indian friendships that have retained the heat of Haileybury days in the chairs of Bath, or the pensioners' shades of the Jungle Club, we think that the popular notion of the warmth of Indian friendship is hazily mixed up with the temperature of the country. Never indeed do we hear the advice given to ingenuous youth to "make plenty of friends in India" without thinking of the distracted wife who desired her drowning husband above all things to keep dry, though how he was to do so was more than he could tell.

PROFESSOR CLIFFORD ON IMMORTALITY.

THAT action shall be followed by reaction is a moral law of the race as well as a physical law of the individual; and I suppose that if we had sufficient insight into the infinite complexity of human consciousness, every atheist who ever lived might, on strictly scientific principles, be "accounted for" as necessarily resulting from the previous excesses of some fanatical believer. There has indeed, been so much that was hideous and vile in the past history of religion, there is still so much that is odious and repulsive in the religion we see around us in the world of to-day, that the strenuous negation of the possibility of the existence of God or of immortality should hardly be regarded as a surprising phenomenon: with the fervid, almost rapturous expression of this negation, it is not impossible for even the most religious minds, in occasional moods, to feel a certain degree of sympathy. A man need be no atheist though he sometimes feel his pulses thrill and his blood run more quickly while reading Swinburne's "Hymn of Man," or "The Garden of Proserpine," or "Felise," or even to descend to prose at certain passages in Professor Clifford's paper on the "The Unseen Universe." Nor, conversely, need one be a Christian, or even a theist, to feel one's self, in all but very exceptional moods, strongly repelled from the atheistic creed, even when propounded with the genuine, though slightly strained, eloquence of Professor Clifford.

At the risk of seeming egotistical, or even worse, I venture roughly to outline my own attitude on the subject of religion, partly because I believe it is shared by many others, partly because what I have to say would otherwise be hardly intelligible. In the supernatural character, then, of Christianity, I have completely ceased to believe, and can only regard it as differing in degree, not kind, from Boodhism or Mahomedanism. I do not believe that any man has ever been "inspired" in any other sense than that in which we all admit that Wordsworth, Carlyle, or Mazzini have been inspired. In God and immortality I might, in some of my happier moments, almost say that I believe; but in nine moods out of ten they are for me only possibilities, to be aspired after and hoped for, but about which there can be no certainty.

To many, such a state of mind as this may seem hardly to differ at all from atheism, pure and simple. To me, however, the difference is so great that possessing this hope, I can make shift to struggle on through the weariness of a very monotonous existence, while, if I could be once thoroughly convinced, beyond all possibility of doubt, that I myself, and all whom I have known and loved, were to be blotted out of existence when we cease to breathe, to be as if we had never been, the instinctive animal clinging to life would probably suffice to prevent me from self-destruction; but I am quite sure that self-destruction would seem to me the only rational course, and that to do all in my power to form a society for the propagation of universal suicide would be the only duty towards mankind that I should be able to recognize. If my mind were once thoroughly divested of the idea that my human consciousness has been bestowed upon me by some higher divine consciousness, as an indestructible trust which it is my highest duty to purify and develop; if I were absolutely persuaded that there is no divine consciousness between which and my own there may be some relation, and into harmony with which I may, at some distant time, hope to be brought; if Professor Clifford and his school could once persuade me of this, I fear I should feel no more grateful to them for the disillusionment than the captive spirit of Lord Lytton's *Thanatos Athanaton* to those who similarly "enlightened his darkness":—

In the deepest of deeps of night
Swam the star of a far off day.
A spirit in bondage there,
Chain'd fast to the sullen slope,
Sat watching the lonesome ray
Of that Star's uncertain light,
With an agonising stare.
Let him grieve and grope as he may
Henceforth, that spirit blind,
Whose name, not Patience now,
Shall by men be called Despair;
But he never again shall find,
However he grieve or grope,
'Neath night's eternal ray,
Any light in the deeps below:
For the star he was watching is Hope,
And that star ye have stolen away.

As I said before, I have nothing which I can call a firm belief in the existence of a Conscious God, or in the immortality of my own soul, nor do I think that I shall ever in this life attain such a belief. But the hope that it may be so, that all may yet be well, that the painful riddle of life may yet find some sweeter solution than eternal annihilation, or a meaningless "subjective

immortality," makes for me all the difference between a state of tolerable struggle, and a state of intolerable despair. I can hardly believe that those who write and speak so lightly of all these hopes—without which life would to me seem not worth living—being mere sickly dreams, which it is high time for every honest and enlightened man to finally reject—I can hardly believe, I say, that these men have ever really felt the infinite sadness, the unutterable weariness of modern life.

"The heavy and the weary weight
Of all this unintelligible world."

A life of strenuous realism and negation, inspired with the first glow of emancipation from outward dogmas, and of indignation against the frightful figments of theology and those who preach them, may be for a time animated even to joyousness. I know by experience that this state of mind is capable of affording keen pleasure, but I do not think it can do so permanently. At the outset, the destruction of lies and shams seems work enough to worthily occupy a life sustained by enthusiasm for ideals that seem so easily attainable, and truths so clearly defined and certain. But when ideals refuse to be realised, and truths, or what had seemed such, lose their sharp definite outline and grow vague and cloudy, then the enthusiasm of unbelief is very apt to lose its early glow, and one feels that something more than mere negation, never so fervid or enlightened, is needed to keep the wheels of life from grating with intolerable harshness. That something, to me at least, is the hope, vague as it is, which I have tried to describe. Many will doubtless say that nothing short of clear undoubting belief is worth having. I can only reply that mere hope is to me worth a great deal, and that I can see no way in which a positive belief is to be obtained. I can perceive no convincing evidence in nature that the world was made by a benevolent being. So far as I can judge, the course of nature seems to be indifferent to man's happiness or sorrow, and to have been designed without any particular view to either one or the other. Men and animals alike appear to me to suffer, "not for doing what they do, but for being what they are," and what it is not in their power to avoid being. It is only the pardonable one-sidedness of a poet that can rejoice that the "sweet current of primiæval love still flows throughout the veins of all nature; that the nightingale mourns for the perished rose, and the winds are laden with the sighings of sympathy." Nearer the truth, though not less poetical, seems Matthew Arnold when he sings of a nature who—

With equal mind
Sees all her sons at play;
Sees man control the wind,
The wind sweep man away;
Allows the proudly-riding and the founder'd bark.

Still, in spite of all "the mystery of the cruelty of things," which I believe I feel as deeply as most people, there remains the yearning hope that in some other state of being, absolved, it may be, from all conditions of the world we know, the spark of consciousness which I call my soul, may yet, while retaining its individual life, be at one with the souls of those whom I have known and loved here in time, and with that spirit of goodness, that divine consciousness, in whose objective existence I would fain believe. I am not careful to reconcile this aspiration with the results of modern science, and the recorded observations of the working of external nature. Professor Clifford may tell me that the aspiration itself is "the slender remnant of a system which has made its red mark on history and still lives to threaten mankind;" and that my "longing for the infinite" is but a token of inability to cope with the finite. He may be right. It may be that the hopes and yearnings of countless generations of mankind have been not dim gropings after half-seen truth, not distorted visions of a hidden goodness, but blind phantasies of feverish imagination projected into a void that contained no reality answering to the idea which they strained so hard to reach. It may be that no divine eye has ever looked upon "these desperate and hideous years," that no divine ear has ever harkened to any one of the innumerable prayers which sorrowing men and women have vainly offered up. It may be that we have but seen "for heaven in a vision a void world's shadow and shell," and that all religions which the world has known have been but the stupendous satire of a soulless fate upon human folly. All this may be so. I cannot even say that I am never inclined to believe that it is so. Should I ever become convinced that it is so, I cannot but think that, both for myself and those dear to me, I should prefer immediate annihilation to annihilation after a few more years of what would seem to me a wearisome and meaningless existence. Until, however, I am so convinced, I cling to the hope that the universe has a divine meaning, and prefer to Professor Clifford's eloquent denunciation of belief in God and immortality, the simple, ancient saying of the Persian poet:—

"Fear not; the end shall be full of sweetness."

SPERANS MELIORA.

*** We have the deepest sympathy with the writer but a stronger faith in the reality of the unseen. The philosophers are wrong: of that we are as sure as that we live at all.—ED., *Friend of India.*

TALES OF VILLAGE LIFE.

THE MOHUNT OF MITRA KOTE.

I.

"WHITHER so fast, my friend, with those baskets carried over your shoulder bhangy-fashion, suspended to either end of a long bamboo?" To ask such a question of the trudging pilgrim, as muttering a prayer, he passed you on one of the cattle-tracks, designated roads, in Bundelkund, must more than once have suggested itself, if it has been your lot to march much in the interior of a district in that part of India. You cannot well have failed to notice numbers of them passing and repassing, ever with the same look of dogged resolution, as of men engaged on a set task—if your tents have been pitched near the sacred hill of Mitra Kote. Pilgrims from all parts of Central India wend their way to this spot to perform the circumambulation of the holy hill and bathe in the pools that lie round its base. Thousands of pious Hindoos bring the ashes of their dead from great distances to scatter them on the surface of the small river that meanders through the plains surrounding the town of Meetapore, and which winds like a snake through its short course till it joins the mighty Jumna. Twice a year a great *melâ* or fair is held at Mitra Kote, to which the Rajahs of Ajigurh, Punnah, and half a hundred smaller native States used in former times regularly to repair, and their attendance has only fallen of late years into comparative desuetude from the dislike those potentates feel to asking permission from the Resident to leave their own territories, a disinclination not perhaps quite unconnected with the conviction that by non-attendance they escape falling victims to the exactions of the custodians of the many shrines and bathing ghâts at Mitra Kote.

Those *kawar-walas* or carriers of holy water in the baskets (*kawars*) strung over the shoulder on bamboos, are many of them, you will find on enquiry, in the service of the Mohunts of Meetapore, These great men have vast landed estates, the gifts of former rulers, and possess large *pucka* houses of palatial dimensions, albeit in a style of architecture that would find little favor with western lovers of the beautiful. Their revenues are large, both from their rent-rolls and from the alms of the pious, and they live, it need hardly be added, in the very odour of sanctity itself. A Mohunt, in the eyes of his immediate disciples, can do no wrong. His lapses of morality, though frequent, are regarded with little disfavor by those in whose eyes he is invested with a peculiar sacredness. Now and then, however, a particularly gross violation of the moral code brings the 'pure being' into trouble with the powers that be, as for instance when he takes advantage of his priestly character to bring dishonor upon some high caste native, whose respect for the great man cannot blind him to a sense of personal injury inflicted. Even then it is rare that the case comes before the ordinary Courts of criminal jurisdiction. The man who has been wronged feels keenly the disgrace involved in dragging his domestic troubles before an alien judge, and dreads the ridicule and contempt that will be heaped upon him by his co-religionists, at the same time that he cannot but be aware how impossible it is that any one will give evidence against a Mohunt.

The Mohunts of Mitra Kote are a large family or rather group of families. Under Mahratta rule they had aggrandised themselves to an alarming extent, and even after the considerable resumptions of landholds under insufficient or invalid *sunnuds* which befel them when the British took possession of that part of the Bundelkund, their landed possession comprised some ten or twelve villages near to Meetapore, while in the neighbouring native territory they had more than twice that number. They have always been a thorn in the side of the sub-divisional Magistrate, who resided some six miles from their chief village at the station of Maidanpore, having usually as his single European co-resident a Police Officer, but sometimes living for months with none but natives near him. The police reports that were daily read out to the Magistrate frequently contained such items as this:—

"A fire broke out last night at Khera, distant one mile from Meetapore, in the house of Dasodhar Das, Bohra. No life was lost, but property to the value of Rs. 500 was destroyed. There is no

clue to the origin of the fire, but the Bohra states that he has a family quarrel with one of the Mohunts and attributes the fire to the act of some of his hirelings. It is the second time the Bohra's house has been burnt down. The chief officer of the police station has held a local enquiry, but no evidence of any kind has been elicited which could throw light on the matter."

In the spring of 1870 a tragedy was enacted in connection with one of these men which it is our intention briefly to narrate, as it will illustrate the character of the Mohunts and the extreme difficulty there exists in bringing to justice persons who are regarded by all Hindoos at least with a superstitious veneration, and often with no small amount of physical dread. For their influence and the consequent difficulty of bringing crimes home to them render it more easy for them to wreak their revenge with impunity upon any bold spirit who should dare to raise his voice against them, so that the eye-witness of a murder perpetrated by one of them would probably from prudential motives discreetly hold his peace, rather than risk his own life in the cause of justice.

Perhaps the Mohunt who was least known to the local authorities as a suspected criminal was Swami Sema. He had without doubt a more "libertine" appearance than many of his fellows, and his fat paunch and limbs gave evidence of a desire after good as well as holy things. He was reputed wealthy, but did not affect any very ornate style of dress. The long coat of green broadcloth, green being the national color of the Bundelas, and very common still in the tracts where they once held robbers' rule, and a small cap of gilt pattern were all the finery he wore. His large white house, surrounded by high walls, was entered by a small door on one side and inside the enclosure the first object noticed was a small temple with a figure or emblem of the presiding deity. One side of the quadrangle was a granary for the stores of grain which the holy man distributed among his followers as food or as alms to mendicants.

Numerous little huts lay outside the walls where his disciples and retainers lived with their families. The latter were mainly the *Kawar-walas*, or carriers of holy water mentioned before. One of these, with whom the incidents of this story are mainly connected, was Kallu Brahman, a man about 35 years of age. His young wife Hemavati had borne to him two children, and herself attended to the domestic requirements of his small household, for his monthly salary derived from the Mohunt, not amounting to more than four or five rupees, rendered it impossible to pay others to do those duties which should always be piously performed for Brahmins by some of the inferior castes. He was proud of his Brahmin caste, although so poor a member of it,—and had preferred taking service even on such wretched terms as those offered to him, rather than live as some of his family were not ashamed to do, begging their way from one village to another and living entirely on alms. His duties were heavy, entailing long journeys to far distant places of pilgrimage, to pour holy water upon the emblem of the presiding deities and offer presents in the name of the Mohunt. On Kallu's return from one of these absences, a longer one than usual, in this case extending to six weeks, for he had been to Gya, distant several hundreds of miles from Mitra Kote, he fancied he noticed something wrong in his household. He could not explain the feeling to himself. It took no definite form, but was somehow connected with Hemavati. Her brother, Ram Dayal, had looked strangely at Hemavati when Kallu met her, for Ram Dayal happened to be present at the meeting of husband and wife. Her manner, too, had altered from one of interest in her daily duties to one of utter indifference to them. Kallu spoke about this to Ram Dayal, but the latter evaded giving him any direct answer, although he clearly showed Kallu by his manner that something *was* wrong. For two days Kallu held his tongue about the matter to Hemavati, but at last could refrain no longer. "What ails thee, Hemavati," he said to her, "that thy looks are become so sad and thy manner so estranged towards thy children and myself?" A hysterical laugh was all the answer he could for some t me gain. At last, after much previous crying and laughing strangely intermingled, she replied, "I cannot tell thee, husband, what the Mohunt said to me. He sent the old woman Parbutti to ask me to go and see him at dusk one evening, and when I went he made use of strange language to me. Ask my brother for more. I cannot tell thee." From Ram Dayal Kallu learnt that the Mohunt had, as Hemavati declared, sent for her and made her magnificent offers; promising to make her his chief mistress if she would desert her present lord and master. Boldly and angrily Kallu hastened to where he knew he should find Swami Sema. As soon as the Mohunt set eyes on Kallu, he guessed the purport of his visit by the workings of Kallu's countenance, but, pretending not to notice it, said in his usual tone: "Well my son, and hast thou performed the holy mission upon which I sent thee to Gya? Thou hast returned fully a week earlier than I expected thee."

"A poor man had need, Babajee, to return early to his home in these days, when he cannot be absent from it on his master's service without dishonour being done to him while he is away."

"What lying tale have they been telling thee, Kallu?"

"No lie, master, I fear your own heart will best inform you if it is a lie or not. I have come to tell you that from this day I cease to be your slave, and intend to appeal to the Sirkar against your infamous treatment of me."

"Stuff and nonsense, my son; wherein can a holy man of God have given offence to him whom he regards not as a servant but as a son? Speak out and let me know what charge thou hast against me."

"This, Mohunt, that during my absence thou didst attempt to induce my wife by deceitful promises to desert me, telling her thou wouldst give her a high place among thy own women."

"Lies, Kallu, base lies, and who pray told you this?"

"My wife herself and a near relative."

"Kallu listen, I swear by my son's head that I never did this or aught like it. Do not thou be deceived by a lying tongue, even if it be thy own wife's. Thou hast not much k nowledge of my affairs, or thou wouldst know that I have twenty women in my household; but my thoughts are so much concentrated in the contemplation of Ram that I have not seen any one of them for the past year. Wherefore then should I steal thy wife? And thou hast rightly alluded to the Sirkar. Dost thou not think I value my own liberty too much to risk the punishment I should receive for such a crime as that at which thou hast hinted? Thy wife came to me to ask an advance of money for her subsistence. I gave it to her and I fear much that she is not the honest women thou thinkest, but hath some other intrigue in hand and desireth to put thee off the scent. Be satisfied no evil shall come to her from me. Now therefore be thou content and easy on this score. I have a mission of the highest importance for thee to perform. To-morrow I wish that thou shouldst set out for Budh Raj with the water of the Holy Ganges, so prepare thyself for the journey, and leave thy wife in my charge. I will inform thee on thy return if I have heard aught of her misdoings. Go now to my treasurer and take from him two rupees for thy sustenance on the way and also thy usual rations of *dál* and *átá* sufficient for thy first day's food."

Kallu left his master's presence in a confused state of mind, half believing, half-doubting the truth of what the Mohunt had said. It was evening now and he decided not to sleep at home that night, but on one of the *ataris* of the Mohunt's house, where often his servant and disciples took their rest. He was to start in the early morning for Budh Raj, and it would prevent the delay of leave-taking then if he bade farewell now to Hemavati and his children. Not a word of what the Mohunt had said passed his lips to Hemavati, nor did he allude to the subject of his previous conversation with her. Taking the bags for holding food which he had received from the Mohunt's household some months previously and with his *kawars* (baskets) slung over his shoulders he left his house about nine at night and proceeded to that of the Mohunt's.

. . . . . .

II.

On the morning after Kallu left for Budh Raj an "express" message from the Panaria police station, distant eighteen miles from the sub-divisional station of Maidanpore, reached the Joint Magistrate in charge. It was a mere abstract of a report by the head police officer of an occurrence that had happened there on the night previously. A Brahmin had come into the village, and placing his *kawars* down near a well, had cooked his food of *ata* and *dal*, taking those substances from the same bags he had with him. After eating his *chupatties* he had given the fragments to three children aged 8, 9, 11, sons of a *Kachhi*, who was cultivating his fields near the well. First the children had been seized with violent pains and died, one after the other, at short intervals before 8 P. M. They had eaten the food at about 5 P.M. The Brahmin had also died before midnight. The Joint Magistrate went over to the local dispensary in the course of the morning, and there saw the bodies of the four victims lying on *charpoys*. He found on enquiry from the native doctor, a second-class hospital assistant, that he had already taken out the stomachs from the bodies, and (miracle of native sagacity!) had placed them all in one *garha* or earthen vessel, mixed up together. On being asked why he had not kept them separate, he had no answer to give beyond the statement that he did not consider it of any importance to do so. Of course *he* had no appliances to test the contents of the extracted viscera with a view to the possible discovery of poison. Three bags sealed and labelled, containing

flour, pulse and salt, were shortly afterwards brought in from Panaria. These with the earthen vessel and its contents were sent into the sudder station without delay to the civil surgeon, there to be properly packed and despatched to the Government chemical examiner. The same afternoon the Joint Magistrate and Assistant District Superintendent of Police proceeded to the residence of Kallu at Meetápore. The wife or rather widow of Kallu was first examined, but added nothing to what the reader already knows.

The Mohunt declared himself utterly ignorant of the whole matter, and declined to answer any questions. His treasurer deposed to having paid Kallu Rs. 2, but denied having given him any flour, pulse, or salt. A *chamar*, Ram Dinwa, however, came forward and deposed to having seen the Mohunt give flour, pulse and salt to Kallu, who placed it in the bags which Ram Dinwa identified as those produced. This proof was capped by the statements of a *mali*, who said he saw the Mohunt grinding some substance like salt with a mortar and pestle on the morning Kallu left and afterwards saw Kallu leave the Mohunt's house. The Mohunt Swami Sema was of course arrested, and an enquiry held preliminary to his committal on a charge of four-fold murder. The mortar and pestle were found, but were quite clean and free from any sign of a poisonous substance. Ram Dinwa Chamar and the *mali* were shown to be the servants of a rival Mohunt, an enemy of Swami Sema's. The report of the Chemical Examiner disclosed the fact that the contents of the earthen vessel despatched to him, and also the salt in one of the bags, contained traces of arsenic, the quantity in the earthen vessel being quite sufficient to cause the death of four human beings. Swami Sema was committed for trial, but before the receipt of the Chemical Examiner's report the Joint Magistrate, who had enquired into the case had been transferred to a distant station, so the final order of committal had to be passed by his successor. At the Sessions Court an English pleader from Hakimabad appeared to defend the Mohunt, while the prosecution was conducted by a salaried (native) Government pleader. The result was somewhat doubtful till Mr. Gettemoff, the eloquent pleader, known throughout these provinces for his success in criminal cases, commenced to cross-examine the two chief witnesses for the prosecution, Ram Dinwa and the *mali*. These worthies soon got confused and contradicted each other as much as the most sanguine pleader could expect native witnesses to do. The Sessions Judge in delivering judgment, did so in the oft-used formula : "*Kyimki is mukaddame men bahut shakk hai, is waste pukur rihái ká diyá játá.*" ("In as much as there is great doubt about this case the order is for an acquittal"). Mr. Gettemoff went back to Hakimabad, the richer by some two thousand odd rupees, and the Mohunt returned to his home a sadder if not a wiser man.

Of Hemavati and her subsequent proceedings we can give the reader no positive information. When last heard of she had not changed her habitation from the house she occupied when Kallu was alive. It is commonly believed by the ignorant in that part of the sub-division of Maidanpore, where the Mohunts have influence, that the worst result of murdering a man or two to the murderer, if he be rich enough, will be the payment of the fees of a good "*gora vakil*," and the figure at which those fees are now put is Rs. 2,000. The great cost of the luxury, however, renders indulgence in it of comparatively rare occurrence.

EDITORIAL NOTES.

In congratulating the Council the other day at Simla, upon the discontinuance of the annual discussions that used to take place upon the introduction of the Budget, Lord Northbrook hardly stated, we think the real objection to them. "I agree," he said, "with the high authorities who hold that the discussions were open to the objection of raising apprehensions of additional taxation, or at least of leading the public to expect changes every year in the financial arrangements of the State. Such changes in England are well understood and regarded without apprehension, but in India they are liable to be exaggerated and to disturb the minds of the people. There are none of the constitutional reasons for annual discussions which exist in England, and the consideration of financial measures by this Council only when the necessity for them arises is, in my opinion, both more in accordance with our functions, and more calculated to maintain the stability of Indian finance than such annual discussions."

The mistake of these discussions consisted in the fact that they never led to anything, and were never meant to do so. The Budget was settled beforehand in the Executive Council; and the views of the Legislative Council should never have been asked thereon, unless the Government was prepared to defer thereto upon occasion shown. The submission was ostensible only, and not real, and it simply invited and provoked discussion without the smallest intention on the part of Government of being influenced thereby. Without reverting to the former practice, it would be an improvement, we think, upon the present one, if the Financial Statement were published in the *Gazette of India* a month before its final adoption by Council, thus giving an opportunity to those who were competent to do so to review its proposals. The discontinuance of the former practice was adopted, largely, we think, at our own repeated suggestion of the evils which attended it. But we have now gone to the other extreme. What but good could arise from the publication of the general nature of the Budget a month before its final adoption? It would be necessary to reserve only any changes contemplated in the customs or Excise duties. The rest of the estimates might we think be submitted to public consideration with nothing but advantage.

***

Shall we have war with Burmah? It is hard to say, but it is satisfactory to observe that many are beginning to forecast a possible issue of such a contest, that has been to a great extent overlooked hitherto. We mean the finding ourselves face to face with China instead of Burmah, upon our frontier, as the result of the war. We have as deep a sense of the impolicy of forcing ourselves into this contact, as contempt for the chronic alarm with which Russia's position in Central Asia is generally regarded by Englishmen. The one danger is real, and far from remote: the other we hold to be more chimerical than real. We feel utterly ashamed of the attitude of our countrymen towards the Russian advance, and should be as much amused thereby as St. Petersburg itself, but for the irritation which such folly provokes. If the country is ever driven by our "alarmists" to occupy Affghanistan, we shall regard it as the most fatal mistake yet made by us in India. There is about as much real ground for anticipating a Russian invasion of India, as of St. Petersburg being invested by a sepoy army.

***

Now that the ex-Gaekwar of Baroda is held "in durance sweet," and only kept before the public mind by canards, that much abused man Colonel Phayre, may perhaps get a little more moderate treatment, and possibly a crumb of sympathy from his critics. No one has ever said that the Colonel is remarkable for suavity of temper and manners, and it is not even asserted that discretion is the better part of his valour, but it is just possible, if it is not probable, that the condemnation of his conduct at Baroda has been too sweeping, and that, in fact, the Colonel, being a not ineligible candidate for the post of vicarious sufferer, has been selected as the victim. For in all notorious failures in policy or diplomacy under despotic Governments, it has even been thought necessary to offer a propitiatory sacrifice to the gods of the under world. The head of some grand Vizier or inferior official should be struck off, for that is the right thing to do. But we live in a degenerate and irreligious age, and grudge the gods of Orcus their perfect morsel. Instead of the head of an ambassador we fling them his boots, stuffed with the blurred and blotted parchment of his immolated diplomatic character. And as to Colonel Phayre, though we ought certainly to have slit off his refractory head, because he persisted in putting on steel gloves to grasp thorns, or rather poniards, with, and refused to take his arsenic and diamond dust quietly, we are contented with dismissing and disgracing the man and sending him away into the wilderness with a load of Governmental sins on his broad back. For a time the public could scarcely make up its mind whether the Colonel or the Gaekwar was the more to blame. But what has been play and paradise to the Gaekwar, has been obloquy and official immolation to the Colonel. We confess to a feeling of satisfaction, however, on finding that Mr. Tucker's pamphlet attempting to justify Colonel Phayre is receiving some attention and is not unlikely to have some effect. It by no means proves that he was the fit man for the post he held, though probably the blame of his selection does not fall wholly on himself. He was not a well-oiled diplomatic machine, but went very crankily to the handle. He sinned in imagining that his own judgment and feeling had any thing to do with the direction of his behaviour as Resident, and, above all, was too ungentle with the royal reprobate he had to deal with. In fact, being sent there to see that the Gaekwar reformed the abuses in his State, the Colonel thought that he ought really to see that he did reform them. This was a serious blunder, and to his over-zeal he probably added

faults of temper, and was altogether too overbearing and peremptory. He seems not to have been able to get over his loathing for the dangerous reptile he was handling. A snake-charmer was wanted as Resident at Baroda, and Colonel Phayre was not a snake-charmer. It would have been more to his taste to have crushed the snake. But altogether Mr. Tucker thinks—and perhaps not a few will by and by agree with him—that the Colonel's treatment of the Gaekwar, and his discharge of his own duties, were right and just. The Resident saw what the Government could not see, and events have proved that his judgment, and the charges he made against the Gaekwar, were honest and well founded. But he did not know that his chief aim at Baroda should have been to try and make matters seem smooth on the surface. Perhaps Sir Lewis Pelly was better fitted to understand the position.

Mr. Tucker even endeavours to show that Sir Lewis Pelly has got a great deal of credit for bringing about reforms that were really initiated by Colonel Phayre. "Sweets to the sweet." The man that has the gift of making matters smooth, gets smooth words and honour and glory. A rough, honest, irascible redresser of wrongs is abused for want of tact—the steel glove, because it is not soft and pliable as French kid—and even when villainous attempts are made on his life, he gets ridicule and abuse instead of sympathy. India will get tired in course of time of handling murderous Gaekwars with French kids, and of creeping on her stocking-soles into the presence of His Majesty of Burmah.

***

A FRIEND writing to us says:—"I have great faith in salt as an antidote to cholera, and I see no reason why I should not circulate my experience through the medium of your columns, which I remark are extensively quoted by most of your contemporaries (particularly at this time when cholera has broken out both at Cape Comorin and the Himalays and is gradually verging to a centre with a probable prospect of spreading all over the country). I have invariably found that the much eater of salt in food has generally escaped altogether, and those who have increased their daily consumption have had it in a mitigated form. I am myself a living example, for I have met the dread disease in its most virulent form in Spain, Portugal, England, Turkey, and in this country, and have stood amidst the dying and the dead both in camp and hospital without (by God's blessing) ever having felt a touch of it. I have always, when I could obtain it, caused an extra quantity of salt to be given to those under my care, whenever there was a chance of its approach; and I recommend every one to increase the usual portion at meal times; and that an extra ration should be issued to the troops. Surely even in these times of cheeseparing economy the expense cannot be considered with the value of one single life saved by the experiment.

"I do not recommend salt meat, but salt pure and simple to be eaten with the food at meal times as much as possible, but never in sufficient quantity to create thirst, until the palate becomes accustomed to it. This is a preventative not a cure. I am not learned enough to say in what manner salt assists the human system against this terrible epidemic, but only mention the fact, and I hope your contemporaries will 'please copy' this."

***

WITH regard to the outbreak of cholera in Simla, attention should be drawn to the fact that the night-soil, instead of being taken to some place beyond the inhabited limits, is buried in trenches on the hill side a few hundred feet below Burra Simla, the most populous part of the station. The spot cannot be got at without some physical exertion and careful supervision is on that account out of the question. Representations, we are informed, have been made to the Municipal Committee without the slightest effect. When the wind blows up-hill from the direction of the Brewery, the stench is at times intolerable. The same used to be the case immediately after the showers of rain that fall in May and June. In some parts of the station, the drinking water, when filtered, has the colour of milk and water. Orders are occasionally given that people should cut away brushwood and jungle from their compounds, but the vegetable matter thus encouraged to rot and disseminate malaria is not carted away: it is merely thrown down the hill sides. No wonder then that fever is now a common complaint at Simla. The Municipality ought to be forced to buy or rent a piece of ground some miles out, for depositing night soil and vegetable matter that has been cut away. With two Sanitary Commissioners on the spot one would think the *manus fortis* would be ready when needed.

***

THE most remarkable thing in the Chronicles of Dustypore, according to one reviewer, is the unconscious ignoring of the natives *en masse* as something attaching to India accidentally. Lord Clive, we are told, never could express himself fluently in any Indian language. Of the many who come out to India, there are few indeed who get more than a glimpse of the inner life of the natives. It is not wonderful then that we occasionally see a paragraph like the following, from the pen of one who professes to be up in Indian subjects:—

"Lord G. Hamilton, would hardly allow *bhang*—a drug that produces in ninety-nine men out of a hundred an access of homicidal mania, *and is therefore eaten by sepoys—to be sold* in England, and opium, in a different way, is *not much more defensible*." *

The italics are our own. We are afraid that there arose in the mind of the writer some dim recollections of rebels, infuriated with *bhang*, rushing to the attack with loud cries of *deen, deen*, and yet there was never a greater libel on a harmless stimulant. To say that *bhang* induces a homicidal mania is as true as to say that one's mid-day 'peg' produces temporary insanity. It is moreover by no means a stimulant more used by sepoys than others, and is certainly not 'eaten.' The class that perhaps most of all is addicted to *bhang* are the *Sàdhs* or celibate lay-monks, one of the curses of this country, and in them it produces a pleasing torpor, which, when aided by a *sulfa* (lit *chillum*) of *churrus* is turned into downright stupefaction. The Sikhs too almost universally use it, and by them it is styled *sukhà*, or *the* 'dry thing' *par excellence*, and is sometimes made a Sikh of under the title of *Sukhà Singh*. It is often too, euphemistically styled *thandai*, the cool drink, and to the Sikhs supplies the place of tobacco from which they are debarred by their great Guru's express prohibition. Like our 'nip' or glass of bitters *bhang* has the effect of inducing appetite. It has besides the power of intensifying the state of mind in which the drinker happens to be, previous to imbibing. So that if a man has made up his mind to commit murder, and then takes a draught of *bhang*, he becomes strengthened in his resolve and blind to the consequences. But to say that in ninety-nine cases out of a hundred, it induces a homicidal mania is to show an utter ignorance of the effects of *bhang*. We venture to say that common assaults even are far less common among the millions who daily drink *bhang* than among peoples who indulge in vinous or spirituous liquors. Excess in *bhang* merely brings on stupor, and incapacitates a man for any kind of work. Taken in moderation, it does not seem to have any bad effect on the people. It does not demoralise, like absinthé, or depopulate as whiskey has done with the North American Indians. A finer and more stalwart set of men than the Sikhs, regular *bhang*-drinkers, one does not often come across in Asiatic countries.

***

THE two great points in Lord Northbrook's speech in the Legislative Council on the New Tariff Bill are those which deal (1) with the conditions under which we have to raise a revenue in the country, and (2) with the question of Exchange. Concerning the former, he points out with perfect justice that India is a country in which there is but little choice of new sources of taxation: and that it would be difficult to replace the Customs revenue, except by an Excise duty on tobacco, or by some kind of direct taxation. And concerning such a step he says:—"I am satisfied that such a change would not be desirable even in a financial point of view. The army of tax-gatherers, on low pay, which would be let loose over the country to collect a new Excise, would probably involve a larger charge to the Government than the cost of collecting the Customs duties; and, what is of more importance, by the imposition of a new Excise duty or of direct taxation under the best arrangements that could be made to levy either, the people of India would, in my opinion, have to pay a larger sum than they would gain by the reduced cost of the articles which would be affected by the abolition of our customs duties. Whatever may be the objections to Customs duties they possess the advantages of being collected easily and paid without pressure. These advantages are of peculiar importance in India where new taxes are particularly liable to occasion popular discontent."

We commend this extract to the consideration of those who have been congratulating themselves upon the supposed leanings of the Viceroy to direct taxation. There is little to commend such taxation even in wealthy countries, while in India it is open to the gravest objection.

***

ON the question of Exchange Lord Northbrook says:—"The Government of India is one of the best abused Governments

* *Spectator*, 3rd July 1875.

in the world, and I have seen it asserted that this fall in the value of silver is our fault. Governments can do much—when they interfere with trade they usually do much harm—but they are powerless to control the value of any article in the markets of the world. What the cause of the fall in silver has been, and how long it may contiune, is not easy to say. It may be produced mainly by the change in the currency of some European nations from silver to gold, which has thrown a large quantity of silver into the market. It may arise from the increased production of silver. As long as it lasts, however, the Government of India suffers in common with private individuals. The Government of India has to make large fixed payments in gold out of income received in silver, and a fall in the value of silver raises the cost of those payments. This really governs the item 'loss by exchange,' which has of late years figured so heavily on the wrong side of our accounts: for whatever temporary fluctuations in the rate of exchange may be produced by the balance of trade between India and other countries, these fixed payments in gold must in the long run constitute a lighter or heavier charge upon the Indian finances in proportion to the rise or fall in the value of silver. The net sum provided in the estimates of the current year for loss by exchange amounts to more than a million sterling, and if the value of silver should continue to fall this charge will be considerably increased."

***

If any proof were wanted of the false position into which the present relations of the Government of India with the press are certain sooner or later to betray it, it is supplied we think in the *Pioneer* of Monday last, in which Sir Douglas Forsyth's mission to Mandalay is made the subject of the most passionate reproaches. That the Government had nothing to do with the production of the article is certain, but it is no less certain unfortunately, that its inspiration will be attributed to the Foreign Office, by nine out of every ten readers of the paper. The Government is thus placed to the popular apprehension, in the undignified position of assailing its own Envoy, with abuse almost feminine in its rancour. Sir Douglas is not only "weak" it seems, but "is a mere diplomatic posture-master" whose "blundering surpasses conception." He is the "whining confidant of the press, uttering disloyalty to the Government which generously adopted his blunders;" a cowardly deserter of his humbler accomplice in wrong-doing; a man stamped with failure or with guilt in his every association with the public service for years past; and one who "for the credit of the service should be relegated to the official obscurity from which he first emerged only in the ghastly light of the Kooka massacre." "His case is as hopeless," we are told, "as Humpty Dumptys," the writer meaning we suppose "his fall." But if all this be true about Sir Douglas, what is to be said of the Government that selected this compound of meanness, incapacity, and guilt, for the Mission to Mandalay? When our contemporary tells us that Sir Douglas "is one whom the King delighteth to honor, because he is blessed by Providence with a brother in Parliament, of some little weight in the Conservative ranks," does it mean to hint that he was forced by the Home Ministry on the Government of India as their Envoy, while they knew him to be all the *Pioneer* now declares him to be? To notice the special charges made against Sir Douglas, when they are conceived and set forth in such terms as we have quoted is almost needless. For there is malevolence in the attack, and the best service we can do in the matter is simply to caution the public against believing that the article was officially inspired. The Government would do better to have an avowed organ of its own that it could control, than subject itself to the faintest suspicion of inspiring such outrages as these upon its servants.

***

A CORRESPONDENT of the *Pall Mall Gazette* says that although the wretched condition of Turkey demands foreign intervention of some kind, our interests are so bound up with her independence that we could not, without political danger, allow her to be blotted out of the roll of nations, and the *Statesman* (Calcutta) thinks it is much to be regretted in the interests of the Turks themselves, that England has "so many cogent political reasons for wishing to maintain Turkish rule in Europe as the fall of the Porte we are told would involve.—1. A loss of our grip on the loyalty of the fighting element in our Indian possessions. 2. The loss of our command of the sea, the one weapon left in our hands to counterbalance the preponderance against us on land. 3. The loss by our manufacturers of their best and cheapest supply of raw material and of the best market for their wares."

Turkey has an almost nominal tariff. The Russian tariff is the most highly protective in the world. The very keystone of Turkish commercial policy is free Trade. The whole basis and tendency of Russian commercial policy is protection. It was Turkey which defeated the policy of the Berlin decrees and afforded British commerce an emporium and a means of inundating the Continent with its wares, in spite of, and in the very teeth of, those decrees; and it is Turkish commercial policy which offers English manufacturers at the present day those advantages of free competition by the help of which it is enabled to command the markets of the East. *Wherever Russian influence extends, a prohibitive tariff makes successful competition with their own inferior products impossible.*

Let us admit all this to be true, what then? If Russia unwisely shuts out her populations from the cheapest markets in the world—she herself is the chief sufferer thereby, and not the foreigner. Of course we should be very glad to supply her with goods at cheaper rates than she can herself make them for, but we need not get angry over it.

***

OWTON FERRY CHURCHYARD will be chiefly known hereafter in connection with the name of the "Reverend" Henry Keet, despite the strenuous efforts that have been made by the Vicar of that parish, to prevent the name of the dissenting minister from appearing in that churchyard on the tomb-stone of his little daughter, with the disputed title attached to it. We thought that the matter had been settled long ago, when the Primate declared against the opposition of the Vicar, supported withal by his Bishop. It seems, however, that the Vicar was not to be beaten by any extra-judicial utterances of even an Archbishop. Lincoln, the See in which this storm in a teapot—we mean a graveyard—has occurred, is subordinate to the Archbishop of York, and possibly this was a reason why the Primate's opinion was not accepted as binding. At any rate, the Vicar has obtained from the Chancellor of the diocese an injunction restraining Mr. Keet from doing the offensive deed complained of, and Mr. Phillimore has given his decision in such unmeasured terms of scorn and intolerance for the body to which Mr. Keet belongs, that not all the oil thrown upon the waters by the *Times*, nor even the terms of high respect in which Wesleyans are mentioned by that journal, will prevent the storm from bursting, and the injured and insulted ministers and their flocks from venting their indignation upon those who thus wantonly abuse them. The words of Mr. Phillimore's decision will be interpreted not as the mere utterances of one man, but as breathing a spirit of intolerance and hatred far more general. Friends of the Church of England must regret these indecorous and damaging displays of zeal, while the followers of Mr. Miall probably hail them with delight as new additions to the load on the already burdened camel, only waiting the last straw which shall finally and effectually break it.

***

BELGIUM, if we are to credit the Berlin correspondent of the *Times* who telegraphed the fact on the 7th of June, unable constitutionally to hang, or transport, the now notorious Wiesinger for his injudicious offer of his services to a high dignitary of the Roman Catholic Church to "settle" with her greatest living enemy for a certain sum down, has been committed to stand his trial for fraud! The force of legal fiction could, we should imagine, no further go than to charge a man with cheating, who only proffered certain services that were never accepted. This last move may have been the work of some Belgian legal wag, a kind of Bœotian joker, who patriotically desired to show up the recent action of the German Chancellor in all its absurdity. Wiesinger will, if convicted, be punished for an attempt to cheat his venerable correspondent, by promising to do for him what he never intended to do. All he intended—if the committal for the offence of fraud be true—was to pocket the money and laugh at the deluded churchman. So after all the German Chancellor's life was not in such jeopardy as we were led to imagine, and the origin of the "war scare" was but a feeble joke of Wiesinger's creation.

***

THERE was some mention of a portrait of the Prince of Wales in one of our late numbers, and of a "sky blue cloak," a duplicate of which had been discovered in Bombay. As the history of the original paintings (the Prince and Princess) is interesting, we subjoin a few particulars and give a clue to the present proprietary. Shortly after the Prince of Wales's wedding, Chevalier Theodore Jansen, a Danish artist, was commissioned to paint full length portraits of the Royal couple. Accordingly Jansen painted these portraits from sittings given him at Windsor Castle. The architectural details in both pictures belong, however, to Malborough House. The Princess is in her bridal robes, and the picture is a marvel of costume painting, as is also its partner, which presents the Prince in the robes of Grand Master of the Star of India. The portraits, though not very striking, are unmistakeable.

When finished they were the objects of a Royal visit to Jansen's studio, and were exhibited at the Royal Academy (not by Royal prerogative). We have seen Ruskin's original letter regarding these paintings, in which he says that few men since Reynolds's time know so well how to map out colors "relatively and positively." Jansen brought these paintings to India as his credentials. The prestige he, had derived from his Royal commission and the Royal visit to his studio were more to him than any academical honors. McLean, the publisher, offered a large amount to be allowed to engrave them and to exhibit them for three years. In Bombay he painted replicæ for Sir Jamsetjee Jeejhebhoy for Rs. 50,000, and the originals were exhibited in Bombay, Poona, and throughout the Southern States of India, helping to bring Jansen the costly commissions he received both from the "National Portrait Gallery" Committee, then under the presidency of Sir Robert Napier (Lord Napier); and from native sirdars, princes, and the nobility. In February '72 Jansen brought the pictures, together with his portrait gallery, to Calcutta. Things had changed with him, and he was in debt and difficulty. "The National Portrait Gallery"—of which he was custodian, and which was then exhibiting at the Dalhousie Institute—was attached by a Bombay creditor, the portraits of the Prince and Princess of Wales among the rest. The Portrait Committee, having been warned in time, claimed and recovered their property, but these two paintings were brought to the hammer. Two of the leading art patrons of the Chitpore millionaires were present at the sale. One gentleman, who had greatly befriended Jansen, was willing to buy them in, for the amount decreed against Jansen, intending to keep them for him till he could repurchase them. By some oversight the transaction was not completed, and the paintings were knocked down for Rs. 1,500. The bailiff who had attached Jansen's property, and who treated Jansen with as much consideration as his office permitted, has become the owner of these pictures, and we dare say he can supply the rest of the history to any one who cares to seek him at the High Court. As for Jansen his history was a very short one after this. He drank hard, and was seldom able to work. The owners of the "Balgachea" villa employed him to paint some full length portraits, but there was little sober work in them, and he died at Balgachea a few months after, leaving the pictures unfinished. It appears he died in great poverty, the proceeds of his commissions having long previous to his death been given to his creditors to keep himself out of prison. But for the generosity of a gentleman he had consulted on some business matters, his remains would have had only such burial as the police authorities could afford.

***

AN almost incredible, case of "Justices' justice" is reported in the *Home News*. Sarah Chandler, a girl of thirteen years of age, was brought before the Spalding magistrates sitting in petty sessions, charged with the heinous crime of plucking a flower from a geranium plant, in the grounds of the Spalding almshouses. Two clergymen were among the Justices, and their manner of dealing with little sinners is exceedingly instructive. Little Sarah Chandler was sentenced to fourteen-days' imprisonment, and four years in a reformatory. One wonders how many years of a reformatory would be needed to teach these clergymen common sense, not to speak of Christian feeling. Had nothing further transpired, we should have believed that there were aggravating circumstances in the case, which had more influence on the minds of the Justices than the mere act itself. But, however that may have been, the sentence caused a *fama* in the press, found its way into Parliament, and a sensible Secretary of State has released the child, and severely reprimanded the magistrates. This is surely an extreme case of "Justices' justice," but of late years so many cases have come before the public of sentences characterized by stupidity—to use the mildest term that can be applied—that some reform in the constitution of country magistracies is evidently necessary.

***

MUCH has been said, both in and out of Parliament, on the justice and expediency of India bearing her share of the expenses of the Prince's visit. No good reason has, however, been brought forward to show that any other course is desirable. If it is once granted that the visit of the Prince of Wales is a matter of great State importance, and likely to benefit India, let the Imperial power and the subject Empire, as they are supposed to share in the advantages, share also the expenses of the visit. Those who contend that the object is merely to gratify a personal whim of the Prince, and that neither of the nations is likely to derive advantage, are only consistent when they oppose the grant *in toto*. That the voiceless millions should be taxed to pay the cost of India's hospitality to her Prince, whose visit is to be fruitful of great result, does not seem a very great enormity, and is an imposition that will bear favourable enough comparison with some of the other branches of expenditure whose weight they have to bear. There are other items that go to swell the amount of the Indian budget, which have less show of being incurred for the benefit of the people than this will have. If there is no good reason why the people of India should bear part of the expense, it will be difficult to show the good reason why the people of England should pay so dearly. In short, if the visit is not of so much consequence and advantage to India as to be worth India's hospitality, it should never take place, and that would be an ungracious assertion to make, especially now that matters have gone so far. Natives of India will not grudge the cost of hospitality, although so much has been said and written at home to teach them how to grumble. They will willingly pay the £30,000, or the much larger sum which may eventually be spent, for the estimate is an exceedingly moderate one, and there is no ground for assurance that it will not be exceeded. As to the great result of good that is expected from the visit, perhaps it is better to expect little and so run little risk of suffering from disappointment. It is easy to point out how good results may arise. Independently of the effect of the visit on the Prince's own mind (not to mention his health, which Mr. Disraeli thinks may be renovated), it will be of some consequence if it still further awakens in the English mind an intelligent interest in this land and its peoples; and it is perfectly conceivable that the Prince may so demean himself, if suitable opportunities be given him, as to awaken a feeling among the people of India that may in time grow into loyalty. We may notice one remark of the *Spectator* which is not without force, with respect to the assertion that the visit is merely the gratification of a personal whim: "The utility of great State ceremonies does not depend on the motives or the mental tone of those who perform them. The natives of India are not injured by the Prince because he is amused by his expedition, nor will he learn the less because his motive in seeking this opportunity is not to learn but to enjoy." But we have no doubt that the Prince's wish and endeavour will be to make the most favorable impression on the inhabitants of India, and we do not doubt that he is able to succeed.

***

CICERO thought that if the belief in the immortality of the soul was a delusion, it was better to be deluded than to be undeceived. Surely the friends and admirers of Professor Cairnes (and the latter class includes, we presume, all who had any knowledge of the man and his life) must feel as the old Roman felt. For nearly ten years, Professor Cairnes had been the victim of a tyrannical disease, rheumatic arthritics. He was never free from pain, and often suffered terrible agony. First his public duties,—he was Professor of Political Economy at Queen's College, Galway, and at University College, London,—had to be given up. One by one the social enjoyments, without which most men hardly think life worth living for, were taken from him. His bodily members ceased to perform their services; he became physically helpless; his body was a mere machine of torture in which the brave soul was enclosed, heavily ironed as ever was prisoner in a dungeon. But the mind of the man was strong, clear and active, during all these years of suffering and prostration, and it is said that he scarcely ever passed an idle day. The high value of his contributions to the science of Political Economy are well-known, but it is the heroism that could toil on so nobly and produce works of the highest importance under such physical conditions, that is deserving of eternal admiration. Who can think of such a mind having its existence dependent on that of such a body, and passing into nothingness when that body of death was dissolved? If it is a delusion to believe that Professor Cairnes was but set free from his prison, and now lives and labours under new conditions in a nobler sphere, it is a delusion we do not wish to have dispelled.

***

MR. MATHEW ARNOLD is one of the most zealous of our lay critics of the New Testament documents. And though we are often obliged to differ from his conclusions, and often to hesitate in our acceptance of them, we never fail to get a clearer comprehension of the meaning of some part of the sacred records, from a perusal of his writings. His "St. Paul and Protestantism" throws a flood of light on the pages of the Epistle to the Romans, even to a firm believer in the resurrection as a material, as well as a "Spiritual fact." His doctrine of resurrection as a spiritual fact, "an internal phenomenon accomplishing itself in the believer's conscience," is the key to Arnold's treatment of the New Testament. Without denying, which could not possibly be done, that Paul believed in, and taught as a great truth, the resurrection of the body, he endeavours to show

that it was entirely subordinate in his religious system to the doctrine of the "Spiritual phenomenon." In "Objections to Literature and Dogma" in the *Contemporary*, he endeavours to show that, in this respect, the teaching of Christ himself was in harmony with that of Paul. But his great contention is that the Apostles and others who surrounded him, and recorded his saying, were incapable of rising to the height of their Master's teaching, and persistently materialised it. We have no doubt that Arnold is, in a great degree, correct in this as a general truth, yet we cannot but think that he is guilty of twisting the teaching of the fourth evangelist, for the purpose of reading his own meaning into his pages. We are willing to go the whole length with Arnold in believing in the resurrection as a "spiritual fact, an internal phenomenon in the believer's conscience," but this belief does not involve a renunciation of the other belief, that the resurrection of the Founder of Christianity is an historical fact, and that to that fact and its recognition, the early spread of his religion is to be attributed.

Arnold does not believe that the fourth Gospel was written by the Apostle John, but by "a sincere Christian, a man of literary talent certainly and a Greek, but not a consummate artist; having traditions from John, having, above all, *logia* from John, sayings of the Lord, and combining and presenting materials in the way natural to him. The Evangelist's literary procedure is that of a Greek of ability, well versed in the philosophical speculation of his time, and having the resources of Greek style and composition at his command."

***

HAS Mr. Whalley been studying the Calcutta daily newspapers? If that is what has again armed him to the attack upon the English Jesuits, he must be highly delighted with some of our contemporaries, for it seems the English press is far from giving him satisfaction by its treatment of the "nest of hornets." He declared in Parliament that the whole press had been dragged into the Jesuit interest. It has even been asserted that he is himself a Jesuit in disguise. Surely there has been no calumny greater than that since it was said: "He casteth out devils by Beelzebub the Prince of Devils." We may expect to hear next that "Sigma," or "Kelticus," or "M.," and perhaps all three, are Jesuits in disguise, and that our contemporaries received a sop for allowing such a mass of silly writing to appear in their correspondence columns.

***

BOTANISTS will search for rare cryptogams on the sides of open drains in defiance of malaria, and the statistician must have a like devotion to his science, who has carefully toiled through all the evidence in the Beecher-Tilton trial for the following "curiosity." Mr. Beecher, in giving his evidence, said: "I can't recollect" 583 times; "I think," or I "presume," 245 times, and "I don't know" 57 times. Mr. Moulton replied: "I don't remember" 235 times, and "I don't know" 76 times. Yankees are proverbially inquisitive, and doubtless many of the queries to which such answers were returned were impertinent, irrelevant, or at least inconvenient. We suppose Mr. Beecher is, in the opinion of his followers, a successor or fit representative of the apostles, and might have laid hold of a certain promise for such as he, when brought to trial before persecutors. But he either didn't want to make a clean breast of everything, or he forgot the promise that in the hour of trial it would be given him what he should say. The trial, however, has proved a better speculation for the reverend gentleman than he can ever have calculated upon. We learn that his salary has been quintupled, and stands now at £ 20,000 a year, and that his congregation have given him a three months' holiday. Surely Christianity is being deeply wounded in the house of its friends.

THE WEEK.

MANDALAY has been very near supplying us with another "King out of employment," for, had the Mekhara Prince succeeded in his designs upon the throne, the present occupant would doubtless by this time have become acquainted with the interior architectural beauties of the strongest local lock-up. "Women," it is said, "hastily removed and secreted their jewellery and valuables, and an intense feeling of alarm pervaded, not only the Palace and its vicinity, but the entire city. The intended *coup*, however, failed in its very inception, and the panic was promptly dissipated when it became known that the Prince was being taken care of by a body of troops who bivouacked round his compound. He was not arrested one moment too soon, as all arrangements had been made for his departure from Mandalay, and in the provinces men and arms were waiting in readiness to place themselves under his command. The details of the plot are rather obscure; but it appears the design was to seize the King's person on a particular occasion some days back, when His Majesty was expected to come down from the Palace in order to take a walk round his North Garden. The King, however, at the last moment, changed his mind, and betook himself instead to the South Garden. Numerous high officials are said to have shared the intentions of the Prince, and to have intended to cast in their fortunes with him, but at the news of the discovery came a flood of returning loyalty."

COLONEL KEATINGE has this week made public all that is known about the survey and exploration expedition to the Naga Hills, commanded last season by the late Lieutenant Holcombe. It was while passing through the village of Longsang on the 14th January, that he first met with opposition from the natives. His Naga interpreters and coolies were so terrified that most of them deserted him and returned to their homes. Nevertheless, he proceeded, and on the 17th arrived at Longva, or Longha, which he states to be on the direct route to the Kyendwen. It was this village that Captain Brodie, late Principal Assistant to the Governor-General's Agent, North-Eastern Frontier, was so anxious to reach in 1846, but he was prevented by the opposition of the Changnoi people. It was Lieutenant Holcombe's desire to have penetrated further in a southern direction to clear up all doubts concerning this route between Assam and Burmah. Unfortunately his supplies ran short, and he was compelled to confine himself to making every possible enquiry at Longva itself. He reported that Longva is a powerful village holding the pass into Burmah and having constant communication with the Burmese Nagas, Shans, and Singphos. He met at Longva two Singphos and several Burmese Nagas, who had been summoned by Longva to assist in an attack on a neighbouring village called Suana. Lieutenant Holcombe came to the conclusion that Longva is four days' journey from the Kyendwen, and that the route strikes the great river, as the Nagas call it, at a spot up to which it is navigable by boats of any size. Captain Hannay also came to the conclusion that the ordinary route from Longva to the Kyendwen occupied four days; but he mentions that there is a shorter route which only takes two. The Nagas of Longva were most reticent and jealous, and thoroughly alive to the importance and strength of the place, so that it was impossible to gain more information. Want of supplies compelled Lieutenant Holcombe to keep near the Seebsagar district. He reached Jaboka on the 24th January. On his way the men of Tang at first stopped the road, but retired as the party advanced. The chief of the village eventually supplied rice on payment, but this was considered a sort of punishment for his attempted opposition. To illustrate the scarcity of grain, Lieutenant Holcombe mentioned that the chief offered to give a buffalo in preference to supplying five rupees' worth of rice in the husk. From Jaboka the route lay through Banfera, Kulung, and Bor Mutun, to Deo Parbat, where Holcombe intended to join the work of his party with that of Captain Samuells, who surveyed the eastern part of the hills in company with Holcombe in 1873-74. The last letter received from him was dated the 1st February 1875. He was then at the village of Senua (south of the Bangsang Hill of the maps). His description of the people of this place has since obtained a very melancholy interest. He states: "We are at present among a particularly treacherous set of Nagas. Some ten days ago the people of a neighbouring village, anxious to make friends with the Senua people, approached the village; but our friends here, doubting their amicable intentions, attacked the party when close to the village, and killed seven of them. Their heads are now paraded in the centre of the village. Some young fellows from another village lately cut up a woman and four men close to where I am now encamped. The marks of the fray are still visible in the long grass. Arguing with such people is hopeless. One fine young fellow said: 'Yes, it is very bad, but then Nagas are on a level with dogs.' This he said *apropos* of the fact that his chief's brother last year murdered within the village three men of a friendly tribe who had come to trade. A dog would blush to own the connection! On the afternoon of the 1st the party marched from Senua to Ninoo."

THE subject of Reformatory and Industrial Schools has been engaging the attention of the Council of the Governor-General. Sir A. Arbuthnot has moved for leave to bring in a Bill for the establishment of these institutions. He said that the subject of reformatories had engaged the attention of the Government of India and of the various local Governments for several years. So far back as 1861, the framers of the Code of Criminal Procedure included in the enactment a section which provided that, in the case of juvenile offenders, it should be competent to the Criminal Courts, on the occasion of sentencing any person under the age of 16 years to imprisonment for any offence, instead of directing

that he should be confined in a criminal jail, to direct his confinement in a reformatory. This law is still in force. Its defect had been found to be that while it had some advantage over the previous law in that it admitted of the separation of juvenile offenders—where a reformatory was available during the period of their sentences—from adult criminals, still, as a general rule, the periods of those sentences were so brief that very little could be done to carry out the objects with which reformatories were established. The subject has often been discussed, and the most practical suggestion, which is to be the foundation-stone of the new Bill to be brought forward, has been that made by the Inspector-General of Jails in Bombay: "If possible, the sentences of juveniles should be proportioned to their age, *e.g.*, a boy of ten, if sent to the reformatory, should be sentenced to such a term as would enable him to learn his trade, and be strong and independent enough to earn his livelihood on discharge; while a boy of fifteen need only be sentenced to a year or more, as it is not advisable to keep grown-up boys, almost men, in the reformatory." Society at large loses infinitely more by the criminal classes than it would have to pay for the board and education of all the children from whom the criminal classes are recruited; so that it is a very wise economy to set about the reformation of the young before it is too late. Setting aside the murders and other injuries inflicted on individuals, which cannot be estimated pecuniarily, criminals when in jail cost more than double and treble the number of children in reformatories would do, because they are unproductive and require careful guarding. When out of jail they are infinitely more expensive to the community, for not only do they necessitate the maintenance of large bodies of police, but they are wantonly destructive, wasting much more than they utilize. A thief to live at all must steal four or five times the value of what would maintain an honest man in the same degree of comfort. He utterly destroys many things which would lead to identification, and can only realise on his stolen property at an alarming sacrifice. Valuable plate is melted down and sold as old silver, and the receiver does not give the thief even half the value of the old metal. It follows, therefore, that what one thief is obliged to steal to keep him alive would feed several honest men, even leaving out of consideration the plunder destroyed and wasted. It is consequently far cheaper to cut off crime at its source, by maintaining and educating the children of criminals, than to maintain, in or out of prison, the criminals themselves; and it must be remembered that every neglected child of a criminal parent, if it lives, *must* become a criminal ultimately, and be at the charge of the public on the most expensive terms possible.

THE floods in Upper and Northern India still continue unusually heavy. Floods have fallen in the Jullundur, Umritsur, and Lahore districts: and at Lahore about twelve inches in sixty hours. Much damage has been done to property, especially in the city, where numerous houses have crumbled to pieces. The total extent of the damage is not yet ascertained. Several lives have been lost in the suburbs, including those of a Eurasian clerk and his wife. There have also been several narrow escapes amongst the European community. Traffic on the Punjab and Northern State Railway was suspended for two or three days owing to the pulpy state of the embankments. On the Sind, Punjab, and Dehli Railway, the continuous rain has caused a break on the line between Umritsur and the Beas, and the rest of the line towards Lahore is alleged to be dangerous for traffic. Both the up and down mails were detained on the 11th, and the Traffic Manager has had to convey passengers by dâk over the break. A terrible accident is reported from Madras from a similar cause. A crowd of pilgrims, encamped in the bed of a river in the Tinnevelly district, was overtaken by a freshet on the 1st instant. Two hundred lives are reported as lost.

INFORMATION has been received by Government of the death of Meer Wullee, former ruler of Yassim, and the suspected murderer of Mr. George Hayward. Meer Wullee was met on his way from Wakhan to Kashghur by some men in the service of Pahlwan Bahadoor, the present ruler of Yassim, between whom and Meer Wullee enmity had existed. A fight ensued, resulting in the death of the Meer.

THE intelligence we have received this week from Achin, is on the whole of a favorable nature for the Dutch, who have again repulsed an attack made on several of their posts, without sustaining any loss. The Achinese had three killed and eighteen wounded. It is reported that Tuanki Daud, a boy of about 11 years of age, cousin of the late ruler of Achin, has been proclaimed Sultan. It remains to be seen how far this appointment will be approved of by the majority of the principal headmen. On the 1st and 2nd July a violent storm visited Achin Proper, several large trees having been blown down in Kotta Rajah and neighbourhood. A large branch fell upon one of the hospital wards, causing the death of no less than seven men, and another case is reported of two men having been killed by the fall of a tree at Misigit Longbatta, one of the Dutch posts. The state of health is still unsatisfactory. It would appear that up to within a comparatively recent date, piracy still infested the waters of the Achin. In the month of March six Achinese were brought before the Penang Police Magistrate, charged with having committed piracy on a prow sailing under the British flag, the property of a native of Malacca. The crime was perpetrated in March 1874, not far from the mouth of the Langkat river, and the case against the prisoners being fully proved, they were all six committed for trial. During the time they were out on bail two absconded, the other four having been sentenced at the last assizes to ten years' imprisonment.

DESPATCHES received by the Siamese Government announce disturbances on the Burmese frontier in the province of Chcen Han, where a large band of dacoits, some 2,000 in number, have been committing depredations. They have plundered a few towns, but, according to latest advices, some 2,000 Cochin Chinese had gathered to resist their incursions. A Siamese Commissioner had been sent up to collect information and endeavour to ascertain the true cause of the disturbances; if necessary, a Siamese force will be sent to assist in protecting the inhabitants. At Chiengsaan, also, a number of Burmans and Koene have located themselves on Siamese territory, and the authorities of Chiengmai have organized a force of about 2,500 men to expel them. "A Commissioner was sent to Chiengmai from British Burmah, where he met an officer of the British Consulate General of Siam. Both were treated as guests by the Siamese Royal Commissioner." A later despatch states that the Siamese forces, after frightening away a number of Burmese settlers burnt down about 240 of their houses.

LONDON LETTER.

(FROM OUR OWN CORRESPONDENT.)

LONDON, 16TH JULY 1875.

THE French Assembly has been for the last two days the theatre of some very vigorous debating, leading, it is true, to no positive result, but profoundly interesting as revealing the sunken rocks and dangerous shoals through which France has had, and still has, to pilot her course before she can enter into the harbour of a legally constituted Government. The immediate subject of discussion was whether or not the election of M. de Bourgoing for the department of the Nièvre should be considered valid or not. But the subject itself was of small importance, in the minds of the Assembly. It was the principles enforced by the vote that should be ultimately arrived at, which have given to the debates their interest and their consequence. They were a trial of strength between the supporters of the present constitutional laws, and the reactionists of both parties, Legitimists and Bonapartists. They had entered into a kind of unholy alliance to defeat, if possible, by a combined effort the attempts of the Assembly to suppress their respective *propaganda*.

M. de Bourgoing presented himself as a candidate for the representation of the Nièvre in May 1874. Those were the days when the Duc de Broglie was at the head of what he termed "the Government of Combat." The Duke is a man educated in the straitest sect of the Orleanists. He sat at the feet of Guizot and his own father, the Duc de Broglie—the two most eminent representatives of that political school known in France as the "*juste milieu*." The "*juste milieu*" consisted in avoiding the sterile despotism of an Imperial rule, and the excesses of a Republican one, by means of a representative Government based upon the suffrages of the shop-keepers. France, under Louis Philippe, was governed by a shopocracy, assisted by a number of brilliant writers who wrote ingenious essays and for a number of years blinded the eyes of the people by enveloping this prosaic fact in a rich halo of political philosophy. Nothing could be more constitutional than these essays; nothing more conclusive than the demonstrations they exhibited of the folly of attempting to govern a people otherwise than in accordance with their wishes—these wishes to be enlightened by education, ascertained by a free press, and finally rendered effectual by means of a Government based upon representative institutions. During the Imperial rule, no writer produced such essays in greater abundance than the head of the "Government of Combat." But like so many French politicians he no sooner attained power than he forgot all his maxims. The Duc de Broglie's ministry, it will be remembered, was disgraced by a shameless attempt to trick the nation into receiving back a Bourbon. When this failed, he surrounded himself with Bonapartist Prefects, a former Imperial minister became his most intimate colleague in the Government, and secret instructions were issued that where a Monarchist could

not be returned for a vacant Department, a Bonapartist was to receive all the official aid possible in preference to a Republican. This, be it remembered, in a country where Marshal MacMahon had just been voted a seven years' lease of power under the title of "President of the French Republic." To these secret instructions the success of M. de Bourgoing was undoubtedly due. He represented himself as the official candidate. He was backed by the energetic assistance of the Prefect. The chief canvassing agent of the Republican candidate was arrested on a frivolous pretext a few days before the election, deported out of the Department, and liberated only after the election was over. M. de Bourgoing declared that his published profession of political principles had been approved by the Marshal himself, and only the day after the election did this statement receive a demi-official contradiction. But no sooner was M. de Bourgoing elected than he threw off the mask, openly declared himself an Imperialist, and went off to pay his homage to the Empress Eugenie. Such knavery as this could not be allowed to pass unnoticed; and, the Duc de Broglie's Government of Combat having in the meanwhile come to a disastrous termination, the Assembly appointed a Commission to inquire into the circumstances of the Nièvre election. These proceedings were quickened by the chance discovery of a Bonapartist circular, emanating from some secret committee, and which seemed to indicate the existence of a widespread organisation working underground in the interests of Imperialism. After fourteen months' inquiry, this Commission has now presented its report. It considers, with one dissentient voice, that the election of M. de Bourgoing is invalid. But the important part of the report is the light it throws upon the Bonapartist propaganda. M. Rouher—the late Emperor's favorite minister—is, it appears, the head of a secret organisation which ramifies through all the departments of France, and the operations of which are directed to corrupt the fidelity of the police, the army,—nay, even to win over to the cause of Imperialism the relics of the Commune, whether still at liberty or in prison. It is worth while to note, as illustrating the character of the two parties, the conduct of the Legitimists and Imperialists. To the former a Republican Government is even more hateful than to the latter; but in their endeavours to restore the Bourbon they were not even suspected of desiring to do it otherwise than by a vote of the Assembly. But the Bonapartists form themselves into a secret conspiracy which by bribery and corruption strives to paralyse the arm of the executive; and, in the very act of preparing the way on a *coup d'etat*, represent themselves as the advocates of a Government based upon free and universal suffrage. M. Rouher, in the prosecution of this good work, does not scruple to take as his associates a convicted thief, and a man of the name of Amigues, whose recommendation was his bad character and his consequently large acquaintance with the most distinguished members of French scoundrelism.

The questions then which are being debated in the Assembly are in fact two—the one being the validity or otherwise of M. de Bourgoing's election—the other, whether or not a vote of censure should be recorded on the proceedings of the Bonapartists. The first question has been decided. M. de Bourgoing is declared unseated. The second question is still being debated, but enough has been said to show the extreme dread and abhorrence of Imperialism which exists in the present Assembly. Englishmen in general are blind to the corrupt and pestilent character of Imperial rule in France, from a mistaken belief that Napoleon III. was a friend of ours. That one merit hides from their eyes a multitude of sins. Frenchmen know better, and there is no doubt that the revelations made by this Commission of the character and extent of the Bonapartist conspiracy, combined with a strong suspicion that the *propaganda* was secretly encouraged by the Marshal himself, produced that union of parties of which the constitutional laws are the result. It is strange to note how the eyes of all thinking men are still drawn to France and held fascinated there, notwithstanding her recent reverses, her apparent utter prostration—how men recognise instinctively that the future of Europe is being fashioned forth in these fierce debates and noisy recriminations. The House of Commons is a more orderly place than the French Assembly, because convictions with us are less intense, less living realities than with the French. The English, Mrs. Browning says, have a scornful insular way of calling the French light; but light they are not in the sense of being inconsequent. "Is," she asks,—

> a bullet light
> That dashes from the gun-mouth, while the eye
> Winks and the heart beats one, to flatten itself
> To a wafer on the white speck on a wall
> A hundred paces off? Even so direct,
> So sternly undivertible of aim,
> Is this French people.

An idea there cuts like a knife; they rush with "most unscrupulous logic on impossible practice;" and it is not too much to say that at this present moment it depends on the success or failure of Republican institutions in France whether or not Europe shall become the theatre of a religious war as fierce as that of the thirty years.' Your readers will perhaps remember that a few weeks ago I mentioned a pamphlet recently published by M. de Laveleye, entitled "Protestantism and Catholicism in their bearing upon the Liberty and Prosperity of Nations." Should this pamphlet have found its way to Calcutta, I would recommend it to the perusal of any one who desires to understand the present political situation. A brief account of it will serve to explain what I have just said regarding Republican institutions in France.

The question M. de Laveleye proposes to discuss is the amount of truth there is in the *dictum* one hears so frequently now-a-days, that the Latin races are in a state of decay, and that the future belongs to the German and Slavonic races. He admits that superficially the *dictum* has an appearance of truth, but he finds the cause, not in the fact of some natural incapacity existing in the Latin race, but in the fact that the area of Roman Catholicism is almost everywhere coincident with the Latin element in Europe. To its blighting influences he sets down the backwardness of the Latin races. When, he urges, Protestants of Latin race are seen to rise superior to German but Catholic races, it is plain that the incapacity urged against the Latin races in general must be sought for elsewhere than in their blood. The Scotch and Irish are of the same origin. Both have become subject to England. Until the 16th century, Ireland was much more civilised than Scotland. But since the Scotch embraced the reformed religion they have outrun even the English, while Ireland, devoted to Ultramontanism, remains poor and miserable, and incapable of raising herself by her own strength. He adduces similar examples from Switzerland and elsewhere. "In the United States," says Tocqueville, "the greater part of the Catholics are poor." In Canada (I am quoting from the pamphlet) all important concerns, manufactures, commerce, and the principal shops in the towns are in the hands of Protestants. M. Audiganne, in his remarkable studies on "the working classes of France," observes the superiority of Protestants in industrial enterprise, and his evidence is the more trustworthy that he does not attribute this superiority to Protestantism. Before the revocation of the Edict of Nantes, the Protestants took the lead in all branches of labour, and the Catholics unable to compete with them on equal terms, caused them to be forbidden the exercise of various industries in which they excelled, by several successive edicts, dating from 1662. After their banishment from France, the Protestants brought into England, Prussia, and Holland their spirit of enterprise and thrift, and enriched every district in which they settled. It is partly to reformed Latins that the Germans owe their progress. The refugees of the Revocation introduced various manufactures into England, that of silk among others; and the disciples of Calvin were the civilisers of Scotland. Throughout Germany, at the present day, the trade in intellectual works, such as books, reviews, maps, newspapers, is almost entirely in the hands of Jews and Protestants. In the presence of all these concurring facts, it is difficult not to confess that it is religion, and not race, which is the cause of the extraordinary prosperity of certain races. I have not space to follow M. de Laveleye in his interesting inquiry into the causes which lead to these different results in the case of Catholicism and Protestantism respectively. The force of his proof is cumulative, and is educed from a multitude of facts for which I must refer your readers to the pamphlet itself. I have seldom read anything clearer or more satisfying. Essentially, however, it consists in this, that Protestantism based upon individual conviction, and making no claim to finality, naturally associates itself with a *régime* of toleration and progress; whereas Catholicism, believing herself to be in possession of absolute truth, dooms those who accept her yoke to mental stagnation and political slavery, and forces those who reject her claims into an attitude of uncompromising hostility. The Latin Liberal is compelled by the nature of his position to be a destroyer pure and simple. He cannot get leisure in which to erect the edifice of the Future, but has perpetually to stand on guard if he be not engaged in actual aggression. "The apathy," says our author, "with which two new dogmas have recently been accepted, which formerly would have roused the strongest opposition and have led to schism, is a sign of an incredible enfeeblement of intellectual life in the bosom of Catholicism. The excesses of superstition lead inevitably to infidelity. The challenge thrown down to reason by the Church leads those who refuse to abdicate their use of it to reject all religious worship. . . . . Catholicism produces such complete indifference in religious matters that even the strength requisite honestly to leave the Church is wanting. We see Protestants becoming Catholics, because, preserving some religious faith, they seek the true religion and believe that Rome offers it to them. Few Catholics become Protestants, because they have become hostile or indifferent to every species of religion ..... Voltaire's cry of hatred, '*Ecrasons l'infâme*,' becomes logically and everywhere the avowed or unavowed word of command of liberalism. But the forces employed in struggling against the clerical party are forces lost to progress, for, even when they prevail, the victory has no other result but that of preventing us from falling under the yoke of the Bishops."

It is this spirit of Ultramontanism that is at this moment striving with all its might to uproot the nascent liberties of France. Ultramontanism would achieve its purposes equally

well whether Henry V. or Napoleon IV. reached the throne. In either case it would endeavour to push the country on to a new crusade to deliver the persecuted Catholics of Germany. Spain, Holland, Belgium, Austria, Italy—wherever the same spirit exists—would either be drawn into the struggle or become the theatres of internal religious strife. But so long as the French Republic exists, this disastrous consummation is out of reach of the Catholic priesthood. They have no sufficiently strong base of operations. The men who have voted the French constitutional laws in the face of these tremendous obstacles are the defenders of the peace and order of Europe, not less than of France ; and it is the knowledge of this fact which makes thoughtful men everywhere watch with such breathless interest every move of the game.

OUR LIBRARY TABLE.

The Madras Jurist.—August. A valuable article, from the pen of Professor Leone Levi, appears in this number, on certain distinctive characteristics of Oriental and European jurisprudence. The principal texts and authorities on Oriental law are the *Précis de Jurisprudence Musulmane, par* M. Perron ; the *Recueil de Lois concernant les Musulmans Schyites, par* M. A. Querry. It should be remembered that the Koran contains only the germ of Mussulman law, the judgments of the prophets and the decisions of the twelve Imams, his legitimate successors, forming an important corollary to the Koran. For the Hindoo laws we have the Ordinances of Menu, translated by Sir Thomas Strange, together with the works of Halhead and Colebrooke. For the law of China we have the *Ta Tsing Lee Lee*, by Sir George Staunton, as well as the Scientiæ Sinicæ of Confucius. And for the Jewish law we have the Bible. The ancient laws of Japan are mainly founded on the laws of China.

Oriental and European jurisprudence differ in the first instance in the sources whence they are held to emanate and in the authority they are supposed to possess. That all laws originally emanated from the Divinity is an opinion held by many philosophers of ancient times. "All laws came from God," said Plato ; "no mortal man was the founder of laws." Heraclitus affirmed "that all human laws are nourished by one divine law." The Greek judges, said Dr. Maine, were supposed to receive from Themis, a divine agent, Themistees or Awards divinely dictated. Minos, with a view of giving authority to his laws, put forth that when he retired into a cave at Crete, Jupiter, his father, dictated the laws to him. The Hindoo laws, attributed to Menu, are presented as notes of a learned divine, whose spirit reflected the Divine being. The Koran is held by Mohamedans, not only of divine origin, but as eternal and uncreated, the first transcript having been from everlasting by God's throne, and a copy sent down by the angel Gabriel to Mohamed. Among Mussulmans there is only one law, and that is the religious law. With them, law is not only a legislative enactment, it is a dogma. Moses is held by Jews and Christians as having been divinely commissioned, and his legislation as proceeding direct from God. The Ten Commandments emanated direct from the Divinity, and they were written by the very fingers of God. Now, in direct contrast with such claims, European jurisprudence confesses itself to be altogether human. The State being an emanation of the national will, law is the expression of the will of the people. Doubtless it may be deemed a defect of European laws that they are the work, not of gods, but of men, and that since *humani est errare* imperfection and instability must consequently ever be inherent to European jurisprudence, but society is ever changing, human wants are constantly revealing themselves under new phases, and jurisprudence would cease to be the science of law if it did not take cognizance of the altered condition of society. But other consequences arise out of this contrast. A system of legislation, as the Oriental professing to come from God, must of necessity be immutable. One confessedly the work of man, as the European, is ever changing and changeable. In the East, the observance of laws is sought for by inspiring a sentiment of awe towards their authors, and fear for the absolute monarch who executes them. In the West, the better observance of law is sought for, first, by making the people themselves their own legislators ; and, secondly, by creating a united responsibility for and a common interest in the execution of the law. How far the most important systems of law may be traced back to one common human source it is not easy to establish. We know how much British, French, German and Italian jurisprudence owe to Roman laws, and how much Roman jurists have drawn from Greek jurisprudence. And if the conjecture of Sir William Jones should be rightly founded that Minos, the son of Jupiter, was the same person as Menu, the son of Brahma, a common source would be found to exist for both Greek and Indian jurisprudence ; whilst there is much reason for supposing that the Mosaic legislation has itself drawn much from Egypt, and that Egyptian jurisprudence has in turn taken much from India.

Wit and Humour.—By Shirley Brooks. Two choice bits from the "Very Last Idyll" and "The Natal Correspondence" are all we have space for from this amusing volume :—

Then Arthur, baring both his manly arms,
Made a bag-pudding, stuffing it with plums,
And putting in sweet lumps of richest fat,
As large as two of his big royal thumbs :
Then tying it in, the Queen with vehement act
Dashed it within a splendid silver pan
(Like Lancelot's helmet, bitterly she thought),
And set it firmly on the vigorous fire
("Where I could set him," bitterly she said).
("O madam!" cried the little maid hard by.
"Who spoke to you ?" she said, and smote her ears.

Here the "Natal Correspondence" :—

Natal to Manchester.

My dear Prince Lee,
You scold poor me,
But this is clear, as you must see.
"The hare," says Moses, "chews the cud."
"It don't," says Owen. Now, my Lud ?

N.

Manchester to Natal.

My dear Natal,
Your letter's quite
Worthy the way you think and write.
You snap a word, which may not mean
The beast the Hebrew called unclean.
But I have far too much to do
To waste my time in smashing you.

M.

Canterbury to his Clergy.

Beloved Brethren,
Spare your bile :
Colenso's book is puerile ;
So trite his views, that, as you know,
They were demolished years ago :
They can't seduce good folks like us,
Though they may make the wicked wus.
As certain advertisers do,
"*Try* our South African," cry you.
I can't, for clerical Red Tape
Sends him for trial to the Cape :
But, for his unbelieving biasses,
I do prohibit him my diocese,
And thank you for the note you've signed,
The which I take uncommon kind.

C.

Lunacy in Bengal.—Dr. D. B. Smith. It would be almost as hopeless to expect uniformity or similarity in the delusions of the insane, as to expect the patterns of the kaleidoscope to repeat themselves ; still, as the wonderfully varying phases of the latter are composed of different combinations of a few elements, so the delusions of the insane are capable of being resolved into a few dominant mental moods—suspicion, fear, grief, and the like—and the variety of forms which they assume depend on the past circumstances of the individual, and the resulting mental operations which they cause, both of which are capable of infinite variation. As the life circumstances of no two persons are exactly alike, so are the delusions of no two lunatics exactly alike ; but they can by comparison be reduced to a comparatively small number of mental phases. It may be interesting to note a few phases of delusional insanity observable in the Dacca asylum. One little man is daily finding precious stones of incalculable value. He grinds the edges of pieces of glass and so transforms them into diamonds and emeralds. He declares that the gardener one day walked off with three crores of his treasure. He suffers from chronic mania, brought on by *ganja*-smoking. He is a useful, industrious fellow, who is constantly engaged in sweeping the floor of one of the large wards. Another *ganja*-smoker is disinclined for work, and believes himself to be a great man's son, which he certainly is not. Mohesh Ram, also a *ganja-wallah*, originally implored that he should be put to death on account of his sins ; latterly he has been working well, and has no delusions now. A non-criminal, admitted into the asylum nearly 30 years ago, claims arrears of pay due to him as head gardener for 120 years ; he constantly worries his poor old brain about the account. Another has no particular delusion, but always talks incoherently about fish and blankets. Sabir Ali (a criminal in a state of chronic dementia) says he has three lacs of rupees in England, and that he trades with it in "jute, cloth—any thing you like ;" he amuses himself by writing Bengali on plantain-leaves ; he is fond of collecting rubbish of all kinds ; at times he wishes to be killed, tears of his clothes, and refuses food for days. Faizo thinks himself a Rajah ; he works well in the garden, and says that if other people would not spoil his work, he could sell the vegetables at a great profit. Sya Gahzee decorates himself with necklaces made of old rags and scraps of rubbish, and is always happy and laughing. Ram Chung for long believed that he was tied to a star by a thread ! He declares that he sees a person, in human form, who directs him to lie down when he is standing, and to stand up as soon as he lies down. *For many years this man never lay down at night* ; when he wishes to sleep, he passes a cloth round the chest, ties the end of the cloth to a bar ; then, leaning back, goes to sleep : until lately all attempts to induce him to lie down were ineffectual. A man who murdered his wife in a fit of insanity, says he wishes to kill some one, because attempts are shortly to be made to hang him. He becomes very violent when the word "wife" is mentioned. Kava Ram is constantly engaged in cursing crows, dogs, and other animals, but the reason for this is not very clear. Another man, a dangerous character, is always jabbering in an angry threatening tone. He believes that nobody could kill or even strike him, as he is possessed of supernatural powers. He says he can send his enemies to hell, and go himself to heaven. He will not bathe, but quotes Persian poetry and the Koran freely—a very dirty saint. A short time ago he stole a seer of raw ghee and drank it off ; he nearly died of diarrhœa in consequence. Chunder Nath Bhuttacharjee fancies himself the Rajah of Nuddea ; he thinks he could bury himself in the earth and rise again after a few days a king. He says he has 80 lakhs of rupees in the Dacca Bank. He looks after the filtering of drinking water, and has a grievance that he is not paid (10 rupees a month) for this. He made a vow that he would not eat rice for four months : flour was given to him instead. A non-criminal, suffering from chronic dementia, says that somebody is breaking his head, and that his whole body is aching ; complains of noises in his ears at night. For nearly two years he never would walk in the erect

posture: now he does so. He talks to trees, and wishes to climb them. A good tempered fellow, generally known as "Thakoor," makes images of clay, which are worshipped by the insanes. He has many delusions about money and property. Podhoo Khan, a fine looking young man from the Chittagong Hill Tracts, killed his daughter and tried to burn down his own house; he was acquitted on the ground of insanity. He says that a jungle demon possessed him one day when he entered the forest; this was followed by giddiness and insensibility; he says he has no recollection of having murdered his daughter. He has been quiet and obedient since his admission. Like other hill men, he was addicted to bouts of drinking. A sweeper one day, suddenly and without provocation, struck another lunatic on the head with a *kodali*, causing extensive fracture of the skull. He says his mother ordered him to do it. He has had no excitement since. Nobin Chongo is a man who eats the poultices applied to his leg, thinking that they are given to him as food! Mohim Chundro Bhodro strikes his chest under the belief that it is a musical instrument. Gholam Hosein will have it that one of the keepers is his brother: they are not related in any way. A Mahomedan tailor, fancies himself a Kulin Brahmin who has been deprived of his holy thread (*poita*). He joined some Ferazi emissaries, and became a religious enthusiast; one day, when journeying with two priests he went towards a Mahomedan boy who was ploughing in a field, drew a knife, and stabbed him through the heart. He made no attempt to run away. He says that Emam Mendi and Huzrut Isa (Christ), with a great army, are advancing to exterminate the Kafirs.

Indian Antiquary.—August. One of the most interesting essays in the number before us relates to the tradition of the "Gold-digging ants." Herodotus notices them in the following manner:—

Besides these there are Indians of another tribe, who border on the city of Kaspatyrus and the country of Paktyika: these people dwell northward of all the rest of the Indians, and follow nearly the same mode of life as the Bactrians. They are more warlike than any of the other tribes, and from them the men are sent forth who go to procure the gold, for it is in this part of India that the sandy desert lies. Here in this desert there live amid the sand great ants, in size somewhat less than dogs, but bigger than foxes. The Persian king has a number of them, which have been caught by the hunters in the land whereof we are speaking. These ants make their dwellings underground, and like, the Greek ants, which they very much resemble in shape, throw up sand-heaps as they burrow. Now, the sand which they throw up is full of gold. The Indians when they go into the desert to collect this sand take three camels and harness them together, a female in the middle, and a male on either side in a leading-rein. The rider sits on the female, and they are particular to choose for the purpose one that has just dropped her young: for their female camels can run as fast as horses, while they bear burdens very much better. . . . When, then, the Indians reach the place where the gold is, they fill their bags with the sand and ride away at their best speed: the ants, however, scenting them, as the Persians say, rush forth in pursuit. Now, these animals are so swift, they declare, that there is nothing in the world like them: if it were not, therefore, that the Indians get a start while the ants are mustering, not a single gold-gatherer could escape. During the flight the male camels, which are not so fleet as the females, grow tired, and begin to drag first one and then the other, but the females recollect the young which they have left behind, and never give way or flag. Such, according to the Persians, is the manner in which the Indians get the greater part of their gold: some is dug out of the earth, but of this the supply is more scanty.

Such is the story of the gold-digging ants as told by the far-travelled Herodotus, "the Humboldt of his time," who had come to Susa for the preparation of his magnificent history, a work scarcely less valuable from a geographical and ethnological than from a historical point of view. The story, for the truth of which he was compelled to rely entirely upon the statements of the Persians, we find repeated by a great many later Greek and Roman authors. How deeply the legend had taken root among the ancient Greeks may best be seen from the narrative of Harpokration, who records the sarcasms of the comic poets relative to a fruitless expedition against the gold-digging ants undertaken by the Athenians with troops of all arms and provisions for three days: "It was rumoured among the Athenians one day," he says, "that a mound of gold-dust had been seen on Mount Hymettus guarded by the warlike ants: whereupon they armed themselves and set out against the foe, but returning to Athens after much expenditure of labour to no purpose, they said mockingly to each other: 'So you thought you were going to smelt gold!'" The gold-digging ants of the Indians are mentioned in the writings of the Middle Ages and in those of the Arabian authors, and the tradition of them survived among the Turks as late as the sixteenth century. None of the authorities throw any doubt upon the truth of the tradition except Strabo, who treats the whole story as a fiction, and Albertus Magnus, who in quoting it adds: "*Sed hoc non satis est probatum per experimentum.*"

The advent of criticism did not at once dispel the belief in this fable. So late as the end of the last century we find the learned academician Larcher, in his French translation of Herodotus, cautioning his readers against hastily rejecting the narrative of the Greek historian; and two years later, in 1788, Major James Rennel, while admitting the exaggerations of the story, gives it none the less as his opinion that the formidable adversaries of the Indians were termites or white ants. In the 19th century, when people at length ceased to look upon these bellicose gold-diggers as really ants, the opinion began to prevail that there had simply been a confusion between the names of the ant and of some animal of larger size. In connection with this view, or even excluding the hypothesis of a confusion of names, it was also supposed that a certain resemblance between the ant and some larger animal had given rise to the fable, or at least contributed to maintain it. The idea of resemblance was especially grounded on the larger animal's mode of digging its burrow, or excavating the earth with any other object. This animal has been variously identified with the corsac or Tartary fox, the hyena, the jackal, the hamster (*Mus cricetus*), and the marmot. The theory that the auriferous earth cast up by burrowing animals guided the Indian gold-seekers, and originated the tradition of the gold-digging ants, is curiously confirmed by an observation of Alexander von Humboldt: "I have often been struck," he says, "by seeing ants in the basaltic districts of the highlands of Mexico carrying along shining grains of hyalith, which I was able to pick out of the ant-hills." But the supposed similarity which has led to classifying as ants animals widely different from them is not limited to their mode of excavating or throwing up the earth, for an attempt has also been made to extend it to their shape and general appearance. It appears, however, that these marvellous 'gold-digging ants' were originally neither, as the ancients supposed" real ants, nor, as so many eminent men of learning have supposed larger animals mistaken for ants on account of their appearances and subterranean habits, but men of flesh and blood, and those men Tibetan miners, whose mode of life and dress were in the remotest antiquity exactly what they are at the present day.

INDIAN INTELLIGENCE.

BENGAL.

AN outlay of Rs. 12,000 for the construction of a landing stage at Chandpal Ghât has just received the Lieutenant-Governor's sanction. The necessity of improving the landing places along the city river frontage has long been apparent to all who have had to use them, and it is gratifying to notice that the Commissioners for the improvement of the port are at length doing something towards so desirable an object.

AN immense block of stone has fallen from the central dome of the pagoda of Juggernath at Pooree. The stone is ten feet long, five broad, and four in depth, and belongs to the inner cornice of the temple; the damage is imperceptible to the eye, owing to the intense darkness in the interior of the edifice. The *Indian Mirror* says: "There is a prophecy, which is much talked about in Pooree in these days, that when the first stone is unfastened, the temple shall not stand. The repairs, say the Ooriahs, will take at least fourteen years, and during all this time no public worship or festival in Pooree is allowable. A suspension of fourteen years, if it can be enforced, will cause, we think, the utter extinction of the worship of Juggernath and Pooree may present that scene of desertion and fallen grandeur, of which the holy city of Bhuvaneshwara in Orissa is so full. The temple of Juggernath, it will be remembered, was built by Rajah Anangabhima Deva of Orissa in the middle of the twelfth century, and during the last seven hundred years not a trowel has been laid upon it in way of repair. The magnificent dome is composed of immense blocks of stone, not kept together by cement or mortar of any kind, but made fast by an elaborate process of dove-tailing, the slabs being arranged in horizontal layers narrowing towards the end, which is covered by a huge head-piece carved and ornamented."

AT a first glance the statistics given in the Calcutta Police Report for 1874, would appear to indicate that a considerable diminution in the amount of crime committed in the town and its neighbourhood had taken place in the year under review, as compared with the previous one. The number of offences of all kinds, cognisable or non-cognisable, reported by the Police, was only 37,654, as against 48,322, in 1873, or 10,668 less. We are sorry to say, however, that this remarkable decrease of more than 22 per cent in the amount of work cut out for the Police Magistrates is not to be attributed to any change for the better in the habits of the least honest and most disreputable portion of the community. The arm of the law has not suddenly acquired new terrors for the criminal classes, nor have their morals lately undergone an unexpected but welcome reformation. Bapoo is still, when at large, an impenitent thief, and Buxoo's proclivity towards deeds of violence costs the guardians of Her Majesty's peace as much mental anxiety as ever. By far the greater part of the apparent improvement in the returns is due to a large falling-off in the number of those petty cases which the Police, sometimes without any undue regard for the strict letter of the law, were formerly in the habit of taking up on their own responsibility. Instances in which constables and chowkeedars with more zeal than knowledge had, of their own mere motion, arrested persons on the most trivial grounds were, it appears, so numerous in 1873, that the Commissioner found himself under the necessity of issuing instructions to his impetuous subordinates to use greater moderation in the exercise of the powers with which the Legislature had invested them. The result of these instructions is now before us; and assuming that the Police did not greatly err on the side of leniency in 1874, we are driven to infer from the figures submitted that an immense proportion of the arrests made in 1873 must have been unnecessary and vexatious. The number of cases under Chapter XIV. of the Penal Code alone, we observe, fell from 6,476 to 3,742!

NORTHERN INDIA.

NOWROZ KHAN'S power is said to be increasing daily, and he is being aided by his friend the Moolla of Swat.

CHOLERA is at last leaving Simla, but not till nearly two hundred deaths have been caused by the disease.

THE homeward English mail from the Punjab has been delayed owing to the floods on the railway. The mail steamer was in consequence detained one day at Bombay.

A PUBLIC meeting assembles at Allahabad on the 18th instant to organise means for the relief of the sufferers by the recent inundations. Assistant Magistrates Messrs. Mulock and Barnes are out in the district relieving the general distress.

MR. RUSSELL, of the Central Asian Trading Company, has gone to Sreenuggur in order to arrange, if possible, for the establishment of a depôt at that place, as also at Leh. If he succeeds, the company will be able to maintain a continual import and export trade with the Punjab, Yarkund, and Lhassa.

COLONEL Colyear, one of the oldest residents of Simla, died unexpectedly on Sunday evening last. A *post-mortem* examination showed that the appearance of the stomach, intestines, and their contents were suspicious, and they were forwarded to the chemical examiner at Lahore for examination.

THE Division Bench of the High Court, in the Landhoura case, has confirmed the finding of the Appellate Court. The Bench recorded the opinion that the complaints made by Mr. Markham against the conduct of Mr. Newton, the counsel for the defendant, should be brought to the notice of the full Court for consideration and orders.

A MAGNIFICENT leopard was lately shot in Lahore city by Mr. Justice Campbell. The animal was so close that on being hit, and thereby hurled backwards as it were, its tail struck Mr. Campbell in the chest. When measured the carcass was found to be 7 ft. 2 in. from tip of nose to tip of tail, the tail being 2 ft. 8 in. in length. It was a male and full grown, in the prime of his strength, having for many months past wandered over the forest rukh close to the Ravee bridge, from which it is supposed the high floods had driven it to seek other shelter.

THE following paragraph appears in the *Delhi Gazette* of Wednesday: "An officer of the Royal Artillery at Agra, Captain Liot, was placed under arrest on Monday, under circumstances which have created a painful sensation. He stands charged with a very grave crime. We are in possession of full particulars, but must, for obvious reasons, withold publication of them for a time. Busy Rumour is of course at her wicked work, and facts are, as usual, much exaggerated by the vile, garrulous dame. By the action of the accused, we are justified in entertaining the hope that the matter is susceptible of some explanation. In reply to the demand for an immediate explanation he tendered his sword, thereby demanding a full public enquiry."

SOME of our readers may remember the story of a burly, kind-hearted, but rather choleric, captain of the dragoons, who, while quartered in one of the hottest of the Indian cantonments, was engaged in learning Hindustani under a "moonshee "or Hindu scholar. A discussion arose about a certain Hindustani verb, which the captain declared was transitive, but which the moonshee declared to be intransitive. The question was discussed in all its bearings, the moonshee still adhering to his opinion that the verb was intransitive. "I tell you," said the dragoon, "it is transitive." "I know my own language, Sahib," replied the Brahmin, "and I know that the verb is intransitive." "Call it intransitive once more." shouted the captain, "and I'll knock you down!" This effective way of enforcing one's own views upon the mild Hindoo appears to be gaining popularity amongst some of our countrymen in India, if we may believe the reports of "a curiously interesting case," lately tried at Barrh, a station on the railway between Allahabad and Calcutta. A European and a native were travelling together, and some little discussion took place concerning the trial of the Gaekwar. Unfortunately, it soon appeared that the two travellers did not entertain precisely identical views of the question. What was to be done? The incident was a serious one, and the European felt it to be such; so, having in vain tried with admirable moderation to bring the Baboo round to his own views of the case, he felt himself reduced to the necessity of flinging the native out of the window. As the ground happened to be swampy there, and as the train was moving at the rate of no more than fifteen miles an hour, the Baboo was not much hurt.

DESCRIBING the recent floods at Benares, a correspondent of the *Pioneer* says: "The native portion of the 'holy city' of the Hindoos stands on the left bank of the Ganges, hundreds of temples and houses rising as it were from the river. The Barna, a river of not much importance, flows through the European quarters. Whenever a flood occurs both rivers swell their banks simultaneously, and appear to make efforts to spread their waters over the sacred ground of Kasse. During the last week the rivers were rising steadily, but no fears of an extraordinary flood were entertained. But it struck me that the unusually heavy rains of Allahabad and other up-country stations would contribute to swell the size of the rivers in Benares. The rivers rose on Sunday and Monday, so that on the evening of the latter day a portion of the road north of the college was under the waters of Barna; however, it was possible to drive through it. After this the river rose rapidly, so that on Tuesday morning many streets in the city were flooded, and the lowlands on the banks of the Barna were converted into petty lakes. Then came a scene which very few must have beheld in Benares before this year. The occupants of the mud houses surrounded by water began to leave their old and beloved houses, carrying off as much of their property as they possibly could, and leaving their dwellings to the mercy of the waters. It was very lucky that many of these men did not possess more than a couple of old rotten charpoys and few articles just sufficient to load them. They resigned everything to fate, and sat down wherever they found an elevated piece of land, but many of them did not forget in the hurry of the moment to offer prayers and throw flowers, &c., into the water to appease the wrath of the enraged Ganges, bent upen working wholesale destruction in the oldest of the old cities of India. By evening some of the roads became impassable, aud the mails coming from the Rajghât station were brought by a very circuitous way. A portion of the road connecting the city with the cutcherries was under water, and the college was enclosed by tributaries of the Barna, which steadily poured their waters into the beautiful gardens. The cricket-ground of the college was occupied by men who were philosophically beholding their houses falling one after another. Any one who saw the ground last August must have been struck with the striking contrast it presented on this day. Shelter was provided to the sufferers on the ground where last year the Officiating Judge Saheb and the Collector Saheb used to play cricket matches. Whilst the Barna was converting the wide roads into lakes, the Ganges rushed into the narrow streets of the city, and spread its water over the new road at Dasasumedh. The crowd there was enormous, thousands of natives collecting to have a look at the familiar places which were now under water. The top of the Man Mandil, the Hindoo observatory, was crowded by spectators, and it was not an easy matter to reach it. The curious thing was that at such a crowded place not a single policeman was visible. The scene from this building was really splendid. As far as the sight could reach there was nothing but one vast sheet of water."

BOMBAY.

IT is reported that Sir Lewis Pelly is engaged to be married to Sir Bartle Frere's second daughter, and that Sir Lewis is to be the next Governor of Bombay.

THE native merchants of Aden have subscribed Rs. 10,000 for the reception of the Prince of Wales. Mr. Cowasjee Dinshaw presided at the meeting.

TWENTY thousand rupees have already been subscribed by the Bombay people to the fund for the reception of the Prince of Wales.

WE are indebted to the General Traffic Manager of the G. I. P. Railway for the information that, during Friday week night, "a very serious fall of rock to the extent, it is believed, of something like a thousand yards took place on the Bhore Ghât. Both roads are for the present blocked, but we hope that by the Monday following one line will be again opened for traffic, and that in the course of next week we shall be able to resume running over both roads. Meantime, until one road is opened, passengers will have to change carriages and walk across the slip. Every assistance in our power will be given to make this change of trains as little inconvenient as possible."

THE supposed case of assault on the Great Indian Peninsula Railway turns out to be a simple matter of brandy and soda. A correspondent of the *Bombay Gazette* supplies the following information on the subject: "On the 20th, ultimo, the station-master at Kurjut came to Lanowlee for medical advice from the company's doctor; the man was returning to Kurjut by the passenger train which leaves Poona at 2 P.M. While the train was standing at the Lanowlee platform, the man was asked by a female passenger, who was travelling 2nd class, to get her a glass of brandy and soda, saying she did not feel well, at the same time she tendered a rupee in payment. On arrival of the train at Kurjut, she again asked the station-master to get her another glass of brandy, saying she felt no better. The train started from Kurjut all right, the station-master remaining at his station. On the journey between Kurjut and Narel, the woman, who was travelling alone, attempted to throw herself out of the carriage, but the guard of the train prevented her from doing so. On the train arriving at Narel the matter was reported, and two policemen were put into the compartment with her, who travelled to Bombay with her. A summons has been served on the woman, and the station-master is under suspension for having given her the liquor. No outrage was committed on the woman by any railway official. The station-master, crediting the woman's story of not feeling well, through kindness got her the brandy she asked for, not thinking there was any danger in so doing."

Native Opinion assumes rather a high philosophic contempt for fireworks and illuminations, and complains that both Calcutta and Bombay, instead of making the "visit of the Prince of Wales impressive, are going to make it simply amusing." "No doubt," it goes on to say, "illuminations and fireworks will supply a fund of amusement to the people at large, but the effect will be transitory, and will probably be remembered only by those who have experienced it." It is afraid that as the Prince has seen illuminations and fireworks on a scale the grandeur of which Bombay would in vain hope to equal, instead of creating a pleasant reminiscence in the Prince, the reception which Bombay is going to provide for him may bring on a jading sensation, and he may get tired of the monotony of illuminations and fireworks, the laying of foundation stones, and the eating of State dinners." It thinks, however ,that "a grand military procession through the town, on a scale and splendour which only Oriental Princes know how to attain, would be far more impressive and effective than illuminations and fireworks. Why should not His Royal Highness," it suggests, "riding on an elephant and accompanied by the dignitaries of the State and a grand military escort, with band-playing and flags flying, slowly march through the town, instead of whirling away at a gallop in coach-and-four, throwing gold and silver pieces to the poor, as did the Great Mogul, as do the Nizam and other native Princes, and as did an humbler personage in Bombay, the late Sir Jamsetjee Jejeebhoy?" Such a procession, *Native Opinion* thinks, will make the British Crown popular and present with the masses, and will go home to them more than any number of illuminations, fireworks, and statues.

THE landslip on the Bhore Ghât occurred about midway between the reversing station and Khandalla. Shortly after leaving the former station in ascending the Ghât, the line, as many of our readers know, runs through a long tunnel, and along the side of what is known as the Khandalla ravine, at a height of about three hundred feet above the level of the valley. The mountain

on the right, which is mainly composed of amygdaloidal trap, rises abruptly to an almost equal height above the cutting on which the line is laid. The cutting itself is nearly perpendicular, and is of hard solid-looking rock, the occasional clefts and fissures in which are filled with a soft soil, through which the rain in descending from the mountain top permeates. It is at a short distance from the upper entrance to the tunnel, where the railway curves to the right, that the landslip has occurred. A huge block of stone, some three thousand tons in weight, fell from a height of about sixty feet, and struck the embankment between the up and down lines, ploughing up the portion of the bank on which the outer line is laid. The down line was thus completely buried, while the up line was thrown up some eight or nine feet above its usual level. For some time past that portion of the cutting has been carefully watched, the geological formation rendering such a course advisable. No less than five watchmen are nightly stationed on patrol over a mile. Early on Saturday morning one of these men, hearing the crash, proceeded to the spot, and immediately sent intelligence to Khandalla. Mr. Rendell the engineer in charge of this portion of the line, got together a large gang of workmen, and set to work without delay to blast the rock. With the assistance of gunpowder the thousand cubic feet of which the mass first consisted is rapidly diminishing, and a day or two will suffice to complete the removal of the remaining *debris*. A large gang of coolies are on the spot, so that no delay is experienced in transferring the luggage from one train to the other.

MADRAS.

THERE appears to be no truth in the rumour regarding Mulharao's removal to Kurrachee. The ex-Gaekwar was at Madras on the 4th instant, and no orders had been received for his transfer.

PREPARATIONS are already being made in Ceylon for providing the Prince of Wales with some sport when he arrives there. The Governor has, we hear from the local papers, determined on a trip to the interior to arrange for an elephant kraal being got ready in anticipation of the arrival of the Royal visitor.

IT is announced that Valid Coil Tampuran, husband of the Senior Ranee of Travancore, has been arrested, upon what charge is not known, by order of the Madras Government. A telegram from Trevandrum says: "Town quiet, though much grieved at this."

A SOLDIER and a constable at Kandy have mauled each other so seriously that both are lying in hospital seriously ill– the former with a cracked skull and the latter with a bruised face. For a few days their recovery was despaired of. About the same time two soldiers fought at the same place until they fell bleeding and senseless on the road side; and there they lay under a broiling sun, until a guard came up to remove them in a carriage that had been hired for the purpose.

IT has been officially announced in Ceylon that the Prince of Wales will arrive at Colombo on the 11th December from Tuticorin, and will stay for a week in the island. The *Colombo Observer* says: "We suppose that His Royal Highness will leave Ceylon for Trincomallee, so that we shall not see much of him in Colombo. A kraal at Avisawella, an elk hunt on the Bopattalawas, a run through the young coffee-districts, the shooting of a bear on the way to Trincomallee, will, next to laying the first stone of the breakwater, and cutting the first sod of the Uva railway, perhaps at Rosita station, we suppose, be the main features of the programme to be arranged."

THE Secretary of State or India, in his despatch to the Government of India, sanctioning the construction of the proposed Madras Harbour, writes: "I have in conclusion to request that the Government of Madras may be directed to introduce Bills into the Legislature providing for the levy of dues either on shipping or on goods in the port of Madras, upon the construction of a harbour there, which will be sufficient to defray interest at 4 per cent. of a loan of £628,000, and a yearly expenditure of £6,000; and, further, that your Excellency's Government will, on the passing of those measures, advance the sum of £628,000 out of the Extraordinary Funds to the Government of Madras for the conconstruction of a harbour in accordance with the plans of Mr. Parkes and under his superintendence."

IN Chittoor, on the 27th July, Fakeer Khan a lascar employed by the D. P. W. Range Officer, murdered his wife, while she was lying asleep, by hacking her with a sword. He then wounded his little son desperately, and rushed out into the street with the bloody sword in his hand, and ran *a muck*, cutting and hacking everybody he met. Five people were thus wounded by him, and one has since died. At last he fell upon a police constable, who, in warding off a blow, managed to break the sword with his baton, and then fled, whereupon the lascar attacked another constable with the broken half of the sword. This constable, however, fought well, and managed to knock his assailant down, threw himself on him, and shouted for assistance, and other people running up the miscreant was pinioned and taken to the station. He is now under trial. Unfounded jealousy, it is said, was the cause of his killing his wife.

MADRAS is at last expecting to have the long contemplated and certainly sorely needed harbour and breakwater. The plans of Mr. Parkes for these improvments have been examined and reported upon by Mr. Bateman, whose opinion is on the whole favorable as to the practicability and general suitableness of Mr. Parkes' designs. The mode of construction adopted is stated to be similar to that of the Kurrachee breakwater, and the piers or sides of the enclosed harbour are proposed to be extended two-thirds of a mile from the shore. The tops of these are to be 3 feet 6 inches above high-water mark, which, it is believed, will be sufficient to arrest the progress of driving waves and afford sufficient shelter within the harbour, as the piers will effectually break all the heavy seas. It is proposed to make the mouth 150 yards wide, and both Messrs. Parkes and Bateman anticipate that, even in the case of a high wind blowing in shore, the strength of the waves will be dissipated a short distance from the entrance.

BURMAH.

GOPAUL SING, orderly to the late Colonel Hamilton Inspector-General of Police, and who was severely wounded when Colonel Hamilton was killed, has been promoted to be Sergeant, and has been given a gratuity of Rs. 500 for his good conduct on the occasion.

A CONTEMPORARY says that the King of Burmah was delighted with the compliant politeness of Sir Douglas Forsyth, and hopes to see him again with an offer of the restitution of Rangoon in his hand. When such an offer is contemplated, Sir Douglas will probably be sent on another embassy to Mandalay—but not before.

WE hear on good authority from Yunan that the officials are in a considerable state of excitement, and that the Governor is raising soldiers *en masse* to resist the English, whom he wishes to prevent investigating the murder of Margary on the spot. Our informant adds:- "I hope England will be firm on the full programme she has laid out, or we shall fall lower than ever in the opinion of the Chinese. This information, coming from quite another quarter, is consistent with the report that the Governor had addressed a memorial to the Emperor, offering to keep the frontier clear from the English or any other barbarians who threatened it."

THE *Pioneer* has come forward to relieve the Government of all blame in the negotiations with Burmah at the expense of its Envoy. The following is the explanation vouched for by our contemporary: "In colloquial language, the following evidently describes the attitude towards the Court of Ava which the Envoy was to observe: 'Before you commence to negotiate about the main object of your mission, deliver this letter to the King. Remind him that our last expedition to Yunan, though its safety was guaranteed by Burmah and guarded by her troops, was murderously attacked just beyond his boundaries. Tell him that we purpose despatching a fresh expedition, but on this occasion we shall protect it by a sufficient escort of our own. Do not ask for a reply to the letter—or the King *more suo* will raise difficulties. Simply let him understand by your demeanour that to mark our sense of the outrage committed, we do not intend to seek the right of way as a concession, but to enforce it, if need be, as a right.' The King as is known received this communication with apparent—probably, in the first place, with real—submission. But in the course of the negotiations which followed he naturaly took the measure of the Envoy, and was thereby no doubt encouraged to try on the letter of objection, which reached Sir Douglas after the business of his mission had been concluded, and at the moment of his departure from Mandalay; which letter, moreover, he accepted. If we here take the words of the Resolution, 'was *not directed* to request a reply' it would appear that the acceptance of such a letter by the Envoy was optional. But if, adopting Sir Douglas's amendment, we read, 'was *directed not* to request a reply,' it is even more evident that the act was opposed to the spirit of his orders; in fact, an act of constructive disobedience. Now, we are not surprised that Sir Douglas Forsyth, in his eager haste for exoneration at any body or everybody's expense, should provide a pit-fall for his friends, but we are surprised that public writers of ability and experience should at once tumble into it. To follow our Envoy another stage in his dilemma is still more instructive. A man of ordinary resources would immediately have returned this 'friendly but informal' document, because it was informal, apprising the King that his mission was at an end; and that as plain Sir Douglas, he had no longer authority to receive any communication: and there, probably, we should have heard the last of it. But as by this time the Envoy is fairly out of leading-strings, he retains the letter, telegraphs to Simla that he is in a mess, and when told in reply to stand fast at Mandalay until the difficulty has been disposed of—we are writing of matters within our knowledge, let it be said—he immediately, and in the very teeth of his orders, sets sail for Rangoon!" But if this be the case, what are we to think of the Government of India? Is it usual for a Government to publicly thank, and endorse the proceedings of, an Envoy who has deserved public condemnation for disregarding instructions, disobeying orders, and compromising the dignity of the Government he served?

ASIA.

THE Russian conscription for 1875 will include a total of 180,000 men. This is a pretty respectable levy of recruits for so peaceful a Power.

ADDS, the accomplice of Swabey and Cantelli in the robbery of the Comptoir d'Escompte at Yokohama, has been tried, found guilty on all the counts of the indictment, and sentenced to two years' imprisonment.

THE Heads of the Japanese Naval Department intend to send six young men, selected from the students, to England with a view to perfecting them in the science of naval warfare and tactics. The united Christian Missionaries of Osaka have determined to issue a newspaper printed in the vernacular tongue.

EARLY in June a strong Russian expedition left Krasnovodsk for a prolonged march in the Steppe. The primary object of the expedition is to survey the ancient bed of the Amu from the eastern shores of the Caspian to the Khiva frontier. The expedition is accompanied by numerous engineers and natural philosophers.

A CIVIL war on a small scale is going on in Dhastistan. The peasants having an idea that the Shah favours them, refused to pay tribute or anything else, the local governors

having in turn resorted to coercion. About twenty-five lives have been sacrificed, and valuable property has been destroyed. Colonel Ross, the Political Resident has gone to Muscat to settle some disturbances amongst the Arabs, and it is thought probable that Syed Turkee will be superseded in the Government.

NOTHING further has transpired with respect to the case of the British steamer *Carisbrooke*, which was referred to Seking. The steamer has gone into dock at Hong Kong for repair, the cargo having been landed and stored in Hong Kong under the control of the Canton customs officers. The *China Mail* states that the consignees refused to take delivery under condition of signing bonds for the value of their respective consignments, and have taken steps to make their claims against the owners of the steamer.

SEVERAL of the Russian Sir Darya steamers have again entered the mouth of the Amu Darya, and effected a communication with the Russian fort of Nukus. A Russian astronomer has been surveying Khiva, and a topographer, a commercial agent, and other persons were to be sent to the capital of that Khanate early in summer. Colonel Venyukoff, the distinguished geographer of the Russian Government, in a Paris letter to the Russian *Invalide*, mentions that the Grand Duke Constatine, the President of the Russian Geographical Society, is expected to honour the coming Geographical Congress at Paris with his presence in May.

THE mail brings us the following items of news: "Chinese officers are making large purchases of arms in Germany. Lieutenant Cotton, R. N., has been granted ten months' leave of absence to navigate a Chinese gunboat which has been built in this country for Foo-Chow." Now, to most intelligent people it must be evident that China is not straining every nerve to arm herself without having some definite object in view, and it needs no prophet to guess what that object is. What simple, unsuspecting people we must be, however, to lend the Chinese naval officers to navigate their gunboats and military officers to drill their troops! How men like old Gortschakoff must grin at these evidences of British astuteness.

THE 26th of June last was an era in the annals of Japan. On that day His Imperial Highness the Mikado opened the first sitting of *Chihokuan Kaigi* or Provincial Parliament at Asakusa. The Parliament which met in the Honganji, a temple of the Senshu sect, was addressed by the Mikado in a speech, inviting it to the thorough discussion of all matters affecting the interior economy of the empire, and to provide for the adequate representation of the provinces. Said the Mikado: "You have been convoked for this purpose, and in order that your knowledge of the condition and feeling of the people of your several districts may aid you in discussing their requirements and introducing such reforms and changes as may seem to you to be most urgently demanded, it is our wish that your deliberations should be marked by general harmony, and that, sinking minor differences, they should tend to promote the ends in view in calling you together. If with one mind you adhere steadily to this course, your conduct will be surely productive of general welfare, and thus your deliberations may become the foundation of the eternal well-being of the empire."

A HONG KONG paper hears on good authority that Dr. Bushell, physician to the British Legation at Peking, was assaulted by stones at one of the gateways of that city lately, and that on the same day a Russian gentleman was roughly handled by the populace. Now, there is of course nothing very alarming in the fact of a few stones being thrown at a foreigner in a Chinese city, but there are certain circumstances connected with foreign residence at Peking which make any such demonstration exceptionally important. As a matter of fact three-fourths of those who live there are officials, and in ordinary Chinese eyes all foreigners at the capital occupy that status. The gateways of the city are places so publicly frequented, and foreigners are so constantly seen passing through them, that any assault must have been witnessed by a number of people, and if unchecked must have had the connivance of petty official underlings. Stoning a resident in Peking is therefore much more serious than stoning a foreigner at one of the other ports—that is, it involves a more distinct complicity of people who know what they are about. It is of course idle to speculate at present as to what the causes and results of the slight outrages in question may have been. But if the account given be correct, we attach more importance to it as a sign of unfriendly feeling than we should have done to a similar exhibition elsewhere. As a Russian gentleman has also been roughly handled, it is probable that the offenders will receive a severe lesson.

THE peasants of Herzegovina do not appear to be as helpless, in the presence of Turkish troops, as might have been reasonably expected. They are besieging towns and gathering strength as they go, and the Principalities are profoundly agitated in consequence of their movements. What we supposed to be a mere despairing effort of the oppressed Christians may be something of far greater political import. If the rebels of Herzigovina are being secretly encouraged and supplied with money and arms from without, the end of the Turkish Empire in Europe may not be far off. It is evident that the Sultan feels uneasy about the aspect of the Eastern question, as he would not otherwise, at a period of such financial depression, proceed so immediately with the construction of a railway to Bagdad. It is to Russian railway enterprise in Central Asia that we owe this latest development of Turkish energy. Influences are at work in the East, as in the West, which are hardly favorable to a prolonged state of peace, and at such a time mere straws—far less important than the insurrection in Herzegovina—often show the direction of the wind. The *Augsburg Gazette*, a respectable journal not given to dreaming, has, according to the *Pioneer's* Paris correspondent, unfolded the following scheme: "A new European Eastern Empire would be founded, composed of Constantinople as the capital, a part of Turkey, and all Greece. The Emperor of the East would be Alfred of Saxe-Coburg, son of the Queen of England, and son-in-law of the Czar of Russia. Bulgaria would become a separate kingdom. To Servia would be added Bosnia, the Herzegovina, and Montenegro. Roumania would be offered to Austria in exchange for the German provinces which would fall into the Empire of William I."

A LETTER from Pera in the *Allgemeine Zeitung* says that there is now no doubt that the epidemic which has broken out at Hama, in Syria, is Asiatic cholera, and that it originated in the military hospital there. This proves, as was shown once before in the epidemic of 1871, that the old theory of Asiatic cholera being always introduced into Asia Minor by persons coming from India is incorrect. The disease has also made its appearance in Damascus and other parts of Syria. The International Sanitary Commission has found it impracticable, owing to the customs of the population and topographical reasons, to block up the streets where cholera is prevalent, but all goods sent from the Syrian harbours to Constantinople and other Turkish towns are examined by the sanitary authorities on arrival. A report from Dr. Padovani, the Sanitary Inspector of the province of Bagdad, dated the 16th June, says that the plague is rapidly disappearing. In Nenjef there had been no new case during the whole of the preceding week, and the increasing heat of the weather will doubtless put a speedy end to the epidemic. The correspondent adds that the new postal organization of the Turkish Government will probably be abandoned, as the Porte seems to have supposed that the foreign post-offices at Constantinople made large profits, whereas it has now discovered to its surprise that they are only kept up by their respective Governments at considerable expense. Moreover, the Turkish Government has no officials capable of undertaking the duty, and no steamers to convey the mails. The negotiations entered into with the Austrian Lloyd could not lead to any result, as the Porte offered a smaller subvention to the company than it receives from the Austro-Hungarian Government, besides which the Government demanded the establishment of five new lines of steamers.

A CONSTANTINOPLE correspondent writes: Devlàh, of Lycaonia, was before the famine a very considerable village of about 700 houses; 200 only are now left; all the rest are ruined and deserted. I myself saw a whole quarter of the place in ruins. It possesses a very extensive pastoral district, consisting of rounded marble hills, with much grass but little arable land, and is four to seven hours' ride distant from any other village. The scarcity began in 1873. There was no rain; but it was the winter of 1873-4 which ruined them. They possessed 48,000 sheep; all perished. They had 400 pairs of oxen; about 5 per cent. are left. Every house possessed a cow or two; almost all are gone. When no food could be found, the poorest of the villagers ate grass, herbs, the bark of brushwood, and they died by scores, for there was no help nearer than Koniah or Adana, every one round them being in the same sad condition. At last in their extremity some of them found a kind of clay, which they ground down, mixed with water, and swallowed. I was solemnly assured of the truth of this. No help came; a few managed to escape to Koniah; of those who contrived to reach Adana nearly all died of typhus. And so the fire went on till nothing was left for it to feed on. Only those who once were rich are left now: even they are reduced to the extremity of indigence, and scarce know how to support themselves till the new harvest comes in. They live on money borrowed from the merchants with whom they used to do business in better times. For them, as for most other villages, the Government did little or nothing. Seed was given; indeed, had that not been provided, this year would have been as bad as last. The harvest will be good, but it will only just be enough for their absolute wants. Last year the Government taxes were raised, in many cases by the most violent means; this year the same thing would occur, but there is nothing—absolutely—left to take. "Had all this been told to the Sadr-el Azam" (Grand Vizier), said one of my informants, "he would have been indignant with the Wali for not reporting it before. The Wali would have been furious with the Kaimakan for deceiving him as to the real state of things, and the Kaimakan would have laid all the blame on us for not bringing our complaint to him." And to this bitter irony he added: "Any Government would be better than this." Such is the present state of things in this beautiful but unfortunate country. Let us hope the incoming harvest will bring some relief, and the Ottoman Government be brought to see the absolute necessity of establishing proper communications by roads and railways. Had these existed, how many useful lives might have been saved, and what a terrible amount of suffering prevented!

LITERARY.

THE sixth volume of the late Sir H. M. Elliot's "History of India as told by its own historians," embracing the Mahomedan period, has been published.

THE "Baroda Number" of *Mookerjee's Magazine* is entitled—"The Empire in Peace: The Baroda *Coup d'Etat*." The headings to the pages are suggestive: "Beware of a diseased Liver!" "The Mercies of the Incapable:" "A Dupe in Office: A Bully in Court:" "'Notice—Wanted a Conviction. Enquire within:'" "A 'Griffin' from the English Bar:" "Did Lord Northbrook Poison the Gaekwar?" "No! But Natives are but Natives, and N. Princes—Monsters:" "To Poison to be caught—not kill. The Diamond Dodge:" "How an Empire stoops to crush and—plunder," &c.

A LUDICROUS misprint occurs in the papers recently laid before Parliament on the subject of the proposed reforms in the administration of the State of Baroda. Colonel Phayre complained of an insult which it is manifest that the Gaekwar had intentionally offered him, by addressing him as "toom," the second personal

pronoun, used only towards inferiors, instead of by the courteous term "ap," which should always be employed where respect and civility are intended. It is evident that the printer, being unacquainted with the Hindustani language, mistook the letter *p* for the common MS. double *s*, and poor Colonel Phayre is accordingly in the published papers made to remonstrate as follows: "It does not escape my observation that towards the close of the memorandum under reply the proper mode of address, 'ass,' is used, which makes the use of the word 'toom' twice at the beginning of the memorandum the more marked." Dogberry himself was hardly more plaintive: "Dost thou not suspect my place? Though it be not written down, yet forget not that I am an ass. I am a wise fellow, and, which is more, an officer, and one that knows the law. Go to. Oh that I had been writ down an ass!"

MR. MEDHURST has been lecturing in Hongkong on Chinese poetry. The language, he remarked, contains a term which precisely corresponds to the English word "verse,"—*i.e.* words arranged in metrical order, according to certain recognised rules; and metrical composition is in China regarded as an essential acquirement of the educated man. The general superficial or rather mechanical analogy between Chinese and European ideas of the art of poesy having been traced to a certain stage, the lecturer proceeded to point out the more radical forms of divergence. Chinese verse is so hampered by rigid and complex rules of prosody and construction, that the spirit of poetry has not had fair play. Poetry in China is consequently but a cramped and stunted representative of the sister art in other countries. The basis of Chinese verse-making, it was shewn, is the system of "tones" or vocal inflections. In regular verse, the monosyllables or "feet" of which the verse consists must not only be assigned each to a particular tone, but the tones of the words or characters making up each line must stand in a definite relation one toward the other. Chinese stanzas are usually in verses of five or seven feet each, and the construction was exemplified by combining the monosyllables *yes* and *no* to form the following stanza *à la Chinois*:—

1. No, no; yes, yes, no.
2. Yes, yes; no, no, yes.
3. Yes, yes; yes, no, no.
4. No, no; no, yes, yes.

A regular alteration, line for line, will be here observed, and the same rule holds good with verses of seven feet or characters. A pause or *cæsura* in each line is an essential element of Chinese versification, falling in pentameters after the second and in heptameters after the fourth syllable. The peculiar arrangement of the tones in Chinese verse is thought by Sir John Davis, whose valuable treatise on Chinese poetry was becomingly referred to by the lecturer, to have been adopted with a view of avoiding the too frequent recurrence of the same tone in ensuing lines. The antitheses and parallelisms which go so far to make up the distinctive style of Chinese poetry were further expatiated upon, and their resemblance to similar characteristics of Hebrew verse, as exemplified in the Psalms of David, was illustrated with numerous examples from both languages.

ECCLESIASTICAL.

THE total number of adult baptisms in India by the different missions during last year was 5,029. By far the largest numbers were amongst the Santhals and in Chutia Nagpore.

THE Rev. R. S. Copleston, Bishop designate of Colombo, not having arrived at the canonical age of 30, will not be consecrated until January next. He was ordained deacon in 1871, and priest on Trinity Sunday last. He will be the youngest man called to the office of a bishop since the Reformation, and like many of the bishops of the early church was only a deacon when nominated bishop. This is contrary to modern custom.

THE Emperor of Russia has addressed a rescript to the Minister of the Interior, thanking him and the Governor of Warsaw for the part they have taken in facilitating the reunion of the 200,000 united Greeks with the orthodox Church. He expresses great gratification at this termination of a schism lasting nearly three centuries, and attributes it to the sincere convictions and inclinations of the clergy and the perfect concurrence of the laity. He directs the Minister to provide everything requisite for the services of the churches belonging to these communities.

THE ROYAL VISIT TO INDIA.

AN estimate of the amount required in the year ending March 31, 1876, as a grant to the Prince of Wales in aid of the expenses he will incur on the occasion of his visit to India, was issued with the parliamentary papers on July 12. The amount is 60,000*l.* A supplementary navy estimate has also been issued "of the sum required to defray the charges consequent on the visit of the Prince of Wales to India, which shall come in course of payment in the year ending March 31, 1876." Assuming the *Serapis* and *Osborne* leave England in October 1875, and do not leave India before the close of the financial year 1875-76, the additional expenditure for the current year is estimated at 42,850*l.* This is accounted for under the following heads: For wages of additional officers and men required to be employed, 3,500*l.*; cost of provisions for these persons, 1,200*l.*; labour at Portsmouth dockyard in preparing the ships and repairing them on their return, 4,580*l.*; coals, 13,700*l.*; other stores, 11,070*l.*; repairs of ships at other than Her Majesty's dockyards, 1,000*l.*; medicines and medical stores, 200*l.*; canal dues, pilotage, &c., 2,300*l.*; and cost of supplies to the Prince of Wales and suite, extra cost of messing officers, and special allowances to mess servants, 5,300*l.* The charges which will be incurred in the year 1876-77 are estimated at 9,360*l.*, making a total for the two years of 52,210*l.*

The *Serapis* and the Royal yacht *Osborne* will leave Portsmouth on or about Oct. 6, taking in coal at Malta, and reaching Brindisi, where the Prince of Wales and suit will embark, on Oct. 16 or 17. A guard-of-honor of 100 marines and a captain will be sent out in the *Serapis*. So far as at present arranged, the number of persons going out in her will not exceed 400, and as she has accommodation for over 1,000, it will be possible to render the ship thoroughly roomy. "With this object all unnecessary cabins and fittings are being removed. A general clearance has been made on the main deck, with the exception of the Royal cabin, reception and dining rooms on the port side, thus making an excellent promenade and lounging place, extending 150 feet by 30 feet wide. An entry for the sole use of the Prince will be made on to the promenade, and from this a handsome staircase will lead up to the saloon deck, and above that to the new crystal deck-house. The suite will be provided with cabins chiefly on the starboard side. The usual cabins here have already been augmented by thirteen new ones, all of which are to be draped with chintz, and furnished with handsome bedsteads, baths, and every appliance calculated to make them luxurious." The Prince of Wales will, we believe, return from India on board the *Serapis viâ* the Cape of Good Hope, and not by the Suez Canal. Mr. Thomas Bradbridge, who has been appointed paymaster of the *Serapis*, served in a similar capacity on board the *Galatea* with His Royal Highness the Duke of Edinburgh as Captain. Mr. Denzil Onslow, M. P., who presided at an amalgamated *fête* of Oddfellows and Foresters held at Stoke Park, Guildford, by permission of the Earl of Onslow, in proposing the toast of "The Prince and Princess of Wales and the rest of the Royal Family," said he was quite sure that all would join with him in wishing His Royal Highness at the present time a successful and prosperous journey to India, and that he might be brought back to us in health.—"It had been said that it was the duty of Her Majesty's Government to allow a grant to His Royal Highness for the duties he would have to perform on behalf of the nation. He believed that that view was the one entertained by every working man in England. (Loud cheers.) He was quite sure that if they were called on even to pay as much as sixpence a head, although the amount was really infinitesimally small, they would gladly do so. (Continued cheers.) He (Mr. Onslow) disagreed with those who pretended to represent the feelings of the working men, and he was glad to hear by the cheers there that day that every one present felt proud that His Royal Highness would have a proper allowance voted him by Government. (Cheers.) He believed that, speaking in the name of working men, they would not object to the vote which had been proposed in the House of Commons—('No, no,' and cheers)—and he was quite sure that at the present moment they would drink with greater enthusiasm than on any former occasion 'The health of the Prince and Princes of Wales and the rest of the Royal Family.'"

A meeting of working men was held in Trafalgar Square on July 12 to protest against the proposed grant of money to defray the expenses of the Prince of Wales's visit to India. "A small procession, headed by a brass band, started from Clerkenwell Green, and marched to the square through a heavy downpour of rain. On arriving there it was found that the police had received instructions to prevent the use of the monument for the purposes of a platform in consequence of the lions having been newly painted. The procession then proceeded to the railway arch in Villiers Street, but the majority were disinclined to remain in that place, and after some confusion another move was made in the direction of the square. Eventually the vicinity of one of the fountains was selected, and the proceedings commenced by Mr. C. Murray taking 'the chair' on the edge of the fountain. The chairman, in the course of his address, referred to the proposal made by Professor Fawcett in the House of Commons, to the effect that England should defray the whole expense of the visit, and denounced it as being opposed to the views of working men. Mr. Galbraith proposed a resolution, protesting against the proposed grant, and tendering the thanks of the meeting to those members of Parliament who, in the name of the working classes, spoke against it. The resolution was seconded by Mr. Edwards and carried."

"A Conservative M. P.," in a letter to the *Times*, says that it has been suggested that an increase in the grant for the personal expenses of the Prince of Wales in India should be moved in accordance with the views of most members of the House of Commons and a large majority of the public. It appears not to be generally known, the writer says, that it is not competent for any private member to put any such motion upon the paper, however certain he might be of its adoption. Government, and the Government alone, are responsible for the sums demanded in estimates. The House may diminish but cannot increase them. As he cannot bring the matter formally before the House, the "Conservative M. P." asks permission to state in the *Times* what he knows on the subject: "He estimates the cost of the Prince's journey across the Continent to Brindisi and return and the journey through Egypt at 5,000*l.* Railway journeys in India, which, even if the actual cost of the trains be defrayed by India, will still require large sums of money from His Royal Highness's purse for presents to railway managers and others, cannot absorb less than 10,000*l.* The expense of buying carriages and horses for state occasions and transporting them may be calculated at 12,000*l.*, and there would also be about 5,000*l.* required for the outfit of gentlemen of the suite and attendants. Then there would be the sum required for presents, which may be divided into three classes—*viz.*, those made to native princes, those made to great nobles, and, thirdly, charities and subscriptions. The native princes number ninety-five, most of them ruling independently; and experienced Anglo-Indians affirm that the average value of the presents to these potentates should not in decency be less than 500*l.* apiece. The presents to great ministers and powerful nobles may be taken at an average of about 50*l.*, and these two classes of presents have been calculated by persons most qualified to judge at 50,000*l.* The Prince's subscriptions to the third class, namely, charities, local institutions, race funds, and such like, cannot be put at less than 10,000*l.*; and, allowing a percentage of some 4,000*l.* or 5,000*l.* for contingencies, the total of all these sums amounts to

100,000*l.*, and this the writer ventures to affirm is the least the Prince of Wales has a right to claim from the country."

A writer in the *Morning Post*, who signs himself "Copiosus," urges that the Ministers have made "a huge mistake" in proposing so inadequate a sum for the Prince's expenses. Ministers, it is understood, say that they have to consult the Prince's popularity at home as well as in India, and that they do not feel justified in asking for a large sum.—"This (the writer observes) is indeed a pitiful view to take of a great occasion, as mean in its stinginess as the poverty of spirit which induced their predecessors to knuckle down to Russia in the business of the Black Sea Treaty and to submit to the *Alabama* extortion. This is no mere pleasure excursion of a Royal Prince. It is a visit of the Majesty of England to India, and the Prince should pass through the dominions of the Queen in a manner befitting our historic renown and his illustrious presence. This is a great deed of peace, and it should be paid for in accordance with the estimate which judicious men frame of its immense value. We are ready enough with money for a wasteful war—with many millions of pounds; but how much more beneficial would be the investment of a few hundred thousand on the remunerative work of conciliation and the foundation of a new starting point for our rule?"

MILITARY ORDERS.

CAMPBELL, Lieutenant-Colonel J. M'C., to Murree to the 15th October.
DOYNE, Lieutenant P. K., to England to appear before a medical board.
GUNN, Surgeon J. S., to Mussoorie to the 31st October.
HAWLEY, Lieutenant-Colonel W. H., to remain in England to the 31st October.
HENNEL, Lieutenant W. F., admitted to the Bengal Staff Corps.
JONES, Lieutenant F. W. R., to England to appear before a medical board.

LATEST TELEGRAPHIC NEWS.

AUGUST 7TH.

London, 6th August.

IN the House of Commons last night, Mr. Hardy, replying to a question, said that the warrant and regulations relative to the Regimental Exchanges were prepared and only awaited Her Majesty's sanction.

Dublin, 6th August.

THE celebration of the O'Connell Centenary has commenced, with an immense attendance. The religious element predominated, and included several foreign Bishops and Deputies from German Ultramontanes.

9TH.

London, 7th August.

THE following appointments are gazetted: The Duke of Connaught to be Major in the 7th Hussars; Major William Leckie, to be Lieutenant-Colonel in the 63rd; Major H. J. Bell to be Lieutenant-Colonel; and Captain Henry Beckly to be Major in the 105th, *vice* Browne, supernumerary while Brigadier-General in India.

Brevet Appointments.—Charles Dressing to be Lieutenant-Colonel; Lieutenant Colonels G. T. Hogg and Claud Alexander to be Colonels.

In the House of Lords last night, Lord Cadogan, replying to a question, said that more frequent relief for Queen's Regiments of Cavalry in India was under consideration of the Government.

Lord Salisbury stated that Government had no intention at present of extending the system of a sanitaria in India for the women and children of European troops.

In the House of Commons Lord Hartington impeached the conduct of public business during the Session, but Mr. Disraeli vindicated the action of Government.

The insurgents in Herzegovina are besieging Trebigne.

New York, 6th August.

THE Mississippi has overflowed its right bank in Arkansas.

10TH.

London, 9th August.

THE Banquet given in Dublin on Saturday in celebration of the O'Connell Centenary closed abruptly in consequence of a dissension arising between the Home Rulers and the Catholics.

There have been demonstrations in England and Scotland and a riot in Glasgow between the Orangemen and the Home Rulers.

A Revolution has broken out in Khokhand. The troops have joined the insurgents, who have expelled the Khan and his family.

New York, 9th August.

THE overflow of the Mississippi, which threatened to be of a serious nature, is now subsiding.

11TH.

London, seconded and his ALEXANDER COLLIE, the bankrupt Calcutta merchantine has relinquished bail has been estreated. Mr. Serjeant the case.

London, 10th August.

Mr. FAWCETT, in the House of Commons, brought forward a motion, which was negatived by 90 against 55 votes, condemning the delay in the introduction of the Indian Budget. Lord Hamilton introduced the results of the Indian Budgets of 1873-74 and 1874-75, which were more favorable than expected, and said that a telegram was received yesterday from the Viceroy, showing that last year's deficit would be converted into a surplus, and that, notwithstanding the rising expenditure, the revenue was most satisfactory. Referring to the tariff changes, he (Lord Hamilton) maintained that the Viceroy's proposals should be carefully considered on the principle that nothing should be done contrary to the financial policy of the last five years. There was a small prospect of reduced expenditure, which at present was not greater than was necessary to secure peace and orderly government to India. A long debate followed. Sir George Campbell deprecated Lord Hamilton's sanguine views of Indian finance. Mr. Smollet brought forward an amendment, which was negatived by 66 against 21 votes, condemning as unremunerative the public works adopted by the Budget, particularly referring to irrigation works.

Malta, 10th August.

THE *Indus* arrived with the crank of her shaft broken. Eight days are required to replace it. The mails have been forwarded *viâ* Brindisi.

London, 10th August.

THE British exports for July were 20¼ millions, showing a decrease of £875,000. Imports 34½ millions.

London, 10th August.

IN the House of Commons last night, Mr. Bourke, replying to Sir C. Dilke, said that no official information had been received respecting the reported Russian expedition to Merv.

12TH.

Belgrade, 10th August.

THE insurrection in Herzegovina is increasing in importance. The Montenegrins, Servians, and Dalmatians are sympathising with the Insurgents.

Berlin, 10th August.

THE Prussian Catholic Bishops are adhering to the new law for the administration of Church property.

13TH.

London, 12th August.

A ROYAL Warrant has been issued promulgating the Regimental Exchanges Act. A General Order states the form of the declaration that will be required from Officers applying for exchange on promotion.

In the House of Commons last night, Lord George Hamilton, replying to Mr. Fawcett. who announced the renewal of his motion for the earliest introduction of the Indian Budget, said it would be more satisfactory if members made observations on Indian matters during the session without awaiting the budget.

SHIPPING.

ARRIVALS.

August 2nd—Hippogriffe from Moulmein. 3rd—Cambay from Liverpool, Str. Socotra from Singapore. 4th—Str. Mirzapore from Southampton, Leopold et Marie from Bourbon, Str. Enterprise from Port Blair. 7th—Str. Penang from Bombay, Str. City of Manchester from Liverpool. 8th—Mary Fry from Aden, Epervier from Masulipatam.

DEPARTURES.

August 2nd—Glenhaven for Mauritius. 3rd—Str. Avagee for Akyab, Str. Meinam for Galle, Linguist for Demerara, Triton for Mauritius. 4th—Star of Persia for London, Palais Galien for Mauritius. 5th—Marian for London. 6th—Str. Penguin for Bombay, Str. Himalaya for Hong-Kong. 7th—Royal Alice for New York. 8th—Str. Abyssinia for Singapore.

LIST OF PASSENGERS.

ARRIVALS.

THE P. & O. Co.'s steam-ship *Khedive*, Commander J. D. Stewart, arrived in Bombay on the morning of the 4th instant with the English Mails of the 16th July on board. She left Suez on the 23rd July at 10-15 A.M., and Aden on the 28th at 2-30 P.M. The following is the list of passengers:—

FROM SOUTHAMPTON.—Mr. and Mrs. H. Bell, 2 infants, and ayah, Mr. and Mrs. Reynolds, Miss Barrett, Mrs. Henderson, 2 infants, and ayah, Colonel Baird, Mr. A. Baylis, Mr. J. R. Kay, Mr. G. Corstorphan.

FROM VENICE.—Major and Mrs. Mead, Mr. J. E. Dawson, Mr. G. Thornhill, Mr. S. J. Tucker, Mr. W. L. Harwood.

FROM BRINDISI.—Mr. A. A. Borrodaile, Mr. W. Wiseman, Mr. C. Hordern, Mr. H. E. Winter, Mr. G. Connell, Mr. T. W. Bourne.

FROM ADEN.—Captain E. A. Emmerton, Surgeon Major Skipton and native mail servant, Hoossein Hajee Esmail and wife, and four Natives.

DEPARTURES.

THE following passengers proceeded from Bombay on the 6th August by the P. and O. Co.'s steam-ship *Sumatra*:—

FOR SOUTHAMPTON.—Mrs. F. Smith; Mr. and Mrs. McCarthy and 2 children; Mrs. Berry, child, and Miss Berry; Mrs. Fleming, child and 2 infants; Mr. and Mrs. Miller and infant; Mr. R. B. Arch; Mr. Chas Domines; Mr James Lasseter; Mr Leonard; A. J. Ashley; Mr. James Brown; Mr. George T. Lockyer; Mr. W. White; Mr. Thos. A. Snell.

FOR BRINDISI.—Mr. T. W. Gribble; Mrs. Widdicombe; Mr. A. Smith; Mr. J. G. Shiffock; Mr. M. W. Sundays; Mr. P. V. James, R.N., Mr. H. St. G. Tucker; Mr. M. Birkbeck; Captain Pemberton; Mr. Mackay; Capt Butler.

FOR VENICE—Col. Tweedie; Mr. and Mrs. Abel; Dr. and Mrs. E. Charles and 4 children; Mrs. Barkett; Mr. C. Denton: Mr. E. B. Baker; and Mr. A. J. Bolton.

FOR SUEZ—Mr. F. Myers,

THE following passengers proceeded per steam-ship *Abyssinia*, which left Calcutta on Saturday, the 7th August, for Rangoon, Moulmein and Straits.

Mr. D. R. King; Captain Cox; Mr. J. F. Paul; Miss Paul; and Mr. Cobbs; (2nd class.)

MARRIAGE.

SPENCE-CROSSE.—ON the 15th July, at St. James, Piccadilly, by the Rev. R. W. Forest, Vicar of St. Jude's, South Kensington, and the Rev. W. Powell, brother-in-law of the bridegroom, J. A. W. Spence, Esq., L.R.C.P., Madras Medical Staff, second son of John Spence, Esq., F.R.C.S., to Fanny Louisa, youngest daughter of the late Edmund Crosse of Fairfield, Harrow, Weald, and 9, Ladbroke Gardens, Bayswater.

DEATH.

LOCH—At Erinpoora, Rajpootana, on 6th August 1875, Captain R. Gordon Loch, of the Bengal Staff Corps, son of G. Loch, Esq., late Bengal Civil Service.

ADVERTISEMENTS.

SAILORS' HOME.

THE Annual General Meeting will be held on Wednesday, the 18th instant, at 5-30 P.M., in the Reading-room of the Home,

By order.

The 11th August 1875.

NOTICE.

RANGOON MUNICIPALITY.

SEALED TENDERS are invited for the supply of twenty thousand tons, or 400,000 cubic feet of Rubble or Ballast Stone (Bombay trap being preferred or stone of equal quality) for Road metal. Delivery to be taken in boat at ship's side. Tenders to state clearly the price per ton of 20 cubic feet.

Tenders will be received up to 12 o'clock noon on the 15th November 1875.

By order,
O. D. CHILL,
Executive Engineer, Rangoon Municipality.

Rangoon, the 5th August 1875.

NOTICE.

Chairman of the General Court of Directors.

THE RIGHT HONORABLE LORD LAWRENCE, G.C.B., G.C.S.I.,

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

GROVE PARK SCHOOL, WREXHAM.

Principal.—J. PRYCE JONES, L. C. Prec.

ATTENTION is respectfully invited to the following facts:—1. The locality of the School is remarkably healthy. 2. The premises are extensive, and fitted up with due regard to the comfort of the Pupils. 3. Every facility for recreation is afforded by the large playground and cricket-field which adjoin the house. 4. There is a sufficient staff of well qualified Masters, including a Classical Master, B.A., in Classical honours, Cambridge, and a resident Frenchman. 5. At the Examinations of the College of Preceptors and the Oxford and Cambridge Universities, Pupils from the School have taken Honours in several distinct branches of Education, *e.g.*, Latin, French Mathematics, Book-keeping, and English. 6. At five examinations by the College of Preceptors, Certificates were Awarded to one-third of all the pupils in the School. 7. At five out of seven examinations by the College the highest place in Book-keeping was given to candidates from the School. 8. The Principal earnestly endeavours to form in his Pupils a manly Christian character. 9. The Diet is liberal.

Terms which are moderate and inclusive with lists of successful pupils on application.

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourishing frame."—*Civil Service Gazette.*

C. LAZARUS AND CO.,

(Incorporated with Shearwood & Co.)

CABINET MAKERS, UPHOLSTERERS,

BILLIARD TABLE MANUFACTURERS,

BY APPOINTMENT

To His Excellency the Viceroy and the Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh,

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking-board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible, and annoyances and inconveniences are done away with, and the interest in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction that an Amateur can put it together in half-an-hour without the assistance of an Electrician. The Battery will last for months without being refilled, and when it needs to be renewed can be done at any time for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co. are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have ust received, and have now on view at their show rooms,

A Magnificent and most varied Assortment of

PLATE GLASS MIRRORS,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

ever imported into the Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—an opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade Advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturers' prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burmah, Persa, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured, and are the only ones appreciated in the places enumerated.

"THE FAMILY FRIENDS"

Is the name bestowed by the discerning and grateful Public on

DR. E. J. LAZARUS'S

DOMESTIC MEDICINES.

Parents, Guardians and persons residing in out districts, where medical aid was not available, or when circumstances prevented their calling in a physician, have used them for a number of years, and very many thousands of cases have been cured by their judicious use. They consist of

A Printed Pamphlet giving full instructions will be found wrapped round each bottle.

Prepared only by MESSRS. E. J. LAZARUS & Co. at the MEDICAL HALL, BENARES, from the original receipt of EDWARD JOHN LAZARUS, M.D., and sold by all Medicine Vendor

NEW BANK OF BOMBAY (LIMITED).

CAPITAL Rs. 1,00,00,000, DIVIDED INTO 20,000 SHARES of Rs. 500 each.

FIRST ISSUE 10,000 SHARES OF Rs. 500 each=Rs. 5,00,000 PAID UP.

RESERVED Issue 10,000 Shares of Rs. 500 each, called up in full.

DIRECTORS.

HAMILTON MAXWELL, Esq. (of Messrs. W. Nicol & Co.)
R. VALENTINE REID, Esq. (of Messrs. Finlay, Scott & Co.)
A. J. MACDONALD, Esq. (of Sir Charles Forbes & Co.)
DINSHAW MANOCKJEE PETIT, Esq.
AHMEDBHOY HUBIBBHOY, Esq.
KESSOWJEE NAIK, Esq.
E. D. SASSOON, Esq.

FIFTEENTH REPORT.

The Directors have the pleasure to submit to the Proprietary the accounts of the Bank for the half-year ended 30th June last. They have been audited, and the Auditors' Report is annexed.

The Cotton crop proved to be a full average one, and the staple was in steady demand throughout the season. The Directors did not re-open the Dhollera and Wudwan Branches finding that there was little probability of their being able to work to a profit. The returns from the Branches in operation have been generally of a satisfactory character.

A few small failures have taken place in the bazaar. The Bank has made no bad debt during the six months.

The accounts show a net gain of Rs. 6,71,354-11-4, and, adding to this Rs. Rs. 1,14,890-14-8, the balance brought from the half-year ended 31st December last, there is a sum total of Rs. 7,86,245-10-0 for distribution.

In accordance with the Articles of Association, the Directors recommend the declaration of a dividend at the rate of ten per cent. per annum—

which will absorb	Rs.	5,00,000	0 0
The transfer to Reserved Fund	,,	2,25,000	0 0
In reduction of cost of premises	,,	20,000	0 0
To Bad and Doubtful Debt Account..	,,	10,000	0 0
Leaving a balance to be carried forward of	,,	31,245	10 0
	Rs.	7,86,245	10 0

The Directors regret to repeat that they have not been favoured with any communication from the Government of India regarding the very important questions still at issue—*viz* : the Bank's Charter of Incorporation, and the removal of the local agency of the Bank of Bengal.

Mr. H. R. Cormack resigned his seat at the Board on leaving India, and Mr. A. J. Macdonald has rejoined the Board by desire of the Directors, subject to the approval of the shareholders in terms of Clause 70 of the Articles of Association.

Mr. R. Valentine Reid and Mr. Dinshaw Manockjee Petit retire from office on this occasion, and are eligible for re-election.

The shareholders will have to elect Auditors for the ensuing year, and to fix their remuneration. The present Auditors being eligible, offer themselves for re-election.

By order of the Directors,

M. BALFOUR,
Secretary and Treasurer.

Bombay, 13th July, 1875.

AUDITORS' REPORT
For the Half-year ended 30*th June*, 1875.

Bombay, 13th July, 1875.

To M. BALFOUR, Esq.,
Secretary and Treasurer, New Bank of Bombay, Limited.

DEAR SIR,—We have to report that we have audited the Bank's Accounts for the half-year ending the 30th June, 1875.

The General Ledger, Stock Ledger, the Security Ledger, and the Branches' Ledger have been duly examined by us. The balances given in the Balance-Sheet agree with the Bank's Books and the returns made by the several Branches. We have counted the Cash and Currency Notes in the Bank's till in Bombay, and found them to agree with the figures given in the Balance-Sheet. The value of Government Securities and Specie belonging to the Bank is correctly stated.

The Securities deposited for safe custody, as also those in possession of the Bank against Loan and Cash Credits, we have carefully examined and have found them in order in comparing them with the Registers.

The Abstract of the Balance-Sheet and Profit and Loss Account are correct, as showing the true position of the Bank at the end of the year under report.

We are, Dear Sir, yours faithfully,

SAM. W. READ,
EDULJEE NUSSERWANJEE SETTNA, } Auditors.

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec. 31, 1864.*

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

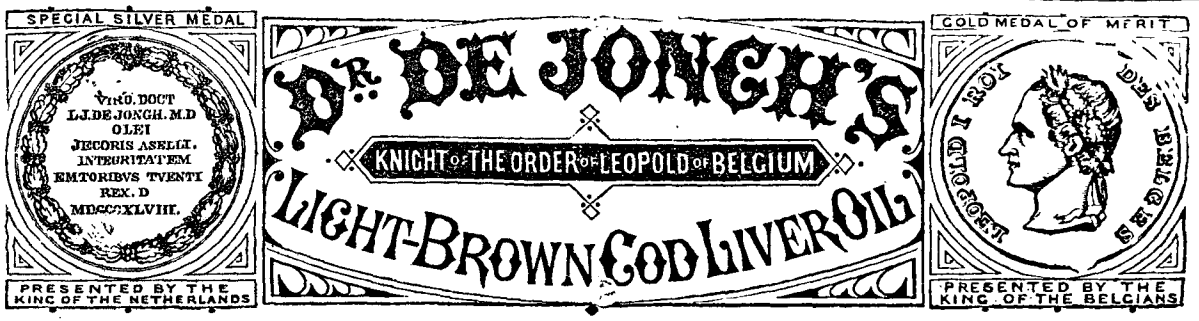
DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street Bloomsbury, London.



The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescsibed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
edical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been triod in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion or DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

PRINTED AT THE "INDIAN STATESMAN" OFFICE, CALCUTTA—BY W. H. TARGETT, PUBLISHER.

NEW PLAN

BY THE

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATES, with 80 per cent Invested Solely for Policy Holders.

Example.

A, aged 30, wishes to Assure Rs. 1,000.

		With Profits.
Annual Premium at Indian Rate ...	Rs.	36 0 0
Annual Premium at English Rates ...	„	23 10 8
Difference ...	Rs.	12 5 4

The "ORIENTAL" charges (*A*) the English Premium of Rs. 23-10-8 *only*. The Extra Premium for India, Rs. 12-5-4, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with *Compound* Interest at 3 per cent is equal to the sum assured, *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses, and Forms of Proposal can be obtained from any of the Agents, or from

A. B. MILLER, *Official Assignee.*

PRINCE OF WALES'S
ROYAL VISIT TO INDIA.

P. W. FLEURY & Co.,
BUILDERS, ENGINEERS, MANUFACTURERS, AND EXHIBITORS OF
ELECTRIC LIGHTS,
PATENTEES FOR AN IMPROVED METHOD OF EXHIBITING
TRANSPARENCIES,
REPRESENTING
PRINCE OF WALES'S PLUME,
PRINCE OF WALES'S
COAT OF ARMS,
PRINCE OF WALES'S
CHROMATROPE REVOLVING CROWNS,
AND
OTHER COATS OF ARMS.
P. W. FLEURY & Co.

BEG respectfully to offer their services to the Maharajahs and Princes of India, and Chairmen of Municipalities, for brilliantly illuminating, by the agency of Electricity,

10,000 running feet

of roadway, and for decorating Buildings within that space with appropriate Devices and Designs.

Our charges for exhibiting our Revolving Chromatrope Stars, Lights, Ornamental Welcomes, Prince of Wales's Plumes, Crests, Coats of Arms, and other Transparencies will range from

RS. 50 to RS. 400 EACH.

With reference to our Patent, which was filed by the Secretary to the Government of India, on 7th August 1875, for an improved method of exhibiting for exterior Illuminations Transparencies, &c., we beg respectfully to invite the Chairman or Agents of Municipalities and other Committees, the Merchants, the Editors of Journals, Executive Engineers, and Agents of the Maharajahs of India, to witness the effects of our Transparencies, which we are prepared to exhibit at No. 62, Wellesley Street, Calcutta, for the inspection of our constituents and parties who are desirous of engaging our services.

Our Mr. Fleury and his staff of experienced Assistants will superintend and carefully carry out all arrangements entrusted to them in any part of India.

ST. XAVIER'S COLLEGE, 10 *and* 11 *Park Street.*

MY DEAR MR. FLEURY,—I very willingly give you the certificate you ask from me regarding your Electric Light and your Tranparencies. I think that your appliances are very good, and I may add, I know by experience, that your Electric Batteries never fail to give a strong and steady light.

Yours sincerely,
Calcutta, 13th May 1875. E. LAFONT, *Rector.*

OPINION OF BRADFORD LESLIE, Esq., C.E.,
Chief Engineer, Calcutta Municipality.

I have been much pleased with the Transparencies exhibited by Messrs. P. W. FLEURY & Co. The designs are tasteful and carefully drawn, and the chromatic effects both varied and beautiful.

BRADFORD LESLIE, C.E.
Calcutta, 9th August 1875.

Letter from Chevalier Blondin's Secretary.

P. W. FLEURY, ESQ.

DEAR SIR,—Mr. Blondin wishes me to inform you that the Electric Light with which you lighted his Tight Rope Performance on the Maidan from the Ochterlony Monument last Tuesday, 13th, was all that could be desired, and a perfect success—a proof of your perfect mastery in the management of such a difficult task, and with Mr. Blondin's thanks for your kindness to him,

I remain, &c.,
GREAT EASTERN HOTEL, *Calcutta, 17th January* 1874. NIAUDE, *Secretary.*

Calcutta, 28th December 1869,

MESSRS. P. W. FLEURY & CO.

DEAR SIRS,—On the night of the general illumination of this City in honor of the arrival of His Royal Highness the Duke of Edinburgh, you supplied us with four Transparencies, showing a Crown, Stars, &c., and the word "Welcome." The effect of these was decidedly rich and satisfactory. The machinery by which changes of light and design were thrown into each device worked as truly as anything possibly could, so that there was no interruption of any kind in a trial of five hours.

We express our complete satisfaction with them.

Yours, &c.,
F. & C. OSLER.

Accounts opened with approved Indian and other Foreign Firms or Banks, at ~~such moderate~~ rates of Commission as shall be considered consistent with sound mutual advantage. The Interest ~~upon such~~ accounts is calculated at current rates on daily balances, and is made up on the ~~30th June~~ and 31st December in each year.

Demand Cheques and Exchange honored against approved previous or simultaneous Remittances. Credits opened against First-class Securities negociable in London. Mercantile and Marginal Credits are issued, as also Letters of Credit upon any leading Commercial City, and every description of general Banking Business transacted. The Officers and Clerks of the Bank are pledged not to disclose the transactions of any of its Customers.

London, 20th July 1875.

THE RUPEE AT 1*s.* 9½*d.*

THE currency question is perhaps the most difficult in the whole range of economic studies, while nothing is more common than to see its discussion entered upon with the utmost confidence, by writers who have never mastered even its elements. The heavy and continuous fall in the exchange value of the rupee, affecting as it does so seriously the means of the Anglo-Indian, has become the chief topic of the day; and it was wise, we think, for Lord Northbrook to refer to it prominently in Council the other day: "I have seen," he said, "it asserted that this fall in the value of silver is our fault. "Governments can do much—when they interfere with trade "they usually do much harm—but they are powerless to control "the value of any article in the markets of the world. What "the cause of the fall in silver has been, and how long it may "continue, is not easy to say. It may be produced mainly by the "change in the currency of some European nations from silver "to gold, which has thrown a large quantity of silver into the "market. It may arise from the increased production of silver. "As long as it lasts, however, the Government of India suffers "in common with private individuals. The Government of India "has to make large fixed payments in gold out of income re- "ceived in silver, and a fall in the value of silver raises the cost "of those payments. This really governs the item 'loss by "exchange,' which has of late years figured so heavily on the "wrong side of our accounts; for whatever temporary fluctua- "tions in the rate of exchange may be produced by the balance "of trade between India and other countries, these fixed pay- "ments in gold must in the long run constitute a lighter or "heavier charge upon the Indian finances in proportion to the "rise or fall in the value of silver. The net sum provided in the "estimates of the current year for loss by exchange amounts to "more than a million sterling, and if the value of silver should "continue to fall, this charge will be considerably increased."

It is not much consolation to be told that the abstraction we call "Government" suffers in common with private individuals, since its suffering is neither proper to itself nor vicarious. That Government suffers as well as ourselves simply means that the loss which the Anglo-Indian *pater familias* is enduring from the altered value of the rupee, has to be aggravated by the imposition of heavier taxes upon him, *e. g.*, the increased duties on wines and spirits, to enable the Government to meet its losses from the same cause. The sufferings of the Government are simply passed on to the community, and have to be borne thereby in the shape of enhanced taxes. Nor is it quite true to say that Governments are powerless to control the value of any article in the markets of the world, as they very often have shown their power to do so in a very bad way. Speaking generally however, Lord Northbrook is no doubt right, and instead of abusing Government on account of the evil, we should be better employed in an attempt to ascertain the true causes of the fall in the exchange value of our currency, for, as Lord Northbrook says: "It is not easy to say what the true cause has been, nor how long it may last."

We remark first, that whatever uncertainty may exist as to the cause, the fall is clear and undoubted. Whereas the price of silver a few years ago was 62*d.* to 63*d.* per ounce, and silver could only be bought at that rate for remittance to India, it is now procurable in any quantity in the European markets at about 55*d.* Now the result of that for one thing is that for all purposes of exchange with other countries, the stock of silver in India, whatever its amount, is worth 11 or 12 per cent. less than it was ten years ago. In so far therefore as we have to spend our income abroad, or to make remittances for liabilities accruing there, we are plainly worse off now by 11 or 12 per cent. upon our earnings than we formerly were; in other words, we have now to pay 11 or 12 per cent. more than we formerly did, for every article of English or foreign manufacture consumed by us; for our childrens' school bills; and for every other charge accruing against us abroad.

Does the fall extend any further? Does it reach the remainder of our income, that which we spend in India itself on house-rent, servants, and living expenses generally? The answer, we fear, is not easy, and we should be glad if any of our readers who are familiar with economic studies would try to think the matter out, and let us have the result. The answer to the question will depend largely, we think, upon the extent to which our export trade determines the price of the produce grown for home consumption. We throw this hint out for what it is worth, and add that it would be very desirable in discussing the question to confine it, as far as possible, to an enquiry into the precise effects of the fall in the price of silver, upon the value of rupees spent in India. The fall in prices occasioned by the home charges, or the rise or fall therein from other causes, are questions that should be pursued separately. What we want now to trace, is the precise economic effect upon India of the heavy fall that has taken place in the *intrinsic* value of the rupee as so much silver. It is a new phase of the currency question altogether that we have to deal with. The question formerly was—the effects of a restricted or redundant currency upon prices. The present question is the effect upon prices of a change in the intrinsic value of the currency: another matter altogether.

THE NEW TARIFF.

THE article upon the new tariff in the *Indian Mirror* of the 18th instant shews that the writer has known his own mind, and he therefore boldly demands the deliberate adoption of a protective policy on behalf of the local cotton mills. He says: "If ever in the interests of India a protective duty on "cotton ought to have been maintained—and with all their "stereotyped utterances about free trade and the authorities in "India, who are no real authorities in favor of free trade, our "legislators are still maintaining a protective duty—it seems "to us that the present is just the time that the duty should "have been left alone, when a new local industry, which is "feeling its way, as it were, into the local markets, equitably "demands the fostering care and the encouragement of "a Government which frames and works its own laws." And again: "We do not admit that the interests of "Manchester were entitled to any weight at all in "the consideration of the proposed enactments of a law "to be passed for India. On the contrary, it seems to us "that the benefit of India alone should have been steadily "kept in view in the presence of a new-born local industry, "which, if it does not in time compete with the manufactures "of Manchester in foreign markets, is not unlikely, in the "course of a few years, to supersede them in this country at "least. It does not require the eye of a prophet to foresee "that the success of Indian mills—for success in Bombay is "sure to lead to the establishment of cotton mills in other "parts of the country where the staple is cheap and abundant "—will secure to the poor populations of India at no very late "period cloth as good as, but far cheaper than, the manu- "facture of Manchester." Surely it is very much better that the real issue should be raised in this clear and distinct manner. For, without knowing it, the Indian Press, so far as we have observed, are protectionist in their views. Their real objection to the tariff is that they think the Government is upsetting a

ise policy of protection upon the local cotton mills, out of eference to the interests of Manchester; and the very strongest rms are employed to characterize this conduct, journal after urnal denouncing it as "infamous."

Now, we do not know that any economist of repute denies the ropriety of "protecting" an indigenous industry while in its xperimental stage. And instead of beating the air with clenched sts, let our contemporaries shew calmly that the manufacture f cotton goods by English machinery in India is still entitled be regarded as in its purely experimental stage, and then mand openly (1) that it should deliberately be protected. Let em state (2) the extent to which the protection should extend, d (3) the time that it should last. They overlook that up ll now, we have been affirming that we levy the import duty n cotton goods for revenue purposes, and have repudiated the dea that we were introducing a protective system into India. The natural reply has been: "Then put an excise duty on the produce of your own mills." As there is no possible answer o that demand, we are now to throw off all disguise, and to ell Manchester plainly, with the *Indian Mirror*, that our native industry equitably demands the fostering care and encouragement of the Government." Right or wrong, that a fair, honest, and intelligible proposition. And the whole Indian Press is plainly of this mind, *i.e.*, "they are protectionists" without knowing it, and intensely angry that the Government is not so, or not so much so. For the tariff is still highly protective, as we have shewn. At all events, do not let us delude the Bombay Mill people, as to what they may really expect from us. The question has now been boldly raised: let it then be settled once for all, by an open demand for a protective policy, stating at the same time the extent to which the protection is to reach, and the time it ought to last. Our contemporaries have never thought the subject out: that is quite clear. And they can have no influence upon opinion, until they have done so, and can shew satisfactorily that their demands are right.

THE difficulties under which Government is carried on in this country are largely augmented by the fact that the press is able to give it so little real assistance. In the case of the majority of the native papers there is no wish to give it assistance, while the best of them, and many of our English contemporaries, are so little acquainted with economic subjects that, with the best intentions in the world, they misrepresent one-half its decisions. Thus the *Hindoo Patriot*, following the leading of our contemporaries, discourses upon the new tariff arrangements as follows: "Would any civilized Government make any such humiliating confession as Mr. Hope, on behalf of the Government of India, has done in imposing the import duty on raw cotton? What could be more discreditable than to say, though not in so many words, that the Government of India does not care two pence for the interest of the people of India, if it can succeed in preventing the cotton manufactures of India from assuming undue proportions? Is this the boasted solicitude of the Government for the welfare of the millions of India? Is this the way of fulfilling the hope and assurance of our Gracious Sovereign that in the prosperity of the people of India lies Her happiness! We do not blame Manchester for urging her selfish demands, for her object is profit and not charity. But does it become our Government, which professes to hold with an even hand the scale of justice between man and man and nation and nation, to throw overboard the interests of a fifth of the human race for the sake of propitiating a few cotton lords of their own country."

The writer is sincere, but it is evident that what he really wants the Government to do is to adopt a settled policy of *protection* upon the cotton manufactures of India. And he is simply following the lead of our English contemporaries in the matter. The complaint of Manchester is most reasonable, most unanswerable. We have ignored it as long as we could, out of tenderness to the interests concerned, and when unable to do so any longer from the growth of home public opinion, fortified as it is by our own conviction that the *protective* principle is a mischievous one, the Government is charged with betraying the interests of the people of India to those of Manchester. Do our contemporaries really wish that Government should deliberately *protect* native manufactures against Manchester competition? If they do, why not say so plainly, thus raising the right issue? We say that Government would act most unwisely to establish such a policy, except tentatively; and that the large measure of protection still to be enjoyed under these new arrangements by the Bombay mills, is all that can rightly be extended to them. The real doubt is,—Whether it is not still too much. There is great room to fear that the mill enterprize in Bombay is being overdone; and what sort of policy would it be to stimulate the enterprize further, under promises that we can never fulfil!

DESULTORY THOUGHTS ON THE RENT QUESTION.

IT must be admitted, we think, as undoubted that there was really no definite pergunnah-rate in any part of Bengal at the time when the regulations of 1793 became law. We think that a careful study of the papers must produce a consensus of opinion upon this fact. It must be admitted at the same time, that the rental to be imposed by the zemindar was not intended to be a matter of caprice or arbitrary will. It was a fundamental principle of the settlement that, so far as *law* could bind him, the zemindar was to be bound to levy a moderate rental on his tenants of whatever class; and in equity he is so bound to this moderation, that the State has a right at any time, if it can devise the means of doing so, of reducing the obligation to a statutory form. The original intention then being clear, and the power to enforce it being founded both in reason and morals, our hand is stayed by nothing but the difficulty of defining what "moderation" means. The pergunnah-rate has notoriously failed us. Is there then any other guide? We suggest that there is. It is impossible for any one studying the mass of papers on the subject recorded at the time, not to be struck with the frequent recurrence of the statement, that in every part of India the people have ever regarded an assessment of one-third the produce as "moderate" and considerate; and that one-half was held to be an extreme rate, that under no circumstances should be surpassed. Here then may we not have precisely what we want? The pergunnah-rate has failed, but if at the time of settlement the zemindar had offered to fix the rental everywhere at a third of the produce, he would have been regarded as acting considerately, and in accordance with ancient usage; and as giving effect to the precise intentions of the settlement. This is something infinitely better than "the pergunnah-rate," which is uncertain, undefined, and varies everywhere. The immemorial tradition that the fields are considerately assessed when the landlord takes no more than one-third the produce, is the clue with which we may thread the labyrinth.

Might we not then here put down our foot? And is there not firm guidance for us here through the difficulties in which the question is now involved? Decree boldly that the rental shall in no case exceed, but may extend to one-third the produce in the case of privileged ryots, excepting always of course the mokururee holdings. But there is a class of cultivators between the man who holds direct of the zemindar, namely the under tenure-holder, and those again below the latter, the class of tenants-at-will. Lay down then a principle equally simple in this case, and make it law that the rental may amount to but shall not exceed one-half the produce. Where this limit has been reached, give the tenant-at-will a right to occupy at this rate, and refuse to allow him to be ousted so long as he pays it. Up to this rate we might give free play to the principle of competition, but put a hard and fast line there. The first step of all would be of course a field survey, the cost to be defrayed by a special cess upon the land, the Bombay system being everywhere adopted, but with shorter leases, and the assessment being re-adjusted every ten years upon the corn-rent principle, without any new survey whatever. All agreements should be declared void, in which the rental exceeded one-third the produce, or one-half, according to the status of the cultivator. The *conscience* of all classes would we think approve some such settlement of the difficulty, and justify the Government in any legislative measure to compel its acceptance. It would be the realization of Lord Cornwallis's idea, and place the ryots of these provinces on the best footing they can occupy. Where the tenants are privileged or occupancy tenants, we might give them at the same time the right of enfranchising their holdings, by surrendering a part of them to the land-holders.

It seems to us idle to speak of holding a perfectly even balance between the cultivator on the one hand and the zemindar and middleman on the other. Our sympathies must range themselves on the side of the former, and it is no blame to the Legislature if it is influenced by sympathy for the peasant. It will be the lasting reproach of our legislation on this subject, that from the time of the settlement down to 1822, the State was constantly increasing the zemindars' power for the greater security, as was alleged, of the revenue. Indifference and apathy were allowed to take the place of this partizanship from 1822 to 1859, but towards the close of that period public sympathies began to move in the other direction. They have happily continued to do so, in spite of the efforts that were made in the great rent quarrel ten years ago, to confuse and mislead men's minds on the subject. The position in which we find ourselves in this rent difficulty is as follows: We have a small body of zemindars with a vast body of middlemen under them, exacting from the cultivators whatever can be got out of them, and claiming to have a right to carry these exactions to any height they please, under the letter of the settlement made with them eighty years ago. No one will contend that when that settlement was framed, the idea ever entered the minds of any one concerned therewith, that this would be its issue. The very opposite of this was intended. The men who framed the settlement did so in the belief that such an issue could not possibly result therefrom. The sin of the settlement was two-fold: it sinned against both the cultivator and the State. To understand the measure of the wrong which it has inflicted upon the former, it is necessary to know the extent of land under cultivation at the time of the settlement, as we may otherwise be led into serious misapprehension as to the wrong endured by the cultivator. We require to know the extent to which the increase of the rental in modern days is attributable simply to the extension of cultivation. The sin of the settlement against the State was mainly that it was held to confer all the waste cultivable land of the province upon the zemindar. If there is now three times the area of land under cultivation than there was at the time of the settlement, the zemindars have a right to be receiving three times what they did then.

MR. ATKINSON'S N.-W. GAZETEER.

So long ago as 1844 Mr. Thomason laid down a plan for the preparation of an Historical and Statistical Memoir for each District in the N.-W. Provinces, and in pursuance of his instructions Memoirs were prepared, but for six Districts only. In the course of time, Mr. Thomason's plan was lost sight of and neglected, until the Government of India, in 1867, drew attention to the publication of the Central Provinces' *Gazetteer*, and desired that steps might be taken to prepare a similar work for the North-West Provinces. This reminder induced Sir William Muir, in 1868, to record a minute reviving Mr. Thomason's plan, and adding further instructions to the compilers. The Lieutenant-Governor wrote: "I do not wish to "impose the task upon any special functionary. I am "well aware that it will only be satisfactorily performed by those "who possess a taste for this special kind of employment, and "the consequent disposition to take it up with zeal for its own "sake. Among the Settlement Officers, and the numerous Assis-"tants now attached to that Department, there must be many "whose position and duties would peculiarly qualify them to "compose a work of the kind intended. I feel safe in trusting "to the public zeal, spirit, and literary power of this class, and "of the junior officers of the service at large, promptly and effec-"tively to carry out the plan."

This scheme of district Memoirs was a purely provincial one, and, so far as executed, it has been kept distinct from the *Gazetteer*, which Mr. Atkinson is preparing for incorporation in Dr. Hunter's *Indian Gazetteer*. Sir William Muir over-rated the amount of leisure and antiquarian zeal possessed by our junior civilians, and the progress of the District Memoir scheme has consequently been much slower than he anticipated it would be. So much slower indeed, that as yet Memoirs have been completed, on the revised plan, for only three out of the thirty-five districts of the North-West Provinces; and one of those is the work of a native Deputy Collector. The first part of Mr. Oldham's Ghazeepore Memoir has also been published, and one or two similar works are believed to be under preparation. This slow progress has induced the local Government to reconsider the subject, and in a recent *Gazette* Sir John Strachey explains his views. He does not blame district officers for their comparative failure in the execution of the scheme, which he justly ascribes to want of leisure on the part of officers competent to undertake the work; but he is anxious to secure, without delay, even if embodied in a somewhat less pretentious form, the practical advantages aimed at by his predecessors.

Hitherto the compiler of the *Gazetteer* has endeavoured to confine himself to a brief notice of each district, and has avoided trespassing on the ground assigned for the District Memoir. Consequently, in the only volume of the *Gazetteer* yet published, namely that for Bundelkhund (recently reviewed in this journal), various topics are but slightly touched upon, or are altogether omitted; and the work is thus in some respects incomplete. No detailed memoir of any of the Bundelkhund districts having yet been published, there is no ready way of obtaining access to information on any subject omitted from the *Gazetteer*. Mr. Atkinson is now instructed to make the rest of his *Gazetteer* more complete in itself, and to supply the gaps caused by the non-existence of the Memoirs. The work is to aim at a position differing from, and in some respects higher than that of an ordinary *Gazetteer*. It will be complete in itself, and will contain an account of all matters of interest connected with each District, or at least, where detailed description is not considered necessary, a reference to other authorities. These orders will, no doubt, make the North-West Provinces' *Gazetteer* a more interesting and valuable work, but will perhaps involve the disadvantage of delaying the publication of the remaining volumes. In these days when district officers are so frequently changed, and various causes tend to prevent much familiar intercourse taking place between them and the people, the importance of carefully compiled digests of needful information relating to each district, can hardly be over-rated. Nothing can altogether compensate for the want of actual local experience, but the existence of a work like that which the North-West Provinces' *Gazetteer* promises to be, will go far towards preventing the evils that result from the total ignorance of local affairs, which so often embarrasses an officer on his arrival in a strange district.

A MATERIALIST'S THEORY OF SPIRITUALISM.

Mr. STUART GLENNIE, in his recently published book, "Pilgrim Memories," a record of travel and discussion in Egypt and the Holy Land with the late Mr. Buckle, enters into an explanation of the theory which enables himself, an avowed materialist to accept and account for the strange phenomena of spiritualism. As a materialist, he of course can give no countenance to the hypothesis of the phenomena being caused by spirits; but, on the other hand, he looks upon the attitude of the scientific men who, after very slight investigation, and very often without any investigation at all, attribute the appearances to delusion and imposture, as a very unsatisfactory and unscientific one. He believes that the phenomena of which the world has heard so much of late, and which men have not known whether to look upon with favour or disfavour, will, when rightly explained, lead, not as spiritualists generally maintain, to a revelation of an invisible spirit-world, but to a more accurate knowledge of the action and re-action of bodies on each other, and especially to an exacter knowledge of the correlations of physical and psychological forces.

His main hypothesis, he asserts, is one which may be considered as a combination of the highest generalisations of modern science. He looks upon all bodies as systems of molecular motion. He looks upon the ultimate molecules of bodies, not as isolated from one another, but as acting mechanically on each other as parts of a system. He furthermore considers that all mental states and changes are accompanied by corresponding states and changes of molecular motion; that every feeling, every thought, every desire or volition, is accompanied by, and necessarily connected with, certain molecular motions and mechanical changes. Every change whatever, he thus reduces to a vibratory motion of ultimate particles. Every influence exerted by one body upon another, is transmitted by a motion of vibration which passes unbroken from the one to the other. The theory so far is confirmed by the experiments in electricity, by which Faraday threw doubts on the possibility of any force of nature passing from one point of space to another sensibly distant, without acting through the whole series of contiguous particles lying between the two points. Mr. Stuart Glennie also asserts that his idea as to mental action and its accom-

panying mechanical action, is in a great measure accordant with accepted facts of psychology.

He conceives moreover that, between all particles in the universe—the particles of all bodies, whether inanimate or animated—there is a provision for the transmission of mutual influence. The lines along which forces act, are always occupied with molecules ready to transmit any impression which may be impressed upon them. Within the limited sphere of a single human body, every organ is more or less influenced by every other organ. All can enter into sympathy with one another, by means of wonderful continuous connection between them. Just in the same way it may be conceived that different human beings may exert an influence upon each other. If all mental actions have their accompanying mechanical actions, why may there not be an external continuation of these mechanical actions? And why may not these be so transmitted as to induce corresponding molecular actions in other individuals, and hence give rise to sympathetic mental states? Is it not conceivable that such influence is always being exerted in some such way, though generally producing results so minute, that no conscious note is taken of them? Mr. Stuart Glennie maintains that if all bodies, more particularly all animated bodies, are what he calls "systems of molecular motion," and if they are all "more or less directly connected, through mechanical lines of force raying out from each and varying in character with the mechanical and psychological state of each, then a change in the mental condition of an individual, being a change also in his state of molecular motion, must affect the mechanical states, and hence the mental condition of others," and this influence being often other than minute may produce even strange and startling results.

This hypothesis of his, he calls the hypothesis of Mutual Influence—"a mechanico-psychological mutual influence." He thinks that it will account for many of the actions and mental states we call—really not knowing what to call them—instinctive; for the contagion of ideas; for the flame-like spreading of religious enthusiasm; for the existence at the same time, in different individuals, of similar mental tendencies and interest in the same set of ideas; for the peculiar influence exerted by certain individuals; for the strange dreams in which things which happen afterwards, are foreshadowed; for sudden unaccountable anxieties; for strange impulses with regard to absent friends, who at the same time are really in some distress. But the great object he has in review in bringing his hypothesis forward, is to point to the explanation it affords of the various spiritualistic phenomena, which he himself is utterly unable to look upon as confirmatory of any real spiritual existence following after life in this world, and which he is reluctant to believe to spring from delusion and deceit.

He admits that the undisciplined human imagination is always ready to be imposed upon, and is too much given to the creation of myths. He is conscious also that the explanation of modern stories of spiritualism with which some are content, namely, that they are records of phenomena which have but a subjective reality, is one which applies to a large number of alleged instances of spiritual manifestations. But he thinks there are certain exceptional phenomena which can only be accounted for, by his extended theory of mutual influence. And with a straightforwardness and frankness which show that his mind has long been accustomed to look upon the widespread acceptance of a belief in the supernatural as merely an interesting though prolonged phase of the mind's growth, he asserts his own assurance that all theological beliefs whatsoever originate in the tendency of the uninstructed mind to attribute to objective causes phenomena which may reasonably be assigned to subjective causes; and that all supposed supernatural manifestations may either be similarly accounted for, or result from the operation of the law of mutual influence which it is his special mission to explain.

Mr. Buckle, to whom he unfolded his views on first meeting with him at Assouan, the frontier town between Egypt and Nubia—or, as he calls it, the Gate of Ethiopia—seems to have listened to them with interest, but to have been unprepared to accept them. He had himself not long before been present at a *séance*, at which he asserted he had seen a large table floating in mid-air. Such a phenomenon he was inclined to attribute not to the doings of spirits, but to the action of an insufficiently known force. But it was pain to him to hear doubts expressed of the existence of spirits and of a spirit-world. He had not very long previously lost his mother, to whom he was tenderly attached. He was constantly dwelling upon the thought of recognising her again in a future state. He believed he had been brought into spiritual communion with her. He had felt conscious of mysterious companionship with her, in the early days of his solitary grief for her loss. It is not to be wondered at, that he was not prepared to give thorough attention to Mr. Stuart Glennie's views, which would have resolved all his recent experiences into creations of his own, or explained them as due to the lingering influence of her with whom he had spent his years of study, and to whom he had unfolded all the thoughts he wrote down in the work to which he had devoted his life. His unpreparedness to do more than listen with interest to Mr. Stuart Glennie's exposition of his theory, calls forth the remark that he allowed his feelings to bias his judgment, and that it was perhaps well that he should do so, to correct the tendency so prominent in his writings to deny the efficacy of moral causes in the history of humanity. The subject was not introduced again in their discussions as they journeyed together.

Mr. Stuart Glennie's book is one among many indications at the present day, that the thoughts of men are dwelling intently upon the mysteries of the hidden world. His hypothesis of mutual influence has far greater significance than appears at first from his connecting it with alleged spiritualistic phenomena. It is the extension of the hypothesis of Undulation or Vibration, which has of late been so widely developed in the departments of sound, light, heat, and electricity into the sphere of mental action. That other minds should have been aiming at a result similar to the one he has been working towards during several years, seems almost a confirmation of the mutual influence which he propounds as so comprehensive, a explanatory of a vast range of differing phenomena. It should be borne in mind, however, that the effect of the like enquiries entered into by men of scientific attainments far higher than Mr. Stuart Glennie would claim to possess, has been to strengthen their hold upon the doctrine of the soul's immortality, and to give a deeper significance to the Christian teaching centred in the one great doctrine of the Divine Humanity: the great doctrine foreshadowed in the union of the Divine with the Human in the person of Jesus Christ. As men are led on by scientific enquirers, who carry on their work patiently and reverently, towards a clearer comprehension of the mysteries underlying all outward manifestations, they are surely guided into a closer union with the great Sustainer of the Universe, in whom we all live, and move, and have our being.

THE TREE OF LIFE.

WE were greatly struck some years ago, by a passage in Butler, that we have since found has impressed itself on a good many other minds as deeply as on our own. The passage has a direct and very important bearing upon the great controversies of the day concerning Science and Religion. It occurs in the second part of the Analogy in the third chapter, and is as follows: "The hindrances of natural and of supernatural light and knowledge have been of the same kind, and as it is owned that the whole of Scripture is not yet ascertained, so if it ever comes to be understood before the restitution of all things, and without miraculous interposition, it must be in the same way as natural knowledge is come at;—by the continuance and progress of learning and of liberty, and by particular persons attending to comparing and pursuing intimations scattered up and down it, which are overlooked and disregarded by the generality of the world. For this is the way in which all improvements are made; by thoughtful men's tracing on obscure hints, as it were dropped by nature accidentally, or which seem to come into our minds by chance. Nor is it at all incredible, that a book which has been so long in the possession of mankind should contain many truths as yet undiscovered. For all the same phenomena, and the same faculties of investigation from which such great discoveries in natural knowledge have been made, in the present and last age, were equally in the possession of mankind several thousand years before. And possibly it might be intended that events as they come to pass should open and ascertain the meaning of several parts of Scripture."

The passage is marked by the breadth and clearness and sweet reasonableness of all Butler's writings, and describes we, believe, with exact truthfulness the way in which *growth in knowledge*, both of revelation or nature, is being attained. That the Bible, is not merely imperfectly understood, but largely misunderstood has long been our own belief; and also that the result of the present conflict will be to show eventually that the revelations of Science have a deep and true harmony with Revelation. In illustration of Butler's view, take the bearing of Scripture upon the contention of science that man is no more immortal than the beasts that "perish." The materialistic school denies that there is any evidence of the existence of an immortal principle in man, more than in the brute: and it must be admitted that we have no such evidence. But the

immortality spoken of in the Bible, instead of being spoken of as inherent in our nature, is called the *gift* of Eternal Life. The materialist has therefore gained nothing, unless able to say that it is not within the power of God to make man immortal. The more carefully the Scriptures are studied, the less confident the student becomes as to the existence therein of the doctrine that the soul *cannot* die. There are numerous and express declarations therein to the contrary, while they teach very expressly, though incidentally only, both at their commencement and their close, that instead of being necessarily immortal, man's immortality depends upon something outside himself. It is orthodox theology to hold that Adam was immortal, and that death was the fruit of his disobedience. But that is not what the narrative says. It says that his "immortality" depended upon his access to the "Tree of Life," and that by disobedience he forfeited this, and became subject to death in common with all creation around him. The Church teaches much concerning our first parents, of which the Bible says nothing. There is nothing in the Scriptures to lead us to suppose that they differed in any way from ourselves, in their liability to pain, disease and death. Their advantage was—access to a something which meant healing and life, and it was *this* that they forfeited by disobedience. "In the day that thou eatest thereof [the Tree of Knowledge of Good and Evil] thou shalt surely die"—that is "forfeit the Tree of Life." The orthodox interpretation is "die in thy soul "by being separated from God;" but this is not the teaching of the narrative, which simply says that by disobedience Adam lost all right to the Tree of Life, that which had hitherto preserved him from death. Now, observe the confirmation which is given to this view, by the very last of the inspired writers, 1,600 years afterwards when the canon closes. With the mention of the Tree of Life in the first pages of the book, it disappears from the sacred volume. For 1,600 years we hear of it no more, until the last of the sacred writers suddenly sees it in Apocalyptic vision, as the long lost, regained, possession of the race. The first of the epistles to the Seven Churches speaking of the blessedness of him who "conquers in the strife"—puts in the fore-front of the prophecies, the Tree of Life.

"He that hath an ear, let him hear what the Spirit saith unto the "Churches; to him that overcometh will I give to eat of the Tree "of Life which is in the midst of the Paradise of God.—Rev., ch. 2., v. 7.

It is some years since we were struck with the fact that, as the Scriptures begin with narrating the circumstances under *which the inheritance was lost, the last of them 1,600 years afterwards*, tells us that it had been regained. The striking and impressive words with which the last chapter in the Bible opens, are these: "And he shewed me a pure river of water of life, clear "as crystal, proceeding out of the throne of God and of the Lamb. "In the midst of the street of it, and on either side of the river, was "there the Tree of Life, which bare twelve manner of fruits, and "yielded her fruit every month: and the leaves of the tree "were for the healing of the nations." There is still no *necessary* immortality spoken of, but an immortality secured by something *else*. From the opening chapter of the Book to the close, through the long series of inspired writers, historical, prophetic, evangelistic, and apostolic, stretching over 1,600 years of time, we see this Tree of Life but twice. We see it at the first, only to learn how it was lost; and once more at the very close. We have said that the Book is silent from beginning to end upon a fact of which we might naturally have expected it to be full. It is not true, however, to say that it is *absolutely* silent upon the subject. In one instance—and one only—in the middle of the Book—(Proverbs, ch. 3, v. 18)—we read that "Wisdom is a Tree of Life to them that lay hold upon her." Now, there is, we believe, a *consensus* of opinion that the "Wisdom" here spoken of means the Divine Saviour: "I was set up from everlasting, from the beginning or ever the earth was. When there were no depths I was brought forth, &c., and my delights were with the sons of men."—[Proverbs viii, 24-31.]

Is it at all fanciful, then; is it not rather sober exegesis to conclude that the Tree of Life *throughout* is no other than the Divine Saviour? Admit this, and we learn that instead of man being by nature immortal, it is because the Divine Saviour is immortal, and because of this only, that man will ever be so. "*Because I live, ye shall live also.*" Separation from Him means death: union with Him life. In throwing out these reflections, we do not think there is much that can justly be called mere "speculation" in them. For the narrative teaches us that the death which fell on Adam was not the result of any change wrought in his physical nature by sin, as the Church teaches, but that he forfeited thereby access to the "Tree of Life." And at its close we are taught that his immortality will still be dependent, not upon any inherent life in himself, but upon the Tree of Life. The Scriptures teach that as all other perfections reside in God alone, as He alone is eternal, omniscient, and omnipresent, so He alone is necessarily immortal; and if the hope of the Christian is immortality, it is because our finite, perishing nature is capable of being mysterously made one with the divine in the person of the Son of God. The idea therefore that underlies the Mass and the doctrine of the "real presence" generally is a vital truth. How is this union with the Divine Saviour to be obtained? Believers in "the real presence," tell you by the sacrament. The act of consecrating the bread and wine brings "the real presence" of the Saviour into them, and union with Him is obtained by now eating and drinking this bread and wine, which the Romanists declare to be bread and wine no longer, but by a double miracle, (1) to have become the very body and blood of the Saviour, while (2) the elements nevertheless deceive the senses of the recipients, by *seeming* still to remain bread and wine, which they are not, but the real flesh and blood of the Saviour. The idea that *underlies* this materialistic belief is a true one in our view. We believe with Butler that the Bible is very imperfectly understood; indeed, that it is much misunderstood and misrepresented in orthodox theology.

GOETHE'S "FAUST."

III.

FAUST was a man of lofty nature. He hungered after divine knowledge and divine pleasures, and consequently despised the common pursuits of worldly men, and spurned the gross gratifications of sense; he forsook the world with all its light and loveliness, with its crowd of human faces and its marvellous network of human sympathies; he buried himself in seclusion; he fed his soul with knowledge extracted from books and parchments; he dug deep into the secret mines of the abstruse sciences, seeking in their labyrinthine mysteries the key of all knowledge and the light of life; and if at times the natural appetites of flesh and blood, and the social cravings of his human nature, stirred him in his retreat, he sternly crushed them down as vices of the blood—as prurient passions to be starved if they could not be eradicated. Who shall say that in all this there was not a great self-sacrifice? Still, as we have already pointed out, the self-sacrifice was but a partial one: it was both incomplete and indiscriminating. Instead of seeking to eradicate the real vices of his flesh and blood, and to repress his natural appetites, so as to prevent their morbid development, he attempted the unnatural task of entirely sacrificing the lower part of his nature. It was, indeed, his lower nature that he tried to sacrifice, and his "best self," as Matthew Arnold calls it, that he wished to cherish and gratify; but here again he erred, not only in the means he employed, but in the object of his earnest pursuit. What that object was it would not perhaps be easy to say, as it would not perhaps be easy for the majority of us to state precisely and truthfully what, amid all the multiplicity of our aims and endeavours, is the chief object and aim of our life We must content ourselves with vague generalities, and be satisfied with the trite assertion that we all have a want within—a craving for some quite undefinable *summum bonum*—and that in obedience to this craving we toil on thus restlessly from day to day. The ideal satisfaction of this craving we look forward to as complete happiness. Some look for it in one direction, some in another: Faust sought it in the path of knowledge, and he failed to find it. He awoke, as it were, and behold his life had been a dream and delusion! The craving of his nature had not been satisfied, and he saw clearly that he was not even on the way to satisfaction. It is not knowledge that can be to him the bread of life, and no sooner has he made this discovery than he begins to scorn those who have not. "Strange," he says—

> Strange how his pate alone Hope never leaves,
> Who still to shallow husks of learning cleaves!
> With greedy hand, who digs for hidden treasure,
> And, when he finds a grub, rejoiceth above measure."

For though he knows that he has lost the way to happiness, he has not yet lost that high estimate of himself which led him to despise inferior men and seek to mate with gods. Self-glorification—we might not unjustly say self-deification—was that which ruined him. And though he is now the most wretched of men, he still feels within him all the great capacities longing for activity and satisfaction. And not unnaturally he turns from the husks of knowledge, and looks forth with longing eyes to.—

> "The living sphere of nature,
> Where man was placed by his Creator."

Could he have chosen, henceforth, the real human world for his sphere of action, and recommenced life as an active and benevolent doctor of medicine, it might yet have been well with him. But he

was too far gone in his peculiar disease to return easily to a life of health and usefulness. Though he now desired to pursue happiness in a different direction, the quality of the enjoyment he sought was still as transcendental as ever. Very beautiful and very sad is the following midnight utterance :—

Oh ! shon'st thou now, thou full moon bright,
For the last time my woes upon,
Thou, whom so many a sad midnight,
Beside this desk, I've watched alone ;
Then over books and papers shone
On me thy soft and friendly light !
Oh ! that beneath thy lovely ray,
On peaky summit I might stray,
Round mountain caves with spirits hover,
And flit the shadowy meadows over,
From all the *qualms of knowledge* free,
Bathe me to health within thy dewy sea !"

To understand fully the aspect in which Nature presented herself to the eager mind of Faust, it is necessary to know more fully than we can set forth in these superficial pages what is called the Pantheistic view of Nature. To the mind of Faust the Universe—the macrocosm—is a vast living whole, the great All, of which Man—the microcosm—is a living portion, a particle indeed, yet rounded off with a wonderful completeness, and endowed with a mysterious power of imaging forth the whole. He is a "light sparkle in the ether of Deity." All the objects of sense are but the clothing of the spirit of the Universe—" the living garment of the Deity." To know what life really is, we must pierce with keen spiritual vision beneath this outer garment, and see the soul of Nature. Seeing this, we perceive that the soul of Nature is *one*, and that we are of it. Rightly to comprehend this is to plunge, as it were, into the boundless sea of Deity, or of Nature (for the distinction between these has now ceased to exist), and to revel henceforth in infinite blessedness. To attain some such transcendental bliss as this is now the endeavour of Faust. Once more, then, he will attempt the impossible, and, if he cannot succeed otherwise, he will attempt to do so by the power of Magic, a power which was believed in by the greatest minds of his age—

"Therefore to Magic I have given
My mind, from spirit's mouth to draw
Truths passing Nature's vulgar law ;
That I, with bitter-sweating brow,
No more may teach what I do not know ;
That I with piercing ken may see
The world's indwelling energy,
The hidden seeds of life explore,
And deal in words and forms no more."

He studies the secret spells of the renowned Nostradamus, and seems almost to have gained the object of his heart's desire. In the wizard light in which he lives, this is his view of the Universe—

"How mingles here in one the soul with soul,
And lives each portion in the restless whole !
How heavenly powers, a bright unwearied band,
Their golden flagons reach from hand to hand,
And bliss-exhaling swing from pole to pole !
From the high welkin to earth's centre bounding,
Harmonious all through the great All resounding !"

How he evokes the earth-spirit and shudders in its presence, yet asserts that he, Faust, the image of the Godhead, is not the inferior, but the peer, of this thing of flame ; how the pedant Wagner intrudes upon the scene and dispels the vision, dragging Faust down again to the petty realities that surrounded him ; how, left alone once more, he reflects on the impossibility of his flesh-shackled spirit communing freely with pure spirit-natures ; how, while in this mood, his eye catches new fire at the sight of the matchless phial that contains " the extract of all subtle powers that kill," and he determines by suicide to enter perforce into the hidden realm of bodiless ecstasy : all this must be read in the book itself, and cannot be marred by description or quotation. We hurry on to the first grand crisis in his career. He stands there in the early morning, with the phial in one hand, and in the other the long unused crystal goblet on which he soliloquises before pouring out the fatal draught. It had graced the merry banquets of his sires, and now brings up strange memories of the olden time—memories of many a youthful night and many an hour of jollity. Old faces and dear voices from the past are seen and heard once more. They arrest his thoughts and stay his hand for a little, but only for a little ; for, after all, these are but memories ; the realities, if they were realities, have long since gone from him, and now he too will go. One more draught, then, from the old-fashioned goblet—one, and the last. The grey light of dawn trembles through the Gothic window. To Faust it shall be an everlasting morning or endless night. He brings the cup to his lips—

A solemn greeting to the rising moon !

Not yet, O Titan Spirit ! not now, and not thus shalt thou scale the empyrean. On the breeze of dawn is borne into the Gothic chamber a sound of bells announcing the birth of Easter Morn, and fainter and sweeter, yet near and distinct, there fall on the ear of Faust the voices of women singing—

" Christ is arisen,
Joy be to mortal man."

Thus had he heard, on long-vanished Easter mornings, the voices of mother and sisters sing ; sweet memories flood his soul ; and on the top of the flood is borne the wreck, not yet finally sunk, of an old, long cherished faith. How weak at some critical moments of life is the loftiest human intellect ! A moment ago, Faust stood erect and fearless, fronting the almighty spirit of the Universe, and ready to dare with headlong plunge "the dark, unbottomed, infinite abyss" of eternity, a man who would have reasoned with his Creator face to face, and refashioned the decrees of destiny. Now his hand trembles, his eye tames its fire, resolution quivers, and Prometheus is chained. Yet the power that holds and subdues him is but the sound of a bell and a Christian chorus bringing back memories of a life and a faith that he had for ever cast behind him. The Titanic intellect is hushed and conquered, like a half petulant, half whimpering, child, subdued by the low sweet melody of a mother's lullaby—

" And thoughts of childhood rule the full grown man."

Do *we* rule our destiny then, or is there a power above us that guides us, as it guided Faust, whithersoever it will ? It seems even so, and in the ocean of life, it is often a very small helm that turns the greatest ship.

Thus, in the first great wrestle between the good and evil powers for possession of Faust, the good has triumphed, and " Earth claims her truant son again." But the battle closes again, and though Good never entirely quits its hold of him, Evil has on the whole the upper hand. To point out what seems to us to have been the weak point in Faust's armour, through which he became an easy prey to the devil, compels us to trench more closely on the domain of theology than we should have desired. But we shall be brief. We believe the poet meant to point out a fact of his own experience, and a fact which most, if not all, who tread the same path discover, that the most perilous stage in one's spiritual development is the stage when the revolt against dogma and tradition has been accomplished ; when the soul swells with the consciousness of new found freedom, and in the face of the upper and under worlds records, once for all, its high protest against the slavery of religious systems of man's invention. The emancipated intellect will henceforth bend to nothing but Law and Reason, and, having elected itself judge of what true Law and right Reason are, is apt to "falter where it firmly trod," and is fortunate, indeed, if it fall not on the Aleian field—

" Erroneous there to wander, and forlorn."

Faust had given up his belief in a personal God. His confession of faith occurs at a later stage of the poem, and we can only notice here that it is a confession of a Feeling rather than of a Faith. He believes in a power that weaves in eternal mystery, itself invisible, but rendered visible by its works. And he says—

" Fill up thy heart therewith, in all its greatness,
And when thou'rt wholly blest in this emotion,
Then call it what thou wilt,
Call it Joy ! Heart ! Love ! God !"

It is not for us, in this place, to pronounce for or against any theology whatever, we only mean to advance the simple statement that the moment when a man renounces a dogmatic creed, and a rigid rule of faith and action, and commits himself to the guidance of Reason and his own intuitions, is the critical moment in his history ; and it is then that he lies most easily accessible to the allurements of the tempter in whatever form he may present himself. There is an analogous stage in the secular life of every individual, when the youth is first emancipated from the arbitrary control of his parent, and takes the guidance of his life into his own hand. It is then, as we know, that most lives make shipwreck. And there is an analagous stage in the history of the body politic when the tyranny of despotism is overthrown, and the age of reason and the rights of man is reached ; and there is perhaps a Reign of Terror between the reign of *Grandes Monarques* and the reign of Law. These respective stages are often, if not always, necessary, and happy the State or the individual that is safely guided through them. Faust has reached the religious stage we have indicated, and has escaped from what he deems the land of bondage, but a waste howling wilderness lies between him and any safe land of promise, and the wings that are offered to waft him over it, and unfortunately accepted, are the wings of the tempter. Poor Faust ! we shall meet him by-and-by in the company of the devil. In the meantime we shall leave him for a little.

"THE UNIVERSITY AND THE MAN THEREIN."

["The inevitable jealousy of the Scotch and Irish Universities."—*Pioneer*, 1st *July*.]

THERE is only one nationality in the kingdom of the slightest consequence, or even respectability—that of the Anglo-Briton—and he naturally monopolises the only two academical institutions in it that can pretend to the title of "University"—a word of mysterious import, not to be treated lightly, but used with extreme caution, like the Eucharist. The Anglo-Briton has indeed much to thank Providence for, and next to his monopoly of the purest form of the Christian faith, he ought perhaps to be most thankful for his monopoly of *the* "Universities," *viz.*, Oxford and Cambridge, sometimes both. We are here conscious of expressing ourselves with a certain amount of confusion, pardonable however because the institutions in question possess a metaphysical attribute similar to that which once excited the amazement of an ignorant heathen, whose arithmetical faculty was stunned by the information that two was one, and one was two. Strange to say they are singular as well as dual, and are in consequence commonly spoken of by the initiated as "the University." The reason of this we cannot pretend to explain, and probably no one else ever will be able to do so. Meanwhile, it is more convenient to treat the subject in the singular, a plan tending to clear the ideas of our Anglo-Indian readers, who, after the perusal of this article, can hardly fail to perceive how and whence the principal administrative posts in this country should be filled up.

The University, as every school-boy at home knows, was founded by the learned and valiant Trojan, Brute, about the year 2,000 B. C. Its earlier history is more or less clouded by the mists of mythology, but emerges from obscurity some years later, when the eminent Roman physiologist, Julius Cæsar, there endowed a chair of obstetrics, not long before the birth of Christ. The operation bearing his name has since fallen into disrepute, though sometimes practised at the "Smalls" and often at the "Greats," usually *post mortem*. The business of the University is to realise the Platonic *beau idèal* of perfection, the harmonious blending of the beautiful with the good; and nobly it has discharged its functions. All the great writers, scholars, mathematicians, politicians, orators, statesmen, warriors, and athletes that have appeared in the British Isles during the last three hundred years or so, were without exception, *alumni* of the University. It will be sufficient to remind our readers that Shakespeare took a second class, the Duke of Wellington was a gentleman commoner at St. Blunderbuss's, and Jack Heenan, having entered as a sizar at Whackem Hall, consumed broken food there for several terms before emigrating to America with his impoverished parents. No one in the world can bear comparison with your University man, in point of intellect and educational attainments. His ordinary amusements consist in chopping Latin and cramming mathematics. Now and then, to while away the time, he caps verses, or bonnets problems, by way of a change. When out of sorts, he relieves his overstrained nerves by exchanging satirical repartee with a bargee, or milling a cad, exactly like Guy Livingstone. He is also prone to sport his oak, and have a wine, which being interpreted, means to shut his door and have a drink. He is inordinately fond of field sports, especially tuft-hunting. He likewise loves art; witness the exquisite taste with which certain enthusiasts decorated the statue of DuGuesclin at Dinan in Britany a few years ago, and the embellishment of various busts at Oxon by a curious encaustic process about the same time. In fact, we believe his grasp of mind to be such, that did he not modestly content himself with "*pulling down* the river," he might easily set it on fire. In the matter of social refinement, we know of none who would not contrast unfavourably with him outside of Swan and Edgar's celebrated establishment, and possibly Buckingham Palace. In proof of the admirable social qualities that he invariably carries with him into official life in this country, we should be doing him an injustice did we not testify to the fact that, pending the settlement of an official misunderstanding, the polished and magnanimous creature has been known to make his provincial brother feel the full sense of his immeasurable inferiority, by solemnly cutting the latter's wife in public with the utmost courtesy and decision. The University man's physique is magnificent. Some London footmen, the B. Division of the Dublin Police, and the *elite* of the Household Brigade, can alone hold a candle to him in point of bulk and stature. He is rarely less than 6 feet high, and, when the weather is genial, not unfrequently grows to 7 feet. His weight ranges from fourteen to twenty stone. Once a year, he has an athletic encounter with himself, and rows a boat-race with himself, in both of which he is always victorious, for the simple reason that he is the sole competitor, and, even if there were others, the result would still be a foregone conclusion. They would, of course, inevitably be beaten. Indeed, did any one else presume to suggest competition with him, he would treat the pretender to impossible distinction with silent contempt. On these occasions, the whole of England is convulsed with mighty throes, and every shop-boy in London wears either a light or a dark blue ribbon, as the case may be, in his billy-cock hat. Sometimes the University man, borne along on the breeze of popular favour, will then condescend to visit Evans's supper-rooms in company with the said shop-boy, and, should his liquor disagree with him, he will express his disapprobation of the performance by shying chairs at the platform, and smashing the chandeliers with the assistance of the shop-boy Should he happen to be, on the other hand, in good humour he will generously offer to fight any man in the room (for does he not average 5 feet 6 inches in height and 16 stone in weight?), by way of a treat for his young friend. But if he is strong, he is merciful, and it is on record that he has succumbed to a head waiter in a pugilistic encounter, after considerable hemorrhage and extensive solution of continuity in his garments rather than hurt the poor man who was doing his duty by trying to save his employer's property. Had there been enough of him out here between 1856 and 1857, we never should have had the mutiny, and, whatever falsified statistics may say to the contrary it is a positive fact that, as long as he chose to honour the Indian Civil Service by competing for a place in it, he always decorated the head of the list of successful candidates, leaving humbler aspirants from Edinburgh and Dublin to gaze at him in amazement from the bottom. Of late years, he has retired from the contest (the supposition that he has done so owing to the disappointment of his anticipation about the result, is simply absurd, and not deserving of one moment's consideration), because a wretched cripple, furthermore afflicted with a name suitable to the insignificance of his person, has dared to interfere with the magnificent creature's private arrangements. The accident is most deplorable, and we trust that no time will be lost in pacifying the University man's just indignation, inducing him once more to honour India with his presence. The means of doing so are at hand, and we are at a loss to understand why they have not been employed sooner. Hang or transport the obnoxious men and then frame rules which will effectually debar any but the everlasting University man from competing. What can be more simple?

EDITORIAL NOTES.

OUR London contemporaries are still exercised on the Burmese difficulty, urging firm and energetic measures. It is pointed out that the refusal to allow the passage of a British escort is really the withdrawal of an old concession, and can have nothing but a sinister motive; and that were we to allow this refusal, we could not command redress from China, and must give up the Bhamo route for all time to come. We believe a war with Burmah to be exceedingly undesirable, not more on account of the expenditure of blood and treasure, than on account of the risk of conquest, but at the same time the most energetic action is perhaps likeliest to prevent such a war.

***

THE *Times*, like most intelligent organs of home opinion, sees clearly that neither diplomacy nor force of arms can stay the inevitable progress of Russia in Central Asia. As she has advanced on Khiva she will advance on Merv, and we cannot stay her progress till she reach the borders of Afghanistan. "Masterly inactivity" is clearly the only practicable policy, To advance the Indian outposts to Herat, would simply be to invite a great war. Russia must know, and does know, that there is a "far and no further" which England cannot help insisting upon, and it would be folly on the part of England to fix a limit which she could not, and would not, strain all her resources to defend. But the policy of inactivity is really only inactivity in so far as empty threats, and demands for treaties which we are not prepared to uphold by war, are concerned. We should complete our railway system in the north-west, cultivate the best possible relations with Afghanistan, and be prepared, in case of need, to bring all the resources of our empire to the contest. If we pursue this policy with clear, calm, resolution, there is no ground for supposing that Russia will ever provoke us. In the event of a European war, matters in Asia might be different, but at present there is no power that has so much reason

as Russia, for seeking to preserve the peace of Europe. Her efforts to do so are unquestionably honest, for they are self-intereste d.

WHO is responsible for the quality of the paper, bearing the Government stamps, which the public are required to use for almost every important document they have to prepare? We have at this moment before us two such stamps impressed upon the veriest rubbish ever turned out of a paper mill. The paper is so rotten that the ink goes through it as if it were rag. If responsibility were not a mere phrase in the public service, the history of this paper, would be traced at once, and the "jobbing" officials and contractors through whom it is supplied, get their deserts. When it is remembered that thousands of these stamped documents are of such importance that the paper ought to be imperishable, the apathy that tolerates the issue of such rubbish becomes most irritating. The Stamp Department should see to the matter at once.

***

THE French papers protest against the authorities planting elm, ash, poplar trees, &c., along the road sides, and demand that fruit trees be cultivated instead, as is the case in Switzerland and Germany. Might we not take the hint in India?

***

THERE has been much erroneous news of late touching an alleged cure for the vine disease, the *Phylloxera*, in France. Unhappily the question is just in the same state as it was months ago, when both the vine and its enemy went into winter quarters. The evidence appears to accumulate in favor of manuring the vines, to fortify them against the insect, and the only poison-powder employed is that suggested by the distinguished chemist, Dumas, sulpho-carbonate of potash or soda, at the rate of 85lbs. per acre, dissolved in 500 times its weight of water—to be applied after the manure (guano at the rate of 5 cwt. per acre) has been incorporated with the soil. The salt, as it slowly decomposes, generates sulphuret of carbon and sulphuretted hydrogen; two poisons which kill the *Phylloxera*; the potash or soda set free nourishes the roots at the same time. The present season will witness these remedies fully tried. Can our own planters learn nothing from this?

***

SOME weeks ago, we expressed our doubts whether the riots amongst the cultivators in the neighbourhood of Poona were really caused by the new assessments that have been introduced into some of the talooks of that collectorate, in the last few years. We now learn that, so far from being confined to the districts in which the new assessments have been introduced, the disturbances have been as marked in the adjoining collectorate of Ahmednuggur, where the rates are almost nominal, and have been so for the last five and twenty years. The public may not trust a single statement made by either the *Bombay Gazette* or the *Indu Prakash* on the subject. It is hard to believe that either journal wilfully misrepresents matters, but the conduct of the former has ever been marked by such irrational hostility to the land revenue as the source of the nation's income, that it has been out of court on the subject for many years. It has neither the calmness to see, nor the honesty to state, what Indian economists are obliged to maintain concerning this subject. We were long since tired of replying to such statements as that "Mr. Knight and the civilians who write for him" advocate the policy that "as high rents as possible should be taken from the ryots." All real morality in public discussion is violated by such writings, and we have passed them by, as unworthy of notice.

***

WE thought we had made the reasons on which the new tariff arrangements concerning cotton are made, clear to the comprehension even of a child. We were either obscure after all, or our contemporaries are very obtuse. Thus the *Statesman* writes: "If we "wish to see the new measure in all its glaring absurdity, we have "only to suppose India to be Turkey. The Porte, pressed by financial necessities, is forced to levy an import duty of 5 per cent. on "Manchester goods. But Turkey has also mills of her own (we will "suppose), and the Sultan forthwith decrees, in accordance with the "modest request of the English Ambassador, that the local industry "be taxed in order that Manchester may lose nothing by the "duties imposed!" To reply is almost to suppose the public is wanting in intelligence. Does the writer not see that if the import duty is to realize the purpose for which it is imposed, *i.e.*, for revenue, the Porte *must* put an excise upon its own mills, or stultify itself? What is the use of an import duty if it is to be made nugatory by the home mills producing the goods that are required?

***

THE *Statesman* says: "If language has any meaning, Mr. Hope distinctly tells the local manufacturers of *fine* cotton goods, not that they shall compete with Manchester on equal terms, but that they shall be liable to the imposition of an augmenting excise duty till competition becomes impossible. If this is not protecting Manchester against India, what is it? Here are Mr. Hope's own words, previously quoted by us, but repeated for the benefit of the *Friend*: 'The fact of the duty on imported twist being 1½ per cent. lower than that on cloth gave an encouragement to Indian mills to make the finer cloths for such twist. If it were thought by the English manufacturers that this modicum of pretection was injurious, no doubt the Government would be ready to consider any representation they might make on the subject. . . . . If, in spite of such precautions (an increase in the duty on twist), the Indian local manufacturers should assume more important dimensions than at present, then there appeared no doubt that the proper course would be, not a repeal of the import duty with its concomitant resort to more objectionable taxation, but the imposition of an excise duty.'"

Mr. Hope *is quite right, although the Statesman* cannot see it. The duty is levied for revenue purposes. It would not be levied at all, if we did not need the million of revenue it yields. The *Statesman* itself admits this, and yet blames Mr. Hope for saying that if the Bombay mills prove as successful as they promise to be, we shall have to put an excise upon their produce. Of course we shall—or lose our customs revenue, which by the supposition we cannot afford to do. If the Bombay Mills can compete successfully with Lancashire in any class of goods whatever, the import duty on that class of goods becomes at once a purely *protective* duty, as the veriest sciolist ought to be able to see. The truth is that our contemporaries are advocating 'protection' pure and simple. If they will raise that issue, there may be something to say in its favor. At present they are in hopeless confusion on the subject, while they think they see clearly. Is it no protection, we ask, to the Bombay mills, that they are simply to pay duty upon the raw material, while Manchester is to pay upon the whole manufactured fabric? One would certainly suppose not from these writings.

***

A CONTEMPORARY points out that "the *Friend of India*, in a single issue, vindicates both the Manchester and Mandalay policy of Government, against which the rest of the non-official Anglo-Indian press 'is barking, like a bobbery pack.'" We have never been accustomed to follow "a pack," for we have so commonly found it on a wrong scent, that it never troubles us to course alone. Nine times out of ten, we have had the satisfaction of seeing it admitted afterwards that we were right in doing so. It is generally the case that in the initial stage of discussion, it is the minority that is right; for truth seldom lies on the surface of such questions as the propriety of taxes.

***

MR. PLIMSOLL'S explosion in the Commons against the "villains inside the House," who were sending our seamen to certain death in the floating coffins for which they are impressed, appears to have been levelled against Mr. Edward Bates, the member for Plymouth and well known Liverpool shipowner. The scene is described as follows:—

MR. PLIMSOLL.—I will ask the right honorable gentleman whether he will inform the House as to the following ships, the *Thetis*—the *Melbourne*, the *Nora Gray*—which were all lost in 1874 with eighty seven lives, and the *Foundling* and *Sydney Dacres*, abandoned in the early part of this year, representing in all a tonnage of 9,000 tons; and if he will tell the House whether the registered owner of these ships, Edward Bates, is the member for Plymouth, or if it is some other person of the same name. (Cries of "Order.") And, Sir, I will ask some questions about members on this side of the House also. I am determined to unmask the villains who send men to death and destruction——(Loud cries of "Order" and excitement.)

[The honorable member here hurriedly left his seat near the cross benches and walked up the House with the question in his hand, apparently for the purpose of giving it to the Speaker. The Speaker, however, rose at the same moment, and there being loud cries of "Order," the honorable gentleman sat down in the gangway.]

The SPEAKER: The honorable member makes use of the word "villain." I presume that that expression is not intended to be applied to any member of this House.

Mr. PLIMSOLL here stepped quickly to the centre of the House, immediately in front of the table, and looking at the Speaker said: "I did, Sir, and I don't mean to withdraw it." (Loud cries of "Order." Several of the honorable gentleman's friends endeavoured to make him sit down.)

The SPEAKER: The observations of the honorable member are altogether unparliamentary, and I must again call upon him to withdraw them.

Mr. PLIMSOLL (who was still standing in front of the table) : And I must again decline. (Loud cries of "Order," and sensation.)

The SPEAKER : Does the honorable member withdraw the expression ?

Mr. PLIMSOLL (shaking his fist at the honorable member for Plymouth, who sat on the second Ministerial bench) : No. I don't. (Sensation.)

Thus challenged, Mr. Bates seems to have pulled himself together, and after a pause to have addressed the House as follows.

I ask the indulgence of the House whilst I make some reference to t' s extraordinary and distressing exhibition we witnessed this afternoon. As to the statements made and the epithets used about myself I forgive them—(hear, hear)—as I think everybody who witnessed the conduct of the honorable and junior member for Derby will agree with me in saying that he was evidently not responsible for his actions or sayings. Sir, it is too true that during 1873, 1874, and 1875 I lost five ships; four of them were coal laden, and one was on her way back from Calcutta. All were ironclads, and all were classed A.1. (Cheers.) I believe they were all as good ships as ever went to sea. These particulars I think it necessary I should give to honorable members. To myself, pecuniarily speaking, the loss was very severe, as I never insure my ships for more than one-half or two-thirds of their value ; but this was but a small consideration with me, for I deeply deplored the loss of my men. (Hear, hear.) As far as human foresight could go, the ships were as good and safe as it was possible to make them. (Hear, hear.) As for myself, I think I may leave my character as a merchant and a shipowner with the public outside. (Hear, hear.) I and my ships have been known for a quarter of a century, and no shipowner stands higher with his underwriters. The statement made by the honorable and junior member for Derby will be looked upon by those to whom I am known as I regard it myself—with pity. I thank the House for listening to this explanation, and I feel sure they will not think that I have troubled them unnecessarily. (Hear, hear.)

We presume that this gentleman is the Edward Bates of Edward Bates & Co., Bombay ; and we should like for special reasons to hear the reply of that community to the challenge.

***

WE all know that the *Pioneer* has angels, and though not perhaps very numerous, they yet form a considerable band of heroes. We may suppose that one angel differs from another in glory, as all can hardly be equally worthy. Just at present, Sir J. Strachey seems to have been promoted to the rank of archangels. He is like the constitutional king of Great Britain who, in the language of our jurists, "can do no wrong." Thus our contemporary lately published an account of the destruction of Rundheer Singh the outlaw, and his gang ; and briefly commented on the result as being highly flattering to Sir John Strachey, stating that his Resolution had the rare merit of achieving its object. We do not wish for a moment to detract from the *merits of* Sir John, but we do not quite see the force of the *Pioneer*'s reasoning. Our readers will perhaps remember the Resolution which was commented on in these columns, and the opinion which we then expressed. It was a vehement denunciation of officers who failed in an attack on certain outlaws, conveyed in language which we considered any thing but dignified. It was nothing more than this. There were no suggestions as to future action, no sketching of a plan of operations, no exhortation to renewed effort. It was entirely punitive and retributive. Yet when the authorities of the Jhansi Division succeed in destroying the whole gang, the *Pioneer* at once attributes the success to Sir J. Strachey's Resolution, which it dignifies with the name of a State document, and also we suppose to its own eager support of Government in publishing and approving of the Resolution. Resolutions do not man police posts, collect information, and mark down outlaws. The Commissioner of the Division, the District Officer of Lulleetpore, the Political Agents of Gwalior, Bandelkhund and Kherec, probably all shared in the disposition of forces which was at last successful. It is asserted that the Supreme Government have acquitted Colonel Davidson (the Commissioner of Jhansi) of the graver charges made against him but hold him to have been guilty of some degree of negligence in the matter. An officer's reputation may survive a judgment of this order, and Colonel Davidson may perhaps be open to some reflection in the case ; but this is a widely different matter from the strong language of the original resolution. We have little doubt that Sir John Strachey himself on reconsideration would have wished to modify its terms.

***

FROM a return to the Commons, we find that the estimate of the naval expenses connected with the visit of the Prince of Wales to this country, so far as they come in course of payment in the year ending March 1876, amount altogether to £42,850, while an additional £3,000 will be paid during 1876-77. The amount for wages to the additional officers and men to be employed is put down at £3,500, the cost of provisions at £ 1,200, the preparation of the ships £4,580, coals and stores £24,770 , and other expenses about £9,000. The canal dues alone well amount to £5,000.

***

IN spite of their culture and reading, even well educated Englishmen have little understanding as a body of the true state of matters on the Continent. They understand little of France, except Paris : have but the most general and inexact notions as to the inner life of Spain, Italy, and even Germany, while Russia is all but a sealed book to them. That Russia is honeycombed with communism views, and that there is a real danger of her masses precipitating themselves in a socialistic propaganda against the West, is hardly known by one Englishman in a thousand. And yet we have been assured by exact enquirers, German chiefly, that the fact is really so. The correspondent at St. Petersburg of the *Eastern Budget* tells us that the recent circular of the Minister of Education on the socialistic propaganda in the empire has produced almost a panic among the educated class of Russians. "According to the picture drawn by the Minister, the state of affairs is indeed alarming : parents are teaching their children the wildest communism, and the national schools have become hotbeds of revolutionary ideas. Every one sees and admits the evil, but it is hard to find a remedy. To render the school discipline more strict would only make matters worse, and indeed it is already too strict. The real source of the evil is that the Russian people are driven into extravagant and morbid political theories by their being forbidden to take a practical part in politics ; and the Government must make up its mind to face the alternative of either a socialist revolution compared with which the convulsions through which France has passed are mere child's play, or the adoption of some sort of parliamentary system." The existence of this state of matters has long been known in well informed quarters, and we recommend such of our readers as would like to study the matter, to M. Erckhardt's book on the Russian Empire and people. The outburst upon Europe of a revolutionary torrent from Russia is a political complication quite upon the cards ; but the fact is better known in Germany than in the west of Europe. It is impossible to foretell what the issue of such a movement would be. It would in all likelihood solve the Eastern question in a very unlooked for manner.

***

THE law of contempt would appear to be very lax in New York, from the strange things that were said and done during the Beecher trial. The newspapers were violently partizan throughout. Some of them roundly declared during the progress of the trial, that the jury were bribed by Beecher and his friends, even going so far as to name individual jurymen who were said to have good reasons for their verdict. The opinions of the jurors were known during the course of the trial. The slow-going British people must be amazed to see their ancient and revered institutions "developed" in this way by the go-ahead Americans. Private detectives it is said were employed to find out the opinions of the jurymen. When they could not do so by cultivating the acquaintance of the Jurors' female relatives, they took lodgings in their houses for weeks. The free institutions of a free people, in the land of progress in the nineteenth century, are worthy of study. A still graver subject of thought is the nature of the religion of such churches as Plymouth Church, fostered by such men as Beecher, with the people bowing down and worshipping him after a trial in which, though abundantly shown to be a very objectionable man, he has not been *proved* guilty of the crime laid to his charge. It becomes painfully manifest that much of the popular religion of the present day is a mockery and a delusion. Loud eloquent preaching, and stirring meetings, seem not inconsistent with quackery, hypocrisy, barefaced impudence, lewdness, and all immorality.

***

THE *Economist* has a quiet laugh over the recent debate in Parliament about Central Asian affairs. England is full of machinery and of armies of skilled workmen in all departments of industry, while Russian industry is almost exclusively that of a backward agriculture. Russia again has a most imperfect railway system, and does not yet possess even roads, while England has had good roads all the century, and has for twenty years possessed complete railway communications. Our mercantile navy at the beginning of the century was but one out of several nearly equal fleets ; it is now predominant on the seas over all countries, including Russia, in a way that no navy ever was before. There has been no growth of resources anywhere like it, certainly not in Russia, where the discoveries and in-

ventions of the last fifty years have made slow progress from the previously backward condition of the people. Not only, have we far more men relatively to Russia than we had at the beginning of the century, and not only has this growth been steady, but our power to send out armaments of every kind has been relatively multiplied. The exhaustion of Russia at the close of the Crimean war, while our own resources were hardly touched will not be forgotten; and while Russia no doubt could make a much greater effort than it did then, it is beyond question that we could double or treble our Crimean war exertions, and yet hardly feel the strain. No doubt it may be urged that the Russian Empire in Asia has grown immensely in area since 1812; but this growth is a drain upon Russian resources, and thus a heavy disadvantage to her in any decisive struggle, apart from strategical positions which might or might not be of service at first. It is moreover insignificant compared with the growth of the English Empire. Our hold of India, it must be remembered, has been acquired during the present century. The Punjab alone, which has been annexed since 1848, is worth double the entire territory of Russia in Asia, including the new conquests. We have been annexing little since then, but our power has been enormously increased by our railway system, whereas Russia as yet is without a mile of railroad in all her Asiatic possessions. Outside of India, again, the growth of the English Empire, in Canada, in Australia, and other colonies, has been prodigious. And although the connection of our colonies with the mother country may be loose, they would certainly be an addition to the strength of the "nucleus," and not a deduction from it, as is the case with the Asiatic possessions of Russia.

***

THE *Inflexible* double-turret armour-clad, which is in course of construction at Portsmouth, represents at the present time the highest attainment of constructive genius as applied to naval warfare. She is well deserving of the attention which she arouses, being in every sense the most formidable engine of war ever conceived. With the exception of the three broadside ships of the *Minotaur* class, she is the largest ironclad in the navy. She will also carry the thickest armour and the heaviest guns, will have the largest displacement in tons, and will prove the most costly ship ever built. It is indeed only by superlatives that she can be described. In addition to her armament she will be furnished with a submerged prow, so that she will be able to butt an enemy with her head as well as penetrate him with her guns, while in addition to engines working up to 8,000 indicated horse-power, she will be provided with a couple of iron masts which will, however, be mainly used as derricks. Among her other excellent qualities she will, while spreading havoc around, be herself impervious to any gun afloat in any ship except our own; and notwithstanding her stupendous offensive and defensive power, she will, according to the recently pronounced dictum of Mr. Reed, be as fast, as handy, and as mobile as any vessel that has preceded her. The *Inflexible* was commenced at Portsmouth on the 24th February 1874, and may be regarded as one-fourth completed, though, so far as external appearance goes, she appears to be in a much more forward condition. There are 600 men employed upon her hull at present, and upwards of 2,000 tons of iron have been already used. Nearly the whole of the beams, with the exception of a few aft on the upper deck, are in their places, the structures for receiving the engines and boilers are being proceeded with, the stern tubes for the turn screws are being fixed, and the teak backing is being arranged for the iron plates on the sides of the citadel. The stern-post was manufactured at the Mersey forge, Liverpool, in consequence of the great pressure of work at the yard, but the rudder itself, which is of colossal proportions, is being forged at the dockyard smithery. The *Monitor* is expected to be ready for launching in April next, when it is probable that her present name will be changed. The *Inflexible* has been succinctly described by her designer, Mr. Barnaby, as a rectangular armoured castle, 110 feet in length and 75 feet in breadth, and protected by 24-inch total thickness of iron. The other parts of the ship, which are not armour-plated, are simply used as a means to float and move this invulnerable iron citadel.

***

AN enquirer asks us what is the true meaning of "the wedding garment" in the 22nd chapter of St. Mathew. There is great difference of opinion, we believe, amongst commentators upon the point. Father Lacordaire's practical application of it, as quoted by Faber, is exceedingly good. "It is the temptation of some," says the great Dominican, "who are called as it were by chance to the "highway of life to replace other guests who were invited and have "not come, to persuade themselves that they are the objects of God's "special predilection and to neglect to make their calling save by an "exact fidelity." This state of mind is not uncommon, we think, in Evangelical bodies, being fostered by the great prominence given to the crisis of "conversion" in the individual life. The "converted" man is very apt to think himself the special favorite of heaven, and the more so in proportion to any peculiarity of circumstance under which the change took place. It has been remarked that we may lay it down as a rule that the severity of our judgments concerning others, even where judgments are legitimate and unavoidable, is an infallible index of the lowness of our own moral state. The more severe we are, the lower we are. Nothing is more common than to find a man who is himself openly irreligious scandalized by the least appearance of worldliness in religious people and straightway speaking of them as hypocrites. It is part of the evil within us to put the worst construction upon what we see, and while the really good will often astonish us by what we think the laxity of their judgment concerning others, the bad are prompt to condemn without reserve. We do not ourselves believe that conscious hypocrisy is very common in the world, and men are far too ready to ascribe simple inconsistencies of conduct to the deliberate wearing of religion as a cloak.

***

M. WAHL, in his lately published work on Russia, where he resided several years, speaks of the Russian horses—those of the Tcherkesses—with enthusiasm. The Russians proscribe winkers as a barbarity. The horses of the Tcherkesses are reared in the midst of the wild steppes, in scenes of nocturnal alarms and dangers, which develop their sagacity in a remarkable manner. The back is large, the breast powerful, the hams extraordinarily full, while the hoof is as hard as iron and as sure as a mule. The head and neck are light. The animal is chosen from among the best in the troop, and the owner admits it virtually into the family circle, as it assists at meals, and often sleeps in the room. The children speak to it, climb up it and play between its legs, or pass the day on its back, so that the animal finishes by acquiring an exceptional intelligence. No adult is ever permitted to mount, till the horse is six years old—the period necessary to impart solidity to the frame. M. Wahl draws attention to the advantages of treating horses kindly, and laments the brutality to which they are so often subjected by reckless or drunken servants. He truly says, all animals maltreated will in the long run become vicious; hence the difficulty to make them work, to sell well, or to obtain a good price for their progeny, for it is an established fact that vicious habits are transmittable.

THE WEEK.

THE year 1875 will figure in meteorological annals as one of floods. In Asia, in Europe, and America alike have the windows of heaven been opened, and although the gigantic calamity in the south of France has dwarfed other floods into comparative insignificance, the general downfall has been exceptionally severe and disastrous. The last mail brought intelligence of floods at Windsor, Newbury, Oxford, Bedford, Norwich, Cambridge, Manchester, Birmingham, Lamington, Coventry, Burton-on-Trent, Leicester, Rugby, Nottingham, and Newcastle-on-Trent, all occurring on the same day, a more general rainfall than has probably been known for a century, and it is to be feared that the damage to standing crops and to property in general will yet be severely felt. In India now that the North-West has been relieved, Burmah is the sufferer, the rainfall there during the past week having been almost unprecedented. We are not yet in possession of the details, but those referring to the floods in North-Western India are heart-rending. Immense damage has been done throughout two hundred villages, chiefly on the Tonse and Belan. One hundred and seventy-four lives have already been recorded as lost, the crops over a wide area have been injured, and there has been a great loss of agricultural cattle and store grain. A fresh landslip has occurred on the Bhore Ghât. Just as passengers from the first Bombay and second Poona trains had changed carriage on the two sides of the great landslip which occurred the week before last, a gurgling sound was heard to proceed from the direction of the "obstruction." It was at first conjectured that the gunpowder which is used in blasting had exploded; but it was soon discovered that a great fresh landslip, accompanied with slight injury to the workmen, had taken place. Three or four of them were more or less injured by the falling *debris*, which was estimated to amount to a thousand tons. The overhanging rocks near this spot make the line most dangerous still. There have also been extensive in-

undations in Japan, the water of the rivers having risen twenty feet above the average level. Three hundred villages have been destroyed in a single province.

THE extreme north of India has also suffered from heavy floods. The embankment of the Punjab Northern State Railway, opposite the Fort, has given way between Lahore and the Back Channel. The gap is now about 100 yards wide, and through it water is flowing freely to the river. Colonel Young and Captain Nisbet went out with Mr. Conder to enquire into the cases of the villages and houses, and arranged to send relief by boat. Three days' Peshawur mails were one day at Kalka, about thirteen miles from Lahore. "All the country between here and Kalka is under water," writes the Lahore journal. "We fancy the canal has done most of the mischief to Lahore, and probably led to the breach of the State Railway protection works." The extent of the damage during the past week in Lahore is nearly as follows: In the city, between 500 to 1,000 houses destroyed and 35 lives lost, and in Anarkallee and Donald Town, the European quarter, about 40 houses occupied by Europeans have been wholly or partly rendered uninhabitable. The villagers about Lahore have, however, suffered most severely, their huts being washed away, and numbers of their cattle destroyed or dying from want of herbage. We hear from Umritsur that the rainfall has been almost as heavy there as at Lahore, but there has been less destruction of house property. The new jail has, however, succumbed to the elements and been completely destroyed. A public meeting for the relief of the sufferers by the recent inundations in the North-West has been postponed till the 24th instant. The latest information estimates the loss at 177 human lives, 2,428 cattle, 10,024 houses, 115,436 maunds of grain, and 39,066 acres of khureef crop. The total value of the property destroyed is Rs. 1,450,000, the loss being confined principally to the city of Allahabad and the localities bordering on the Tonse river.

IN Madras a frightful catastrophe has befallen a large party of pilgrims to the Mahalingam shrine on the Tinnevelly frontier. They were camped in the dry bed of a torrent at the base of the shrine on the evening of Sunday last. A correspondent says, thousands of men, women, and children were talking, or eating, or dancing in the sandy bed; hundreds of sheep and fowls, brought up to be sacrificed, stood in mournful groups, each awaiting its turn. At 5 o'clock there was a heavy shower of rain, but the multitude stirred not; ten minutes later, the hitherto dry bed was full, and the freshet rushed down headlong, carrying those who, notwithstanding all their frantic efforts to gain the bank, could not force their way through the crowd. "Husbands rushed for dear life, leaving their wives behind and *vice versa*. The piteous cries of men, women, and children who were being carried away moved not their surviving friends or relatives; indeed, in the general confusion, which was rendered still more dreadful by the darkness, nothing in the shape of assistance could perhaps be tendered or received. The water did not gradually rise, else the people would have escaped; but a wall of water came down unexpectedly, and rendered any attempt of the rear ranks to gain the shore problematical. In half an hour the water had fallen considerably, and one hour after the catastrophe there was no water in the bed, only the surface was wet and slippery." Many dead bodies intercepted by roots and bushes were picked up; a large number were seen floating on towards the Watrap tank; some were found jammed between stones; and only a very few of the ill starred lot saved themselves by catching a friendly bough. A poor bricklayer of Madura, who had gone to the feast with his wife and five children, perished with all of them; a whole family of oilmongers shared the same fate; a young bridegroom on his honeymoon trip escaped, but his bride was lost. It is believed that over two hundred men, women, and children must have perished.

A CONTEMPORARY tells us that Colonel Davidson, who was so unmercifully "wigged" by Sir John Strachey on account of the escape of Rundheer Sing, has been exonerated by the Supreme Government from all but the charge of negligence.

EUROPEAN British subjects in Travancore will be glad to hear that their rights and interests have been fully provided for in a judicial notification published at Simla. If they commit any offence against the majesty of the law, they can only be dealt with in the first instance by a European Justice of the Peace. The Government has appointed six European Justices, including the Resident of the State for the time being. The Resident will exercise the powers of a Sessions Judge, and the High Court of Judicature at Madras will exercise original criminal jurisdiction over European British subjects of Her Majesty, being Christian residents within the said State; will also exercise appellate jurisdiction over all sentences passed on European British subjects as aforesaid by the Resident acting as a Justice of the Peace or as a Court of Session in cases in which an appeal lies to a High Court under the Code of Criminal Procedure; and will further exercise the powers conferred on a High Court as a Court of revision by the Code of Criminal Procedure in all cases in which European British subjects are accused in the Travancore State before any Justice of the Peace as such or before the Resident as a Court of Session. Commitments of European British subjects, when made by the Resident acting as a Justice of the Peace, shall be made to the High Court. The notification comes into force on the 1st September next. Similar regulations have been framed for the benefit of European British subjects in Cochin. In both cases, however, there is a reservation to the effect that "nothing herein contained shall be deemed to interfere with the exercise of any powers with which any of the Justices named may be invested as Judges of the State of Travancore in pursuance of the arrangements recently assented to by the Governor-General in Council for the administration of criminal justice in the said State in cases where European British subjects are accused."

ANOTHER Anglo-Indian of some note in his day has just passed away, aged sixty-five years, in Paris. We refer to Mr. Paterson—more familiarly known as "Pat—" Saunders, who, twenty-five years ago, edited a small paper called the *Agra Messenger*. In many things he was not unlike John Lang. He was adventurous to a degree little understood in these latter days, a brilliant writer, an unfortunate speculator, and a thorough gentleman, more fitted to live in the days of the Crusades than these prosaic times.

THERE is little fresh news about the visit of the Prince of Wales. Bombay is subscribing loyally, and Calcutta generously, while native Princes of any note are furbishing up their capitals. A regiment of British cavalry, a regiment of Native cavalry, a regiment of British infantry, and two batteries of horse artillery will meet His Royal Highness at Bombay, and an escort of British cavalry will conduct him throughout the tour. Whether the journey from Bombay to Madras will be by rail, or ship by way of Ceylon, is more than can yet be told, but this has been arranged, that after going to Lahore and returning to Calcutta, the Prince will then cross India and embark at Bombay. There is therefore a prospect of Bombay, like Calcutta, being honoured with two visits. If His Royal Highness does not pass through the Nizam's territory on his way to Madras, that is, if he goes by ship, he will receive the Nizam at Ellore. Not more than £20,000 or £25,000 will be spent in presents. Though there will be nothing of such intrinsic value as diamonds and precious stones, every article will have a special appropriateness. There will be, in addition to some of the things that we have already mentioned—such as guns, clocks, carriages, watches, vases, porcelain-ware, and royal portraits—a large number of seals and signet rings bearing the Prince's plume. There will also be a few splendid gold or silver statuettes, by Boehm, of the Prince on horseback in his uniform as an officer of Hussars. There will also be an investiture of the Star of India, but what will be of far greater importance will be the institution of a new Order, belonging to the class of family Orders, like that of Victoria and Albert, and those in the family of the German Emperor. "Whoever of the Indian Princes receives this high distinction may claim to be a personal friend of the future King of England. The number of guns in salute to some of the Indian Princes will also be increased. His Royal Highness is taking intense interest in the preparations for this visit, and there is not a detail of it that escapes his observation."

THIS has been a week of railway accidents. On Saturday night last the down mail train from Jubbulpore came to grief in some mysterious manner a few miles beyond Kutnee. The driver, a platelayer, and six native passengers were killed outright, and a large number of other natives seriously injured. The engine went off the rails, and several of the carriages were completely destroyed. There were only two European passengers, and these escaped almost by a miracle. Their carriage was thrown on the top of another and they were pitched out on either side, the bottom and sides of the carriage simultaneously giving way, and the roof collapsing. There is a rumour that some of the bolts connecting the rails with the sleepers had been removed.

THE populace of Pekin and the neighbourhood, who have hitherto been noted for their inoffensive conduct towards foreigners, have apparently felt the necessity of acting in union with their fellow subjects at Chinkiang and other parts of the empire, for the last few weeks have witnessed a succession of serious exhibitions of

popular illfeeling, which in any other part of the world except China would be considered deserving the attention of the representative authorities. "Here however," writes a local paper, "with such politicians as Sir Rutherford Alcock, it is only considered retributive justice for the misconduct of those unfortunate men engaged in the China trade. This was a satisfactory enough hypothesis, apparently, for such apologists, while the attacks were confined to members of the mercantile community, but now it will be curious to see the excuses given for the antipathy shown to officers of that distinguished profession to which Sir Rutherford owes the position he was called upon to fill." It is to be regretted that Sir Rutherford Alcock should be disappointed at his ill success in diplomacy in China, but this hardly justifies him in visiting his own shortcomings on the mercantile community of China and Japan. The demonstrations to which we have alluded are: 1*st*—An attack on Dr. Bushell, of the English Legation, Pekin, who (accompanied by Mrs. Bushell) escaped with difficulty from being pelted with stones by a Pekin mob. 2*nd*.—The attack on two Cossack soldiers of the Russian Legation, who were assaulted and seriously injured by the mob. 3*rd*.—An attack on Baron von Mollendorf, of the German Legation, and four gentlemen of the English Legation, who were seriously assaulted near Pekin. The following particulars of this last incident are just to hand: Baron Von Mollendorf, Messrs. Hopkins, Holland, Colthard, and another gentlemen of the English Legation left Pekin on Saturday, the 19th July, for an excursion to Pay-hwa-san (the Hundred Flower Mountain) in the western hills about forty miles from Pekin. They reached the temple on Saturday evening, but found all the rooms occupied except one, as there was a considerable number of Chinese assembled there on account of the celebration of the "three months' festival." They took possession of the small room allotted to them, and joined freely with the people, conversing with them in the most friendly manner. At 6 o'clock in the morning they were disturbed by a volley of stones thrown at their windows and doors, and after a violent pelting the roof and walls gave way and they were subjected to the full force of the assault. Affairs were most critical, and the only escape appeared to be firing revolvers together over the heads of the mob, and by this means creating a diversion. This was accordingly done, and fortunately it had the desired effect, for the mob, frightened, retreated momentarily, allowing sufficient time for the party to make good their escape, all more or less injured. They reached Pekin at 10 P.M. at night, and there appears to be no doubt that if they had not had their revolvers with them they would have been killed, although the fact of carrying revolvers, in the light of the Chief Judge's ruling last year at Chifoo, would appear unjustifiable. As it was, the valuable astronomical instruments of Baron von Mollendorf were destroyed, together with all the provisions.

PARIS GOSSIP.

(FROM OUR OWN CORRESPONDENT.)

PARIS, JULY 24.

THE lamentations in the Liberal camp are loud and deep at the "victory" the clerical party has obtained in the matter of superior instruction. However, the afflicted do not show where their opponents enjoy privileges by the law, not as freely open to themselves. The fact is the new law gives permission to everybody to establish Schools or Colleges, after complying with various formalities: the clerical party has plenty of money to commence work, and the laity has not; hence the sting. But you cannot ask the Church to wait to establish their colleges till laymen are in an equally good position. The State will control the granting of the degrees, and in the present state of France this is the chief point to uphold and to watch. If the Liberals cannot profit by the arms the law places at their disposal, the loss will be greater for them. The field is open to all.

Primary instruction in the Municipal Schools is making rapid progress. Thus in 1871, there were only 68,000 pupils, at present the number is 96,000 in attendance. An amelioration introduced and highly prized, is that of furnishing the pupils gratuitously with their necessary school requisites. There are 23,500 infants in special schools, and double that number require accommodation. The salary of the head lay teacher varies from francs 1,600 to francs 2,000; that of a *religieuse* is but francs 850; the masters of the Boys' schools enjoy salaries from francs 2,200 to francs 3,400, their assistants francs 1,600 to francs 2,000, and pupil teachers francs 400 to francs 600. School Mistresses are paid from francs 2,000 to francs 2,900, and the *religieuses* francs 800. Where a male and female teacher are married, they can live very comfortably, especially as they have house-rent free, but then their qualifications must be of a superior order to obtain the higher grades. The object of the Municipality is to induce the teachers to regard their work as a profession worth living by. But it is a very weary life.

The Orleanist Princes keep retired; their friends, however, are in power, and will remain so, till after that political day of judgment, the general Election. The members of the family, to judge by the papers, seem to be occupied solely in celebrating obituary masses for their departed relatives.

Affairs at Toulouse progress as well as can be expected. The distressed are occupied in repairing their shattered fortunes: and occupation is the best antidote for grief. There is the prospect of a new inundation and of another kind. The Mayor of Toulouse is deluged with "original poetry," which he is free to sell for the benefit of the sufferers. Apologising for a bull, it would be well if, for the future, the opening of doors of all exhibitions of an "international" character was deferred to the closing day, as then there would be a certainty that the exhibits would be in their places. These remarks apply to the Maritime Exhibition in the Palace of Industry just "opened." A more melancholy official ceremony could not be witnessed. All was as cold as the banquet: the show is more than incomplete and the exhibitors are behind time, none more so than those from England. In a few weeks the exhibition will be worth a visit; at present, it resembles the Grecian who when desirous of selling his house brought a brick to the market as a specimen.

Granier Cassagnac has not yet kicked Gambetta, though numbers of people collect at the Saint Lazare railway station to witness that interesting political and boot trick. The manufacturing of freemasons is the most lively industry at present in Paris, the object being to vex the Pope. Perhaps more "lodges" might lead to the practical virtues said to be the appanage of the craft: the field is very wide for the exercise of some calming draughts. An additional headache has been caused the Ultramontane party, by Edmond About asserting that their big gun the *Univers* was chiefly supported by the Jew Miris. An action is threatened, which is a pity, as a series of passages at arms between About and Veuillot, the best writers of modern French, either of good or bad styles, would be eminently interesting.

A painful spectacle occurred a few days ago on the Boulevard Strasbourg, that of an omnibus being conducted by a dead driver. The unfortunate man was killed on his box by sunstroke, and was not observed to be dead till he nearly rolled off. The drivers during a hot day and after their dejeuner try to indulge occasionally in forty winks as they perform their duty; but great Homer himself took a nod over his work. How explain the phenomenon that the drivers of Paris busses prefer to go bare-headed, finding that the sun is fiercest when everybody else seeks shelter under parasols or broad brims?

Quite a respectable war is raging between the Ultramontanes and the general newspapers on the question of free-masonry. It would seem that all Paris intends to be initiated, if not in the interests of brotherly love, at least to vex the Church. After *Littré*, Victor Hugo, it is said, will be made a mason, and of course his reception would furnish the occasion for a grand discourse; perhaps he might publish a poem or a novel on free-masonry. Poor Littre is being roundly abused for his address on ethical toleration; he is a bent, feeble old man at present, but in his day he could hold an ordinary table upon his hand; he has put all his strength, almost his life, into his great Dictionary. His opponents say he knows all earthly matters, but nothing at all about heaven. He is the leading apostle of Positivism, and the Bishop of Orleans holds him in great horror. An ancient Father of the Church maintained that a day of grace would come for even Belial himself. Monsigneur Dupanloup believes all redemption possible, except for Littré, who furthermore annoys him by sitting opposite to him in the Assembly. But Littre takes no more notice of the Bishop than of any other deputy; he is absorbed in reading books, and his Dictionary might occupy his place, and in addition prove very advantageous for the Deputies. Littré is a Norman, the son of a clock-maker, and is 74 years of age, and his features would defy Lavater, as would his skull Gall to read. He is far from being handsome; he married the daughter of a noble but ruined family, and has one child, a daughter, who, like her mother, is a good Catholic; he works during the night as George Sand, and goes to bed at the hour that Thiers rises to enter his study. He is the quietest and most inoffensive of men; holds his tongue in twelve languages. In the garden of the Luxembourg, where he passes much of his time reading and alone, he is the pet of children and the sparrows; he looks at all, but listens to nothing. "You ought to make me a dictionary", said his school-mate, Hachette, the eminent publisher to him one day, and

the work was finished in 15 years. If all the lines in his dictionary were strung together, they would stretch a distance of 50 miles; yet that colossal work only represents the tenth of his labors. He devoted 25 years to his "Hippocrates." The dictionary is not only the history of the French language, but the comparative anatomy of all languages. He translated portions of "Homer" into thirteenth century French. His style resembles Buffon's, but is less flowery, and he is as impartial as a photograph.

The Bonapartist conspiracy business has ended apparently in favor of the Bonapartists by a "fluke." Their guilt however remains proved. But the chief of the Cabinet, from some reasons unknown, ridiculed the parliamentary inquiry, promised to read the report, when private life afforded him leisure, seemed to think the Bonapartists were injured innocents, and capped all by more than hinting that the Republicans, who made him minister, required to be watched rather than the Imperialists. This astounding conduct on the part of the Government, called forth a terrible attack from Gambetta, who poured the vials of his wrath on M. Buffet, and in a *mêlée* a proposition of confidence in ministers was carried, in which the Bonapartists took part, the Republicans abstaining. All this is lamentable, and might bring about a ministerial crisis. There is a strong wire puller somewhere behind the scenes, but the Republic only can be saved, and the country tranquilized by the dissolution of the Assembly—which recedes the more it is approached apparently.

The Geographical Exhibition has been formally opened. Very few persons were present, as the rooms are in a most incomplete state. What is the use of opening a work apparently not well commenced? It only injures the project.

The extreme Republican journals have hardly noticed this year the anniversary of the taking of the Bastille; they are occupied in more serious work, the attack on the Assembly, to compel its dissolution. They recommended all patriots to read about the attack.

The young ladies who graduate for University degrees, become generally teachers, and associates in boarding schools. It is understood their name will appear in the fattest gold letters over the sign-boards of educational institutions, above all the B.A's.

THE HILLS.

THEIR NATURAL HISTORY.

BEFORE introducing you, as I promised in my last, to Mrs. Lineage, I must draw your attention to the two nomad tribes we have in our midst, the tribe of Ishmael and the Bohemians. It is only with the daughters of the former tribe that I have to do—the men concern me not and exist not in my world at all events, for think not reader that a daughter of Ishmael weds with a son of Ishmael. She may wed with a Bohemian, a Prinomite, a starched collar, or anything you like, but mark she still remains an Ishmaelite for ever and ever. It is different with the Bohemians. They live in couples and marry and are given in marriage among themselves, and if a female Bohemian by chance marry a stiff lip she becomes a stiff lip and her tribe know her not, and if a male Bohemian marries a nomad he becomes of the tribe of sheep and his tribe know him no more. The daughters of Ishmael are well beloved of men, their hand is against other women and other women's hands are against them for ever and ever. As you find them up here they are of two types. The first consists of women whose undisguised contempt for the little necessaries all ordinary women indulge in, joined to a powerful intellect and much reading and research, renders them at once a mark of hatred and also of envy to their weaker sisters. My friend Mrs. Bluebas is of this kind. To the well read man of the world—she is simply delightful and I would rather spend half an hour *tete a tete* with her in her unpretending little drawing-room than hours at Mrs. Grandair's carpet hops or at Mrs. St. Progne's elaborate French-menued dinners. But Mrs. Khargosh, who has nine children and whose talk is principally about them and their bottles and their ailments, and who on first calling on Mrs. Bluebas, gushed to her on this all-thrilling topic, never forgets the pitying air with which her prattling was listened to and the sarcastic condolence she received on being the mother of "*so* many children;" and Mrs. Faded, who was once a beauty and is now carefully preserved, cannot forgive being asked before a numerous company to give a recipé for *Perle de Ninon* powder. To cut a long matter short there is not an ordinary woman in society up here who has made Mrs. Bluebas's acquaintance who does not regret it and hate her as only woman can hate another. Then there are others of the opposite kind, women who hate other women because nature in one of its freaks made them women instead of men. Women with whom all manly sports are in great favour, and who can beat an ordinary man at riding, driving, dancing, shooting, aye and even at billiards or carte. These two types are the real daughters of Ishmael properly so called. There are others, such as persons who having had some over-true tale of scandal retailed about them have become daughters of Ishmael, but these are mere off-shoots and not the true blood at all.

And here we will leave the Ishmaelites, the first type of whom I adore, and pass to the Bohemians. Here again we come among a race for whom I have a genuine and deep affection. In fact at one time—but I must not allude to the past as you will of course understand that the Donner who sits by my side now is very different to the gentle Zitelle of my younger days. Still I love the Bohemians, and when I meet Wolfgang, clad in rough garments, trudging down the Mall, with a pipe in his mouth, I do not pass by on the other side because I know what a thoroughly good honest fellow he is, and because I know, when wearied out and blazed by the frivolity up here, I can go to Prague Lodge, where pretty little Mrs. Wolfgang will receive me warmly and will fetch the big meerschaum from behind the clock in the dining-room and fill it with Latakia, and then bring me a spill ready lighted, and as I smoke oft in deep silence sing me those weird songs of gipsy land, till Wolfgang comes in from his work and lunch is announced, and we drink the beer of Fatherland all round. Perhaps in the middle of our harmless revelry, Mrs. Grandair calls and Wolfgang with a growl disappears into some inner chamber, while Mrs. Wolfgang and myself receive the illustrious visitor, who sniffs at the smell at tobacco and the beer flagons, and departs after a few formal remarks. I meet her next day on the Mall, and she says to me: "Oh Mr. Blas do *you* know the Wolfgangs? I call on them as a matter of duty, but I can't help always fancying I am in a pot-house." "My dear madam," I reply, "when we were young and struggling, we did not despise small beer as much as we can afford to do now." "Oh Mr. Blas, you are too cosmopolitan; I cannot countenance such loose notions." So we part, and with a sigh I call to mind the day when I have often seen her tripping in from the kitchen, with the frugal Sunday dinner and frothing the beer into "Pa's" and "young Blas's" glasses. Happy woman—to her, wealth has given Lethe indeed. And now I must close this letter, but I have not done with Bohemians yet, and in my next I must describe to you a few more scenes in their picturesque and loveable life.

BLAS EL MATADOR.

OUR LIBRARY TABLE.

Religious and Moral Sentiments rendered from the Sanscrit,—By Dr. J. Muir. The religious and moral maxims which are metrically rendered in this pamphlet form part of a larger collection from Indian authors writing in Sanscrit, which our author is preparing with a view to their translation into prose, and to their eventual publication. Not a few of them bear a striking resemblance to some of the most admired texts of the New Testament. With the view of obviating the suspicion which some may entertain that in the metrical versions Dr. Muir has embellished the sentiments of the Indian writers, or imparted to them a closer resemblance to their Biblical counterparts than the tenor of the originals will justify, he has given in an Appendix a faithful prose version of all the passages, to which, in some cases, the contexts have been added. It is the opinion of several writers that many, at least, of the Indian ideas and maxims which are most akin to those of Christianity have been, or may have been, borrowed from the latter. We may refer especially to Dr. Lorinser, who in the Appendix to his German translation of the "Bhagavad Gita*" (a philosophical and theosophical episode of the great Indian epic poem the Mahabharata) presents us with a collection of passages from the work in question, which he regards as borrowed from, or influenced by, the New Testament, and alongside of which he places the texts which he regards as having exercised this influence. The "Indian Antiquary," a monthly journal published at Bombay, contains in the number for October 1873, p. p., 283-296, a translation of this Appendix, We quote from this translation, p. 286, the following sentences of Dr. Lorinser:—

"If now we can find in the Bhagavad Gita passages, and these not single and obscure, but numerous and clear, which present a surprising similarity to passages in the New Testament, we shall be justified in concluding that these coincidences are no play of chance, but that taken all together they afford conclusive proof that the composer was acquainted with the writings of the New Testament used them as he thought fit, and has woven into his own work numerous passages, if not word for word, yet preserving the meaning, and shaping it according to his Indian mode of thought, a fact which till now no one has noticed. To put this assertion beyond doubt, we shall place side by side the most important of these passages in the Bhagavad Gita, and the corresponding texts of the New Testament. We distinguish three kinds of passages to which

* Die Bhagavad Gita uebersetzt under erlautert von Dr. F. Lorinser, Breslau, 1869.

parallels can be adduced from the New Testament. First, such as with more or less of verbal difference agree in sense, so that a thought which is clearly Christian appears in an Indian form of expression. These are far the most numerous, and indicate the way in which the original was used in general; secondly, passages in which a peculiar and characteristic expression of the New Testament is borrowed word for word, though the meaning is sometimes quite changed, Thirdly, passages in which thought and expression agree, though the former receives from the context a meaning suited to Indian conception."

This subject is one which deserves the notice of Orientalists as well as of scientific theologians, and students of the science of religions. The question raised by Dr. Lorinser is not one which has long or much engaged our author's attention; and he does not pronounce a hasty judgment upon it. Possibly it may not be susceptible of a very definite or positive solution. In forming an opinion on the question, we must consider, first, whether the ideas, sentiments, or figures of speech supposed to be borrowed by the Indians from the west are not such as might naturally arise in the human, or at least in the oriental, mind: secondly, whether they cannot be traced, at least in germ, in Indian writers of such antiquity as to exclude the supposition of foreign influence; thirdly, whether they do not so pervade the Indian writings, so form part of their modes of thinking, and recur so often in their different systems and theories philosophical, theological, or religious, of ancient date, as to be inseparable therefrom, and by consequence original and underived; fourthly, whether and how far, any particular work, such as the Bhagavad Gita, supposed to have been modified by foreign influences, differs in its essential conceptions from other Indian works treating of kindred subjects; fifthly, whether any system of doctrine resembling that expounded in that poem, and known to be independent of Christianity, is discoverable in the religious books of India or any other country, and sixthly, what probability there is that the Brahmins of the period in question could have been accessible to foreign ideas, and whether they would have been intellectually and morally open to and susceptible of such influences.

Protestant Missions in India,—By the Rev. M. A. Sherring, M. A. A work like this deserves an extensive review, but in the meantime it may not be amiss if we give the author's preface, which shows the drift of the book. He says: Among the beneficient influences at work in India, not the least potent and pervasive is Christianity. The aim of this work is to show historically what Protestant Missions have accomplished in India since their commencement in the beginning of the last century. In pursuance of this object, I have collected together all the important events of these missions, and have presented them in a succinct and consecutive narrative, thus striving to give a complete view, as in a panorama, of their operations and achievements. Notwithstanding the numerous reports which have been for many years issued by Missionaries concerning their respective fields of labour, it has but hitherto been well nigh impossible to gain an adequate and distinct conception of the wonderful work which has been accomplished in the evangelisation of the people of India. While leaving matters of unnecessary detail, I have endeavoured to furnish an outline of the various methods, plans and projects which have been pursued in the formation and growth of the Indian Protestant Church, sufficiently minute to be correct, and yet so compacted together and interwoven as to suffer neither in unity nor comprehensiveness. My desire, in short, has been to show how the wave of Christianity, commencing in one corner of the land, has gradually advanced until it has spread over the entire country. The ancient creeds of India, which, like wild luxuriant plants, have brought forth pernicious fruit in abundance, nevertheless demand our profoundest study. Surely, therefore, we cannot withold the same attention and consideration from another faith, which although in its influence upon India dates, as compared with the older ones, only from yesterday, yet seeks to attain what they never designed, namely, to make nun pure and holy like God himself, and has in some small degree, in many places, achieved its transcendant purpose. I earnestly trust that this historical sketch will tend to stimulate the zeal of the Churches at home in behalf of the great enterprise of missions in India. I wish to render my warmest thanks to the Editors of the Report of the General Missionary Conference held at Allahabad in 1872-73, for permission to make use of their valuable Missionary Map of India in this work.

Distinguished Anglo-Indians,—By Colonel Laurie. This is a book every Anglo-Indian should read, and one which we cannot notice at sufficient length in our present issue. Referring to Mr. James Sutherland, who, in 1827, became the Editor of the *Bengal Hurkara*, Colonel Laurie informs us that Sutherland, at the early age of fourteen, went to sea, and spent several years in the navy as midshipman. He served in a dashing frigate, the *Acasta*, commanded by Captain Ker, a famous "Tartar," from whom the "Sea-Fielding," Captain Marryatt, in "Peter Simple," may have drawn the portrait of "Captain Savage." In 1815, the *Acasta* was paid off; and Sutherland, not long after, became a "Country-Captain," and a zealous countributor to Anglo-Indian periodical literature. His first connection with the Indian Press was in 1818, when he joined Mr. Buckingham (who had also been a sailor) in the office of the celebrated Calcutta journal. As many other sensible men have done before him, he married, again went to sea, speculated, lost; and when, early in 1823, Mr. Buckingham was "so tyrannically ordered out of the country," he again joined the staff of the above journal as reporter and contributor. Sutherland played a most conspicuous part in all the press squabbles of that most interesting period in Calcutta, when men thought they were beginning to die for want of what Junius styles "the air we breathe"—the liberty of the press! In 1836 he resigned the editorship of the *Hurkara*. Sutherland had also managed the *Bengal Herald* at the same time, in which journal appeared some of his best articles, literary and political. Here are a few remarks on

CAPTAIN MARRYAT.

"*Editor.*—He has neither the learning, nor, perhaps, the graphic power of Smollett in delineating the human character, but he is a delightful writer, and I have heard men of your profession say that some of his descriptions in 'Peter Simple' surpass anything in the same line in the works of any living writer, not excepting Cooper, the American—the Club—hauling, for example what say you? "Nauticus—I entirely agree in that estimate of his literary character. He is the best nautical novelist of the day out and out; and I doubt his inferiority to Smollett, except in learning. His Peter Simple is a character, I will engage, drawn from the life, nay—I have actually known such a character, and some of his miseries while he was yet a Johnny raw, are such as probably every naval officer has felt."

We gather from the work before us that the *Delhi Sketch-book* was the first comic journal started in this country. *Momus* succeeded the sketch-book, but its chief fault was its bad lithographs, spoiling an excellent design. The *Delhi* was far different and gladdened the Anglo-Indian world with as much zeal as *Punch*, *Judy*, and *Fun* evince at the present day for the amusement of London. In the *Delhi*, "the Royals in India" formed a capital series of sketches. Mrs. Corporal Flouncy objecting to take service with "the lady of a Sepoy officer," the quiet surprise of the lady, and the grim corporal in the background, being admirably brought out, was one of the best. "The war with Burma" formed the subject of some amusing verses in one number, and when the lion flares "right up," and sends "two wise ambassadors, the Serpent and the Fox" (the actual names of a gun-brig and frigate, R. N., employed at the commencement of the second Burmese war), is told with some humour.

Two conundrums from an old *Delhi* may be given:—"Who was the greatest drunkard in Indian history?—Asoka. Which is the most killing—Brown Bess or Miss Minie?" Also a capital sketch of Anglo-Indian Military life, in which the stern visage of Colonel Blowhard in his Bengal muster buggy, and the harum-scarum look of Sprugg, on his tattoo at full speed, are drawn with admirable effect:—"Cornet Sprugg hath just joined his regiment, hath not had sufficient time or opportunity to set himself up in charger, or purchase a buggy. Church being over, he mounteth a diminutive tattoo. Having previously divested himself of his sword and belts, he giveth the same unto his syce (horsekeeper) to bring after him.

Blowhard, the man in authority, twiggeth him. C. O. (Cantonment Order) No. 2.—The practice of officers' servants being permitted to carry their swords is unmilitary, and is to be discontinued. The place for the sword is *always by the side of the officers.*"

Fiji: Our New Province.—By J. H. de Ricci. There seems every ground for believing that with steam communication between New Zealand, Queensland, and Fiji, and with a larger supply of labour, which is one of the emigraut's chief drawbacks, our new possession will form the centre of a highly lucrative trade. Hitherto the communication between Fiji and the Australian colonies has been very uncertain, but with the security to property afforded by a settled government, the incentives to commercial enterprise will be considerably increased. It is but fifteen years since the first 1,000 lbs. of cotton was sent to Manchester from Fiji, whereas in 1870 the value of the cotton exported represented upwards of £90,000. This cotton is the most precious produce of the islands. "Fiji cotton," says Dr. Forbes, who spent two years in Fiji, and has recorded his experiences in a pleasantly written volume, "is to the common cotton what a chronometer is to an eight-day clock. While American or Bombay cotton may be worth from sixpence to ninepence a pound, as much as five shillings has been obtained for an unusually good sample of Sea Island, grown in Fiji." How to obtain a sufficient labour supply has been the pressing difficulty to immigrants. The Fijian will never work if he can avoid working, and, moreover, the natives are rapidly diminishing in number. The horrible system adopted a few years ago in order to cajole and capture South Sea Islanders produced deeds of cruelty as black as those recorded under the slave trade, and was the cause, as is well known, of the murder of Bishop Patteson in 1871. The chief markets requiring a supply of black labourers were Queensland and the Fiji Archipelago, and that admirable Bishop, writing with regard to Fiji, observed, in a judicious letter on the subjet to Sir George Bowen, that he did not advocate the suppression, but the regulation, of the traffic. Mr. de Ricci transcribes a long official document from Consul March, under date December 1869, from which it would appear that, in that gentleman's opinion, the trade was for the most part in a satisfactory position. He writes of the desire evinced to deal openly with regard to the traffic, declares that sellers are ready to submit to consular dicta, and that, on the whole, as far as the planters are concerned, good faith has been kept with the immigrants, but adds, significantly, that the worst feature in the trade is the absence of all control over the manner in which the natives are obtained. Bishop Patteson, who wrote six or seven months later, looked upon the matter less cheerfully, and after observing that the dialects spoken in the western islands of the Pacific are very numerous, and that there are no interpreters, adds: "The vast majority of natives taken from their homes have no notion of the distance or character of the place to which they are carried, and of the work they have to do, of the length of time they are to be kept at work each day, of the time, whether months or years, when they are to be brought home, if, indeed, they are taken home at all. A *native* interpreter (*i.e.*, an islander who has learned some English, and is used as a decoy to entice away his own people) is invariably an untrustworthy man, in the pay of the trader, and ready with any lying story to induce natives to leave their homes." And then he goes on to point out that it is scarcely possible to find out where violence has been committed, and that "a natural retaliation upon some perhaps unoffending boat's crew is in such circumstances the first indication (in all probability) of some unhappy intercourse with some trading vessel." The growing evil

of the labour trade depressed Patteson greatly during the last year of his life. "Means of all kinds are employed," he wrote, "sinking canoes and capturing the natives, enticing men on board, and getting them below, and then securing hatches and imprisoning them. Natives are retaliating." Some of the islands were being depopulated, and everywhere he expected to meet with suspicion or open ill will. His prognostications proved but too true. The Bishop's death brought the subject home to Englishmen in a way no mere verbal representations could have done. Since that time Polynesian immigration has become a matter of Imperial interest, and the private speculators, many of whom sailed from Fiji and carried on a cruel system of kidnapping, will no longer be able to conduct their unlawful traffic.

Annual Report of the Family Literary Club.—Baboo Prosad Dass Mullick is certainly deserving of praise for the manner in which he, as Honorary Secretary to this society, has directed its machinery. The present report states that the "Burra Bazaar Family Literary Club" has now "completed the seventeenth year of its existence. Established in 1857, the year of the sepoy mutiny, it has weathered the battle and the breeze for seventeen years, and worked on amid great difficulties and obstacles, slowly and silently, to realize its main object, *viz.*, to bring the Europeans and natives together in literary union and intellectual sympathy. In India, where the bulk of Europeans make it their paramount aim to make a fortune or competence in the shortest time possible, and where the utility of European institutions is scarcely understood by the mass of the population, the difficulty of holding purely literary meetings can be more readily conceived than described. It is to us a matter of deep thankfulness to God Almighty that, in spite of the lukewarmness of many of our earliest supporters and the falling back of a few members, we have worked on with some success, we hope, in realizing our primary object. We cannot, however, pass by without recording the valuable encouragement and support continued to us from year to year by some of the foremost men of the land. His Highness the Maharajah of Vizianagram, K.C.S.I., and His Honor the Lieutenant-Governor of Bengal, K.C.S.I., have become the patrons of this society. The Right. Revd. the Lord Bishop of Calcutta, the Hon'ble Sir Richard Temple, K.C.S.I., the Hon'ble Justice J. B. Phear, M.A., Roy Rajender Mullick, Bahadoor, Baboo Prem Nath Mullick and others, have continued to take the liveliest interest in our proceedings, and often amid onerous and varied calls of duty favored us with their presence"

POETRY.

DEATH AS A GRACIOUS AND GENTLE LADY.

On a poor pallet in a workhouse ward
There lay a woman, wasted by disease,
Drinking life's cup to its last pauper lees,
So bitter, and so grudgingly outpoured.
And, as it were an angel from the Lord,
A lady came, voiced like the hum of bees
In summer, or the murmur of far seas,
Who kissed the brow, all scarr'd and trouble-scored,
And smoothed the restless limbs upon the bed,
And sang, as to a child that slumbereth.
And then, her task being done, she turned her head;
And in her face I saw, with bated breath,
The calm great beauty of the newly dead,
And lo! that gracious lady's name was Death.

FRANK T. MARZIALS.

WOODMAN, SPARE THAT TREE!

[Attempts have recently been made to discredit the system of open competition by which the *Indian Civil Service* is recruited.]

Just twenty years ago the tree was planted.
What hopes amid some few remember now;
What fierce contention till the boon was granted;
With this, 'twas said, (pure) worth we will endow,
With this remove from reach of party-strife,
The prefectures of "Britain's brightest gem,"
And freely launch its rulers into life
With nought of patronage to fetter them;
With this to give that poor man equal chance
With him whose *name* might else alone prevail,
That no factitious aid should e'er enhance,
The rich man's right to step within the pale.

The tree is doomed, for nought in reason known,
Save that our Tory friends, with longing look,
More and more greedy of the spoils have grown
In hope perchance with these to 'gild the book;'
For if each member, at the council board,
His power to make an Indian judge could boast,
It can't be doubted 'twould much aid afford,
For some would give a vote to gain a post.
The power besides of patronage is sweet,
To give is good, e'en though the boon be small,
And hard it is when many folks entreat
And there is not wherewith to please them all.

For some such reason—we can guess no other—
'Tis said the tree must by the woodman fall,
And in its stead shall nurtured be another—
A noxious plant—to lean against a wall.
None ask if it has failed to bear its fruit
Or if 'tis withered or is worthy death,
Or is its foliage fresh and firm its root,
But all join to condemn it in a breath.

Have Aitchison, or Elliott, or Wynne,
Or others on whom fortune less has shone,
Though aided not by titled kith or kin,
Failed at their work when work was to be done?

And the 'bad bargains' that are found as ever,
Fewer we think there are and not *so* bad:
Then, woodman, pause we pray before you sever
The roots, lest *after* you be wise and sad.

W.

LETTERS TO THE EDITOR.

BY LAND OR WATER—WHICH?

To the Editor of the Friend of India.

SIR,—The accounts of the traffic by the Godavery Canal for 1873-4, during which time many of the canals were closed to carry out improvements that were in progress, are briefly as follows:—

	Rs.
Number of Boats	48,999
Tonnage	869,888
Ton Mileage...	34,091,461
Value of Cargoes	83,798,274
Receipts from Navigation	30,600

If one takes 4 pie a ton a mile as the charge for transport of ordinary land products, the cost to the district is about 6½ lacs or 1-130th of the value of the cargoes, or 8 per cent. nearly. By ordinary railway carriage the charge would have been 77¾ lacs The canals thus saved the district in one year a charge of 71¼ lacs in the conveyance of its products to market, and as the water-rate charged to irrigation was about 23½ lacs, it is apparent the navigation was three times as valuable as the irrigation alone. I cannot say for how much railways would have done this work, or their works passed through such a property as this might not be able to earn a dividend instead of being a burden to the country: if they would examine their bills for land compensation in any district where irrigation is decently managed, they would find the fields valued at from £10 to £100 an acre for wet lands and for dry land from £5 to £1 an acre. Which property is most likely to pay for railways? The officer who devised the Godavery Anikal works is an enthusiastic old projector, and the consideration of one of Ricarde's fundamental sources of rent is "positively mischievous" in connexion with land improvements in India, when such ideas are prevailing at Home in the India Council. An article in the *Economist* of 6th March last on "Defaulting American Railways" shows that there are no less than 122 companies which have been in default in paying the interest on their mortgages since the 1st January 1874, their mortgage debt amounting to over 113 millions sterling, thus fully confirming the opinion of the late Mr. J. S. Mill regarding railway enterprize in countries whose industrial resources had not been fully developed. And yet it is proposed by similar works to resuscitate the finances of India, already burdened with a debt of 140 millions on this account, and an annual deficit amounting to nearly 4 millions a year. As these works are pushed on, the debt of the country must increase and with it the annual deficits to be made good by taxing the community. The elements of success by increased traffic returns do not exist. Without water the land produces next to nothing, and any failure of the rains brings on famine owing to the pressure of the population which has to be supported at State expense, instead of gaining their own food by means of railways carrying grain at 3 *pie per maund per mile*, or a shilling a ton a mile. And so the finances of India are to flourish, and Manchester has got something to think about! The prospect before us is that, unless means are adopted to develop the land revenue, fresh taxes must be laid on to meet the deficit on account of railways, and the costs of famines as they occur. In the meantime the country is to be deprived of the means of gaining its own food by irrigation; of conveying its products in the cheapest manner possible to markets; of securing a water-supply in a tropical climate for man and beast; of accumulating stock to develop its many industrial resources; of affording to the people those aids and appliances for the cultivation of their lands to which they are best accustomed and thoroughly appreciate if only managed "decently and in order." It is confidently expected railway enterprize will be certain to succeed under such circumstances in a country void of feeders to them!

A. B.

INDIAN RISKS AT ENGLISH RATES.

To the Editor of the Friend of India.

SIR,—In a recent editorial note you allude to the dictum of Dr. Mouat that *English* rates are sufficient to cover *carefully* selected Indian risks. I do not know what Dr. Mouat means or intends us to understand by the use of the term "carefully selected." Does he attach any occult meaning to the expression? I always thought that parties joining an Insurance Office could only do so after undergoing a careful medical examination by a properly qualified practitioner; this procedure is, I believe, the rule. It is, I presume, to the interest of a carefully conducted office to reject any bad risks, and to cover doubtful ones by an adequate enhancement of the premium; and thus we may infer that all offices having to do with contingences incident to human life exercise the power of selection so as to raise the standard above the average.

In January 1874 Mr. A. J. Finlaison, of the National Debt Office, London, submitted to the members of the Institute of Actuaries a paper "On the Mortality found to prevail among Subscribers to the Bengal Uncovenanted Service Fund between the years 1837-1872."

Mr. Finlaison states "Members are only admitted to the Fund under the condition that they have satisfactorily passed strict medical examination; that this rule has been efficiently enforced will be allowed on the fact being stated that in some years as many as 25 per cent. of the applications for admission have been refused—the candidates not coming up to the standard it has been sought to maintain." This quotation it will, I think, be considered, goes to show that the risks were carefully selected, so that the test insisted on by Dr. Mouat has been employed in the case of the institution under notice.

Mr. Finlaison's paper enables us to place in juxtaposition the mortality which prevailed in six decades of life, from 20 to 79 inclusive.

Male Annual Mortality per cent.

Age.	Subscribers to Uncovenanted Service Fund, India.	Experience of Life Assurance. Company, England, (Hm.)
20-29	1·00	·69
30-39	1·69	·89
40-49	2·52	1·20
50-59	4·05	2·02
60-69	8·48	4·06
70-79	14·08	8·44

Mr. Finlaison remarks that "from the age of 30 to the age of 70 the average annual rate is in each decade of the Indian Table about the double of that shown in the British table."

"The marked amount of difference between the rates of mortality shown in the two tables is a clear indication that the rate of mortality experienced by male Europeans in India is greatly in excess of that experienced by them in England. Some recent assertions to the contrary are certainly by no means borne out by the death-rate that has occurred, during the last 35 years, among the subscribers to the Uncovenanted Service Family Pension Fund."

In the discussion which ensued on the reading of the paper, the late Mr. Samuel Brown said, "that the paper was a very valuable one, and came at a very opportune time with reference to the recent controversy with regard to mortality in India. Dr. Mouat had unfortunately chosen to conduct an enquiry into rates of mortality, which depends upon large aggregations of facts, in precisely the same manner as any medical gentleman would give the results of his own individual practice. In these instances, isolated cases on one side of the question form the greater part of the observations that a medical man has to deal with. The actuary, on the contrary, is compelled to look at all these isolated cases after they have been collected into considerable masses and compared together, and he does not reason except upon the averages of large numbers."

Mr. A. H. Baily said that "a theory has been lately propounded that the rate of mortality in India is no worse than that which prevails in England, and that the rates for insurance in India should, therefore, be the same as the rates in England. That theory has been reduced to practice, and is the subject of controversy at this moment. In support of it Dr. Mouat, the Honorary Secretary of the Statistical Society of London, has put forward one or two reports of a somewhat elaborate character which, coming from a gentleman of large Indian experience and well-deserved reputation as a medical man, and holding the position which he does of Honorary Secretary of the Statistical Society, have had some weight. Now, what do these reports contain? No trustworthy facts such as Mr. Finlaison has given to-night, but several assumptions. Dr. Mouat has assumed the mortality in India to be the same as the mortality of England, and he has given certain reasons why that should be the case, but he has ignored facts. The value of Mr. Finlaison's paper which contains facts of as a recent a character as could be obtained, embracing the years between 1837 and 1872, is beyond question. If you want the mortality at the later periods of life, you must go back for several years to those who entered the services at about 18 or 20 years of age. You cannot get the mortality of the years of age of 40 or 50, unless you go back twenty or thirty years or more, and it is difficult to conceive that we can get any more recent facts than those which Mr. Finlaison's paper contains. And what do they prove? They prove as conclusively as possible. that the trustworthy observations of Mr. Brown, which embraced an unusually large number, are correct; that the mortality in India is most materially in excess of that in England, and that, therefore, it is madness to think of charging the same rates of premium for residents in India as for residents in this country." I have given the above excerpts from Mr. Finlaison's paper, and Messrs. Brown and Bailey's remarks thereon, to show that the line of deduction employed by Dr. Mouat is not that usually employed by actuaries; in fact, owing to its one-sidedness, its use is deprecated by them.

The inference fairly deducible from the foregoing is that Indian lives are more risky than English lives, or in other words that the duration of life among *picked* lives in India is less than among the same class in England, and hence it follows that the cost for insurance here should be higher than that ruling at home to meet the increased risk or compensate for the shorter duration.

But probably the difference will be better exemplified by a monetary example. The following, taken from the *Statistical Reporter*, illustrates this phase of the question, and shows that the *Positive* office cannot safely maintain its present rates for Indian risks. The *Positive* rates are calculated at 3 per cent. interest, with an addition of 20 per cent. for loading. The same principles have been adopted in working out the rates from the Uncovenanted Service mortality experience, and the comparison is, therefore, fair and to the point.

Rates of Premium for an Assurance of £100 by five annual payments.

Age	Positive Rates			Uncovenanted Service Rates			Positive *less* by		
	£	*s*	*d*	£	*s*	*d*	£	*s*	*d*
22	9	7	11	10	18	5	1	10	6
27	10	3	5	12	2	11	1	19	6
32	11	0	10	13	9	1	2	8	3
37	12	0	5	14	13	8	2	13	3
42	13	2	4	16	0	2	2	17	10
47	14	6	9	17	10	11	3	4	2
52	15	14	2	18	19	6	3	5	4
57	17	6	10	20	10	9	3	3	11

The following comparative table containing the rates of premium charged by the Positive Office, and that deduced from Mr. S. Brown's Indian Military Table also shows that the rates of that office are not safe for Military risks. It may be premised that the Indian Military rates are taken from the *Statistical Reporter*, the rate of interest is 3 per cent., and the loading for expenses 20 per cent:—

Assurance of £100 by five annual payments.

Age.	Positive Rate.			Brown's Military Rates.			Positive *less* by		
	£	*d.*	*s.*	£	*s.*	*d.*	£	*s.*	*d.*
20	9	2	2	13	1	6	3	19	4
25	9	17	0	13	9	9	3	12	9
30	10	13	7	13	17	1	3	3	6
35	11	12	4	14	3	6	2	11	2
40	12	13	3	14	11	9	1	18	6
45	13	16	8	15	2	6	1	5	10

The facts adduced above show, I think, that Dr. Mouat's conclusions do not rest on solid grounds, but on the contrary that an office dealing in Indian risks at English rates is doing an unsafe business.

D. L.

INDIAN INTELLIGENCE.

BENGAL.

WE hear from the Calcutta Alms-house that instead of the authorised allowance of 16 ounces of bread daily, the issue of bread has lately been 11½ or 12 ounces. This should be inquired into, as stone-breaking demands good feeding.

AMONGST the amusements which Calcutta will provide for its visitor, the Prince of Wales, will be a day's racing. We believe it was suggested by His Royal Highness, and that he is especially wishful to see a good Arab race. The 27th December has been fixed, and the Viceroy has promised a cup, value £100.

A RUMOUR has reached the *Englishman* that His Honor the Lieutenant-Governor has met with a narrow escape at Darjeeling from an accident somewhat similar in character, and which might have been attended with the same fatal results, to that which befell the late Mr. Roland Cockerell two years since at Simla. It appears that Sir Richard Temple was riding round a narrow corner of the mountain road at Darjeeling, when his horse unexpectedly shied and partially slipped over the precipice. Sir Richard, with great presence of mind and rapidity of thought, threw himself off the horse, and flung himself upwards, clinging to the rock. Hardly was he clear of the horse, when the animal, unable to regain its footing, slid further and further, and was precipitated down hundreds of feet.

THE annual report of the Fort Gloster Jute Manufacturing Company, for the year ending 31st May last, has been published, and we have a copy now before us. By a glance at the balance sheet we notice among the liabilities an item of Rs. 1,11,884, under the head of "Loan Account," and an overdraft from the Agra Bank of Rs. 37,794, making a total of nearly 1½ lakh, represented as borrowed capital. On the other side, the "Stock Account" is stated at Rs. 1,92,240, of which sum Rs. 1,63,600 is the amount represented by gunny bags, cloth, and raw and partly manufactured jute. There are also about Rs. 70,000 available on capital account for purposes of comparison, the expenditure for block and machinery having been nearly that sum less than the Rs. 14,00,000 of capital paid up. The Profit and Loss account shews a balance of Rs. 14,894-14-2 on the wrong side.

FROM the Fifty-second Annual Report we find that the Doveton College continues to prosper under its present management. The number on the rolls last year was 397, of which 79 were boarders, and the income from fees was proportionately large. These numbers appear to be larger then the college has had since 1865. Out of 11 candidates who appeared at the last entrance examination of the Calcutta University, we observe that seven passed, three of whom stood near the top of the entire list, and have been awarded

Government scholarships, The College Deparment, which was abolished in consequence of the withdrawal of the Government grant, has now been fairly revived, with every prospect of its being permanently continued. Since the publication of the report, the Lieutenant-Governor has, we understand, sanctioned a grant for the College Department, which, as it is not quite so large as the previous one, he has very considerately promised to increase as soon as the grant-in-aid funds at the disposal of the local Government will admit of it. The committee are to be congratulated on the fact, as well as on the general condition of the college. Great credit is also due to the present Principal, Mr. H. Roberts, to whose ability and experience the success of the Doveton College for the past five years is to be mainly attributed.

THOSE who recently spoke in public on the subject of the approaching visit of the Prince of Wales omitted to notice a circumstance which, in our opinion, adds not a little to the importance of the event. India will next winter be inspected, not by the Prince alone, but by the whole civilized world. The ablest writers and artists form a part of the Royal suite, and they will supply a full representation of all that they see. Their works will be translated or reproduced, until every reader in Enrope or America has had an opportunity of forming a vivid impression of India. The opinions thus formed will not pass quickly away. They will endure until some other occasion brings India prominently before the outer world—until we engage in a great war or receive an Emperor. It is probable that for many years to come we shall be judged by the appearance which we may present to the eyes of our expected guests.

IT has been authoritatively notified from home that the staff and suite of His Royal Highness the Prince of Wales will comprise the following, *viz.*, the Duke of Sutherland, Lord Alfred Paget, Clerk Marshal to the Crown, in special attendance ; Lord Suffield, Lord-in-Waiting ; and Sir Bartle Frere, with Mr. Albert Grey as his Private Secretary ; Major-General Probyn and Lieutenant-Colonel Ellis, Equeries ; Lord Carrington and Lord Charles Beresford, Aides-de-Camp, and Captain FitzGeorge, Rifle Brigade, Extra Aide-de-Camp ; Mr. Francis Knollys, Private Secretary ; Dr. W. Russell, Assistant Private Secretary ; Dr. Fayrer ; Cannon Duckworth ; and M. Zychy, an artist. A taxidermist, a botanist (or perhaps more appropriately "collector of plants"), and a custodian of public gifts—these three holding the rank of warrant officers—will be in the suite. There will also be about twenty-five European servants, of whom twelve will be in immediate attendance on the Prince.

MR. ROBERT H. ELLIOT writes to suggest that the routes by which the Prince of Wales will travel should at once be notified as widely as possible throughout every part of India. Mr. Elliot says : "If this will not wholly prevent, it will at least lessen the exactions of the petty native officials. It is difficult for any one here, or indeed even for many officials in India, to realise the effrontery of these gentlemen in taking advantage of even the reported arrival of any dignitary to levy black mail in the shape of supplies of all kind, and of this numerous illustrations might be given. But the following instance of the helpless credulity of her people in the rural districts will probably be as good an illustration as I could select. This is given in Jacob's 'Western India,' where we are told how an impostor levied a war tax in the out of the way villages in the author's name and on account of Her Majesty the Queen. His credentials were simple but effective, and consisted of an empty Crosse and Blackwell's pickle jar, with the Royal arms on the label, and a paper scrawled over in imitation of English writing, to which was affixed a seal, which was simply the impression of the bung of a mustard jar. And yet, with these credentials, he succeeded in levying a good deal of money till he ventured into some village where the people were more advanced, and was thus detected. He was convicted, and the above mentioned facts were brought out at the trial.

THE drill season of the Calcutta Volunteer Rifles has begun, and recruits are invited to join the ranks. The energetic Adjutant announces that he will attend head-quarters, in Lindsay Street, every morning from half-past six until half-past eight o'clock for the purpose of enrolling members, and we hope the young men of Calcutta will not be wanting in the manly spirit which should of itself prompt them to undertake the duties of volunteers. Independently of the physical benefits to be derived from the exercise on the drill ground, and the pleasurable excitement of competition in the use of arms, a great deal has been done to promote the comfort and social amusement of the members of the corps. We recommend our masculine readers to pay a visit to the new head-quarters of the regiment in Lindsay Street. The compound, enclosed by a high wall, forms an admirable drill ground, where bashful recruits can execute the graceful goose-step in the strictest privacy. The ground floor of the building is used as an armoury, which is kept in such admirable order as to be well worth a visit in itself. The upper floor is fitted up, for the use of members, as a private club, in which there is a fine reading-room, a billiard-room with an excellent table, a card-room, a writing-room, a canteen for refreshments, and other accommodation. The subscription to this club is the nominal sum of eight annas per mensem. The social advantages of the club, the elegance of the uniform, and the approval of valour—adoring beauty ought to ensure a large accession to the ranks of the corps ; and it should not be forgotten that the citizen soldiers of Calcutta will play a conspicuous part in the reception of their future King.

NORTHERN INDIA.

A MONTH will be required to repair the railway between Umritsur and the Beas.

IT is reported that an order has been issued on the Oudh and Rohilkund Railway for the immediate removal of all native drivers and shunters.

THE *Lucknow Times* reports that opthalmia of a virulent type is prevalent amongst the men of H.M.'s 65th regiment, and that cholera has appeared amongst the troops in cantonments.

SIR WILLIAM MUIR has obtained leave to introduce the Opium Bill, which will give the Government effective legal control over the growth, manufacture, and possession of opium, and provide a uniform opium law for all India.

THE Jumna Bridge at Agra was tested by Major deBourbel, the Consulting Railway Engineer to Government, on Tuesday Morning. Several heavy engines belonging to the East Indian Railway, and a long train of heavily laden trucks and waggons, passed several times over the bridge, which is said to have borne the extra weight upon it easily and to have thoroughly stood the test.

A CORRESPONDENT writes to the *Delhi Gazette* that "the Gagar river, between Kalka and Umballa, rose so high the other day that it carried down an elephant some distance, when the animal swam ashore. Captain Lockhart, Quartermaster-General, was carried away by the strong current. He had to swim for his life. If he had not been a powerful man, he would never have gained the bank. He was very much exhausted. and, were it not for the timely assistance of Captain Reid, 12th Regiment, he probably would not have recovered."

A VERY curious case lately came before the Courts at Umritsur, where two Mahomedans, said to be Wahabees, were charged with burning a koran. Their defence was that the koran was an old one, and that burning was the most orthodox mode of destroying the holy book when it became too old for use. It also appeared that they performed the ritual in question in their own house ; but inasmuch as the passers-by might have peeped in, the unfortunate religionists were sentenced to two years' rigorous imprisonment and a fine of Rs. 100.

ON Sunday last cholera broke out in H. M.'s 65th Regiment at Lucknow. Two men and two children were the victims, together with two children in the 40th Foot. The 65th have gone into camp. All leave has been suspended. Drs. Bott, 13th Hussars, and Drury, 65th Foot, who were proceeding on furlough, are ordered to stand fast. General Chamberlain, who was to have left this week for Simla to confer with Lord Napier and other General Officers concerning the Delhi Camp of Exercise, has been detained. Very heavy rain has fallen in the Lucknow district.

THE *Himalaya Chronicle* states that on Wednesday week last a formal charge was laid before Mr. Ross, the Superintendent of the Doon, accusing Captain Liot, R.A., of a series of forgeries in connection with a bond on which the Mussooree Bank lent Rs. 3,000 in April last. The instalments not being forthcoming after applications from the manager, all the securities were applied to, and this led to the denial of the genuineness of the alleged signatures of all the securities except one, the signatures, too, of the attesting witness being stated to be also spurious. The military authorities at Agra were informed of the transaction—a proceeding which in the absence of any explanation led to his being placed under arrest militarily.

A SERIOUS accident occurred lately, 53 miles this side of Jubbulpore, to the Bombay mail train which left Jubbulpore at 10-15 on Saturday night. The train ran off the rails, and nearly all the carriages were smashed. Driver West, plate-layer Collins, and six native passengers were killed ; nine seriously, and twenty slightly, injured. The only European passengers in the train were Mr. Carpenter, of the Civil Service, and Mr. Spencer, Railway Engineer, who were slightly scratched. The cause of the accident is uncertain, but it is suspected that some obstruction was maliciously placed on the rails. The line is straight, dry, and in good order. Four carriages were repairable, the remainder completely smashed. The engine went down the embankment.

DR. G. Henderson, of Lahore, writing to the *Indian Medical Gazette* regarding "disorders of pigmentation," calls attention to the effects produced by daily eating a quantity of turmeric in curry and says : "My attention was first directed to this by Mr. C. Wood, who is now Officiating Professor of Chemistry in Calcutta. As far as I can recollect, 'old Indians' used to have a much more jaundiced look than they now have, and it was supposed to be owing to the effect of the Indian climate on their livers. In Upper India at least we do not now acquire this colour, and it is certain that curry is not now eaten to any thing like the extent it formerly was ; in fact, except at the house of a *very* old Indian, one seldom sees curry on the table. The yellow dye of turmeric is a very powerful one, and it seems probable that it will tinge all the tissues of a yellow colour if eaten daily for a number of years."

THE story of the issue of 50 summonses at Simla against the employés of the Government Press there is said by a contemporary to be quite groundless. Reuter in that case has received false information. We are told that what really happened is this. Some little time back the contents of a confidential Foreign Office despatch appeared as a leader in the columns of a Calcutta paper. Upon this a number of the Government Press compositors at Simla were informed that, unless they discovered and handed up the culprits, they would be discharged. Some few days back an examiner in the press, Meer Jhan by name, was seen to receive a letter from Calcutta, which a man with whom he was at enmity observed him secrete : the man purloined the letter, and gave it up to the authorities, who handed it over to the police. The letter proved to be the acknowledgment by Meer Jhan's confederate in Calcutta (who, however, has been circumspect enough to adopt an evidently fictictious signature) of the identical documents which has been converted to the purpose we have already mentioned, their office numbers, by which the connection was made apparent, having been set down with methodical

accuracy. Meer Jhan is now in the hands of the Deputy Commissioner of Simla, who will no doubt satisfactorily account for him. A suspected accomplice, arrested at the same time, has been discharged for want of evidence.

A CORRESPONDENT, writing about the floods in Chunar, says: "An exceptionally high flood has swept away one-third of the native portion of the town, and destroyed nearly all the houses of the poor Europeans in the lower lines. The flood reached its maximum height at half-past ten yesterday forenoon. At its greatest height it rose to over two feet above floor level in the Invalid Battalion barrack lower lines, and nearly all the pensioners' houses in this quarter were submerged—great, if not complete, destruction of house property having occurred. A large portion of the native town is a total wreck, and the serai is completely demolished. The flood swept over the Catholic chapel to the extent of over five feet above flood level, and the English church, which is on higher ground, only escaped by a few inches. The invalids were removed into the fort on the morning of the 3rd, the water having flooded their barrack during the night of the 2nd. Fears were entertained for their safety on the 2nd, but the old men refused to move in the expectation of the flood subsiding as in past years. Many of the poor European pensioners had to shift their quarters on the 2nd, and the morning of the 3rd saw every one completely washed out, the stream rising to the eaves of most of the houses. Through the vigorous exertions of the sepoys of the detachment 13th Native Infantry, who formed a fatigue party, nearly all the property belonging to the invalids was saved and conveyed to the fort in boats, but many of the poor pensioners have lost their all. The energy of the military authorities was untiring ; and both old and young of all classes of Europeans were removed into the Fort, where ample provision has been made for their temporary accommodation."

THE death is announced of Mr. Peterson Saunders, celebrated, amongst other things, for his Volunteer Corps during the mutiny. He reached Agra in May, and there he received a message from his cousin, of the Muloee factory, that he and four other gentlemen were besieged by a crowd of Moslems, and begged for assistance. Mr. Saunders called on Mr. Colvin, the Lieutenant-Governor, and asked for some of the military to be sent to the rescue ; but this was refused. He then asked if the Governor would give him arms for volunteers if he could raise them, and this was granted. Mr. Saunders got twelve mounted gentlemen to join him, and he led them through a hostile country to Muloee, fifty miles distant from Agra. They arrived in time and saved the five besieged, and brought them safely into Agra. This, says a contemporay, was the origin of the volunteers whom he afterwards commanded, and who, to the number of forty, followed him to Alygurh, where they were placed under the orders of Mr. Watson, the Magistrate. They held possession of Alygurh, and kept the communications open between Agra and Delhi for about two months, when the Lieutenant-Governor, thinking the responsibility too great, recalled them, but ordered the Magistrate to stand fast. As this was simply certain death to the solitary Magistrate, Mr. Saunders refused to return ; and he, with a few men equally staunch, stayed with Mr. Watson until he also was allowed to go to Agra. They all returned in safety after many skirmishes and some wonderful escapes, which space will not allow of our relating. At Agra they served in the drawn battle before the fort, and afterwards, in October, proceeded with Major Montgomery to Alygurh, where a battle was fought, in which Mr. John Tandy, late of the N. W. Bank, and Lieutenant Mack, a volunteer, were killed. Sir James Outram's son, now Sir Francis, was a member of this volunteer body, and Sir James expressed himself much gratified with their gallantry. Sir Francis retains a lively memory of Mr. Saunders's happy spirit and utter unselfishness.

THE following notes on fishing in the Poonah river have been given in the *Indian Public Opinion* : One of the best rivers, if not the very best, in the Punjab for Mahseer fishing is the Poonch. The river rises in the Pir Punjal mountains, and after a course of about 120 miles falls into the Jhelum about twenty miles north of the station of that name. It receives three important affluents—the Bitarrh, Sohan, and Mundola rivers—all of which may be fished during September and the early part of October. The Poonch itself may be fished at any time after the monsoon floods have subsided, till about the 15th April, when the snow-water from the Pir Punjal comes down and all sport is put an end to. Supposing then that the angler, starting about 1st September, has six weeks at his disposal, the best route would be to proceed from Gujrat to Bhimber, two miles, by hill cart, and thence by marches *vid* Saidabad, Naoshera Changass, Rajouri, Thanna Mundi, and Soorun to Poonch. Between Bhimber and Saidabad he would probably obtain some fishing in a stream that is met with about midway, and the tackle should therefore be kept in readiness. From Naoshera to Thana Mundi the route lies along the valley of the Tawi river, and fishing may be had during the early part of September, though this is generally rendered very uncertain by the great variations in the stream caused by rain-fall in the hills. The next march leads into the valley of the Soorun river, which further on takes the name of Poonch. This river affords excellent sport, and from four to six days may be profiably spent over the next 20 miles. At the town of Poonch the Bitarrh and Soorun rivers unite, and from there the return journey begins. The Bitarrh, however, if in fit condition, should be fished for a march or two up-stream as it holds large Mahseer. The return journey would be made leisurely along the valley of the Poonch river, the sportsman halting wherever he fell in with likely pools and rapids, and they are too numerous to be detailed. But Potah, Chamook, the mills near Tangrote, and the junction of the Poonch and Jhelum, as well as the affluents before alluded to, will all of them afford excellent sport.

THE Rajpootana State Railway was opened as far as Ajmere on the 1st instant under unfortunate auspices, the first train reaching the Ajmere station more than three hours after its time. No very heavy rain having fallen since the embankments were made, they are not yet considered beyond suspicion, and no night trains will be run till after the monsoon. Over five thousand pilgrims to the shrine of the Khwaja Sahib, the anniversary of whose death is now being celebrated, have taken advantage of the rail, and will swell the traffic receipts of the State Railway for the month to an amount that it can hardly be expected to average in future. The Maharajah Scindiah visited Ajmere in a special train, for the use of which from Agra and back again he is to pay Rs. 6,000—another windfall for the railway. By the receipts for the next month, after these exceptional times have passed, the powers that be will be able to make a fair guess as to the success of this last section of the line in a financial point of view, on which of course will depend to a great extent its southward extension to Neemuch and Ahmedabad. At present, in their zeal for economy, the authorities are carried to the verge of meanness. A recent order has increased the number of waggons in a train from twenty-one to twenty-eight, a load apparently beyond the power of the engines, seeing that drivers are forbidden to take advantage of the numerous inclines to run more than fifteen miles an hour. The consequence is that punctuality is unknown and indeed unexpected. A more dubious piece of economy is one that we can hardly credit. It is said that at th minor stations no regular pointsmen are to be employed, shunting when necessary being carried out by the *mehter* and *bheestie*. With ordinary traffic, namely, one or two mixed goods and passenger trains a day, no accident is likely to arise from such a combination of duties; but with three or four specials a day, as have been run to meet the extra traffic of the last week, and will be throughout the next, these amateur pointsmen would seem not unlikely to bring something to grief. Up to the present the rainfall in Ajmere, though not much below the average of passed years, has not been satisfactory, having fallen in the form of gentle showers which soak into the ground instead of flowing into the tanks. The crops however are said to be promsing, though the Anisagar Lake, the pride of Ajmere and the main resource of the city for drinking water, is nearly dry.

THE rise of the Jumna was, so rapid that the assistance of the European and native regiments had to be obtained. The soldiers, in relays, worked with the utmost vigour for two days and a night in constructing and maintaining a bund four feet high and six feet broad at the base, extending for several hundred yards along the banks of the Jumna. By the morning of the 4th the river began to fall, and all further danger at this point was at an end. Meanwhile the Ganges had broken through the feeble bund which had been raised on Saturday morning. It forced its way through it during the evening of Monday, passed up a nullah, and broke through a feeble bank which was all that protected the low-lying lands, where the station flood and Jumna water had been accumulating from the Ganges. In a short time it was rushing through a gap, one hundred and fifty yards wide, as over a mill race, and this vast current of water continued for nearly forty-eight hours. It was finally arrested by the fall of the Ganges permitting the erection of a bund across near the sluice. The damage has been very extensive. All the hamlets in the low-lying land between Daragunge and Trinity Church have been completely destroyed. In the Daragunge Thannah Circle 1,031 *kutcha* and 27 *pucka* houses have fallen in, and 19 *kutcha* and 10 *pucka* severely injured. In the old civil station, Colonelgunge, Kuttra, and Cannington, the damage caused was due almost entirely to the rain and wind. Here 886 *kutcha* and 10 *pucka* houses were destroyed, and 58 *kutcha* and 2 *pucka* houses rendered unfit for human habitation. This gives a total of 2,043 houses destroyed or injured, so as to be uninhabitable, in the civil station and suburbs. In the city the damage was even more general and serious. In the *mahullas* of Badshahee Mundee, Bahadoorgunge, Shahagunge, Khurdabad, Nihalpore, Pura, Manohur Dass, and Atarsuiya, 355 *kutcha* and 24 *pucka* houses were overthrown by the local rains and choked drainage, and 298 *kutcha* and 8 *pukca* houses injured beyond repair. In parts of Mooteegunge and Kydgunge considerable damage was done by the same causes, but the greatest destruction was produced by the overflow of the Jumna. In these and in Daragunge no less then 2,909 *kutcha* and 33 *pucka* houses were completely destroyed, and 281 *kutcha* and 14 *pucka* rendered uninhabitable. This gives a total of 3,923 houses as the destruction in the city. Only one human life was lost—that of a child—crushed by the fall of a portion of an apparently sound *pucka* house in the leading street of the city, long after all danger had been supposed to have passed away. The inhabitants in nearly every case were able to remove and save their household property. Large quantities of stored grain, cotton seed, and *bhoosa*, chiefly belonging to wealthy or well-to-do *bunniahs* and other traders, have however been destroyed. The houses destroyed in the city itself were in many instances the property of wealthy natives, who are in no want of assistance to erect them again. Several thousands, however, of abjectly poor people have, by the complete destruction of their houses, been thrown on the world.

BOMBAY.

A PUBLIC meeting of the Bombay Mill Owners' Association will shortly be held, to draw up a protest against the imposition of the duty of 5 per cent. on fine-stapled cotton.

THE ruler of Mishar, a place in the Persian Gulf, has ordered all slave-holders to be brought before him with a view to the emancipation of their slaves.

THE Princes and Chiefs under the presidency of Bombay have received intimation that they are expected to be in the capital by the 30th October to be in readiness for the Prince of Wales's arrival. The Governor of Bombay will probably hold a durbar in the first week of November.

THE *Bombay Gazette* believes "the etiquette to be observed on the arrival of the Prince of Wales has been arranged as follows: His Excellency the Governor of Bombay will go on board the *Serapis* to welcome His Royal Highness, and will accompany him ashore. His Excellency the Viceroy will receive His Royal Highness at the landing place, where probably the address of the inhabitants of Bombay will be presented. Sir Philip Wodehouse, not waiting for this ceremony, will go on to Parell, and be in readiness there to receive his Royal guest and the Viceroy. After His Royal Highness has reached Parell, Lord Northbrook will take his leave and go to Malabar Point."

IT is rumoured that Gunesh Khind, that magnificent Poona palace of the Bombay Governors, is suspected to be in a shaky condition. Some years ago, just after it was built, it was declared dangerous, and the walls were all cemented. A noted case came before the High Court, in which the contractor or builder was criminally charged regarding the lakhs and lakhs of rupees squandered in erecting this building, but the late Mr. Anstey defended his prisoner so ingeniously that a verdict of "not guilty" was brought in by the jury. The cement which has been used is, in mine as well as the opinions of others, not everlasting, and it would indeed be a pity to see one of the finest Governor's palaces in India crumble down so soon after its erection.

THE committee appointed at Bombay to prepare the programme for the reception of the Prince of Wales have resolved to submit the following propositions to Government: That the committee are of opinion that the Apollo Bunder is the most suitable place for His Royal Highness's landing; that, after landing, the Corporation may be allowed to present their address to His Royal Highness; according to the practice usual on such occasions; that the line of route from the landing place to Parell be decorated —the Dockyard authorities, the Port Trustees, and the Esplanade Fee Fund Committee assisting; that the town be illuminated on the evening of Tuseday, the 9th November, being His Royal Highness's birthday, and that the arrangements be made for a display of fireworks in Back Bay; that arrangements be made on Wednesday, the 10th November, for His Royal Highness's visit to the harbour and the caves of Elephanta; that the entertainment to the seamen and marines of the fleet in harbour be arranged for Friday, the 12th, and that for the school children on Saturday, the 13th November; that a fair be held on the Esplanade on Saturday, the 13th November, and that arrangements be made for public amusements and athletic games for natives.

DISSENSIONS appear to have broken out among our Bombay friends over the business of the reception of the Prince, and, according to the *Times of India*, the public are wrath at being practically excluded, by the action of the committee, from having "any voice or influence in the preparations for the reception of the Prince of Wales." The cause of complaint briefly stated is as follows: The Reception Committee that was elected at the public meeting had arranged for a "preliminary meeting a day or two later, and as no intimation of the business to be transacted was given, the larger part of the committee did not attend, imagining in all probability that nothing of importance would be done then, but that real business would be reserved for future meetings." To their disgust some twenty-five who did attend elected an Executive Committee from their own number, and the rest thus quietly "jockeyed" are left out in the cold. The result, says the *Times of India*, is showing itself in a tightening of the purse strings generally on the part of those who were before inclined to subscribe liberally. Even if the people of Bombay have cause for dissatisfaction, we are not inclined to believe with our contemporary that they will let it avail to stint their loyal demonstrations on an occasion like the advent of the Prince of Wales at the gate of the Orient.

OFFICIAL news from Aden to the 4th of August says: "It is reported that Moostapha Azim Pasha, the new Governor-General of Yemen, is about to undertake active operations against the Hasheed tribes, which are still holding out, north of Saana, against the authority of the Ottoman Porte. Telegraphic communication has been established as far as Zaideyah, and will be extended to Mohaiel, the chief city in the Aseeree country, as soon as the Hasheed tribes are brought into subjection. The wire will then doubtless be prolonged to the Hadoodal Harum, or the holy places. Hussun Bey, the Egyptian Commodore in the Red Sea, arrived at Hodeida a short time ago in the Khedive's man-of-war *Denz*, and has proceeded with some exports to Zeyla, a port on the African Coast, to the eastward of the Gulf of Tajura, to ascertain whether coal is to be found there. Aboo Bukur, the Ameer of that district, accompanied the Commodore. Zeyla is supposed to have been recently ceded to the Khedive by the Ottoman Porte. It is further rumoured that Redhwan Pasha had also arrived at Hodeida in the Egyptain corvette *Sarka*, and will shortly proceed to Zeyla. It is also said that the Khedive contemplates an expedition against Hurrar, a large town in the interior of Africa, which was visited in disguise by Captain Burton about the year 1855. Large quantities of coffee are grown at and about Hurrar, which is imported into Aden for the European markets. Twenty-four thousand seven hundred and nine, camels entered Aden from the interior during the month of July, bringing coffee, fruit, vegetables, wood, fodder, grain, and drinking water for sale.

ON Friday morning last a second landslip took place on the Bhore Ghât, very close to the site of the one which took place lately, and which has proved to be of a more serious nature than was at first supposed. About midday the ordinary morning train, which leaves Poona for Bombay at 9 A. M., reached the part of the line which has been blocked by last week's slip. It is about midway between Khandalla and the reversing station. With very creditable despatch and care, and with such regard for the comfort and safety of the passengers as the circumstances would permit, the passengers of the Poona train were got across the ugly and dangerous gap to the train which was waiting to receive them on the other side. The bustle consequent on this transfer was beginning to subside, most of the passengers having taken their seats in the second train, when the gang of coolies who are engaged in clearing away the *debris* of last week's landslip, and in boring the immense mass of solid rock which blocks up the line, were alarmed by the falling of a few small stones from the superincumbent rock. This was followed, almost instantaneously, by a terrific cataract of huge cubical blocks of surface weathered trap rock, which came thundering and crashing down the face of the escarpment at whose base the railway winds between Khandalla and the reversing station. The natives fled along the line in terror, and even those who were at some distance from the scene of this alarming catastrophe made off in the opposite direction as rapidly as possible. The sight and sound were most appalling; but, as usual in such cases, the whole thing was over in one or two minutes, and the flight of the frightened by-standers became arrested. The current then began to set in towards the scene of the accident, all being now anxious to ascertain something of the causes or results of the slip. It was natural to suppose that, with so many natives working on that part of the line, many must have been killed or severely injured; and it was with a feeling of surprise and relief that every one heard that only one native coolie was hurt. As there happened to be a doctor amongst the passengers, it soon became known that, with the exception of some rather severe bruises, this man was more stunned and frightened than seriously hurt. A short time afterwards two other injured coolies appeared, but they too were found to be suffering only from bruises. One of these two was picked up from the jungle in the gorge below. According to his own statement he was struck by one of the falling stones and knocked over the side, and then he rolled down to the bottom. The probability, however, is that he either slipped or jumped over the edge in his terror, as the injuries were of that trifling nature which might be expected to happen to one rolling down a very precipitous slope. It is a marvellous thing that lives were not lost. Had the slip taken place five minutes sooner, many of the passengers must have been hurt or killed. Only about a couple of minutes before the accident, Mr. Conder, the General Traffic Manager of the G. I. P., Mr. Keily, the Deputy Traffic Manager, and Mr. Riddel, the District Engineer, were standing just on the spot where the *debris* fell! Many tons of rock must have fallen, although the slip is of much less magnitude than last week's one. It is quite distinct, being about fifteen or twenty yards from the earlier accident. The fall has left a great brown scar on the face of the rock about twenty-five or thirty feet above the level of the railway line.

MADRAS.

ANOTHER gold-mining company is about to be started in Wynaad, and orders have already been sent to Australia for a crushing machine, which is expected in about two months.

AS it has been decided that the Prince of Wales shall visit Seringapatam, and other spots of interest in the neighbourhood, the Maharajah will not visit Bangalore. Major Hay, the Commissioner of the Astagram Division, accompanied by Mr. Carthcart Dobbs, the Executive Engineer, proceeded to Seringapatam a fortnight ago to see how the Dherai Dhowlat could be patched up to make it presentable for the Prince of Wales.

THE *Civil and Military Gazette* says: "Colonel Prettejohn, Commanding the 18th Hussars at Secundrabad, has just been on a visit to Simla about his grievance. It appears that he stands first on the list in his presidency for the next vacant brigade, but as his regiment is to return to England shortly, it was decided by the Commander-in-Chief at Madras to pass over the Colonel. We are glad his representations to Lord Napier have had a favourable result, and the gallant Colonel is to obtain the coveted command. Colonel Prettejohn, when a Captain in the old 14th Dragoons, was well known in these provinces some years ago."

FROM the last issue of the Tanjore *District Gazette* it appears that the reported number of cases of death from cholera in the district last June was 3,204. Heavy as this bill of mortality is, there is reason to fear it is far below the actual number of deaths, for in remote villages people are so ignorant and superstitious that they often decline to state the real causes of death, fearing that the authorities want the information for dissecting the bodies of those who die from cholera. A correspondent, writing from Tanjore town, says that on the 1st instant they were favoured with a very heavy downpour of rain, which lasted nearly all day, and that cholera was subsiding.

THE Governor of Ceylon has been officially informed that the Prince of Wales will reach Colombo on the 11th December from Tuticorin, and that His Royal Highness will leave Ceylon so as to reach Calcutta on the 23rd. It is supposed that His Royal Highness will leave Ceylon for Trincomalee, so that we shall not see much of him in Colombo. A kraal at Advisawella, an elk hunt on the Bopattalawas, a run through the young coffee districts, the shooting of a bear on the way to Trincomalee, will, next to laying the first stone of the breakwater, and cutting the first sod of the Uva railway, perhaps at Rosita station, we suppose, be the main features of the programme to be arranged. The Royal fleet will take care to give the dangerous lee shore of Madras, during the north east monsoon, a wide berth in their voyage up the Bay of Bengal to the City of Palaces.

WE stated last week that Valia Coil Thumpuran, the consort of the Senior Ranee of Travancore, had been made a State prisoner by order of the Madras Government and sent to Alleppy. Perhaps the following in a Trevandrum letter to the *Cochin Argus*, may throw some light on the circumstance.: "The news as it reached me is that some time ago an anonymous petition from some intriguing person here found its way to the Madras

Government, to the effect that *endeavours are being made to poison His Highness the First Prince of Travancore.* This petition was forwarded to His Highness through the Resident for enquiry, and it was on receipt of this communication that the palace was put into such a commotion. The author of this mischief has not been detected as yet, and the communication itself should be treated with the contempt it deserves. There is not the slightest foundation for tht report contained in the petition, which must have been concocted by those who wish to throw discredit on the Travancore Durbar. Knowing as we do the particular regard and affection which the Maharajah has for his brother the First Prince, the public deeply sympathize with His Highness that any scandalous story of this sort should have reached the Madras Government. The writer, I am further informed, not only mentions that His Highness the First Prince is to be poisoned, but has the audacity to name *the Dewan as being one who is to share a similar fate!* Suspicion rests upon one or two persons immediately connected with the palace, and they have been questioned, but, as may be expected, they have disclaimed all knowledge of the same."

BURMAH.

HEAVY floods have occurred in the Prome district. The water has risen considerably higher than in the great flood which occurred in 1871.

ASIA.

IT is stated at Pekin that the Chinese Government proposes to send an embassy to England in reference to the murder of the late Mr. Margary.

THE officials in Yunan are said to be in a state of great excitement at the supposed vengence, which the British are going to take for the murder of Mr. Margary. They are raising soldiers *en masse*, and declare that they will prevent any investigation.

NO satisfaction has yet been obtained for the murder of Mr. Blacklock at Pagoda Anchorage. The smugglers, it is said, are crowing over their victory.

THE *Pekin Gazette* of the 19th June contains the following Imperial announcement: "We, the Imperial Regents, command Li Han-chang, the Governor-General of the Hoo Kwang provinces, to proceed, post haste, to Yunan to enquire into and settle a certain affair which has taken place in that province; and we command Wang Tung-tseo, during the absence of Li Han-chang from his post at Woo-chang-foo, to temporarily perform the duties of Governor-General of Hoo Kwang, together with those of his own post of Governor of Hoo-pep. Respect this!"

A STRANGE affray has occurred in a public street of Macao between the editor of the *Independente* and his brother-in-law, a Mr. Barretto, one of nine litigants against that paper for libel. The facts of the case are difficult to ascertain at present, as each side gives a different version of the occurrence; but what is certain is that Mr. Barretto has an ugly black eye, and the fighting editor a broken head. The Governor, it appears, has ordered the affair to be investigated at once. This, we presume, disposes of one of the cases against the *Independente*. The plaintiffs in the other eight now seem somewhat backward in coming forward.

THE Russian *Invalide* publishes intelligence respecting General Lomakine's expedition to Krasnovodsk, and states that its object was to make a scientific survey of the rivers Ouzboi and Atrek. General Lomakine concentrated his troops near Moullah on the 1st June, and arrived on the 20th of the same month at Igda, whence he sent a detachment with topographers to Sary Kamisch. The *Invalide* adds that the expedition will remain at Igda until news is received that the exploring party have reached Sary Kamisch. General Lomakine will return *viâ* Aidin to the Little Balkan, and will then proceed in a southerly direction along the Lower Atrek. Eighteen Khans of Merv, among whom was the brother of the chief Khan of Merv, have visited General Lomakine at Igda.

THE latest telegraphic intelligence from General Lomakin's Turkestan expedition announces that the General is now on his return march from the Igda Wells. The reconnoitring party which left Igda for Sary Kamisch has arrived safely at the Tscharyschli Wells situated 150 versts in a north-westerly direction. The principal chiefs of the Teking tribes have declared to General Lomakin that the Tekings had, in a special assembly, resolved to submit to Russia, and to surrender all the prisoners in their hands. The surrender of the latter was accordingly at once effected. The nomad tribes friendly to Russia now leave caravans unmolested, and have punished those who had committed hostile acts against Russians. Five hundred liberated Persian prisoners from Khiva have arrived at Igda, having travelled through the Teking territory. The Tekings have opened bazaars.

Vanity Fair's correspondent "Misanthrope" tells rather a good story about the Sultan of Zanzibar. He says: The two words in our language which most mystify El Musafir are the terms "Club" and "Cabinet." As to the first he is under a singular misapprehension. You are aware that it is to the last degree indecorous and indelicate to refer to the ladies of a Mussalman family. Only one mode of alluding to them is permissible. You may express to an Eastern gentleman your hope that his "house" is well. My Tunisian friend hearing me sometimes say in the morning that I had been at my club, or in the evening that I am going there, has taken it for granted that I have external to my lodgings some such an establishment as King Solomon's, though on a smaller scale; consequently he always greets me when we first meet by saying: "I hope your club has rested well, and is in good health." When I attempted to explain to him that the London clubs were in reality mainly frequented by old woman, it only confirmed him in his mistake."

THE "settlement" of the Chinkiang riot business is announced by the last papers to hand from Shanghai. After a good deal of difficulty, Mr. Medhurst (who was compelled to get a special deputy sent down by the Viceroy to require from the military officials the production of the ringleaders) succeeded in obtaining satisfaction. Four of the ringleaders, says the *Courier and Gazette*, were bambooed in the presence of consular officials, each man receiving eighty blows with the heavy bamboo soundly administered, and they were further sentenced to be cangued at the consulate gate for two months. Four others were to be punished as accessories, and a satisfactory proclamation has been determined upon, detailing the offence and punishment, warning all persons to treat ladies and consular premises with the proper deference, and prohibiting the soldiery from congregating in knots within settlements unless on service. This is all very well so far as it goes. But to our mind it is just about the most useless way of getting satisfaction that can be devised in a country like China. Unless we consent to adopt the native system, and insist on the vicarious responsibility of officials, rows and riots will be just as plentiful henceforth as they have been hitherto.

THE Japanese ship *Koriu-maru* (*Columbine*) has returned from the Inland Sea, where she has been employed picking up old ordnance. She has on board a miscellaneous collection, from a 12-ton gun down to carronades. Some amongst the lot are veritable curios. Some are said to have been used on the occasion of the expulsion of the Christains, but the most interesting are two veritable breech-loading cannons, said to be two hundred or two hundred and fifty years old. They do not appear to be quite complete, but the principle of their construction appears to have been almost identical with one of the existing schemes for the conversion of Enfield rifles. Some of the smaller guns are of a pattern not unfamiliar, we believe, to dealers in bronze, which may be described as something resembling an elongated soda water bottle, and on one of them, which was exposed to view, was the following inscription, which is worth transcribing: "This gun is made of a mixture of copper and tin. Its name is *Hyaku-teti-ho*, as it will easily carry over 100 ken. If the enemy come within the distance of 100 ken, many small balls are to be fired at them. It is made so as to be easily carried on the battle field. If the party be defeated and have not time to carry it away with them in their retreat, the nail on the stand should be driven into the touchhole, in order to prevent its hurting its late owners whilst in the hands of the enemy. Spring of 10th year Bunkwa (1813)." As the bore of this gun was about an inch and a half, the limited range assigned to it—200 yards—in comparison with the powers of modern artillery would seem to argue that the Japanese powder of that date was much inferior in quality to that now in common use.

LITERARY.

RAJAH SURENDRA MOHUN TAGORE is about to bring out a history of England in rhyme, which may also be set to music.

DR. R. PISCHEL has ready for the press an edition of the Dravidian Recension of Kâlidâsa's Vikramorvasî. It will probably be printed in Germany.

AN illustrated Chinese paper, the blocks for which are to be obtained by arrangement from the *Illustrated London News*, is projected at Shanghai.

MR. ANTHONY TROLLOPE, in his absence from England, is writing a series of letters, which are printed simultaneously in different newspapers in the United Kingdom. One of these letters, headed "From Ceylon," has just been published.

Another native newspaper, called the *Indian Spectator*, is about to be published "under the management of a competent staff of writers, whose object it will be to point at the abuses current in native society, to expose its foibles, and to improve generally the tone of native morality."

THE new museum at Colombo is nearly completed, and will contain an Oriental and general library and a museum of natural history and antiquities. Liberal grants have been made from the colonial revenues for its endowment, and the India Office has contributed many valuable Oriental works from its stores.

IN the second edition of his "Dravadian Grammar" which is just out—a volume of nearly a thousand pages—the Rev. Dr. Caldwell tells a story *apropos* of the question of transliteration as it applies to Indian languages. It appears that the letters *y* and *v* are frequently in pronunciation affixed in Dravidian dialects to the vowels: thus *e* is pronounced *ye* and *o*, *vo*. Natives with a smattering of English apply this rule to our own language. Thus "every" becomes "yevery" and "over," "wover." "One of the best instances of this peculiarity," writes Dr. Caldwell, "which I have heard of was mentioned to me by some members of my family. As they were travelling along a road in Tinnevelly they passed a finger-post at a cross-road on which the name of a place was inscribed in English. They did not catch the name as they passed, and therefore sent back a native girl to find it out for them. The girl knew very little English, and said on her return that she could not make out the name though she could repeat the letters. "What are they?" Answer: 'Yen, yeh, yell, yell, woe, woe, war. These dreadful sounds represented the name *Nalloor!*"

MR. GRANT DUFF's diary in India contains the following story, which we think may interest our readers generally and our Lahore friends especially: "A tigress which lived in captivity at Lahore made her escape one day, and not unnaturally startled the station pretty considerably. At length the gardener in whose domain her cage was situated went to the proper authority, and begged to be

ordered to take the runaway back. 'Order you to take it back!' was the reply. 'I'll give you no such order—it would be ordering you to be killed.' 'Not at all, Sir,' said the man. 'Only give me the order, and I will take the tigress back.' 'I'll give you no such order, but you may do as you please,' was the rejoinder. Hereupon the man, taking off his turban, walked up to the creature, which was lying in a shrubbery which it had probably mistaken for a jungle, and, after a courteous salutation, said to her: 'In the name of the powerful British Government I request you to go back to your cage.' At the same time he put his unfolded turban round her neck and led her back. The poor fellow lost his life, not long afterwards, while trying the same experiment on a bear, whose political principles were not equally good.

MILITARY ORDERS.

BIGGS, Sub-Lieutenant W. H., to England for six months.
BOYD, Surgeon H., to Bombay for one month to appear before a medical board.
GOUGH, Lieutenant-Colonel H. H., to Simla to the 30th September.
HARCOURT, Major P. H., to Mussoorie to the 15th October.
LENTON, Quartermaster C., to England to appear before a medical board.
MACCALL, Captain G., to Calcutta for thirty days to appear before a medical board.
RADDOCK, Surgeon-Major C. E., to Bombay for thirty days.
RAMSAY, Major M., sixty-one days' leave.
THOMSON, Major G. C., to Bustee to 15th February 1876.
TOBIN, Surgeon W., to England for six months.
TAIT, Captain J. S., leave for one month.
TYNDALL, Major G., to Europe for one year.
WALL, Surgeon N. R., to England for six months.
WALKER, Captain A. M., to remain in Ceylon to the 18th September.
WAUCHOPE, Captain R. A., to Calcutta for thirty days to appear before a medical board.
WALKER, Colonel M., to be a Brigadier-General.

CIVIL GAZETTE.

IMPERIAL.

COWAN, Captain C. H., to Europe for one year and twenty-six days.
DAVIDSON, Captain J., to officiate as Assistant Adjutant-General.
DICKSON, Captain J. B. B., to Europe for one year.
DRUMMOND, Captain F. C. W., to Europe for eighteen months.
HENNELL, Lieutenant W. F., to officiate as 2nd Squadron Subaltern.
MCKENNA, Surgeon C. J., to Europe for two years.
MUIR, Lieutenant A. M., to officiate as 1st Squadron Subaltern.

London, 13th August.

PARLIAMENT was prorogued to-day by commission by Her Majesty. In her Speech she says: "My relations with all foreign Powers are most cordial, and I confidently anticipate the maintenance of European peace. The visit of the Sultan of Zanzibar has led to the conclusion of a supplementary connection for the more complete suppression of the East African slave trade. I deeply regret the Yunnan outrage, which is at present the subject of careful enquiry, and no efforts will be spared to punish the instigators and perpetrators. The condition of my colonies is prosperous, and I look for important and valuable results from the proposed Conference for confederation of the South African States." Her Majesty in conclusion eulogistically enumerated numerous measures of the Session.

Latest advices from the Cape state that public opinion is favorable to Lord Carnarvon's scheme for the confederation of South African States.

16TH.

London, 14th August.

THE following orders appear in Saturday's Gazette: Colonel Baker to be cashiered. William Irwin to be Colonel of the 34th Foot. The principal new features in the regulations for Regimental Exchanges are that both officers exchanging must declare upon their honour that no cause exists affecting their professional efficiency, and that no money had been contributed by the other officers.

Captain Webb, the celebrated swimmer, has unsuccesfully attempted to swim across the Channel.

Calcutta, 6th August 1875.

THE INDEPENDENT ORDER OF GOOD TEMPLARS.

PRINCIPLES.—Total abstinence, enforced by a life-long pledge, and the absolute prohibition of the manufacture, importation, and sale of intoxicating drinks.

POLICY.—Broad, allowing Lodges to act according to locality, times, and circumstances.

BASIS.—Non-beneficiary, the object being to do good rather than to receive benefit

FINANCIAL SYSTEM.—Entrance fee may be as low as Re. 1. Quarterly subscription—Males, 12 ans.; Females, 8 ans.

ELIGIBILITY.—Male and Female are admitted, and are on a perfect equality as to eligibility for office, &c.

MEMBERSHIP.—About 800,000 Members, including Military Officers, Clergymen Governors, College Professors, Lawyers, Directors, Merchants, Clerks, Soldiers, Sailors, and Mechanics.

SCOPE.—The Membership is fraternal, all being entitled to the privileges of the whole Order.

MODE OF WORK.—Employment of competent Lecturers, printing of temperance works, and formation of temperance libraries.

RESULTS.—The violations of pledges amount to only about 5 per cent. annually.

Vice-Presidents.

HIS GRACE THE DUKE OF SUTHERLAND, K.G. | HIS GRACE THE DUKE OF ABERCORN, K.G.

Chairman of the General Court of Directors.

THE RIGHT HONORABLE LORD LAWRENCE, G.C.B., G.C.S.I.,

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

CAMPBELL'S PLANTATION

HAVANA CIGARS.

"No. 7," a large Havanah pattern Cigar, about 60 to the pound.

"No. 6," a smaller Havanah pattern Cigar, about 85 to the pound.

Can be purchased only at Messrs. Campbell & Co's Depots at

CALCUTTA, ALLAHABAD, LAHORE, POONAH, BOMBAY.

"No. 7," Rs. 30 per 1,000, inclusive of all charges. | "No. 6," Rs. 23 per 1,000, inclusive of all charges.

Application should be made to the Clerk in charge of any of the above Depôts.

If 2,000 Cigars are taken, a Discount of 10 per cent. is allowed.

If 10,000 are taken, Discount of 20 per cent. | If 30,000 are taken, Discount of 25 per cent.

Terms—Cash prepaid.

MESSRS. CAMPBELL & Co. have sent a stock of their Havanah patterns Home, and are prepared to deliver them free of all charges to any Railway Station of the United Kingdom at the following rates, duty paid:—

"No. 7" Rs. 80 per 1,000. | "No. 6" Rs. 60 per 1,000.

Prices in Bond in London.

"No. 7" Rs. 35 per 1,000. | "No. 6" Rs. 25 per 1,000.

"No. 7" costs therefore about 7 Cigars to the shilling anywhere in the United Kingdom.

"No. 6" nine to the shilling.

Orders for large quantities, or orders for supplies to England, should be addressed direct to

DAVID WALDIE,

Address, 3-2, *Hastings' Street, Calcutta.*

(D)

ALL BILIOUS COMPLAINTS and every disorder depending on either functional derangement of the Liver or obstruction of the hepatic or biliary Ducts, such as Indigestion, Jaundice, Heartburn, Dyspepsia, Pain in the Right Side and Shoulder, Blotches, Habitual Costiveness, Offensive Breath, Depression of Spirits, Oppression after Meals, Nervous and General Debility, Restlessness, Wasting, &c. &c., have their appropriate remedy in

Dr. E. J. LAZARUS'S

ESSENCE OF CHIRETTA.

That it is the only preparation that has a really *beneficial* influence on the Liver has already been proved, *beyond all doubt*, by the 97,500 cases in which it has been tried. It has already saved *thousands* of valuable lives (*see the numberless Testimonials in the Pamphlet of Directions that is wrapped round each bottle*), and has enabled very many thousands more to continue their residence in India in the enjoyment of perfect health and comfort; hence it has, with all truth, been generally styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the Medical Hall, Benares, from the original receipt of E. J. LAZARUS, M.D., and sold by all Medicine Vendors at Rs. 4 each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof of its value*—against whom the Public are warned. Please observe that every bottle is capsuled, and bears on its labels the *facsimile* of our signature.

THE GRAND INDIAN ALTERATIVE TONIC.

DR. E. J. LAZARUS'S

ESSENCE OF HEMIDESMUS.

THIS preparation of the INDIAN SARSAPARILLA UNUNTAMUL is equal, if not superior to the more costly Jamaica or Hondurus Sarsaparilla. INDIAN MEDICAL AUTHORITIES, both European and Native, with one accord bear testimony to its valuable alterative tonic, diuretic and diaphoretic properties, pronouncing it a most efficacious remedy in all those diseases arising from an *impure state of the blood*, and most strongly recommend it in SCROFULOUS COMPLAINTS, BOILS, PIMPLES and BLOTCHES of the SKIN, CONSTITUTIONAL DEBILITY, CACHEXIA, especially of Children, CONSTITUTIONAL SYPHILIS, CHRONIC RHEUMATISM, certain diseases of the Skin, &c. &c.

Prepared only by Messrs. E. J. Lazarus & Co., Medical Hall, Benares, from the original receipt of E. J. LAZARUS, M.D., and sold by Medicine Vendors at Rs. 2-8 per bottle.

CELEBRATED

STEEL PENS,

SOLD

BY ALL DEALERS THROUGHOUT THE WORLD.

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ¼ lb. and 1 lb. tins, labelled thus:—

JAMES EPPS & CO.,

HOMŒOPATHIC CHEMISTS,

48, THREADNEEDLE STREET, & 170, PICCADILLY.

Works—EUSTON ROAD, AND CAMDEN TOWN.

(Makers of Epps's Milky Cocoa and Cocoa Condensed Milk.)

GEOGHEGAN, Under-Secretary to the Government of India, Department of Revenue, Agriculture, and Commerce; Foolscap folio, in stiff Cover. Price, Rs. 2; packing and postage, 7 Annas. New authorized edition, corrected up to 1st December 1873; royal 8vo., limp covers, with every alternate page blank for entering notes and alterations.

DISSOLVED PERUVIAN GOVERNMENT GUANO,

PREPARED BY

OHLENDORFF & Co.,

LONDON, ANTWERP, HAMBURG, AND EMMERICH-ON-RHINE.

GUARANTEED TO CONTAIN

Nitrogen equal to 10 per cent. of Non-Volatile Ammonia.

20 „ Soluble } Guano Phosphate.
4 „ Insoluble }

Price £14 per ton for 30 tons and upwards.
„ £15 „ under 30 tons.

Delivered Free at any of their Depôts in the United Kingdom.

TERMS.—CASH.

THIS Manure is prepared from *genuine Peruvian Government Guano.* The result of its special treatment is, that the Ammonia is fixed, the Phosphates in the Raw Guano rendered soluble, and the Manure brought into the condition of a free dry powder.

It loses nothing from exposure to the atmosphere, or to the heat of the sun. It is offered to the Planter with a *Guarantee* of its composition, and is, in fact, the richest, and, considering the quality, the cheapest *Guaranteed Manure* at present in the market. Its fertilizing properties are such as will enable the consumer to derive the greatest economical advantage from the use of Guano.

APPLICATION OF DISSOLVED PERUVIAN GOVERNMENT GUANO TO COLONIAL PRODUCE.

INDIGO.

Dissolved Peruvian Government Guano will give the plant greater strength to resist unfavourable influences and the Planter in thus developing the crop will be amply repaid the cost of the manure by the increase and superior yield of Indigo.

Dissolved Peruvian Government Guano is a highly concentrated Manure offering a large and guaranteed percentage of fixed ammonia and soluble immediately available phosphate of lime, and may therefore be recommended with the utmost confidence for Indigo plantations. A quantity of about 3 cwts. per acre will be found materially to benefit and increase the crop. This quantity may be increased with advantage if the land be impoverished by previous crops.

RICE.

We would strongly recommend the use of 2 to 3 cwts. per acre for Rice; for, although irrigation is generally solely relied upon as a means of producing a good crop of Rice, there can be no doubt that, in addition to irrigation, 2 or 3 cwts. of Dissolved Peruvian Government Guano per acre will be highly beneficial.

TEA.

We are confident that Dissolved Peruvian Government Guano will be highly esteemed as a Manure for Tea, and we recommend, say, 3 cwts. per acre, mixing the Dissolved Guano first with vegetable ashes or dry soil so as to secure its uniform distribution. If the land is very poor, and exhausted by previous cropping, more Guano may be used with advantage.

SUGAR-CANE.

Dissolved Peruvian Government Guano produces heavy crops of well-matured Canes, rich in juice, yielding a high percentage of crystallizable sugar, without detriment to the soil. From 3 to 4 cwts. of Dissolved Peruvian Government Guano per acre is a good dressing for Sugar-cane. A few trials of Dissolved Guano in comparison with other manures will soon convince the Planter that no manure yields so large a profit in the increased production of sugar as Dissolved Peruvian Government Guano.

COTTON.

Dissolved Peruvian Government Guano meets the requirements of the Cotton Plant, inasmuch as it furnishes all the elements of fertility which are calculated to promote the luxuriant growth of the same. If the increase in quantity be made the chief object, 4 to 5 cwts. of Dissolved Guano per acre will prove most advantageous; but if greater care be given to the fine quality of the Cotton, the use of 2 to 3 cwts. of Dissolved Peruvian Government Guano, together with 2 to 3 cwts. of mineral superphosphate, per acre, will be found to answer better.

JUTE.

3 to 4 cwts. Dissolved Peruvian Government Guano cannot fail to materially increase both the quantity and quality of this crop which is becoming of more commercial value every year.

RAPE AND LINSEED.

Colza and Flax exhaust the land very rapidly, and for this reason require liberal treatment with manure. Experience has shown that Dissolved Peruvian Government Guano, is the most efficacious manure that can be used. Mixed with diluent as we recommend sow the Dissolved Guano broad-cast, and harrow it in with a light harrow about a week or a fortnight before the rape or linseed is sown. 4 cwts. of Dissolved Guano is a fair dressing per acre on land of average fertility On poor soils 5 to 6 cwts. will give a more profitable return than a smaller dose.

E. I. R., Bengal

ASSURANCE COMPANIES.

STANDARD LIFE OFFICE.

THE DEATH CLAIMS paid by the STANDARD COMPANY, during the past nine years, have been upwards of £1,200 per business day.

THE FUNDS during the same period, after payment of Claims and Expenses of every kind, have increased from £2,600,000 in 1865 to £4,800,000 in 1874.

NEW ASSURANCES, to the amount of £1,000,000 Sterling, have been placed upon the Company's Books in each of the years since 1865—some of them years of doubt and anxiety in the Assurance World. This result, it is believed, has been maintained by no other Office in the United Kingdom, during the same period.

BONUS YEAR 1875.

The next division of Profits will take place at 15th November 1875.

ANNUAL REPORT 1875.

Copies of the Annual Report, containing the Balance Sheet, &c., may be obtained on application.

GEO. LUCAS KEMP,
Secretary, Calcutta Branch.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit.*"—*Extrac from the Speech of the Chairman of the Annual Meeting 7th August,* 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY,
CALCUTTA.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policy-holders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 41 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society, which for twelve years continuously has now returned *Fifty per cent.* of premiums on the participating scale.

Insurances effected for Whole Term of Life, or short Periods,

With or Without Participation in Profits:

The Medical Fee in all Cases Paid by the Society:

Premiums payable Yearly, Half-Yearly, or Quarterly,

at Option of Assured:

Reduced Rates of Premium during Residence in Europe:

Participating Policies share in Profits after Six Years:

Lapsed Policies revived on Special Terms:

Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:

And at reduced Civil Rates during Residence in Europe:

Female Lives taken at Ordinary Civil Rates:

No extra Rate for unimpaired Whole-term Lives in India.

Available Funds	...	... **£ 1,012,185 16 8**
Annual Income	...	... **£ 172,151 18 11**

Claims promptly adjusted on proof of Death.

Total of Claims paid since 1834, £ 2,142,045 14 9

Copies of the last Report, Proposal Papers, &c., on application to the Society's Sub-Agents in the principal Mofussil Stations, or to

GISBORNE & CO.,
Agents and Secretaries.

COLVIN, COWIE & CO.

NEW PLAN

BY THE

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATES, with 80 per cent Invested Solely for Policy Holders.

Example.

A, aged 30, wishes to Assure Rs. 1,000.		With Profits.
Annual Premium at Indian Rate	... Rs.	36 0 0
Annual Premium at English Rates	... „	23 10 8
Difference	... Rs.	12 5 4

The "ORIENTAL" charges (*A*) the English Premium of Rs. 23-10-8 *only*. The Extra Premium for India, Rs. 12-5-4, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with Compound Interest at 3 per cent is equal to the sum assured, *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses, and Forms of Proposal can be obtained from any of the Agents, or from

D. McLAUCHLAN SLATER,
Fellow of the Institute of Actuaries,
Manager and Actuary.

THE "CHANDOS CLASSICS" SHAKESPEARE,
With Life, Glossary, &c., reprinted from the original Edition. Re. 1-4.
———Ditto, neatly half-bound in Morocco. Rs. 2.

THE "BLACK FRIARS" SHAKESPEARE,
Edited by Charles Knight, with Glossarial Index, &c. Rs. 2.

THE "PRINCES" SHAKESPEARE,
A Selection of the Plays of Shakespeare (Merchant of Venice, Julius Cæsar, and Macbeth) carefully expurgated and annotated for the use of Families and Schools. By the Rev. D. Mathias. Rs. 3.

PASSAGES FROM THE WORKS OF SHAKESPEARE,
Selected and Translated into German (including the English Text.) By Gustav Solling. Re. 1-12.

SHAKESPEARE—LEXICON,
A Complete Dictionary of all the English Words, Phrases, and Constructions in the Works of the Poet. By Dr. Alex. Schmidt, Vol. I. Rs. 8-4.

A SHAKESPERIAN GRAMMAR,
An attempt to illustrate some of the differences between Elizabethan and Modern English for the use of Schools. By E. A. Abbott. Rs. 3-8.

SHAKESPEARE COMMENTARIES,
By Dr. G. G. Gervinus, new edition, revised. Rs. 7-12.

SHAKESPEAREANA GENEALOGICA,
Part I.—Identification of the Dramatis Personæ in Shakespeare's Historical Plays, from K. John to K. Henry VIII.—Notes on characters in Macbeth and Hamlet—Persons and places, belonging to Warwickshire, alluded to in several ways.
Part II.—The Shakespeare and Arden Families, and their connections, with Tables of Descent, compiled by G. R. French. Rs. 8-4.

SHAKESPEARE AND THE EMBLEM WRITERS,
An Exposition of their similarities of thought and expression. By H. Green, neatly half-bound in calf. Rs. 22.

SHAKESPEARE,
His Inner Life, as intimated in his Works. By J. A. Herand. Rs. 12.

SHAKESPEARE:
His Birthplace, Home and Grave—a Pilgrimage to Stratford-on-Avon, by the Rev. J. M. Jephson, with Photographic Illustrations, beautifully bound in Morocco, extra, *slightly stained.* Rs. 10.

THE SHAKESPEARE BIRTHDAY BOOK,
Neatly bound in limp Morocco. Rs. 4.

THE FALL IN SILVER.

THE fall in the exchange value of the rupee is telling so heavily upon large classes in the country, that it has become emphatically the subject of the day. "Every one who has to "make a remittance to England, that is to say who has to make "a payment in gold while he receives his income in silver, "has to pay more silver, or in other words, a larger portion "of his income, than he had to pay when the value of his "income was higher." So much of the case is clear to every one. But is not this loss in exchange, the symptom of a greater loss? We reckoned the rupee formerly at two shillings, because it cost about that sum to make the coin. Now, owing to the fall in the price of silver, the rupee can be laid down for about one shilling and nine pence halfpenny, which therefore is its present exchange value. The fall is seen most clearly when we have to convert our money into the gold currency of England or any other country. The debasement is in the rupee itself, and the question is, does it not cling to it whether we keep it here, or send it abroad. In the former case, the fall will take the form of a general rise in prices: in the latter that of loss in exchange. The rupee is worth less than it was intrinsically, and will therefore buy less of foreign gold or goods. Does the fall extend further; and affect the internal exchanges of the country?

A correspondent says it does; and writes to us as follows: "We have to note that the effect of the depreciation in the finances of the country is much greater and more complicated than would at first be supposed. It is not by the exchange that Government loses, for it gets the full value, such as it is, of its silver. The injury it suffers comes from this, that the number of rupees which it is to receive as land revenue, and on many other accounts, is fixed, but their value has fallen. It is paid, not in the good old two shilling coin, but in our depreciated one and nine-penny money. And when it comes to spend what it has got, either by purchasing gold for its English payments, or stores or labour in India, it finds that its cash will not go so far as it did. In one way only can it get rid of such coins without loss. It can pass them on its servants and debtors, who have Hobson's choice in the matter—that or no other. And this it does, thereby reducing by 10 per cent. the income of all civil officers, soldiers, and fund-holders. Lord Northbrook said nothing of this part of the subject, wisely declining to open their eyes to the *wrong* they have suffered.

"He declines all responsibility in the matter. 'The Government of India,' he says 'is one of the best abused Governments in the world, and I have seen it asserted that this fall in the value of silver is our fault. This accusation reminds me of the witty lines—

> 'Who makes the quartern loaf and Luddites rise?
> Who fills the butchers' shops with large blue flies?'

'I need hardly say that Government is not a whit more responsible for the fall in silver than Bonaparte was for the flies. Governments can do much: when they interfere with trade they usually do much harm—but they are powerless to control the value of any article in the markets of the world.'

"We need not stop to wonder whether Napoleon, *could* have effected, however unintentionally, the number of the blue bottles of our shambles; but it is certain that the Governor-General of India cannot waive aside, in this light and airy way, all responsibility for our present loss. Of course no one ever did assert that the fall in the value of silver was the fault of Government but the extent to which we have suffered by that fall, is due to Government action. By Act XVII. of 1835 a gold coin of 120 grains standard fineness was declared to be legal tender for ten rupees. Had we abided by the law, we would have now still a gold currency like the rest of world, and the fall in the value of silver would not have affected us any more than it affects England. In 1852 Lord Dalhousie by a proclamation demonetized gold, forbidding the treasury to receive it on account of Government. Thus he carried out his ideas even in the mint, and made his annexation policy hold good as against our gold coinage as well as against native States. Such being the facts, we leave it to our readers to judge whether Government can treat its own rupees as the flies in butchers' shops, things with which it has nothing to do, and which are altogether beyond its control.

"In an age when every one tries to avoid responsibility, we wonder whether the Finance Department would allow that it is responsible for its own ignorance. 'What the cause of the fall in the value of silver has been,' says His Lordship, 'and how long it will continue, it is not easy to say. It may be produced mainly by the change in the currency of some nations from silver to gold, which has thrown a large quantity of silver into the market. It may arise from the increased production of silver.' That is to say, the Government does not know whether it is temporary or permanent, a passing and casual loss, with which we must put up, or a lasting evil, for which it is our duty to provide the remedy. But, this is the very point on which the public wishes for information. It has been exhaustively discussed in Germany in connection with the late change in the currency carried out in that country, and there are therefore ample materials for forming a judgment at the command of our Government. We have a strong opinion that the supply of silver from the new American mines is in excess of the demand, even at the present reduced price of four shillings and eight pence an ounce, and that its value must therefore continue to fall, perhaps until it reaches four shillings. But what we want at present is enquiry, by competent authorities, such, for instance, as Lord Northbrook himself. Instead of this we receive a candid confession of ignorance. We have not the slightest wish to exaggerate the loss caused by this depreciation of the coinage. In particular, we do not maintain with some that it has injured trade. We do not take Swift's line, when in attacking the debased copper made by the contractor Wood, he wrote in his happy doggerel—

> 'The half-pence are coming, the nation's undoing,
> Ther' is an end to your ploughing, your baking, your brewing—
> In short, you must all go to rack and to ruin!'

"The only sufferers are those who receive fixed incomes from rents, mortgages, the funds, or Government service. This class is however sufficiently large and strong to take care of itself. It includes the Governor and General and Council, the whole of the Civil Service, the army, European and Native, from the Commander-in-Chief downwards, the Archbishop, the Bishops, and Clergy, our royal pensioners of State, most of the landholders, and all those in England who have lent money to Government in India or on the Government guarantee. Every member of this class, without exception, is losing 10 per cent. of his income by the policy of Government in clinging to a silver coinage. And there is every probablity that before many years the loss will increase to 25 per cent. These same persons made sufficient clamour when a third of the amount was taken from them under the form of income tax. They are silent now because they do not so clearly understand how it is they suffer, or what should be the remedy.

"Neither do we desire to underrate the difficulty of introducing a gold coinage, on the standard of the English sovereign, as a ten rupee piece, the only real, complete, and final way of

meeting the fall in silver. Government would have to convert rupees into gold, at a loss of 10 per cent., until things had found their level again, that is, until there was in the country only as much silver money as is required for petty transactions. There is no official estimate of the loss which would be thereby caused. We may however remark that those who say that the value of the rupees in circulation is two hundred millions sterling, and that a tenth of this sum would have to be expended in order to introduce gold, exaggerate very greatly. In the first place there cannot be more than a hundred millions of money in the country, and in the second we would only have to convert a part of this. Some silver would always be required for small sales, as in England. We believe that in a country where most dealings are very minute, by far the greater part of the coinage must always remain silver, and that our object could be effected by issuing twenty millions of gold sovereigns, at a loss of ten millions sterling. But whatever the cost, it could not be so great as to be equal to the annual disbursement of a million sterling as loss on exchange. Moreover, it would be necessary, in the interest of debtors, to provide that contracts made between 1872 and the date of a new currency law, that is, while the depreciated coinage prevailed, should be executed by payment in such coins. There are many other practical difficulties in the matter, which would require all our care and intelligence.

"These changes in the currency of a nation are great works, and have to be matured in every detail before they can be put in execution. But they are not impossible, and on proper occasions we should not shrink from effecting them. France has substituted gold for silver. Germany and Holland are doing the same. In 1819 the ordinary currency of England was and had for nineteen years been, bank notes and tokens, inconvertible, and then depreciated 30 per cent. below their nominal value. By Peel's Act cash payments, and the compulsory purchase of gold by the mint, at the fixed rate of £7-12-10½ were resumed. As our rupees are depreciated only 10 per cent, this change was three times as great and as costly as that now proposed. The reform is one which has been frequently carried out in different countries, and one which we must in the end adopt. And the longer it is postponed the more difficult it becomes. Silver is, and has been for centuries, sinking in value as compared to gold. The proportion between them was originally as ten to one, in the seventeenth century as fourteen to one, in the eighteenth as fifteen to one, now it is as seventeen and three-tenths to one. It is better to take the necessary trouble, and undergo the expense, of extricating ourselves from a bad position at once, than to wait until it has become worse. In this as in many other cases, the first loss is the least."

So far our correspondent.

THE average price of silver in London during the fourteen years, 1853-1866, was 61·39 pence per ounce, at which rate the intrinsic value of the rupee was 22·81 pence. The expense of freight, insurance, brokerage, &c., upon the transport of silver to India averaged during the same period about 3¼ per cent., while the seignorage charged at the mint including the premelting charge of 1 per mille is 2·1 per cent. The value of the coined rupee therefore *in India* is the intrinsic value of the metal contained therein, *plus* the seignorage or charge for manufacture and all other expenses incurred in the transport of the metal from Europe and its conversion into coin. The value of the same rupee abroad is simply the intrinsic value or selling price in the foreign market of the silver contained therein. Thus the average cost of the rupee in India during the 14 years ending with 1866, as compared with the present cost, was as follows :

	1853-1866.	1875.
	d.	*d.*
Intrinsic Value	... 22·81	20·44
With Freight, Insurance, &c., 3¼ per cent.	... 23·55	21·10
With Seignorage, 2·1 percent.	... 24·06	21·57

Thus whereas the rupee represented a little over 2*s.* nine or ten years ago, it has now sunk to 1*s.* 9½*d.* And there is little prospect, it may be feared, of any rise in its value. For the metal has fallen in value intrinsically ; nor is there much room, we think, to doubt the cause of the fall. The selection of any commodity to act as money, in but one part of the world, increases its value everywhere else. There is no doubt, says the great economist Say, that "if silver should cease to be current as money in Asia, the value of that metal in Europe would be affected, and more of it would have to be given in exchange for all other commodities. The adoption of any specific commodity to serve as money considerably augments its intrinsic value, or value as an article of commerce." Were the existing stock of silver and gold applied to no other use than the fabrication of plate or ornaments, the quantity would be abundant and much cheaper than it is at present. We do not think there can be any reasonable doubt that the heavy fall that has taken place in the price of silver arises from its having been so extensively demonetized of late years by other countries. The chief use of the precious metals is for currency, and were the nations of the world to begin demonetizing gold, and adopting silver as their standard in its room, we should see an immediate and heavy rise in the price of silver. It is not, we are satisfied, the increased production of silver that has brought this change about. The value of the precious metals in general is in the nature of things very little affected by an increase in their production ; for the obvious reason, that as they are nearly indestructible, the existing quantity in the world is already so enormous, that the increased yield adds but a very small proportion after all to the quantity already in existence, which is the accumulation of many centuries' production. Were we to demonetize silver in India, it is worth reflection as to what the effect would be upon the price of the metal. For it is the Eastern demand for silver that maintains it at its present price, and the fall that would take place therein upon the demonetization of the metal in India no one can forecast. The existing rupee currency of India is believed to be "moderately estimated" at two thousand millions of silver pieces including the fractional coins.

We look upon the currency question as by far the most important of the day, and while we give Lord Northbrook honour for the frank confession that Government is really in ignorance of what it ought to do, we think that confession should be but the prelude to the institution of careful and earnest enquiry into the whole subject. For it is a very grave fact, and may be fraught with issues we little suspect, that our currency has suddenly deteriorated in value ten per cent. by the change of standard which other nations have thought it wise to adopt. Their course may, for anything at present clearly discerned, prove very damaging to us, or it may prove the reverse. And while other nations are demonetizing silver, it may be that it is true wisdom for us to retain it as our standard. The currency question is so intricate and difficult a one, that it is wise to distrust first impressions altogether: and we are therefore unable to adopt our correspondents' sanguine and confident views. Suppose it to be true that the rupee has not merely fallen in its exchange value with other lands, but, as our correspondent assumes, that it has fallen in value in the same way for all purposes of internal exchange in India—we may not forget that economists are agreed in regarding such a tendency as healthful, and not injurious to the nation as a whole.

A fall in the value of money means a diminution of the pressure which rent, mortgages, taxes, bonds, inflict upon the industry subject to them. When money is declining in value, the debtor portion of the nation—those who have fixed money payments to make—benefit at the expense of the creditor portion, or those who have such payments to receive : and conversely when money is increasing in value. But the debtor portion of the country, is ever in an immense majority. In general terms it may be said to be the working part of the community, while the creditor portion *i.e.*, the small and comparatively idle class of capitalists and landlords, fundholders, annuitants of all kinds, landowners, mortgagees, the public service, and the salaried classes generally, find that though their incomes continue nominally the same, their purchasing power is lowered. They can no longer command the same amount of the labour of the producer's hands. The condition of the merchants, manufacturers, tradesmen, and farmers of a country is improved at the expense of the landlords and creditors, and the classes subsisting upon fixed incomes. Where the fall is rapid and heavy, such as we now see it in India

wages seldom keep pace *pari passu* with the rise in the cost of living, and the class of artizans and labourers may suffer severely for a while in consequence. But even this tends to stimulate industry and production :—

"As fixed or stationary payments," says McCulloch, "include "the interest of public debt as well as the many outgoings of "Government which do not readily accommodate themselves "to changes in the value of money, with the rents of farms and "houses let on lease, feu-duties, the interest of mortgages, and "other stationary loans, the payments to private annuitants and "clergymen, the fees of lawyers, physicians, &c., it is obvious "that, in a country like this, they must amount in the aggregate "to a vast sum. No doubt it sometimes, and indeed not unfre-"quently happens, that individuals belong to both classes, or "that they have fixed payments to receive as well as to make, "and that therefore neither the gain to the one party nor the "loss to the other, from fluctuations in the value of money, is "so great as might be at first supposed. Still, however, there "is no room for doubting that the greater proportion by far of "fixed payments is made to the classes not engaged in business "or in industrial undertakings by those who are ; and hence the "advantages which any considerable fall in the value of money "confers on the latter—that is, on those whose well-being, and "that of the public, are commonly supposed to be identical. "Such fall, by lightening the burden of taxation and of all "fixed charges, increases universally the productiveness of "industry and the rate of profit. And it is hardly necessary to "add that this increased profit operates as a spur to production "that it quickens all the operations of trade, and occasions "an increased demand for labour.

"The opposite effects follow when, instead of falling the "currency becomes more valuable. Taxes and fixed charges "being then augmented in an equal degree, the profits of those "by whom they are principally borne are proportionally reduced, "industry is depressed, and the situation of the productive class-"es changed for the worse. But though there cannot, so it "appears to us, be a doubt that a fall in the value of money, "however injurious to large classes, is, on the whole, advantage-"ous, we hope it will not be thence inferred that we are disposed "to approve any degree of an intentional reduction of its value. "Money being the standard or measure of value, *to interfere* "*with it, whether in the way of increase or diminution, would be* "*an act of extreme injustice.* Government is bound to protect, in "as far as possible, the rights and interest of all classes of its "subjects ; and it cannot, without trampling on its most sacred "duty, adopt, to benefit one part of them, any measure which "might be injurious to another part. But a fall in the value of "the precious metals caused by the greater facility of their pro-"duction, or by the discovery of new sources of supply, is a "wholly different matter. It depends in no degree on the theo-"ries of philosophers or the decisions of statesmen or legisla-"tors, but is the result of circumstances that are beyond human "control. And though, like a fall of rain after a long course "of dry weather, it may be prejudicial to certain classes, it is "beneficial to an incomparably greater number, including all "who are actively engaged in industrial pursuits ; and is, speak-"ing generally, of great public or national advantage."

These are very important considerations. We are not disposed to adopt them without modification, but we certainly regard it as a happy circumstance for India, that the changes which other governments of the world are making in their currency arrangements, tend to cheapen silver and not to augment its price. The movement, we see going on, is serious enough to call for the instant and careful attention of the State ; but it would be a far more serious matter for us were the movement in the opposite direction, when the great industrial classes of the country would be the main sufferers.

THE ANNUAL RAINFALL.

THERE is no problem in the meteorology of India, the practical issues of which are so important, as that of the causes which determine the distribution of the rainfall. That it is within the power of science to solve this problem, there is no reason perhaps to doubt ; and there are certain peculiarities in the meteorology of India which seem to justify the hope that this knowledge when attained, will enable us to some extent to forecast our seasons, or at least to speak with some confidence of their probable character for some months in advance. The meteorology of the monsoon region is comparatively simple, and an eminent authority has indicated India as pre-eminently the country in which the systematic study of meteorology promises to be attended with the most speedy results. It has long been known that, together with the semi-annual reversal of the winds, an equally regular change takes place in the distribution of temperature, atmospheric pressure, and all other conditions which either influence the winds or are influenced by them : and that all that is characteristic of either monsoon season in general, is persistent while it lasts. But it is not so generally known that systematic observation in Bengal, has shown that the abnormal features of each monsoon are almost equally persistent. The fact was first noticed we believe by Mr. Blanford, when comparing the distribution of atmospheric pressure in the two rainy seasons of 1868 and 1869. In the first of these years, the barometers of Saugor Island and False Point indicated during many months, the existence of an unduly low pressure in the north-west corner of the Bay. This necessarily affected the winds around, obstructing their passage towards Behar and the Upper Provinces, and determining an unusually heavy fall of rain in the south-western corner of the Gangetic Delta, and proportionate drought in the region to the north-west. What the cause of this depression may have been, Mr. Blanford was not able to say ; but it is important to notice that it was peculiar to the season of 1868, and not recurrent in subsequent years ; that it made its appearance as early as April, and became intensified up to August, after which it maintained its position up to the end of the monsoon, gradually becoming less marked and influential, though up to November the barometer at Saugor Island was decidedly lower than either at Calcutta or False Point. Each subsequent year Mr. Blanford tells us has confirmed the general truth of the law, that abnormal meteorological conditions are, or tend to be, persistent in India ; and if the connection of these irregularities with those of the rainfall can be once ascertained, it may be possible, even at an early period of the season, to forecast its probable peculiarities.

During the famine year 1873, the distribution of the atmospheric pressure deviated still more widely from that of ordinary years than in 1868. And although with the imperfections of our present information, it is impossible to say exactly in what measure the deficiency of the rainfall is to be attributed to the abnormal barometric distribution that we know of, and how much to that of the regions around from which *no information* has yet been obtained, it follows from what we do *know of* the normal meteorology of the country, that the effect of the former would be to weaken the current of wind which blows from the Bay of Bengal, and therefore to affect prejudicially the rainfall of the Lower Provinces.

In ordinary years the winds of the south-west monsoon blow on the one hand from the Arabian Sea, and on the other from the Bay of Bengal, towards a line lying to the south of the Ganges, at no great distance from and parallel to that river. A barometric depression begins to appear in this region in April, and by the time the rains set in in June, it is well established, the pressure decreasing along it from east to west, where this *trough* as it may be termed, merges in the great barometric depression of the Punjab and the Bikaneer Desert. To the south of this line, the winds from the Arabian Sea blow across the Central Provinces chiefly from the west. To the north of it, those from the Bay of Bengal, turning with the Gangetic Valley, blow in an opposite direction ; their line of meeting being along this trough. In 1873 *this trough did* not exist. The pressure declined thence to the northward, so that the place of lowest barometer lay far to the north-west in Oudh and Rohilcund, immediately under the hills. Elementary physics teach us that differences of barometric pressure are the cause of the winds ; and a current of air coming from the Bay of Bengal could only reach this barometric depression along its northern margin ; while here lay a great physical obstruction in the shape of the Himalayan chain. Now, a weakening of the monsoon current means a deficiency of rain ; for the vapour that is

condensed as rain on the upland plains and hills of India, is brought by this current from the ocean to the southward. Whether, however, these conditions were the only or even the principal cause operating in the drought of 1873 case, we cannot say without some knowledge of the state of things prevailing in the Punjab and in Western and Southern India, and it may be in the seas further to the south and west ; and of these we are still in complete ignorance.

Our meteorologists are already able to frame a conception of the general distribution of pressure, temperature, &c., over about one-half of India and its seas, which probably represents pretty closely the normal or average features of the climate ; and thus the first indispensable step towards an understanding of Indian meteorology has been taken, for a portion at least of this great country. When it is possible for Mr. Blanford to complete this survey, by the records which for many years past have been accumulating in the presidencies of Bombay and Madras, and when the Punjab registers are trustworthy and comparable, we may be in a position not only to describe, and in a great measure explain, the Indian monsoons, but to enter on an investigation of the causes (probably in great part local,) which determine their irregularities, and to attempt the solution of the problem stated in the Bengal Administration Report for 1872, *viz.*, "to ascertain the circumstances under which the summer rainfall is thrown sometimes on the east, sometimes on the west of the Bay of Bengal, and under which it is sometimes abundant in Bengal and scanty in the North-Western Provinces, and sometimes, as in 1872, almost deserts Bengal and falls in great quantities in Northern India."

The fluctuations of atmospheric pressure, shown by barometric records in India, are classed by Mr. Blanford under five heads, *viz.*, two regular and periodical variations and three irregular. These are—1*st*, the semi-diurnal tides ; 2*nd*, the great annual variation which in all parts of the plains has one maximum (in December) and one minimum (in June or July), the amount of the rise and fall varying according to the locality ; 3*rd*, local and temporary variations of short duration, such as accompany north-westers, and other local storms ; 4*th*, general and temporary fluctuations which affect the whole or the greater part of the country simultaneously, being as a rule the more intense the higher the latitude, while in extreme low latitudes they tend to vanish. It seems probable that when the whole of India and the countries immediately adjacent are available for comparison, it will be found that these fluctuations are compensated by others of an opposite character in some adjacent region ; 5*th*, local and persistent variations, which appear as a local exaggeration or partial suppression of the great annual variation ; the pressure remaining for many months, sometimes through two or even more consecutive seasons, either higher or lower than the average, relatively to other parts of the country, over a more or less extensive tract. These last are the most important in relation to those irregularities of the monsoon rainfall, of which we have had so many disastrous instances. This article is simply a condensation of Mr. Blanford's views as expressed in his reports, and the public may expect from the comprehensive researches on which this gentleman is now engaged, more important conclusions concerning the Indian rainfall than we dared hope for until quite recently.

STATISTICS OF PRODUCTION : BENGAL.

THE attempt to obtain reliable statistics of "production" in Bengal, is almost at a stand-still. It is believed that the information desired may be obtained for limited tracts of country, where Government, in its capacity of proprietor or of trustee, happens to be brought into direct relations with the cultivators of the soil ; but the Board of Revenue is persistently of the opinion that the obtaining of anything more is impossible. The information was first called for we believe in 1868, by a circular from the Government of India, accompanied by statistical tables compiled from agricultural returns in Sindh, and the Board were requested to report whether similar information could not be annually submitted from the Lower provinces. They reported in May 1869, that they had attempted to collect such statistics, but had obtained satisfactory information from Assam only, and that it was not possible to procure it for Bengal, as there was no machinery for the purpose and, the landholders as a rule, possessed no reliable knowledge on the subject.

The local Government pointed out in reply that statistics similar to those called for, had been furnished to the Public Works Department by the Collectors of the Tirhoot, Chumparun, and Sarun districts, and the Board was called upon to make fresh endeavours. The result was the receipt of partial returns from the Presidency Division, and the expression of a unanimous opinion from the other Commissioners that, without employing special establishments for the purpose, no satisfactory results could be obtained. In Tirhoot and Sarun, the information furnished was the result, it transpired, of inquiries from the zemindars and putwarees without scrutiny, and in Chumparun a temporary establishment had been employed for the purpose. Where putwarees existed, the Board thought statistics might be obtained ; but putwarees were hardly to be found outside Behar. They were told in reply [1869] that if there were any districts in which information could be procured by the method adopted in Chumparun, the Government would sanction a temporary establishment for the purpose ; and it was intimated that the districts in which it was most important that the inquiries should be made were those in which irrigation works were in progress—Midnapore, Burdwan, Hooghly, and Orissa.

Meantime certain returns were received from some of these districts ; and the Government inquired whether special establishments were still considered necessary, seeing that the statistics were in course of collection without them. The answer to the inquiry turned on whether the returns were trustworthy ; when it was found that for the most part they were mere guesses, and that full and accurate statements could be obtained only by very large and expensive establishments. Great difficulty had been foreseen from the first in Bengal in any attempt to procure the information desired, but in July 1871 Sir George Campbell issued a circular to the district officers, in which his wishes and expectations were set forth at length. He was anxious to obtain, with reasonable accuracy, the prevailing rates paid by the cultivators for land on which the commonest crops were grown, and saw no reason why such returns should not be submitted for all districts with tolerable accuracy. There was no doubt, he said, great variation in the rents charged for homestead land, and this description of land was not to be included in the returns ; but there should be no difficulty, he thought, in ascertaining within moderate limits the rates paid for ordinary, or fair average, land under staple crops. The particular kinds of crops were not specified because these varied in different districts, but only crops largely grown in each district should be given. Rice land, it might be assumed, would come first in all cases; then land for other food-grains ; then that on which the staples of commerce were grown—jute, opium, sugar both cane and date ; then garden and vegetable ground. If there were several well-marked descriptions of soil used for any crop, the rent of each of the principal kinds was to be given ; if one kind of soil prevailed, it would be enough to state the limits within which the rents range. The size of the beegah or other measure would require to be invariably given, and care taken that there was no mistake on this point. The rates were in all cases to be reduced to the acre, the returns running somewhat thus—

High rice lands for early rice .. Re. 1 to Re. 1-8 per Bengal standard beegah= Rs. 3 to Rs. 4-8 per acre.
Low rice lands for late rice .. Re. 1-8 to Rs. 2 same beegah=Rs. 4-8 to Rs. 6 per acre.

Care was to be taken that exceptional rates in the vicinity of a town were not given, but ordinary rural rates. The returns were to be furnished for each sub-division as well as the sudder divisions, and any returns that could be procured from trustworthy persons in other parts of the districts were also to be given, the exact localities being specified, and no important staple omitted. Four Deputy Collectors were finally appointed with suitable establishments, to collect these statistics, and were set to work in Rungpore, Shahabad, Jessore, and Beerbhoom. Several reports have been received from these officers, but they are only a first attempt and require careful study and

comparison by some one who has time for the work. The Board continues however, we believe, to be of the opinion that it is impossible to make the general returns in any sense reliable. A careful scrutiny of those sent in shews that they are worthless, and so much labor and money thrown away. "It is impossible to piece together into a general view the several district returns, even if they were individually on an average much better executed. It is like trying to make a map from village plans without any survey frame in which to set them. The forms of the Statistical Committee of 1868 are very ill adapted to Bengal, and call for information on points on which notoriously no exact information exists or can exist." The Government looks more hopefully on the matter, and in obedience to a call from the Home Government an effort is to be made to obtain reliable statistics concerning both "production" and "distribution" in Bengal generally.

LONGFELLOW'S "MORITURI SALUTAMUS."

BESIDES the mere literary interest that belongs to every production of a man so eminent in letters as Longfellow, friends and lovers of the American poet, will find in this poem a keen personal interest, and it possesses for all of us the wide human interest peculiar to the utterances of the wise and aged, who speak to us, as it were, from the brink of the grave; who have run, and run well, the full course of life, and, before going down to their long slumber, turn upon us their earnest eyes, and tell us the lessons they have gleaned by the way. Amid the feverish haste and emulation of our lives, the absorption of business and the mad pursuit of happiness; it is well to pause sometimes and listen to the words of counsel, of warning, and of encouragement, from those who can say, "We who are about to die, salute you."

The occasion of the present poem was the reunion at Bowdoin College, last July, of the class in which the poet graduated fifty years ago. Among Longfellow's class-fellows were Nathaniel Hawthorne, Josiah S. Little, George B. Cheever, Professor Nathaniel Dunn, and others whose names are famous, not in America alone. Many of them, it is needless to say, have, since 1825, passed underneath the shadow of death; of those who listened to Longfellow's address, many had not met since they parted half a century ago; of the tutors of the class, only one—Professor Packard—remained. The few old men who thus met on the little inch of life at the "cliff's sheer edge," and saw the fiftieth class that has filled their places, must have listened with deepest feelings to the solemn, almost melancholy, words in which their old class-mate, the now aged poet, addressed them.

It is impossible to separate the poem from the circumstances which produced it, and to judge it by its intrinsic worth. Could we do so, and apply to it a cold artistic standard of criticism, we should probably not rank it very high. It is not a great effort of poetical genuis, and was probably not meant to be. And the poet has not said anything very profound or original, as indeed he could hardly have been expected to do, on the subjects of youth and age, life and death. But the poem is chaste and simple, the language is beautiful, and the thoughts are wise; the feeling is intensely mournful, though we have not the heart to say that it is too much so; from first to last its tone is the low, heart-reaching tone of the death-bed, and suggests the hush of reverence which fitly receives the dying farewell. The critic who can stoop to pick flaws in the poem as a work of art, and censure its too subjective character, must be akin to Wordsworth's botanist—

> "One who could peep and botanise
> Upon his mother's grave,"

There is a noble and natural simplicity in the manner in which the poem opens:—

> "O, Cæsar, we who are about to die
> Salute you!" was the gladiators' cry
> *In the arena, standing face to face*
> *With death and with the Roman populace.*"

The brief and striking illustration of the position of the few old men, thus gathered together, forcibly and solemnly arrests the attention, and strikes the key of profound sadness and deathless bravery that runs through the poem. The poet felt, and we also feel, the peculiar solemnity of the circumstances, and the weight that attaches to words spoken thus face to face with death, at the close of a long life-battle, with all the world listening in silent awe. He then salutes the locality and his Alma Mater—

> "O ye familiar scenes—Ye groves of pine,
> That once were mine and are no longer mine—
> Thou river, widening through the meadows green
> To the vast sea so near and yet unseen—
> Ye halls in whose seclusion and repose
> Phantoms of fame, like exhalations, rose
> And vanished—*we who are about to die*
> *Salute you; earth and air and sea and sky,*
> *And the Imperial Sun that scatters down*
> *His sovereign splendors upon grove and town.*"

The river wandering through the seen to the unseen; the young ambitions rising and vanishing; the wide sweep of mind which includes the universe in the salutation: these give to the local and personal a solemn mysterious firmament widening out to infinity. Then a sense of relative insignificance presses on the poet's mind. The voice of his salutation dies away in the distance unheard and unanswered. The old familiar halls know his voice no more, and are indifferent to the passing generations that throng through them. Not so the teachers. They surely will give a warm response to the salutation. Alas!

> "What greetings come there from the voiceless dead?
> What salutation, welcome, or reply?
> What pressure from the hands that lifeless lie?
> They are no longer here; they all are gone
> Into the land of shadows—all save one."

He addresses his instructors, living and dead, in the language of Dante to Virgil when he met him in the underworld. There is nothing very striking in this part of the poem. It is quite correct in feeling and expression, and the poem would not be complete without it, but there is not the depth of emotion here that thrills through other parts of the address.

He next addresses the students, and this is the old man's view of Youth—

> How beautiful is Youth! how bright it gleams
> With its illusions, aspirations, dreams!
> Book of Beginnings Story without End,
> Each maid a heroine, and each man a friend!
> Aladdin's lamp, and Fortunatus' purse,
> That holds the treasures of the universe!
> All possibilities are in its hands,
> No danger daunts it, and no foe withstands;
> In its sublime audacity of faith,
> "Be thou removed!" it to the mountain saith,
> And with ambitious feet, secure and proud,
> Ascends the ladder leaning on the cloud."

Himself and his compeers looking down upon the students "from the snowy summits of their years," he not unfitly compares to Priam and the old men looking from the Scæan gate upon the embattled host of Trojans and Achæans in the field, and wonders—

> "Who is he
> That towers above the others? Which may be
> Atreides, Menelaus, Odysseus,
> Ajax the great, or bold Idomeneus?"

We do not look for much of the didactic or hortative in a poem on such an occasion. There is surprisingly little of such a character here, and, indeed, so profoundly sad is the old man's mood, that his words of warning precede those of stimulation. We should have liked to see him feel himself young again, and infuse a little more ardour into this part of the address. He warns them in the words of the old Hebrew proverb not to boast while they are girding on their armour, to be careful to see in what particular department nature meant them to excel, and to remember that it is not every blossom that ripens into fruit. Especially he seems to warn them to beware of entering, uncalled, upon the poet's vocation—

> "Minerva, the inventress of the flute,
> Flung it aside, when she her face surveyed
> Distorted in a fountain as she played;
> The unlucky Marsyas found it, and his fate
> Was one to make the bravest hesitate."

Marsyas, we believe, was flayed alive, and thus not unfitly represents the would-be-poet in the merciless hands of the critic But the poet alludes to the greater—the real, calamity which destiny inflicts upon the man who mistakes his faculty, and persists in misdoing something that nature never allotted to him. The brief exhortation follows. Having warned them against ignorant temerity, he inculcates true boldness—

> "Write on your doors the saying wise and old,
> 'Be bold! be bold! and everywhere be bold;
> Be not too bold!' yet better the excess
> Than the defect; better the more than less;
> Better like Hector in the field to die,
> Than like a perfumed Paris turn and fly."

Strange that the aged poet has no reward, not even a high object, to set before them. His exhortation is warning, pointing to ignominy on the one hand, and to death on the other, but pointing no finger to a crown of life which a wise boldness may win.

Perhaps the most touching part of the poem, as might have been expected, is that which follows, addressed to his surviving classmates, and pathetically alluding to the many that are gone—

"And now, my class-mates; ye remaining few
That number not the half of those we knew;
Ye, against whose familiar names not yet
The fatal asterisk of death is set,
Ye I salute! The horologe of Time
Strikes the half century with a solemn chime,
And summons us together once again,
The joy of meeting not unmixed with pain."

After a beautiful reference to the "scattered gravestones" where their class-mates lie, he proceeds to express a feeling which, though much younger than Longfellow, we can all understand, and which, though it may be called commonplace, and though the poet has attempted no trick of novelty in dressing it out, affects us so deeply that every expression of it in truthful and beautiful verse is welcome, though it may not claim the attraction of novelty—

"What shall I say to you? What can I say
Better than silence is? When I survey
This throng of faces turned to meet my own—
Friendly and fair and yet to me unknown,
Transformed the very landscape seems to be:
It is the same, yet not the same to me.
So many memories crowd upon my brain,
So many ghosts are in the wooded plain,
I fain would steal away, with noiseless tread,
As from a house where some one lieth dead.
I cannot go; I pause; I hesitate;
My feet reluctant linger at the gate;
As one who struggles in a troubled dream
To speak and cannot, to myself I seem."

After referring to the fifty years that have gone as "fifty folios bound and set by Time, the great transcriber, on his shelves"—volumes "closed and clasped for evermore," he seeks, by help of a legend of mediæval Rome, to dispel the shadows that are gathering round him. It is the legend of the image that wore on its lifted finger a ring with the device, "Strike here," and that tells how a learned clerk, digging at midnight in the spot to which the shadow of the finger pointed at noon, found the way to a subterranean hall—

"Lit by a flaming jewel in the wall,
And opposite a brazen statue stood
With bow and shaft in threatening attitude."

In the midst of the hall is a table with cloth of gold, and laden with gold and jewels.

"Around it, silent, motionless and sad,
Were seated gallant knights in armour clad.
And ladies beautiful with plume and zone,
But they were stone—their hearts within were stone."

After long silence and bewilderment, the clerk seizes a goblet and knife of gold; the guests spring to their feet; the archer shoots the lambent jewel on the wall; darkness falls around; and the clerk lies stark and lifeless on the floor. The tale has the old moral. The statue with the ring is the adversary pointing men away from a life of thought and study to the quest of gold. The lambent jewel is life, and the archer death. The knights and ladies are those whose hearts avarice has turned into stone. The clerk is the scholar who is tempted for gain to forsake "the sweet serenity of books" and the pursuit of wisdom.

But why tell this tale to those already old? It is too late for them to learn its lesson. The poet answers that—

"Nothing is too late
Till the tired heart shall cease to palpitate"

There follows a well-known list of men from Sophocles to Goethe, who have performed great achievements in literature in old age. They are exceptions, he admits—

"But they show
How far the gulf-stream of our youth may flow
Into the arctic region of our lives,
Where little else than life itself survives."

Longfellow does not attempt to cast any halo round the infirmities of age. As he draws to the close of his address, its deep sadness deepens. He is not theorizing about age, but, himself an old man addressing old men, speaks forth what he feels to be the stern reality. There is a sad realism here which we seldom find in poetry—

"Whatever poet, orator, or sage
May say of it, old age is still old age;
It is the waning, not the crescent moon,
The dusk of evening, not the blaze of noon;
It is not strength, but weakness; not desire,
But its surcease; not the fierce heat of fire,
The burning and consuming element,
But that of ashes and of embers spent,
In which some living sparks we still discern,
Enough to warm, but not enough to burn."

Still, he concludes, the night is not yet come; there is light enough left for labour. Near the close of a long laborious life, it is clearly the strong conviction of Longfellow that heaven's message to man is that which he declares in his "Psalm of Life"—

"Trust no future howe'er pleasant,
Let the dead past bury its dead,
Act, act, in the living present,
Heart within and God o'er head."

Even in age something may be done, and with this the poem closes—

"For age is opportunity no less
Than youth itself, though in another dress.
And as the evening twilight fades away,
The sky is filled with stars invisible by day."

The grandeur of the hope that redeems what might otherwise be the wretchedness of old age, is thus only suggested in a single couplet at the end. Longfellow is the apostle of work and duty—of work to be done for duty's sake. He does not believe in labouring for the hope of a future reward, and gives no countenance to the mercenary religion that bribes men to bear and toil here, by the hope of happiness and glory somewhere else. His cry is "Heed neither the past nor the future, but toil in the paths of duty now." The poem before us is remarkably in harmony, as regards its view of the ambitions of youth and the duty of life, with two of Longfellow's best known poems—"Excelsior" and the "Psalm of Life."

Poems written for special occasions are seldom worth so much notice as we have given this, but the occasion, in this case, is no ordinary one, and the subject of the poem is one on which we cannot neglect the words of a man so well qualified to speak as Longfellow. It is so calm and severe in its realism, so deeply mournful in its tone, that its whole effect is not a little saddening. But its teaching is noble and manly; its language is exquisitely simple and beautiful; and though it may not increase the number of Longfellow's admirers his old admirers will read and re-read it with avidity, and will perhaps love and reverence the poet more than ever before.

THE PECULIAR PEOPLE.

THE distinguishing sentiments and practice of this body have brought them before the world rather frequently for many years past. Their characteristic tenet is not of new growth, for they might even claim continuity of existence (ecclesiastically considered) as far back as the Apostles; indeed even a thousand years before the time of the apostles, we find that Asa, King of Judah, was spoken of reproachfully, 'because he sought not unto Jehovah but unto physicians,' and the continuance and virulence of his disease are attributed to this cause. No words can be more explicit than those of the Apostle James on which the Peculiar People base their practice; and that such a practice did really obtain in the earlier ages of the Christian Church we know from other sources besides the words of that apostle.

Is there not then an appearance of harshness, in the spirit in which our law treats these people? That they break no law, whether English or Christian, seems clear from the embarrassment of the Judges before whom they are brought. The ground they plead is indentical with that which the law, as well as the usage of society, has long yielded to persons of that exemplary body of which the Right Honourable John Bright is so conspicuous an ornament: the uncovering the head in deference to human dignity and custom, and the taking oaths in courts of law. In each case the ground is simply one of conscience, the most sacred trust with which the Creator has invested us. Surely, the social obscurity of the Peculiar People is hardly sufficient reason for not shewing a similar spirit of concession in their case? It is difficult to get clear of the suspicion that, if this obscure body included such a man as the Earl of Shaftesbury, or Mr. Gladstone, or any of the other champions of Christian charity or freedom of thought, we should all of us—even the most unimpassioned lawyers—feel differently towards them. It is even now fresh in our memories how, on the occasion of the introduction of Mr. Bright to the Cabinet, our Queen was the first to see the difficulty that would inevitably arise, and with that large-hearted courtesy that has ever characterized her, she anticipated the question by one of the most gracious concessions ever volunteered by a sovereign.

Our law seems in this instance to lack its usual discrimination and equality of justice. It takes for granted that if 'the doctor had been called in, the patient would certainly have recovered—an hypothesis which is contradicted by homely experience. Besides, it ignores the facts which the Peculiar People themselves claim to put forward showing that cases of recovery without the doctor's intervention are numerous among them. It takes cognizance of the failures only; and it also takes for granted that if the theory of the Peculiar People be sound, they must never die at all—a consummation which, it should be noted, they themselves do not for a moment contemplate. To cite what appears to be a perfectly analogous instance: The law takes cognizance of the case of persons who have 'no ostensible means of subsistence.' But what, in this case, is to become of that standing miracle of which Mr. George Müller of Bristol, is the leading spirit? If the reply be that he keeps that institution alive *by faith*, this is simply equivalent to

saying that the law sanctions the principle on which the Peculiar People and Mr. Müller alike go, but only when it happens to prove a visible and tangible success. If their principle were a mere caprice, elevated (as human caprices and idiosyncracies so often are) into a matter of conscience, the law might even then take merely the same view of their case that it takes of the case of suicides—the merciful one of deeming them more or less insane. But to call it caprice or eccentricity, or by the harsher name of superstition (as the *Spectator*—with less than its usual charity—did in a number that reached us lately) is to lose sight of the fact that they can quote high Authority in support of their practice. They can quote not only James, and Paul, and Peter; they can go higher—to the practice and the promise of the Divine Saviour Himself. Is there any caprice they naturally ask in *taking Him at His word?* Nay, is not this the very thing we call *faith?* This is what Mr. Müller has done for more than forty years, and it succeeds. This is all that the Peculiar People do; and yet we take no cognizance of the successes in their case, but seize hold of their mortality, and treat them on the perverse principle that they ought to live on for ever!

It has to be noted that the charge brought against these people is not that they exhibit insensibility or cruelty, nor that they do not have recourse to medicine. It is simply, that they do not 'call in the doctor'—a practice in which more than half Anglo-Indians are, by force of circumstances, entirely at one with them, for every one of us is obliged to be more or less his own doctor. But people who follow the doctor's advice, die all the same, even if he advise the all-availing trip to 'the hills'. Why are not the patients' friends and the doctors punished? Nay, even doctors themselves die, though over head and ears in prescriptions, medicaments, and general knowledge of their art. And yet theya re not pronounced insane by the law.

But it is said that the Peculiar People are not consistent; they will not resort to the advice of approved practitioners, and yet resort to remedies after the manner of Anglo-Indian households; to warm blankets, appropriate diet, change of air, etc. The reply seems to be that by this very mode of procedure, they prove that they are neither wicked, nor superstitious, nor insane, nor wanting in human kindness. In doing so, they follow (as we have already seen) Scripture precedent. The advice of Paul to Timothy about the wine is well known to every one; so, too, is the command of Christ to the friends of Jairus's daughter when he had raised her from death—'that something should be given her to eat.' Surely the most enlightened nation of the age of human history is not after all so foolish as the celebrated saw of the Sage of Chelsea would indicate? And yet the bitter and narrow spirit which English society, high and low, displays towards these people, almost looks as if Carlyle were not after all so wrong in his judgment as is generally believed. For, what does the prevalent state of feeling in reference to them (as well among the Judges who try them as among the rank and file of English society) express, if not this—that we will not tolerate any one who, even on such grounds as those of conscience and religion, differs from ourselves? If it be said that the legislation applied to these law-abiding and inoffensive people becomes necessary as a deterrent *pour encourager les autres*, lest their distinguishing tenet be made a subterfuge and an abuse by other persons not of their body, who might wish to avail themselves of that immunity in order to be rid of their invalid relations, then we reply that it would be just as reasonable for the law to insist on the Plymouth Brethren attending the ministrations of professional clergymen, or to extingusih Total Abstinence Societies and every other good thing that is liable to abuse.

FLIES.

"YOU may talk of the annoyance and worry caused by gnats, midges, mosquitoes, wasps, and *hoc genus omne* of buzzing, stinging, and biting insects; but we defy you reader, to make them out to be more harassing to the human temper, or more wrath-producing in the human breast, than the apparently innocent domestic fly." In this country especially, at times and seasons when the temper is peculiarly irritable, and the nerves most unstrung, the caresses of this little plague are calculated to work "a fellow" up to the highest pitch of frantic madness. We might, with perfect propriety change the celebrated scene in *Martin Chuzzlewit*, where the Yankee tells Mark Tapley that he may possibly, in the progress of civilisation, get to bed, or rather get into a bed at Eden, but advises him to take an axe with him:—"Mosquitoes, perhaps" says I. "And more," says he. "What more," says I? "Flies more," says he. "Its them, stranger, you'll object to. There are "some catawampus chawers that graze upon the human pretty "strong, but never mind them, they 're company. Its flies as you'll "object to—common flies." And so it is. You are perhaps a bad sleeper, and only fall into a doze towards morning; or you have been rolling and tossing about all night, unable to sleep, owing to the suffocating heat. About dawn the air cools, and your weary limbs lie still, and you comfort yourself with the notion of a refreshing nap; but the murderer of sleep is by your bedside, in the shape of a fly, hovering over your chin, and then buzzing in your ear. You smite at him with your hand till your ear tingles again, but in vain; he eludes your angry palm, and gets up your nose; while other tormentors are tickling your bare arms, your feet, and your toes. Sleep is out of the question, and you are baulked of your vengeance too, my wrathful friend, unless you have at hand the slender cane with the leathern flap at the end thereof. Holding the weapon in a firm grasp, arise from your bed, and smite them down as they fly about in wondering terror. A twisted towel or handkerchief, may be used as a lethal weapon, should you have no napper, but they are uncertain, and you are apt to "tailor" the game; so expend four or five annas on the flapper, and do execution in a neat and sportsmanlike style. And, oh, my friend, slay and spare not! And more power to your elbow in this just and righteous work.

We have never shot lions in Africa, nor bagged white bear in Nova Zembla; but, as ordinary Englishman go, we have travelled; and whether we were fishing in Scotland, backing the zero at Baden-Baden, pyramid climbing in Egypt, eating oysters in New York, or doing the "peg" of the country in India, we have never got rid of the "busy, curious, thirsty" and, we may add, ubiquitous fly. Alas! he loves us. Even as we write these lines, three of the tribe are whirling round our head, and whispering their blandishments in our ear, and we arise and take our cherished flapper and deal destruction to them. In all our wanderings, two days of "flies" stand out pre-eminent. One was some ten years ago at Bingen on the Rhine, where we arrived about midday from Mayence. We were hungry and entered the Speise-saal of the hotel, but, in lieu of a table-cloth, we saw nothing but a struggling mass of black with here and there a white patch. The waiter waved his napkin, and a cloud of the enemy arose, and buzzed and whizzed around us, till we were seized with panic and fairly rushed from the spot, but the cloud followed us as we ran towards the river bank, where we spied an open swimming-bath, and, entering, divested ourselves of our garments, and, with a halo of flies encircling our head, plunged into the Rhine, and took a long dive. As we came up for breath, the watchful enemy swooped down, and again encircled us, buzzing loudly with joy at recovering their beloved. We rushed back to the hotel, and dived into bed, pulling the sheet over our head, but even then some of the hardier among the foe had got enclosed too. These, with a sort of fiendish joy, we slew, and for a while were at peace. The evening drew on, and, accompanied still by a swarm, we left Bingen by the last boat, and at last got rid of our persistent following, for, much as they loved us, they loved Bingen more.

The second day was a few months ago, in the Eastern Dhoon jungles, where we were shooting. Here again, our friends quartered themselves on us, spoiling our work by their attentions to our eyes, whenever we raised our gun, and our food and drink by their fondness for everything of that nature, down to the very mustard and salt. The apathetic natives bore them uncomplainingly, and, by way of consolation, told us that the pilgrims to Hurdwar fair had brought them. We anathematised Hurdwar and its "fair" and its pilgrims, in English for our own benefit, and in Hindustanee for that of our followers. We give our readers two recipes for destroying flies, one wholesale and the other retail.

(a) Wholesale recipe. Take of white sugar one-eighth of an ounce, of fine gunpowder one drachm. Mix. Lay a train of fine gunpowder, about 54 inches long to mixture. Watch 5 or 10 minutes, when, if the flies be numerous, some 200 will have collected on the mixture, Then apply a lighted match to tail of train. "Probatum est."

(b) Retail recipe: Take of fine muslin gauze sufficient to make a deep, narrow net, like a miniature butterfly-net. Affix a handle. Let the flies settle upon your legs, arms, or coat. Then, by a dexterous turn of the wrist, net them, and slay by compressing between the forefinger and thumb.

But for all ordinary purposes, Oh! fly-tormented reader there is nothing like the flapper.

THE STATION BELLE.

By Diogenes.

OF all the people whose destinies lead them to Indian exile, there appears to be none that accepts the lot in a kindlier way at first, than the beauty of the family. Other persons and plainer spins may have misgivings about the cholera morbus, the Red Sea temperature, mutineers, and devouring tigers. But the best looking of ten sees only in the East an *el Dorado* peopled with millionaires, and brimful of the gaieties and dissipations of Eve's paradise in the nineteenth century. This is only natural. From the earliest days, the country parson or experimental farmer, her father, has dreamt of a golden future for the child that being the best looking of his lot, he conceives to resemble himself. Nor has an anxious and yet well pleased mamma, been backward in instilling those aspirations for a good establishment, that are becoming a young woman indefinitely better looking than say her seven sisters. The girl grows from infancy to womanhood, conscious that she has a mission, and when India is spoken of as her proper sphere of action, she is more or less ready to pack up her outfit for a campaign against the bigwigs of the East—governors, commissioners, generals, and the rest of them. This young waif, cast upon "India's coral strand" by the cruel fate that induces poor clergymen to marry and beget large families, is after all not far wrong in her surmises about beauty having a certain money value in India. Where she is wrong is that it has so much. The aunt who receives her would not have invited her out at any price, if she was not well assured of the girl's beauty at any rate. To *chaperone* an ugly girl, is a task no Indian relative will willingly undertake; but beauty is another thing, and may even prove profitable to the Indian aunt by bringing her and her belongings to the notice of those great and rich people who according to parsonage ideas, are as common as blackberries at our hill stations. It is in fact the case that men seldom marry money out here, possibly because they cannot get it; and if they cannot have money, it is well to marry looks, so beauty has its value in a measure. Nevertheless, the *genus homo* surveys the nuptial snare with excessive wariness in these days of female extravagance in dress and manners, and the very beauty that fetches all the swains of a station to a girl's carriage or palfrey, is in itself a caution to the lover lest he should be only one among many. Possibly, there is a difficulty in playing the *rôle* of station belle, without inducing that apparent love of admiration that causes many eligible but calculating *parties* to renounce matrimonial intentions, for at least the present. It is only on this supposition that it is easy to account for the fact of the station belle being so often a flirt, and a cause of nearly as much local offence as of local admiration. It is a hard part indeed, to act this, when we come to think over it; for women are very cruel to one of them laying claim to greater beauty than the others. To obtain the admiration of the men, the station belle must give up the love of all the ladies; but to do her justice, it is not this sacrifice that causes her so much distress as the necessity of confining her smiles to persons of a certain income. At an out of the way English vicarage, it may appear an easy thing to marry the money that appertains altogether to the male sex out here. But when money takes the shape, as it often *does* in India, of a crabbed, ill dressed, middle aged gentleman, a widower perhaps with children in England, while love clatters bravely about in sabre, spurs, and sabretache, the station belle must often feel the difficulty of the situation, and piteously remonstrate with those old folks at home who are urging her in ignorance, to make a good match. No one requires to be more careful in behaviour, for the tongues of other belles will inevitably go a clapping over any indiscretion. If the beauty is pensive, for instance, and wears a cross of gold and jewels, she is setting her cap at the *padre*. If she is joyous and decolette, she is dreadfully odd, and loves the nearest Colonel of Dragoons. If she delights in music, it is to captivate the Commissioner with his violoncello; if she hates music and dances, it is to shew her twinkling feet to the Lieutenant-Governor. Generally speaking she is a snake in the grass, and gentlemen are privately warned by their female friends to beware of her. The very dames who invite the belle to tiffins or to garden parties, have little to say in their guest's favor, unless to damn her with faint praise after the manner of mothers with marriagable daughters. In short, beauty, although of a certain marketable value in India, has scarcely a fair chance in a station. It needs more liberality to flourish than is found there; whence no doubt in a measure the many really beautiful girls that disappoint their relatives' hopes, and either never marry at all, or marry in a bungalow. It is not given to every young thing of eighteen or twenty, to play her cards in such a manner as to win the game in a small society. Although married women in India annex to themselves most of the admiration of the other sex that is going, they grudge any claim urged by a maiden to a share of this homage. If it is possible to do so, they will match their own matronly charms against the budding bloom of the station belle. And not without success either, for many bachelors entertain a truly ludicrous terror of being "spoken of" in connection with a station belle. They think of Miss Glorvina O'Dowd and poor Dobbin, of garrison hacks and all sorts of dreadful creatures in petticoats, who entrap the ingenuous Cœlebs in an artful and designing manner, and they would rather stand the chance of a station scandal with some "madame" or other, than the suspicion of an engagement with a station belle. It is the cruel misfortune of the girl that she is always misrepresented, even to the moment when she returns, haggard and worn, to the old folks at home, and they rail at her for throwing away—her chance of all things.

It is a different affair when the aunt or mother of our belle is a vigorous woman of fashion, determined to push her *protégé* up to the very summit of what is highest in the station, and to retain her there *vi et armis* against all comers. But a girl need not be really a beauty, or anything like it, to attain this social elevation so much sought after. It is much easier indeed for a plain girl to reign as station belle than one truly beautiful: for the first excites little envy among her own sex, and but trifling alarm among the others. A little goes a long way in manufacturing a station belle of this last pattern, provided that her parents hold a certain position, and are prepared to advertise their child with a sufficiency of public entertainment. A shaggy head of hair, or anything so out of the common as white eyelashes, or a blue and a black eye in one head, will constitute a station belle under favorable circumstances; nor is any such favorite of fortune as this, liable to detraction at *chota hazrees* or in little circles, since it is everyone's interest to admire what others do, to say nothing of the gratification of being in the local fashion. A station belle of this metal, may queen it as she please over the society of the place. The sex are never weary of singing her praises. She is so amiable, so good, so sweet-tempered, so well taught, so different from the ordinary run of young girls, that hearing these laudations day after day, the shaggy head loses much of its grotesqueness, and Miss Perkin Warbeck has a dozen offers of substantial matrimony, where Miss Simon Pure has had only the invitation of some poverty-stricken lieutenant to share his love in a subaltern's tent.

It is not wisdom as a rule, for an aunt or a sister, or any one else, to desire the giddy height of station-belledom for any girl belonging to them, unless indeed they have the audacity of wealth, or of despair, to fight the position against the little world about them. Neither is it good for the girl herself. The exaggerated admiration she is apt to receive from the loafers of good society, and the extravagance of the compliments paid her in this vein, have a tendency to disgust her with life and with her mission, the more so if the missionary is long forthcoming in the shape of the Governor, or the Indian General of the distant parsonage. Station belles become bitter and sarcastic, as old Father Time moves onward, chronicling in faded ink the inelegible offers, the unprofitable trips to the mountains, the fruitless scourings of the plains, the torn and worn out dresses of the past. People begin to get out of the way of the belle then. The wary old clubmen within an ace of being caught by the Europe color in those fair cheeks, ah! how many seasons since, chuckle over their cheroots in the enjoyment of their perspicuity. They knew how it would be. One warned the other, and the other passed the admonition on against the poor belle years ago, and only for this and that, and the other, a nice life he and she would be leading together now. It is ever the way. The greater the height attained, the greater the fall when it comes, and who does not pity the station belle when she sees that water of Southampton again that was associated in her memories with a mother's parting charge not to come back with less than a Governor at the very least. They say that the matrimonial market in India is tight; that maidens no longer seek the delusive Orient with a view to wedded bliss. The public journals are ever telling how *homo* cannot live on his pay, and how prices are interfering with matrimony. And yet, despite all these assertions, the station belle is not far to seek, by those who wish to see her, up and down the country. She is to be found, as the wags say, *ringing* and just as joyously as ever, and as hopefully as if there were no such things as "passin belles" in this Indian world of ours.

EDITORIAL NOTES.

THE rules for the special admission of natives into the covenanted Civil Service have now been published in the *Gazette of India*. Any native of India may now be appointed to any place, office, or employment in the Civil Service. But such appointments as may be made are subject to restrictions and provisions. The most important of these is the declaration that "every person obtaining such a provisional appointment shall, within two years from the date on which he takes it up, pass the departmental examinations prescribed by the rules of the service, unless he be specially exempted by the Governor-General in Council from being so examined." The rules appear to us to be reasonable and fair—and, as far as is possible, to meet the just claims of the existing members of the Civil Service as well as of natives of India of proved merit. Read by the light of these rules, the reply of the Marquis of Salisbury to the memorial lately presented by the Bengal Civilians, on the subject of these rules, is a State document of great importance. The admission of meritorious natives into the Civil Service is an act of justice; but it would be an injustice to the present members of that service if they were now superseded in appointments which have always been specially reserved for them by Act of Parliament, and if the natives who are now to be apppointed are admitted in the first instance to any other grades than the lowest grades of the service. The interests of the existing members of the Civil Service are sufficiently met under the new rules if these rules are rightly interpreted, and the interests of future members may, as the Secretary of State points out, be protected by a proper adjustment of the number of appointments thrown open to public competition. We place no trust in the rumour that a Madras native gentleman is about to be appointed a Collector in the Madras Service, as that would obviously be an appointment against the spirit of the rules. No Collector and Magistrate could be provisionally appointed, subject to a report on the expiration of two years as to his character and qualifications, and subject to his passing the departmental examinations that are prescribed for Assistant Magistrates. All natives who are appointed to the Civil Service must begin at the lowest rung of the ladder and work their way up under the same conditions as ordinary members of the service. This is only just, and the native community can have no sober objections to such an arrangement.

***

IN the recent and indecent attack upon Sir Douglas Forsyth in the *Pioneer*, the writer appears to have made several grave misstatements of fact. Thus he states that after the censure on account of the suppression of the Kooka disturbance, Sir Douglas went to Russia on a diplomatic excursion of his own projecting. Now if we recollect rightly, this "Russian excursion" took place some years previous to the Kooka disturbance. So also did the first expedition to Yarkand, in which our contemporary says that many of Sir Douglas's dumb following perished in the snows of the Karakoram. But this first Yarkand expedition never crossed the Karakoram at all, but went round to the east of the mountains, and consequently met with no snow, so that neither the Karakoram nor its snows killed the dumb animals any more than Sir Douglas's negligence. There is no excuse for a writer who supports a violent personal attack by such inaccurate statements of facts. The "Imperial displeasure" in the Kooka case took the form of an order that Sir Douglas was not again to be employed in any diplomatic or political duty (or words to that effect), and if his subsequent employment in such a capacity on two rather important missions or on four (the Russian and first Yarkand one), according to our contemporary, is not a revocation of the order which stated that he was never to be so employed again, we can only conclude that the Government preferred to ignore that such an order had been issued in preference to formally revoking it.

***

THE *Guardian* has an interesting note on the present attitude of the Russian Press on the subject of English alarm at Russian progress in Asia. The semi-official *Journal de St. Petersbourg* says that the only rational policy for the two countries, is to make common cause against the Mussulman and other subject nationalities in Asia. The *Moscow Gazette* says that both countries may be congratulated upon Mr. Bourke's recent speech, abandoning the theory of an intermediate zone between the English and Russian possessions in Asia. The establishment of such a zone would have necessarily engendered suspicion and led to difficulties between the two Powers. For ourselves, we have not the least share either in the jealousy, or the alarm, with which the Russian advance is regarded. Were Russian statesmen insane enough to contemplate the folly with which our alarmists have persisted in crediting them for the last fifty years, they would be the stupidest cabinet in Europe instead of the most astute. The ease with which they can excite English alarm upon this subject, must be matter of constant amusement in official circles at St. Petersburg. We are glad to see that the *Edinburgh Review* has been administering a sharp check to this nonsense.

***

OUGHT the army to be made to cram Chaucer? This important question seems to have been the principal subject that occupied the attention of the Lords during the last week of July. Lord Stanhope does not think a knowledge of English literature particularly necessary for a soldier; while Lord Strathnairn denounced the study even of Euclid, hitherto regarded as in some degree helpful to the science of war, as a cruel tax upon aspirants to military honours, and hinted "that it would be much more to "the purpose if Government would keep two packs of hounds, "like Count von Moltke, and exact certificates for good riding "from its officers."

***

A PART of the Bombay Press—the *Times of India* and *Bombay Gazette*—is setting a very evil example to the country. The two journals seem bent upon re-introducing into their community, a style of journalism that twenty years ago made the Bombay Press the scandal of the country. It takes *two* to make a quarrel, Why then does not Mr. Maclean or Mr. Geary, show the magnanimity of silence when assailed with personal invective? The first that does so, will deserve well of Bombay. A few years ago the Bombay Press was at the head of Indian journalism, while it is fast sinking to the old level of the *Telegraph* and *Courier* and *Gentlemen's Gazette*. There is little excuse for either Mr. Maclean or his adversary. Both are old and experienced journalists, and cannot but know the harm done to the character of a community, by such writings as are now so frequently seen in their columns. Do they not see the injustice of which they are guilty to the English community, of which in a very real sense they are the representatives, and the character and the tastes of which they are supposed to reflect? They lower the whole community in the estimation of the country, by these personal attacks upon each other, which offend every person of good sense and right feeling.

***

THE primary elections for the Bavarian Parliament, that is the voting for electors who appoint the members, have been the occasion of a great trial of strength between the Ultramontanes and the Liberals, and the result is hailed with acclamations by the latter as a victory. In spite of a majority in favor of the former, it is reckoned that there will be 79 Clericals and 77 Liberals in the next Landtag, while the Ultramontanes expected a majority of six; and as it has turned out, they will not be able to expel the Ministry for a Clerical Cabinet in its stead. The heads of the church spared no pains to make the contest a religious one. The Archbishop of Munich and other bishops sent out pastorals, bidding the people vote for good Catholics. Election placards were posted on the town walls: "Catholic electors! Catholic fellow-citizens! save our holy Church!" The chief interest seems to have centred in the Munich election, for which the Ultramontanes put forth all their strength. The result was the return of 228 Liberal electors against 56 Ultramontanes, so that all five members for the capital will be Liberal. In Wurzburg the contest was very excited. The Roman party were quite sure of success, but the Liberals fought all they knew against them, and at the close of the day the result was uncertain, one district having committed some informality which nullified its elections. The fight was resumed on the second day, and when it was known that the Liberals had a majority, popular enthusiasm knew no bounds. The town broke out forthwith into flags, illumination, and feasting.

***

IT must strike every one, we think, who is at all familiar with the writings of the Huxley Darwin School that they ignore one half the phenomena of which we are conscious, on the ground that we *know* nothing about them: as though their reality depended upon our power to speak positively of their nature. The love of God in the human soul, and that conscious communion with Him, which is frequently awakened therein under circumstances the most surprising and inexplicable, are just as real phenomena as the facts of physical science. And a theory of the universe that ignores such

phenomena as though they had no existence, simply because it cannot subject them to chemical analysis or to observation under the miscroscope, leaves one-half the conditions of the problem untouched. The dogmatism of modern science is more offensive to ourselves than the narrow intolerance of theologians. The one class make positive assertions concerning the unseen and the unknown, that scientific men are justified in ridiculing; but this error is less offensive to reverent minds, than the confident irreligious quackery that dares tell us, with Professor Draper, "There is no God," and that the so-called universe with which our feeble sense and feeble reason alone are conversant, exhausts the infinite. The school has arrived, in the last number of the *Westminister Review*, at the pitch of assuring us that man, or something resembling man in other planets, is the last and highest development of the Universe. The past eternities and the surrounding immensities might be searched hopelessly for higher moral purity, or intellectual power, or emotional possibilties than reside in man. The primodial cell or protoplasm which the blind forces of nature somehow or other evolved out of themselves in the infinite past, has reached its last and for the present its final development in our God-like selves. If intellect or will were ever evolved before in the universe, it perished in the great cycles of alternate development and dissolution, of which the past eternities consisted. There is neither God, nor devil, neither intellect, nor emotion, nor will anywhere in the universe but in the animals upon this earth and in man, or in creatures resembling them, that have been evolved by the same natural processes in other worlds. Such without the least travesty is the latest message of the philosophers. If we could point out the most powerful intellect of our generation, he would be the nearest approach to what the vulgar deem to be "God" that has yet come out of the Cosmos. A re-action cannot be far off, that will make the school a bye-word in the intellectual world.

***

THE Geographical Congress assembled at Paris has formed a collection of maps, one of which is of great interest to Englishmen, as showing the wonderful extent of the section of the Himalaya between India and Yarkund, regarded often in this country as if the range were a sort of lofty wall. The shortest distance across the mountains, from the plains on one side to the plains on the other, is 400 English miles, much of it being over passes 16,000 feet above the sea. "The vastness of this mountain system, will be appreciated, when it is remembered that a strong man can in a day walk from one side of the Alps to the other; whereas it would take sixty-five days of incessant marching to cross this section of the Himalaya."

***

THE Government Resolution on the new tariff has thrown, we are assured, a flood of new light upon the subject. "It is now clear that "the new commercial policy of Government has really great merits, "that it has made a large sacrifice of revenue in order to enfranchize "the agricultural industry of the country, and that the only blot "upon that policy is the imposition of import duty of 5 per cent. "upon American and Egyptian cotton. But all this misunderstand-"ing would not have occurred if the Government had been at its "post in the capital, and the public had been taken into confidence "For much of the hostile criticisms which were passed in haste "by the metropolitan press upon the new commercial policy "of Government, we hold, the Government is to blame itself. "Simla cannot supersede Calcutta with impunity." The writer forgets that Simla produced the Resolution of which he speaks so highly. If a more rational life were adopted on the hills, there would be little to say against the annual flight thereto. But the Calcutta season is carried up to Simla and life spent in one perpetual round of amusements. Instead of the quiet retirement of "the country" which follows the dissipation of the London season, we contrive to keep up the 'season' throughout the year in India, alternating between Calcutta and the Capua of the hills.

***

THE excitement about the new tariff is at last giving place to juster views of its real merits. Opposition to it has dwindled down to the expression of strong regret that its undoubted excellences are marred by the "one little flaw" of the import duty upon raw cotton. Our contemporaries have altogether overlooked that there is a two-fold mischief in the policy of protection. A nation that adopts such a policy, not merely sacrifices the interests of the whole body of consumers to that of the small class who are engaged in the production of the manufacture, but holds out to the latter a direct premium upon waste. While any industry is protected, you never can tell whether the protection is needed or not, to enable the native manufacturer to compete with the foreigner. Thus the wool industry and the manufacture of silk were formerly protected at home, and prices were artificially raised for both—while all the nation was compelled to buy them. Without any protection, the English manufacture in wool long since distanced competition, but it was only quite lately that the mischiefs produced by prohibiting the silk trade became apparent. Secure of the home market, there was no proper incentive to economy and invention in the manufacture, and the trade languished in spite of the protection it enjoyed. It was not until the protection was withdrawn, and the manufacturer thrown upon his unaided resources that he discovered what he could really do. The silk manufacture of England was a by-word for whining poverty until protection was withdrawn when the manufacturer suddenly found that he could not only beat his French competitors in the home markets, but in those of France itself. The import duties upon Manchester goods in Bombay are but a premium upon wasteful or careless working of the mills: and while the protection lasts, we shall never know whether they could not stand alone or not. We are not absolutely pronouncing against the amount of protection they now enjoy, but it is very doubtful whether it is well even for the mills themselves that it should last, while the fact that all consumers of cotton goods suffer by it is not denied. The action of the Bombay Chamber has seldom been wisely exerted in its interference with fiscal questions from the want of exact and comprehensive knowledge of them.

***

WE do not know that it would be permissible to tender to gentlemen of the Civil Service, who are about to marry, Punch's hackneyed advice—"don't;" but we should be certainly justified in advising all such ill-advised persons not to forget to report it. The *minimum* fine for this act of omission is Rs. 500, and there is always a sufficient majority of spiteful and envious bachelors ready to enforce the rule. It is strange that with the knowledge that the rule is never relaxed, being in this respect like unto the law of the Medes and Persians that were incapable of alteration, any should be so careless as to overlook so simple a matter; yet at the very last meeting of the subscribers to the Bengal Civil Fund, a junior civilian of these provinces, was convicted of this neglect and fined to the tune of £50. Might not some allowance be made for the difficulties in the way of attending to business during the "honeymoon?" The lady has to suffer to a certain extent by the fine, or at least she has less to spend in superfluities, and it therefore does not strike us as quite gallant to enforce the rule so rigorously.

***

THE desire of the Danubian Principalities to separate from the Porte is held to be very unwise in English political circles. The present claim of the Principalities, is a right to form commercial treaties with neighbouring States independently of the Porte, whose claim to suzerainty over them is nevertheless allowed. In a maiden speech in the House of Lords, which seems to have been imperfectly heard by the reporters, *Lord Hammond* was understood to say that, if we sanctioned the pretension of the Principalities to conclude such conventions, we should sanction what was entirely inconsistent with the suzerainty of the Sultan, and wholly without warrant. At the same time, the Principalities have frequently entered into arrangements with the neighbouring Powers without applying for the consent of the Porte, and the present complaint hardly came with a good grace when it was remembered that, in the Principalities, treaties and capitulations (with regard to consular jurisdiction) were virtually a dead letter. The treaty immediately in question is one with Austro-Hungary, and Reuter tells us that the quarrel has broken out into something like war, which the great Powers are attempting to stifle.

***

THE *Guardian* thinks it would not perhaps be expedient to proclaim officially what arguments have been urged by the Viceroy of India for the Prince's visit. A large measure of confidence, it says, must be reposed in those to whom the responsibility of the Government of India is intrusted; and the strength of their conviction is shewn by their undertaking to pay a large proportion of the expense out of the Indian revenues. Our contemporary, however, is not satisfied with the Canadian precedent in the matter, and would have been much better pleased had England taken the entire cost of the visit upon herself. It puts the case very well, and says: "The Canadian Legislature was free to dispose by vote of the money of the people of Canada; but the Government at Calcutta is not the representative of the people of India, and is all the more responsible for any appropriation of Indian revenue from which the

people derive no benefit. Again, no money goes from Canada to England for Government purposes, but more than seventeen millions of Indian revenue are disbursed in England, and this great sum is not the less a tribute, because it is directly applied on account of service in India, instead of passing through the Imperial Treasury. The country which enjoys the benefit of this large expenditure might gracefully have undertaken the whole charge of the Prince's Indian progress on a liberal scale, and might thus have materially enhanced the prospect of its eventual success." The growth and spread of such sentiments in the Home Press is one of the most re-assuring features of our rule.

***

DURING the late wet weather in London, the spectroscope, we are told, showed from every part of the sky a broad dark band on the less refrangible side of the instrument, which, though of telluric origin, differed entirely from the telluric effects ordinarily seen at sunset. Passing out of London, the band diminished with the decrease of the clouds and rain, and finally disappeared, when a clear atmosphere was entered. So far the band in question accompanied actual rain; but on the 17th July, at Edinburgh, while the air was clear, and "the only clouds were a few brilliant and "picturesque currents along the northern horizon, giving something "like Alpine mountain snowy tops to the lovely undulations of the "Scottish hills," the band re-appeared; and it was evidently the product of the light reflected from the clouds, for when the spectroscope was applied to a higher altitude the band disappeared. We are indebted to the *Englishman* for this notice of phenomena to which Professor Piazji has called attention, and which foreshadow, we are told, probably, an important advance in meteorology.

***

THAT Mr. Plimsoll's charges against the ship-owners of the country are exaggerated there can be no doubt, but it was an opportune commentary upon the scene in the House of Commons, that sentence was passed at the Waterford Assizes almost immediately afterwards, on a Mr. Loughlin Freeman, a merchant and ship-owner of Waterford, convicted of sending to Cardiff the brigantine *Alcedo* in an unseaworthy state. The ship was twenty-six years old, and the timber so rotten that it could be taken out in handfuls. Before sending it to sea, the prisoner wrote to Messrs. Begg of Cardiff: "I would be inclined to renew the "former insurance of £250 at eight guineas, if I thought there would "be no danger of Plimsoll. This between ourselves. Private." In reply Messrs. Begg wrote: "We don't think there is any fear of "Plimsoll interfering with the deed (at all events on this side), as "they don't appear to be so much on the look-out over there." The sentence of a fine of £300 and imprisonment for two months seems absurdly inadequate for the offence.

***

SIR ROBERT PHILLIMORE, the Dean of Arches, has given an important decision in the case of "*Jenkins* vs. *Cook*." A certain Mr. Jenkins, of Clifton, by denying the personality of the devil, has proved himself, in the eyes of the worthy Vicar of Christ Church, to be "an open and notorious evil liver," and has on that account been refused the Holy Communion. This is not the only enormity of which Mr. Henry Jenkins has been guilty, but it is the principal one. He charged the vicar in a letter with having preached a sermon of an irreligious tendency, and in that letter and in others afterwards addressed to the bishop, it appeared that Mr. Jenkins regards the doctrine of eternal punishment as "impious." We do not very clearly understand the bishop's position in the affair; but it seems that Mr. Jenkins persisted in claiming his right to the Communion, and since the vicar was resolute in refusing it, he preferred a charge against him to the bishop. The bishop thereupon appointed a commission to enquire into the case, and the majority of the commission found that there was cause for further proceedings against the vicar. The case came before the Dean of Arches, and in a long and learned judgment he dismissed the suit. Notice has been given of appeal to the Queen in Council, so we shall hear more of the matter bye-and-bye.

***

A STRIKING letter from Dr. Dollinger to a priest in Baden is published in the *Guardian*, and deserves notice from all who take an interest in the ecclesiastical movements of the day. He states that the Old Catholic body has, in his eyes, a threefold mission—1*st*, to bear its testimony for Old Church truth as against recent papal heresies, and especially against the present Pope's mischievous practice of manufacturing new articles of faith; 2*nd*, to set forth gradually and in continued progress, a Church purified from error and superstition, and more conformed to the ancient undivided Church, ; and 3*rd*, to serve as the instrument and means of a future reunion of the divided Churches. The late congress at Bonn, he looks upon as marking the commencement of the great work of reunion. He has no hope in the papacy, because the papacy is in the leading strings of the Jesuits, and the "Jesuits are superstition incarnate, united with despotism." The proclamation, as *doctor ecclesiæ*, of Alphonso Liguori, whose writings he characterises as a "magazine of errors and lies," he views as the most monstrous thing that has yet happened in the province of theological doctrine. "Certainly," he says, "such a state of things cannot last long. Sooner or later, "somewhere and somehow, a re-action for the better must set "in, but this, where, and how, are hidden from our eyes." It is seldom that we hear Dr. Dollinger's voice amid the din of controversy, while there is perhaps no theologian of the day who ought more to be listened to, by those especially who look upon ecclesiastical and theological differences from the outside, and consider them important chiefly as they affect the enlightment and progress of the human race. Still, though we cannot but sympathise with him when he feels and declares that the state of things in the Papacy must bring about a great crisis, we cannot but remember that it is not now for the first time that the Papacy has seemed so far gone as to be beyond the help of the physician.

***

A STILL more remarkable document is the "Address of the second Old Catholic Synod to the clergy of the German Empire, who are still under the Vatican bishop, but are in heart Catholic." It is a powerful remonstrance and appeal, and its effect will probably mark the ultimate success or downfall of the Catholic movement. It draws vigorously the line of distinction between the authority of the true Church—"the House of God, which is the congregation of the living God, the pillar and ground of the truth,"—and the so-called infallible authority which Vaticanism has set up in its stead. The doctrine of the Vatican was not heard of in the Church till the thirteenth century; was rejected by the Councils of Constance, Basil, and Trent; defended however by the Jesuits, and at last "has been encircled with the gloriole of the pretence of an Œcumenical Council, to the apotheosis of a Pope who is ignorant of the history of the Church." The address goes on to lay bare the mode in which the Œcumenical Council was convened and conducted. It was not really an Œcumenical Council, and, such as it was, it promulgated nothing. "It was only the Pope, who, assert-"ing that the Council approved, consummated the promulgation in "his own person." A strong appeal is then made to priests who are uneasy in their consciences, to come out from the Papacy. The theory that submission is a virtue is contrary to Scripture, and cannot undo the obligation of conscience and moral self-responsibility. Then follows an enumeration of "anti-Christian doctrines," couched in un-Christian language, that have proceeded from Rome's *Cathedra*. And not only are the doctrines false, but the means to enforce them are unholy. Lying and superstition are chief among these. Here is a pretty strong sentence of the Old Catholic divines on the worship of the Sacred Heart which began the regeneration of France the other day at Montmartre. "Shall we remind you of the *culte* of the heart which 'dissects Jesus,' and make the corporeal heart an object of worship in accordance with the sensuous phantasies of a nun led by a Jesuit?" The appeal closes with a warning against the dangers of persisting in submission. "Walk while ye have the light, lest darkness come upon you. We do not submit to the light, we walk in the light."

***

A CORRESPONDENT of the *Pioneer* points out that although in 1859 the Civil Service Commissioners simply advertised the number of civilians who were drawing pay above £1,000 or £2,000 a year, in their report for 1862 *they* went very much further, and advertized for the information of the public schools, the rates of pay received at each period of service. Thus the rates for Bombay and Madras were as follows:—

	Madras.	Bombay.
Under 4 years	570	452
4 to 8 „	1,218	715
8 to 12 „	1,680	1,186
12 to 20 „	2,149	2,233
20 to 35 „	3,235	3,713
Above 35 „	5,650	6,400

Now these rates were published, as those which might be expected in the two then deemed inferior presidencies. The men who, from being at the top of the list, were able to elect for Bengal, naturally believed that they would draw larger salaries,

while they now find that £800 a year after 12 years' service, is the utmost they can expect. In the North-West, the great block is among the men of the years 1861, 1862, and 1863, the result of posting men thereto in excess of the annual want. Thus it is admitted that about seven juniors every year are a sufficient number, while in 1861, 28 were posted ; and in 1862-63, 13 and 15 respectively. The consequence is that men of 12 to 14 years' service, are drawing but half the pay they were led to expect, the pecuniary loss to these gentlemen representing in some instances Rs. 30,000 to Rs. 40,000. Owing to the comparatively advanced age at which competition-wallahs enter the service, these men are as old as their Haileybury predecessors were of 15 to 18 or 19 years' standing, and the requirements of a man in India are largely affected by his age. There is the most pressing need for the relief of the men of 1861, who have already suffered so much. A system of personal allowances would seem to be the best remedy. The cost would be trifling, while the step would allow time for maturing final arrangements, and the allowances could be dropped as the men got promotion.

***

MAJOR-GENERAL MCMURDO insists, in the columns of the *Times*, upon the awkward nature of our North-Western frontier. An army defending that frontier would have a great river in its rear, which for many months is impracticable for the passage of arms, and in front a mountain range affording various openings for an invading force. General McMurdo thinks we ought to adjust our frontier line so as to have for a frontier the Sulaiman mountains, the Mataban mountains, and the Black mountains, which would afford us commanding positions in climates almost as good as European. We should hold these positions, not only as military posts, but as military colonies, in view of the remote future of India. This military hankering for an advance into Affghanistan, should be steadily discredited by the whole press.

***

THE picture drawn by the American diplomatist Dr. Schuyler of the class of Russian officials who flock to Tashkend almost passes belief. In most cases they are men overburdened with debts, or fugitives from scandals which render it impossible for them to live in other parts of the Empire. The most glaring acts of misgovernment, even of downright robbery, are committed by them. One Prefect levied in one year, according to Dr. Schuyler's report, ninety thousand roubles of illegal taxes, all of which he spent besides other Government money, whilst residing within five miles of the house of the Governor-General, and living in a luxurious style entirely impossible on his salary of two thousand four hundred roubles a year. Money is taken from the natives "at all times and under all pretences." Any persons that endeavour to enlighten the public as to the state of affairs are immediately banished. In some cases, the Prefects resort to torture to extort confession from innocent parties. A Judge placed stolen property in a Khirgiz chief's tent and then accused him of the robbery. If all this is true, we need hardly wonder that "the people are beginning to forget the evils which they suffered from the Khan, and are thinking more of the evils which they suffer from the Russian officials."

***

A PAPER on the "Proposed Flushing of Sahara" was lately read by Mr. Donald Mackenzie at an influential meeting at the Mansion House. Mr. Mackenzie stated that the continent of Africa had an area of nearly a quarter of the entire land of the globe, and presented greater obstacles to human enterprise than any other part of the earth's surface. Notwithstanding the many explorations of scientific people and travellers, both recently and in ancient times, of which he quoted several instances, the vast interior of Africa still remained a *terra incognita*, with its natural wealth undeveloped and its mineral treasures unexplored. It had a climate equal to that of any other part of the world, and capable of yielding tropical and sub-tropical productions to any extent. Still it was a lost continent, banished as it were from commercial intercourse with the civilized parts of the world. The most considerable part of our commerce with North Central Africa, was carried across the great Desert of Sahara from the shores of the Mediterranean. Caravans now performed dangerous and tedious journeys of many months' duration from Morocco, Algiers, Tripoli, Tunis, and other ports to the kingdom of Soudan. Two thousand miles of sterile and mountainous country had to be traversed, and hostile tribes encountered, before the nearest market was reached. In spite of these difficulties, about three million pounds' sterling of British produce found its way annually from the north to Soudan, which kingdom had no less than twenty millions of inhabitants. The great importance of opening those regions to commerce could not for a moment be doubted, and Timbuctoo formed, he thought, the most favoured spot for such intercourse, situated as it was on the edge of the Desert. His plan was to open a direct commercial highway from the mouth of the River Belta, in the neighbourhood of Capes Juby and Bogador, on the north-west coast of Africa opposite the Canary Islands, to the northern bend of the Niger, at Timbuctoo, a distance of about eight hundred miles. That would form the shortest route to the interior, and was within easy access of Europe and America, the mouth of the Belta being distant about 1,500 miles from England. The engineering difficulties were inconsiderable, since the physical formation of that part of the Desert of Sahara which had to be crossed, favoured the project A great tract of it, with an area of 126,000 square miles, and known as Eljuf, is a vast depression, considerably below the level of the Atlantic. It was bounded by fertile and populous regions, and inhabited by an industrious class of people, whose only commercial intercourse with Europe was carried on through Mogador. The depression was impregnated with salt, and it had, it was believed, formerly formed part of the bed of the sea. He contended that the climate, the geography, and the people were all favourable to the scheme, and if once the mouth of the Belta was cleared of sand, the waters of the Atlantic would fill their former bed, thus establishing a direct communication with North Central Africa within easy distance of our ports. Instead of a trade of three millions annually, it might be increased ten-fold. The great continent of Africa would be opened to every wholesome influence, its vast resources would be developed, and the slave trade would no longer stain its history. He added that the proposed preliminary survey would enable them to obtain the necessary *data* to carry out the scheme, and that such a survey would be comparatively inexpensive.

***

MR. RODEWALD, the Chairman of the Directors of the London Joint Stock Bank, paints a bright picture of trade prospects in the future. It is quite natural, he says, that, surrounded by the wreck of disreputable failures, the community should be desponding, but on the other hand, the elements of prosperous and sound trade are manifest to an unusual degree. Labour is fully employed at home and on the Continent at remunerative prices ; pauperism is at a minimum ; bread is extremely cheap ; and the consuming capacity of the masses, encouraged by the low prices of the necessaries of life, was probably never so great in England This is the basis upon which trade is sure to revive before long, and it might have done so already if it had not been checked by the outbreak of those foul and weak spots belonging to failed speculations of previous seasons of high prices, which still alarm public feeling, stirred up by mischievous gossip of unprincipled or thoughtless persons. "But well-paid and general employment of labour, together with low prices, will prevail, and before we know it may lead to a flourishing and sound trade, which, in the interest of commerce and manufactures, we will trust soon to see established."

THE military prospects of Don Alphonso's Government are better than they have been at any time since the repulse at Lacar rendered abortive for its chief purpose, which was the capture of Estella, the movement of Moriones upon Pampeluna, and the relief of that fortress. The Alphonsists upon that occasion all but succeeded in forcing the Carlists to evacuate Estella, the great Carlist stronghold in Navarre, but the check was so decided and so demoralising to the troops that it had all the effect of a damaging defeat. The line of works from Tafalla to Pampeluna, which constituted a permanent menace to Estella, was no doubt still maintained, but Carlist bands immediately became more active in every direction : in Navarre itself towards Vittoria, in the west towards Bilbao and San Sebastian, and in the centre in Arragon under Dorregarray. It seemed quite on the cards that the Carlists from being threatened were about to make a new step in advance. At length the tide has again turned in the other direction. Dorregarray has become a fugitive, and has narrowly escaped with the remains of his band into Catalonia. But above all, on the main scene of operations, which have for their object the attack and defence of Estella, the Alphonsist generals have lately been gaining ground. The mode of attack is somewhat different from that a few months ago. The turning movement was at that time directed from Toffalla to Pampeluna keeping to the right of Estella, looking from the centre of Spain northwards. Now the movement is from Lagrono to Vittoria, and thence northwards, keeping to the left of Estella. A little further advance, *it is calculated*, will

make it impossible for the Carlists to remain in Estella, as they would be cut off from the remainder of their forces operating against San Sebastian. Hence the recal of the Carlist troops from the latter place to withstand the pressure of the Alphonsists at Vittoria. It is impossible to predict how the campaign will end, but in favour of the Government it must be noted that the strength of their works from Toffalla to Pampeluna which immediately threaten Estella, renders additionally embarrassing to the Carlists the turning movement now being attempted from the opposite side. The Carlists also, from the moment they were proved incapable of advancing from Estella into the plains, appear to have been steadily losing ground. In war not to advance almost always means to go back ; and the Alphonsists, though slow in movement, have, on the whole, gained ground upon their opponents, the wonder being that, with more men and means, their progress has been so slow. It seems doubtful now whether any check will do more than delay the end.

IT may not be generally known that a share of the praise lavished on Captain Boyton, for the invention of "*The Swimming Apparatus*," is due to a simple mechanic of the name of John Rees, and resident of Aberystwith, North Wales, who three years ago, in the presence of a crowd of spectators, with apparatus similar if not identical in construction, partly succeeded in crossing the arm of the sea which separates Abeystwith from Aberclovey. The experiment was so far successful as to induce Rees to apply for a patent. He had already spent a small fortune in the prosecution of his experiments, besides the liberal donations of many friends and patronizers. A patent on what had been actually achieved, his supporters thought would have enabled him to bring his apparatus to a greater degree of perfection. But the patent was refused, and he was obliged from want of funds, to abandon the undertaking of many years perseverance and anxiety. No reflection is meant on Captain Boyton. It is possible and probable that his experiments were conducted independent of John Rees's, who has again taken to his ordinary occupation of watch-making.

MUCH attention is at present being given to the condition of the poor in Paris. It is found that while the total revenue for their relief has doubled within forty years, it is now insufficient. French administrators are aiming to realize Ricardo's ideal that no measure for relieving the poor merits a moment's consideration, that does not aim to place the needy in a position to become independent of aid. There are at present in France 3,367 *bureaux* for succouring the poor, one office for every three communes, with a revenue of seventeen and a quarter million francs, one-eighth of this sum being absorbed in Paris, and one-fifth of the total devoted to administrative expenses. The number of inscribed poor is nearly one million and a half, or one for every twelve of the population, representing 483,000 families. Among the remedies proposed for counteracting pauperism, is the reduction of the number of wine shops, the suppression of the Monday holiday, emigration, and the education of the poor, of young females especially. In the halcyon days of the Revolution, when society was to be regenerated by decrees, and *fêtes*, and a re-baptized calendar, it was voted that farm laborers, aged 60, were entitled to an annuity of 100 francs, artizans 120 francs, and mothers having three children under ten years of age 60 francs. The list of annuitants was to be incorporated with the volume containing patriotic hymns in honor of work, and the pensions were to be paid half-yearly pending the *fête du malheur*. The scheme failed, the pensions exceeding the annual revenue of the State.

THE quarrel between the Liberal and Orthodox Protestants in France has apparently made little progress towards arrangement since the point of qualification of an elector for voting in the local presbytery was referred to the Council of State. Is a Liberal Protestant to lose his right to vote, not because he does not believe in the fundamental truths of Christianity, but on account of ecclesiastical authority ordering him to subscribe to a tenet? Fatigued at the law's delay, both parties are about ending the armstice, and commencing hostilities, one-half of the Protestants of France endeavouring to eject the other from the Reformed Church, where both have dwelt together, through good report and evil report, for upwards of two centuries. This fighting is not edifying.

***

THE death of M. Athanase Coquerel, the leader of the Latitudinarian Party in the French Reformed Church, at the age of fifty-five, is recorded in the Home papers. M. Coquerel was a son of the Minister and Deputy of the same name who died in 1868, and who was at the head of the section which successfully resisted the enforcement of Calvinistic tenets upon the Reformed Church, when the advocates of those tenets formed a voluntary church. M. Coquerel went beyond his father in Latitudinarianism, and was suspended from ministerial functions by the Paris Consistory in 1864, on account of his qualified approval of Rénan's *Vie de Jesus ;* and on the adoption of a declaration of faith by the Synod of 1872, M. Coquerel and other dissentients were excluded from the Paris pulpits. They opened services in the Salle St. André and another building, the question of their separation from the church and of a division of buildings and State grants being up to this moment in suspense. M. Coquerel's sermons drew a large number of hearers, but his health had for some time been failing. In politics M. Coquerel was a strong Republican.

***

MR. J. H. MOORE, of Trinity, Dublin, has been nominated to a fellowship in Hertford College, which is regarded as a high compliment. The *Express* says : "Mr. Moore is the first instance, we believe, of an Irishman being appointed to an English fellowship upon the ground of Dublin distinctions only. The selection is a graceful compliment to what we believe may now be termed the Dublin School of Metaphysics, whose merits are perhaps better recognised at the other side of the Channel than at home."

***

M. GEVAERT has published at Ghent a singularly interesting work on the "History and Theory of the Music of Antiquity." The author maintains that all the revolutions of the modern musical drama aim to approach the *ideal* of Gluck tragedy. Gluck and Wagner are thus only disciples of the ancients. But few fragments of ancient music have come down to us, and poetry held then towards music the place the latter does at present to the libretto. Aristotle describes music as the "seasoning of poetry," and Plato, calls it " a thing without signification. " The Greeks learned to sing as soon as they were able to read, and ignorance of music was proof of a neglected education. Socrates, Plato, and Themistocles took lessons in music. Thus the Greeks, as the Chinese, regarded music as essential in the education of youth, and a means of making good citizens.

***

THE Jesuit Fathers being now fully empowered by the new law on superior instruction, have commenced the establishment of the first of the universities they purpose opening in France. The one in question is being marked out on vacant land in the neighbourhood of the Bastile. The Secularists have no time to lose in the race for professionally educating young France.

***

THE jewellers and watch-makers of Paris, two of the great industries of that capital, complain that they are suffering severely from German competition, especially from Baden, by being undersold in the foreign markets. The French Government insists that for jewellery, eighteen carat gold alone must be employed, and very rigorously controls this branch of trade. In Baden, fourteen and even twelve carat gold is permitted, and the deputation of working jewellers from Paris to the Vienna Exhibition admitted that the Baden work was " tasteful and well executed." The single town of Pforzheim alone has 425 jewel factories, employing 7,000 artizans, besides 850 workmen in independent trades. The centralization of labor in the German jewel trade promises to ultimately endanger the craft at Paris, and hence the authorities are invited to place Frenchmen on a footing of equality to compete with Baden and the Black Forest.

THE point of the latter lines of our article, in last week's issue, on " The University and the Man Therein," was spoilt by an unfortunate printer's mistake. The word "men" was substituted for " Wren" (the celebrated grinder). Again, towards the beginning of the article the omission of the words " particularly Oxford, occasionally Cambridge," before "sometimes both," renders the two latter words hard to understand.

THE WEEK.

A DIFFICULTY has arisen from the desire of the Prince of Wales to visit Ceylon, and from the necessity of going there when the climate is at its best. Part of the journey will be by sea from Bombay and part by rail. After the reception at

Bombay, and the review and durbar at Poona, the Prince will re-embark and pass along the western coast to Beypore, possibly calling at one or two places by the way, and very probably at Honawer to visit the falls of Gairsoppa, and perhaps do a little bison shooting. From Beypore, a well-informed correspondent of a Bombay contemporary states, he will travel by rail to Madras, making several detours on the way, among others, it is expected, to the Neilgherry Hills. After doing Madras, His Royal Highness will run down by rail to Tuticorin, and from thence he will cross to Ceylon. He will embark at Trincomalee for Calcutta, spend Christmas there, and afterwards go to Lahore and Delhi. The return journey may not be so far down Bengal as Calcutta, but to Allahabad, and thence the country will be crossed to Bombay. This route, however, must only be regarded as a skeleton itinerary. The train will be stopped and detours made at various points, according to the importance of Rajahs and places of interest on the way, and the Prince will to a very large extent be in the hands of his hosts.

THE prophecy that ratepayers generally in Bombay would not vote for the best men who presented themselves for election, without reference to creed or colour, has, we regret to say, been proved correct in the recent municipal elections in the Western Capital. It was contended that we are still generations off having a homogeneous community in Bombay, and that the only result of attempting to adapt to a population so diverse in character institutions which are admirably suited to the inhabitants of towns in England would be the complete effacement of the European minority and the concentration of all municipal authority in native hands. It appears that while only about one-third of the Hindoos and half the Parsees on the register voted, as many as 57 out of 60 European votes were tendered. The local *Gazette* believes it to be the case that the number of qualified native electors is much smaller than the register would make it appear to be, and that the total number of electors in the Ward does not greatly exceed 400, of whom three-fourths were polled by the various candidates. But, in any case, it is clear that the proportion of Europeans who voted compares favourably with that of the Hindoos or Parsees. It is also clear that, allowing the natives only 340 votes against the European 60, a judicious distribution of their forces would enable the Hindoos and Parsees to monopolize the representation of the Ward—which returns five members—and to shut out any European candidate. What saved the European candidate at the recent election was the want of concord amongst the natives, as each of the Parsees fought for his own hand, and was anxious to get as many votes as he could for himself. With the exception of the Europeans, the electors in the Fort Ward really voted by races, though the Parsees distributed their votes unequally among the several candidates of their own race. Out of 52 Hindoo votes the Hindoo candidate secured 30; while out of 199 Parsee votes only 11 altogether were given to other than Parsee candidates. "The Europeans themselves would have voted more in a body, if Mr. Nanabhoy Byramjee had not, by diligent canvassing on behalf of his father, obtained many promises from European gentlemen weeks before any European candidate appeared in the field. Still, there is undoubtedly a disposition on the part of the Europeans—as was shown in a conspicuous manner at the election by the Justices—to show a liberality in voting for natives which is by no means reciprocated."

A PUBLIC meeting was held at Madras on Wednesday, the Chief Justice presiding, to consider the arrangements for the reception of the Prince of Wales. At the meeting resolutions were proposed that an address of welcome be presented, that subscriptions be raised to defray the necessary expenses, and that the Chairman be requested to communicate to the Governor the wish of the public that His Royal Highness should be solicited to remain a day longer in Madras, or allot a part of his time specially, in order to allow the community an opportunity of giving him a public entertainment. A telegram informs us that the meeting was numerously attended; and it was resolved unanimously that a loyal address of welcome be presented; that a committee be appointed to frame an address and arrange for the reception; that the Chairman request the Governor to solicit H. R. H.'s presence at a public entertainment of such a character as to afford the community at large an opportunity of seeing H. R. H., and expressing their loyal feelings towards him, and to appoint a special day for the purpose; and that a subscription list be opened in accordance with the above resolution. Upwards of Rs. 8,000 was subscribed on the spot.

A "CARRIAGE" road is now in course of construction from Shillong to Gowhatty, the estimated cost of which is Rs. 60,000 at an average of Rs. 1,100 per mile. It is already sufficiently advanced to enable Government and travellers generally to dispense almost entirely with the drudgery of cooly hiring on the Gowhatty side: pack-horses—as a temporary arrangement—having been substituted. The Chief Commissioner is anxious to encourage as much as possible the introduction of pack-horses into the hills, so as not to depend so much upon coolies who are now becoming more unmanageable and impertinent, besides preposterous in their charges. To supplant *entirely* the cooly system would lead to disastrous results. In an emergency arising from frontier raids, or heavy weather on the Chuttuck route, the cooly is indispensable. The completion of this splendid road will no doubt enable Government to draw all Calcutta traffic to the Gowhatty side. It will prove a great saving in time and money, and will in time make some compensation for the heavy drain on the financies, consequent upon the removal of head-quarters—Civil and Military—from Cherra to Shillong ten years ago at the suggestion of Colonel Hopkinson. From sanitary no less than financial considerations the removal was a doubtful step. Mortality both amongst the natives and Europeans is greater at Shillong. A very malignant type of dysentry prevails there during the months of June, July, and August, owing most probably to (1) want of rain, (2) locality, which is a deep hollow hemmed in on all sides by hills of considerable elevation, (3) the intense heat, and (4) bad water. The delightful little *plateau* of Shillong proper, where the dâk bungalow now stands, would have been a happier selection no doubt.

THE cause of the railway accident at Kutnee is still envolved in doubt. On Friday the Officiating Traffic Manager, the Deputy Consulting Engineer to Government, and the Deputy Commissioner of Jubbulpore, with several other officers, visited the scene of the accident and held an official inquiry. Nothing new was elicited as to the facts, beyond the particulars published in our last issue. Evidence was given that the line was in good order and had been carefully watched, whilst the engine had been got up sufficiently far to allow of the wheels being gauged, and they have been found to be now in perfect gauge and good order. The engine had been thoroughly overhauled in the Allahabad shops in June last. It is suggested that a rail had been mischievously taken out, or that the heavy rain may have loosened the ballast, or that chairs may have been keyed on to the rails; whilst others thought that the cowcatcher had fallen off. The result of the investigation of the accident, we learn by telegraph, is that it is supposed the cowcatcher fell from the engine, and caused the accident by becoming locked up in the engine wheels, throwing the locomotive off the rails. Besides two Europeans, there have been eight native deaths in all.

NOWROZ Khan is now in Sohat. There is a general rumour in Cabul that the Russian commander has made over a gun factory to Sirdar Abdool Rahman Khan, and has directed him to prepare as many guns for himself as he requires. "The treasurer also has been ordered by the Commander to pay as much money to Sirdar Abdool Rahman Khan as he wants, otherwise he will be dismissed. The Commander has also directed the Sirdar to collect his former sepoys, and to purchase for them arms, &c., and to give them liberal pay. The Sirdar is now ordered to take three times as much money as he was getting formerly for his daily expenses. There is also another Sirdar, and he likewise has been ordered to prepare guns. Some say he is Sirdar Esa Khan, son of the late Ameer Mohummud Auzum Khan; while others affirm that he is Secunder Khan, son of the late Sultan Ahmud Jan, the Governor of Herat. The person who has given these statements is a relative of an officer in a regiment stationed at Lall poora, and may be relied on." The Ameer has injured his foot and gone to Char Anseaum, a place four miles from the city, for change of air. He has ordered Sirdar Abdoolla Jan to march to Herat with the Sipah Salar and to send the Mustoufee to Cabul. Men of thirty and forty years of age are, it is said, being enlisted by force in the Capital.

THE Ootacamund Government house party, not including the Governor himself, has had a narrow escape from what might have been a very serious accident. While being driven to church, for the mid-day service, the horses shied at a *bandy* that had been left bullockless and disabled at the side of the road, of course, at a most inconvenient spot, the road on the opposite side being unprotected from a drop of a few feet into potato fields; down this embankment the carriage went on one side. Fortunately the occupants were not hurt, though, they were somewhat shaken. Mrs. Robinson, however, was at church in the evening with the Governor and others from Walthamstowe.

THE Lieutenant-Governor of the Punjab officially notices with great regret the death, at Dera Ismail Khan, of Nawab Mahomed Faujdar Khan, Alizai, C.S.I. This distinguished native gentleman

served with great gallantry under the late Sir Herbert Edwardes at the time of the Mooltan campaign, and was subsequently selected for the important post of Agent of the British Government at the Court of Cabul—a post which he filled with great ability and success during the critical period of 1857. Since his retirement from that office he has discharged the duties of Honorary Magistrate, and in this and in many other ways afforded the greatest assistance to the officers of the administration. For his distinguished services and devoted loyalty he was liberally rewarded, and a few days before his death the Government of India was pleased, on the recommendation of the Lieutenant-Governor, to declare his title of Nawab to be hereditary.

THERE is little news of importance from Upper India this week, except the fact that three thousand men have been employed in repairing the breaks on the Punjab Railway caused by the late floods. One bridge with ninety feet waterway near the Beas Station is entirely gone. The Government appeal in the Landhoura case, under Section 272 of the Criminal Procedure Code, against the judgment of acquital passed by the Sessions Judge at Saharunpore on one charge under Section 205, has been rejected by the High Court. A zemindar has filed a suit in the Assistant Commissioner's Court at Barabankee against the Oudh Railway for the loss of a village burned by sparks from a locomotive about a year ago. The plaintiff is supported by the Oudh administration, who have supplied him with copies of the documents belonging to the Railway Company to which Government had access by virtue of its contract with them.

FURTHER outrages are reported on foreigners at Pekin and in the North of China. Mr. Lensey, the Chinese Secretary of the Russian Legation, has it is stated, been knocked off his horse by a blow received from a brick. More recently a reverend gentleman and his wife were pelted with mud by villagers at a place some twenty miles from Tientsin.

OUR LIBRARY TABLE.

The Philippine Islands—By F. Jagor. On the whole, one likes the people, both Colonists and Indians, of whom Mr. Jagor says: "The native of the Philippines is an interesting study of a type of mankind existing in the easiest natural conditions." The natives got off well from the first, when the Spaniards abolished the arbitrary rule of their chiefs, and did away with slavery. They have been misgoverned and cheated, kept in ignorance, and "exploited," but they have never had any of the cruelties to endure which make the records of colonisation a blot upon the history of every country which has colonies. Their islands had no dangerous dower of gold, jewels, or spice; and cruelties such as were practised in the American mining districts, or in the manufactures of Quito, never occurred in the Philippines. It is wonderfully pleasant to read about a country, fallen into the hands of a European Power, whose native population is not disappearing, but, on the contrary, remarkably happy. The Indians pay only one tax, known as the "*Tributo*," of a dollar a year for each individual, and each man has to give forty days' labour to the State, an obligation from which he may be released on payment of three dollars. A separate chapter upon the taxation of the islands contains very interesting details. When the natives feel inclined to work, they can always command good wages, and rice is cheap. The foreign settlers are not very well off, even without counting the earthquakes, for life with their requirements is both dull and dear. Manilla—we suppose the description applies to its present aspect—is not a charming city, and its social customs seem rather narrow. "The city proper of Manilla, inhabited by Spaniards, Creoles, the natives directly connected with them, and Chinese, lies, surrounded by walls and wide ditches, on the southern bank of the Pasig, looking towards the sea. It is a hot, dried-up place, full of monasteries, convents, barracks, and government buildings. It reminds the beholder of a Spanish provincial town, and is, next to Goa, the oldest city in the Indies. Foreigners reside on the northern bank of the river; in Binondo, the head-quarters of wholesale and retail commerce. . . . . Very little intercourse exists between the inhabitants of Manilla and Binondo. Life in the city proper is not very pleasant; pride envy, place-hunting, and caste-hatred are the order of the day; the Spaniards consider themselves superior to the Creoles, who, in their turn, reproach the former with having come to the colony for the sake of filling their pockets. This state of things is to be found in all Spanish colonies, and is chiefly caused by the colonial policy of Madrid, which always does its best to sow discord between the different races and classes of its foreign possessions, under the idea that their union would imperil the sway of the mother-country. In Manilla the state of things was rendered worse by the fact that the planter-class, whose large landed possessions always give it a strong interest in the country, was entirely wanting. At the present day, however, the increasing demand for the produce of the colony seems to be bringing about a pleasant change in this respect. . . . . There is nothing like the same amount of sociability amongst the foreigners in Binondo as that which prevails in English and Dutch colonies, and scarcely any intercourse at all with the Spaniards, who look upon the gains of the latter as so many robberies committed upon themselves. Living is more expensive than at Batavia or Singapore. The houses, though generally spacious, are gloomy, ugly, and badly ventilated for such climates."

The Contemporary.—July. What a remarkable collection of names does the table of contents for the present number of the *Contemporary* present—Mr. Gladstone and Mr. Pope Hennessy, the Duke of Argyll and Mr. George Jacob Holyoake, Mr. Rathbone Greg, Mr. Grant Duff, and Mr. Matthew Arnold. But of some of these gentlemen we have had perhaps enough. Cassandra has croaked till we have got weary of the warnings, and if they can be supplemented by nothing more impressive than "the echo of the antipodes," they may well cease. We dislike the Stoke election as much as we can, but we cannot forget that the admission of the residuum, not only to a place in the electorate, but, as he shows, to supremacy in it, was due to the short-sighted politicians, who resisted the moderate reform which had become inevitable, and so prepared the way for revolutionary Toryism. Matthew Arnold, too, has perhaps filled quite sufficient space with his defence of "Literature and Dogma." He is always clever and entertaning, but, after all, his speculations are not the centre of the intellectual and spiritual universe. The Duke of Argyll's thoughtful and suggestive article on "Animal Instinct in Relation to the Mind of Man," Mr. Keary's on "Wind Myths," and Mr. Holyoake's on "The Beginning of the Co-operative Troubles," are all good.

The Vernacular Press in Bombay.—1874-75. Fifty three volumes are put under the head of Fiction: nine of them in Marathee, 20 Gujaratee, 5 Sindee, 3 Hindustanee, 10 Urdoo, 5 Persian and Sanskrit, and 1 English. The publications are of very unequal literary merits. But the few following may be noticed more peculiarly: "Richardachen Charitra, or A Story of Richard," is an attempt to render into Marathee, Sir Walter Scott's *Ivanhoe*. The translator, however, often omits the best portions of the tale. Compared to the original, the Marathee adaptation is exceedingly poor; yet the latter may be read by the vernacular reader, who does not know English, with amusement and interest. "Elizabeth, or The Exile of Siberia:" a Marathee translation of an English tale of the above title is an excellent performance, and is deservedly patronized by the Educational Department. "Premabandhon, or The Love-tie," is an original work of considerable literary merit. It contains interesting scenes and pourtrays now and then native domestic life in high position. "Nand Batrishi, or A Story of Raja Nand and his Pradhan Kailochan, by Samalbhat, is a short but beautiful poem, full of fine images and sentiments. Raja Nand happens to hear of the extraordinary beauty of the wife of his Pradhan, and conceives an irresistible passion for her. He contrives to send away Kailochan on some business, and goes to his house alone at night. The wife of the Pradhan and her favourite parrot praise the king for his true kingly qualities and make an appeal to his better nature so as to make him see the impropriety of his intention. He is pleased with the sagacity and virtue of the woman and returns home. The Pradhan, on his return, learns of the nocturnal visit of the king to his house, and becomes angry with, and suspicious of, his wife. Several efforts are made by his wife, her father, and the king to convince him of the groundlessness of his suspicion; but all in vain. He gets an opportunity and murders the king, and after some time the murder becomes known, and the Pradhan confesses it before the son of the murdered king, but excuses himself on the ground of the great wrong he believed the king did him. The young prince said that if his father was really guilty of the crime the Pradhan accused him with, he was rightly served; but if he was innocent and the Pradhan's suspicion groundless, the latter deserved to be punished as a vile regicide. The parrot deposed in favor of the innocence of the late king. The Pradhan's wife also made a most solemn declaration to the same effect, and was ready to undergo the severest ordeal in support of her unsullied chastity. But the suspicious Pradhan would not believe her, but on one condition, that if she was really chaste she should restore the dead king to life. The Pradhan's wife prays to the gods and calls them to attest her innocence. They listen to her fevid appeal, and the murdered king is restored to life. He not only forgives his murderer, but acquits him of all blame and restores him to his former dignities and honor, and takes the whole blame on himself.

Spare Moments.—Education Society's Press, Byculla.—The author ventures to offer for the acceptance of the public the fruit of some "Spare Moments" in a busy life in India—"Fruit, I much fear me, not ripe, rich, and rare enough to please some, but which I would fain hope may prove agreeable to other tastes. In these poems I have striven to write nothing I might afterwards regret. So far indeed, as lay in my power, I have tried to sustain, not to weaken, Faith, for alas! I see with deep sorrow that, year by year, as selfish love of luxury-procuring money increases, the religion of Christ seems to wane. As civilization of a wrong kind, in which the head more than the heart is concerned, advances, the simple trust in, and love of, Jesust appears to recede. Three out of the seventy-four poems in the first part, and about half the selected psalms and hymns in the second part, were written considerably more than a century ago by an ancestor of mine, and are now presented in a modern dress. I thought them worth preserving, and I have little doubt they will be readily picked out from the others."

Asiatic Journal.—1816. It has been often said that the pleasures and pains of life are very much of our own making, and the remark applies with considerable point to life in India. We have just met with a whimsical illustration of the truism in an article quoted by a Madras paper from the *Asiatic Journal* for 1816, some years previous to which it had been published in the *Asiatic Mirror*. It thus tells us something of opinions concerning India rather early in the century. The writer describes how a country gentleman and two "old Indians" were assembled together at a house in London, when the country gentleman asked one of the Indians to give him his opi-

nions in reference to our Eastern Empire, as he meditated obtaining an appointment there for his son. There was no other way of providing for him, the father added. "Sir," was the answer, "there are many ways of providing for a young man without sending him to India, and I am sure any is preferable to perpetual transportation; if the young gentleman is idle and sedative, make him a tailor; a knight of the thimble is perhaps as respectable as many other *knights*, and you'll have him courted by every man of fashion in the metropolis—this, Sir, is one way of providing for him; but should he dislike sitting crossed-legged, and show at the same time muscular strength and activity, you can make him a porter, or a coal-heaver, or a waterman, or a charman, but, Sir, if you have any regard for your son, you will prevent his going out to India. If the gentleman, however, is of a vagrant disposition, and is resolutely determined on a change of climate, you have doubtless interest sufficient to get him on board one of the whalers in the northern seas. A short period will convince him of the vanity of wandering and preserve him from Indian exile." Then the old gentleman went on to pour out the vials of his wrath upon this unhappy land. Every breeze bore pestilence on its wings and left bile and debility behind it. Whirlwinds blew away your houses and lightning burnt them down. The climate made a man a bundle of infirmity—a walking automaton; a mass of skin and bone in wide ill made pantaloons. The medicines he must take to keep alive (the speaker gave the loathsome statistics) would fill a large dispensary. As for the natives they were Hottentots without any of the good qualities of their thick-legged brethren; and of their vices he gave a graphic account. The European society he divided into two classes—the Formal and the Familiar: one all ceremony and silence, the other all levity and noise, and both equally insufferable. He had passed five and twenty miserable years in India, and would rather be grinding knives in the streets at home. The country gentleman was staggered, and began thinking that he had better keep his son at home when the second "Old Indian" begged to say a few words. He could not, he said, remain silent and hear a country like India either satirized or abused; a country that no unprejudiced man ever parted from but with regret, or mentioned but with admiration; of which the air is salubrious, the soil fruitful, and the inhabitants wise and benevolent—"where every blast shakes spices from the trees, and every mouth drops fruit upon the ground where all the diversities of the world are brought together, the blessings of nature selected, and its evils extracted and excluded." He hoped no one would look on this as an exaggerated panegyric; he spoke from long experience and rigid impartiality, and had no desire other than that of effacing the unfavourable impression which the last gentleman's invective against India had made on their minds.

The Berlin Neuzeit—Contains an interesting article by Dr. Gerhard Rohlfs on "Modern Cairo," in which he gives much curious information in regard to the origin and character of the names applied by the native populations to this and other semi-Europeanised cities of the East. To the Fellah and other native-born Egyptians the name "Cairo" is unfamiliar; with them their capital is "Masr," or "Misr"—a word which, according to the German Orientalist Dr. Wetzstein, who has supplied Dr. Rohlfs with numerous notes on the subject, is the generally accepted name of the whole country, and is identical with the "Misraim" of the Old Testament. This transference of the name of the country to its principal city is not uncommon in the geographical nomenclature of the Arabs and other ancient races, although, according to Dr. Rohlfs, the reverse of this is not unfrequent in modern times among these and other peoples. Thus, for instance, several nations at the present day designate the Turkish Empire by the name, in the vernacular, of its capital, "Stamboul," while Russia is generally known in the East as Muscu from the name of its ancient capital, in the same way as Europeans call the States of the Berbers—Tripoli, Tunis, and Algiers—from the names of their respective capitals. It would appear, from Dr. Wetzstein's researches, that the present Cairo occupies the site of an ancient city founded by the Ptolemies, and called by them "Hidschra-Babylon." In the year 19 of the Hegira, this city was besieged by Caliph Omar's general, Amribnel'Asi, who struck his tent, "el Fostât," on the north side of the town, which soon became the centre of a large number of other tents, huts, and barracks, and in process of time acquired such extent and importance as to transfer its name to the whole city, which was then known as "el Fostât." Three hundred years later (in 339 of the Hegira), when Egypt was occupied by Gauhal, chief captain of the armies of the West African invaders of Egypt, the name el Fostât was in turn superseded by another, "el Kâhira," from which the modern designation "Cairo" has been derived. It owed its origin to the circumstances attending the siege and occupation of the city; for when Gauhal, in accordance with a treaty which he had entered into with the people, encamped with his troops in the suburbs, outside the bounds of the city, their encampment of tents and barracks gradually grew into an important military settlement, and was known as "el Kâhira," the subduer or conqueror, a name which like its predecessor was gradually extended to the entire capital. To the present day the different quarters of Cairo are distinguished "el Kâhira," "el Fostât," and "Masr" or "Misr," and in official documents demanding accuracy of definition, the city is designated as "Kahirât Misr," Cairo in Egypt, while, as we have before observed, the lower native classes remain constant to its primitive appellation of "el Misr"—Egypt *par excellence*.

LETTERS TO THE EDITOR.

THE N. W. CIVILIANS.

(*To the Editor of the Friend of India.*)

SIR,—I too join in your cry for justice to the N.-W. P. Civilians. They have been wronged and should be recompensed. I also thoroughly agree with you, that such compensation should be, by "personal allowances," not by supersession.

Many of us who have served for years in a Non-Regulation Province, are in danger of being superseded by our Civilian Juniors in the Commission, or from the neighbouring province. That this is the solution anticipated by those aggrieved, is apparent from letters like that of a Joint-Magistrate in the *Pioneer*, who quietly assigns six N.-W. P. Civilians to the Punjab, three to Oudh, &c.

I don't know how officers in other administrations may relish the prospect, but if three Civilians are sent to Oudh it will simply swamp the Commission. We once had to wait nearly *five years* for one step in the grade of Deputy Commissioner. Matters are a little better now, but if three outsiders are put in officiating charge of districts, promotion to all under them, including Civilians, of 1861 and 1863, will be retarded *probably six years*. Why is it Sir, that while the press here and in England have so readily espoused the cause of the N.-W. P. Civilians, not a word has been uttered on behalf of the Military and Uncovenanted men, grown old in the service, whose just rights are being so grievously assailed? No matter what proportion of Covenanted men Lord Dalhousie or Lord Lawrence might choose to assign, when once a Military or Uncovenanted officer be selected for employment in the higher ranks of a Non-Regulation Province, it is on the implied understanding that, while competent, he will not be superseded. A Civilian might be preferred for special appointments, but it was understood—certainly as clearly and on as good grounds, as that Covenanted men should get certain appointments in the Regulation Provinces—that in the main line of Assistant, Deputy Commissioner, and Commissioner, promotion should go by seniority: otherwise, if we were to see our juniors of one day our seniors of the next, if long service and hard work were to be ignored, who would have joined a Non-Regulation Province? Not I for one.

NON-REGULATION.

THE CUSTOM HOUSE.

To the Editor of the Friend of India.

SIR,—Your last issue has some well-grounded remarks on the Calcutta Custom House. I suppose there is no one having regular business transactions with it, who has not continual grounds of complaint on account of obstructiveness and unnecessary annoyance, while there are few even among officials themselves, who would not admit that, under its present administration, the Custom House is not a credit to our Government. The Collector has no doubt a difficult post to fill, and it is none the easier that he has to administer an Act which is obsolete as regards the procedure it enforces. But for this very reason a thoroughly capable, broad-minded man of some business experience is required, whose aim should be to carry out the necessary restrictions and regulations with the least friction possible, combining as much as may be the *suaviter in modo* with the *fortiter in re*. For there are none, at any rate amongst the merchants, who complain of mere strictness, so long as it is enforced in a reasonable manner, and not as is too often the case at present in the form of petty annoyances, and a general disposition to hinder rather than forward the business the public have to transact with the Custom House. At present, hardly a day passes without some fresh ingenuity in the art of annoyance manifesting itself. One time it is a new form of challan; another, the paper on which applications are written is not good enough; and again a blot on a Custom House pass cannot be overlooked without the purifying effect of an anna stamp and a Court Fee Stamp of all stamps in the world! Now, these petty annoyances in addition to producing a feeling of irritation on the part of the public, are taken advantage of by the Custom House Baboos with a view to obtaining small bribes, which are more or less willingly paid, according to the anxiety of the giver to get his business finished without the delay and expense which these objections give rise to. Thus the desire to keep up a sense of importance and authority, even leaving the weightier matters out of the question altogether, leads to a state of things which is intolerable. But instead of, as you say, each house in the city having a "swear" in turn, they might more truly be described as complaining in chorus. There appears to be something wrong in the middle grades of the Custom House, for there are men there who have been in the place a great number of years, and long trained in the ways of obstructiveness, to whom nothing appears to give greater delight than, after a superior has allowed some small concession arising perhaps out of a case of necessity, or because somewhat out of the ordinary routine, to be able to point out some Section of the Act to prevent it. And thus even when the desire is present to bend a little to circumstances, the officer is liable to be brought in check by some under "assistant," ever willing to show his superior knowledge of the Act, and glad of an opportunity of keeping up the traditions of his office. To this no doubt is partly owing the fact, that though the superiors are willing to move with the times, and to listen to reason when difficulties arise, so little progress has been made, and that the Custom House has become, what a home correspondent describes when told of some of the regulations, as an Antedeluvian Institution.

Calcutta, 20th August 1875.

CANALS *vs.* RAILWAYS.

To the Editor of the Friend of India.

SIR,—It has been pointed out to your correspondent "A. B." that he was mistaken in his estimate of the cost at which grain was carried by the Indian Railways during the famine last year, but it is clearly useless to repeat it.

Your readers will however, readily perceive that if his estimate of 3 pie per maund per mile, or a shilling a ton a mile, as he has been pleased to convert it, could by any possibility be earned by Indian Railways, then the more Railways Goverment construct the better, for such earnings would quite supersede the necessity for taxation of any other kind in India.

The E. I. R. is just now carrying grain from Ghazeabad to Howrah at $\frac{3}{4}$th of a pie per maund per mile, or 3·4 pies per ton per mile. This in English money, at 1*s.* 10*d.* per rupee, is 1·55 farthing per ton per mile.

X. Y. Z.

LOYALTY TO ORDER.

(To the Editor of the Friend of India.)

SIR,—There is one thing the present Government of India do not understand, and that is what for lack of a better expression may be called "public feeling" in India.

Witness the manner in which the desire to subscribe to Famine relief when it sprung up spontaneously on the first alarm, was discouraged, and the abortive attempt afterwards made to revive it when it was cold.

Now, we have the Prince of Wales coming to see us, and altho' I do not expect the country to gain much by the visit, I am one of a community of which, I fearlessly say, there is not a more loyal section of the British nation anywhere. But that the English residents in India are intensely loyal, and would, if left to themselves, have shown it in an unmistakable manner to the Prince they would delight to honor, is a fact of which the Government seem profoundly ignorant, or gravely doubtful, and therefore officials are told off in all the presidencies to get up public receptions, &c.

Here in Madras three officers have been "appointed" by the Governor with power to add to their number. With you the Lieutenant-Governor promotes and presides at a public meeting. The Bombay community are similarly patted on the back and asked to pay for the fireworks the Government have ordered.

Already all this official interference is blighting what ought to have been, and would have been, a goodly tree by the time the Prince reached these shores.

Had the European, Eurasian, and native communities been left to themselves in the matter, the expressions of their loyalty would, I feel confident, have been something to tell to the generations to come.

If it proved otherwise in respect to any section of the people, something might have been taught us which at present we are rather desirous to learn.

X. Y. Z.

Madras, August 1875.

INDIAN INTELLIGENCE.

BENGAL.

THE revised code of furlough rules for armies in India has been transmitted by the Secretary of State for the approval of the Viceroy. The provisions are optional for officers in the service; compulsory for those entering hereafter.

THE Government of India has sanctioned the sum of Rs. 2,000 as a marriage dowry for the daughter of the Nawab Nazim of Bengal. It has also been ordered that no larger sum than Rs. 5,000 is to be expended on account of the marriage.

THE programme for the extra day's racing in honor of the Prince of Wales shows an amount of energy on the part of the Stewards and of liberality on the part of the native nobility and gentry which is most encouraging for the prospects of the national pastime. We observe that, in addition to the Cup, value £100, given by His Excellency the Viceroy, and to which Rs. 1,000 are added from the fund, no less a sum than Rs. 5,100 has been presented in Cups and Plates, and a further sum of Rs. 4,200 subscribed by native patrons of the Turf towards repairing and perfecting the Course and Grand Stand, evincing an amount of public spirit which we should gladly see emulated by some of our merchants and highly paid officials. The arrangement of the different races is excellent, and we trust to see the exertions of our Stewards rewarded by a liberal support from the owners of first-class horses, when the well-tried experience of our handicappers will, we have little doubt, ensure good racing, close finishes, and general satisfaction.

THE officials of Chandernagore have a real grievance against the Government of India, which has been aggravated by the recent imposition of additional duties on imported liquors. No civilized Government has a right to levy mere transit duties, but it is obvious that if the Indian Government allowed liquors to be imported into French territory in Bengal duty free, it would be put to much expense and trouble in guarding against the despatch of duty-free liquors from Chandernagore to places within British territory, and the French authorities, recognising the force of this objection, merely asked that the officials of Chandernagore should be allowed to import, duty-free, for their own consumption, a certain quantity of liquor annually, but the modest request was ungraciously refused. A representation was made on the subject to the French Government, but the reply was to the effect that a question could not be raised about such a *bagatelle*. But what is a *bagatelle* to the French Government is by no means so to the Chandernagore officials, who have to keep up the dignity of high-sounding designations on salaries of two and three hundred rupees a month. To them, whatever it may be to the comparatively highly paid officials in the service of the Indian Government, the heavy duty on wines, &c., is an intolerable burden, and as the loss to the revenue would be a *bagatelle* indeed, we trust the Government will reconsider the matter and allow the French officials of Chandernagore to receive, free of duty, the small quantity of liquors they may themselves consume during the year. This would be a mere act of justice, although doubtless it would be gratefully appreciated as a liberal concession.

DR. FAYRER, chief medical adviser to the Council of India, will accompany the Prince of Wales on his tour in India. The work on board the *Serapis* is rapidly progressing. During last winter she was fitted with new boilers, and various alterations in her internal fittings and decorations are now being made. The after part of the ship will be devoted to the Prince and his suite, and cabins are being prepared for the officers in that part of the vessel which, during her troop service, is set apart for the married women. The saloon on the after part of the upper deck is to be enlarged, refitted, and embellished. Six *punkahs* or revolving fans, will be constructed therein, and awnings will be spread over the upper deck. A new staircase will lead from the main deck, on the port side of which His Royal Highness will receive visitors, to the saloon above. Between £9,000 and £10,000 worth of silver plate is to be supplied, on loan, by Messrs. Garrard, of London. The Royal party, including servants, will number about fifty. Samples of internal decorations have been fitted up in the saloon, and the Prince is expected to make his choice and selection of the various designs. The bandmaster and twenty members of the band of the Portsmouth division of the Royal Marines are to accompany His Royal Highness. The *Serapis*, which will carry nine months' provisions, including twenty-five tons of ice, is expected to sail on October 6, and to embark the Prince and his suite at Brindisi. The yacht *Osborne* will go on to Suez, and there await the arrival of the *Serapis*, to which she will act as pilot in the passage through the Canal and the Red Sea. On the occasion of the Prince of Wales's visit to Bombay, "the Government will illuminate all the public buildings in Bombay, including the Town Hall. The Port Trust and the Marine Department will make all arrangements for landing and illuminating the foreshore properties and the shipping in harbour during the Elephanta trip. The Esplanade Fee Fund Committee will pay the expenses of illumination and decoration from the landing place to the Money School, and the Municipality from the Money School to Parell Bridge. The Governor himself will bear the cost of the Elephanta trip. The Prince is expected to stay two days in Poona."

NORTHERN INDIA.

THE Meerut Committee have condemned, after a trial of three months, Dr. Drew's self-acting tattie apparatus.

MAJOR B. WILLIAMS, 5th Punjab Cavalry, has been placed under the orders of Major-General Sam Browne for special duty with the Prince of Wales during His Royal Highness's stay in this country.

A LOCAL vernacular paper points the moral of the recent floods. Allahabad, it says, is desperately wicked. "There is nothing but lies, deception, and roguery going on," and it has itself, therefore, to thank for this "visitation from heaven."

THE rare phenomenon of a lunar rainbow was witnessed at Simla lately. It appeared at about half-past nine in clear moonlight, the form of the bow being first outlined in pale and scarcely visible grey, gradually ripening into prismatic hues, though less pronounced of course, than those apparent in the rainbow by day.

THREE packets of silver bullion, despatched from Bombay, have mysteriously disappeared from the premises of the E. I. Railway at Delhi. The police have been breaking their necks trying to find some clue, but without the slightest degree of success. The silver amounted to Rs. 5 or Rs. 6,000 in value.

ON hearing of the death of Nawab Foujdar Khan, C.S.I., the Commander-in-Chief telegraphed to Nawab Golam Hassan Khan, Native Commandant of the 15th Multanee Cavalry, a clansman and relative, in the following terms: "I most sincerely grieve at the loss of so gallant and loyal a friend, so honourable a chieftain, so good a soldier, as Nawab Foujdar Khan. Pray accept and express to the family my heartfelt regret."

BOMBAY.

AS soon as Mr. Richey has completed his preliminary inquiry, a commission will be appointed to report on the recent Deccan riots. Mr. Richey will be President. One Bombay Civilian, one Bengal Civilian, and one Native Judicial Officer will be Members.

A FURTHER slip, supposed to be to the extent of something like fifteen hundred tons of rock, has taken place on the Bhore Ghât, at the spot where the former one occurred, and it is feared that about another week must therefore elapse before trains can be again run through.

ALL first and second class Chiefs who attend the Viceroy's Durbar will arrive in Bombay by the 30th October to meet the Prince. There will be no Durbar, but visits will be exchanged. The Gaekwar will attend. The Nizam is doubtful. The Prince will probably land at the Dockyard, not at the Apollo Bunder, on account of the greater convenience for official reception.

IN view of concentrating as large a force as possible at Saana for operations against the Hashid tribes, it is said the Governor-General of Yemen has summoned the leading Shaiks of the surrounding districts to consult them as to whether the regular Turkish troops may be withdrawn with safety from their country. It is contemplated to hold them responsible for the general peace in the districts that have submitted to the Ottoman Porte. Muzhur Pasha, the Mootasarif of Taiz, has resigned, and has been succeeded by Asuf Effendi, the Secretary to the Governor-General of Baghdad. It has been recommended to the Ottoman Porte that Mocha should be declared a free port in the hope that its trade may revive.

THE Bombay Government thinks that "an important link in the chain of medical evidence regarding the propagation of cholera" has been discovered in the statements made in the report of Dr. Blanc, Superintendent and Medical Officer of the Yerrowda Jail, on an outbreak of cholera which occurred in the jail, in May last. The Acting Sanitary Commissioner, in forwarding to Government the report by Dr. Blanc, says: "I have the honor to remark that it forms a very interesting contribution to the medical history of cholera, as it states facts which, as regards the theory of the propagation of cholera contagion, are valuable. The investigation into the causes of the outbreak made by Dr. Blanc was immediate and searching, and proves that in this instance there can be no doubt that it was solely due to water poisoning. The facts regarding it have been so clearly stated by Dr. Blanc, that it is unnecessary for me to recapitulate them, and the measures he adopted to stamp out the disease were extremely judicious, and based on true principles of sanitation. The practical lesson to be learnt from this outbreak is the great danger of allowing persons (as is so commonly the case throughout India) to drink water from a river after it has been polluted by *dhobies* washing dirty clothes in it and by other impurities, such as are mentioned in paragraph 31, where it is stated that four days previously to the outbreak, the corpses of two persons who had died of cholera had been burnt, and their clothes had been washed some twenty yards above the spot from which water had been drunk by some of the prisoners employed in watering the new road, so that it is quite possible, even if not absolutely certain, that they may have drunk water actually containing the poison of cholera in its most dangerous state. This fact is most instructive, and though it is feared that it would be impossible to have the clothes of persons who had died from cholera or other zymotic diseases burnt in all cases, yet the police authorities throughout the presidency might be ordered to see that this practice was carried out as far as possible, and that cremation *ghâts* were only allowed at some distance *below* villages."

MADRAS.

THE officer of the Royal Artillery who was lately placed under arrest at Secunderabad for addressing a communication direct to H.E. the Commander-in-Chief has been released and ordered to return to duty.

MELANCHOLY tidings have been received from England regarding Mr. John Bruce Norton, the late Advocate-General of Madras. His health is quite shattered, and he is now threatened with blindness. He is at present living in Boulogne.

THE Alpha Gold Mining Company have met with a series of disasters greater than usually befals even newly formed projects. After the machinery was got into working order, the wood was too damp to keep the boilers going; when the wood was dried, the tunnel conveying the water to the works collapsed, and when all was set right again, the engineer got fever and was obliged to leave the district. Notwithstanding these mishaps, the managers are sanguine of success.

ALTHOUGH the Prince of Wales, during his visit to India, will not take precedence of the Viceroy, instructions have been sent out to the Government of Ceylon that the Prince, as the heir to the Crown, is in a very different position from the Duke of Edinburgh, and that precedence must be accorded to His Royal Highness. Sir Hercules Robinson waited on the jetty at Colombo to recive the Sailor Prince as he landed from the boat of his ship. But Mr. Gregory, as instructed, will go on board the *Serapis* to receive his Royal guest.

GAME has been gradually receding from the precincts of Otacamund; the sholas in the station having been shot over in and out of season, they are no longer a hiding place for the sly birds. Whereas sportsmen, in days of yore, could find food for powder whenever they took their walk abroad, it now involves a day's march in search of game, and mostly ends in disappointment. A single fowl now is a *rara avis*, and judging from the rare occasions in which game is brought for sale, it seems that the native *shikaree* has at last given up the pursuit as an unprofitable trade. The paternal Government has a good deal to answer for in this; game laws have been urged for its consideration but in vain, and the indiscriminating gun of the native has depopulated the woods of the feathered and footed tribes that should inhabit them, and deprived many a table in Ooty of a *bonne bouche*.

THE crime for which the Consort of the Senior Ranee of Travancore has been seized and sent as a State prisoner to Alleppy is that of having been almost persuaded to become a Christian. The young Maharajah or his counsellors, with commendable promptness, took immediate steps to prevent the consummation of the contemplated crime. We regret to learn that Miss Ballard figures as an accomplice before the fact in the meditated offence. The two Ranees, one the wife of the prisoner, the Coil Thumbram, and the other a widow, were also anxious to become Christians, and there was a heartrending scene when the Senior Ranee was torn by her erring husband, whom she wished to accompany on his journey to the prison at Alleppy. No wonder the Maharajah considered the State to be in danger. We think the time has come for the Maharajah to abandon a policy of toleration with respect to a pestilent sect which numbers many thousands of his subjects, and whose demoralizing influences have penetrated into the bosom of his own orthodox family. Of some communities in Travancore the scandalous fact is recorded that the Christian churches are considerably more numerous than the pagodas and mosques.

MADRAS-MADE furniture is one of the product of indigenous industry which the Prince of Wales will have several opportunities of studying during his visit, for Messrs. Deschamps, of Madras, are busy making furniture for the Bombay Government Houses at Parell and Malabar Hill for the use of the Prince and the Viceroy respectively, and in refurnishing the suite of rooms intended for the Prince in Government House, Madras. They have also just completed the furnishing of a palace that the Nizam is having prepared for the Prince at an expense of several lakhs of rupees, (including 1½ lakh for a magnificent dinner service supplied by Elkington of London). For the Prince's rooms in Madras, a large bed, grand pier table, writing and occasional tables, chairs, cupboards, &c., are being made of Indian mahogany richly carved in the Louis XVI. style to harmonise with the furniture in the rest of the house, but with the addition of the Prince's plumes, and his motto on a ribbon at the top of each article. The Prince will occupy the rooms on the first floor, south side, usually reserved for the Governor; and during His Royal Highness's visit, the Duke of Buckingham will use the rooms on the floor above the Prince.

THE death is announced of Lord Hobart, who, as the Hon'ble Frederick John Hobart, paid his brother, the late Governor of Madras, a visit of some months' duration during the last cold season. His Lordship had been suffering from an affection of the lungs, and was advised to avoid passing the winter in Europe. The voyage out to Madras seriously taxed his strength; and on more than one occasion, while he stayed at Guindy, his condition excited much anxiety. Shortly after arriving in England he resigned his appointment of Assistant Secretary, Public Works Department, in the India Office; and on the 27th ultimo he died, aged fifty-four, leaving a widow, one son, and four daughters. His son, Sydney Carr, aged fifteen, now becomes Lord Hobart, and heir to his grandfather the Earldom of Buckinghamshire. It is a melancholy coincidence that has made two daughters of the late Bishop Carr, of Bombay, Dowager Lady Hobarts. Within a few months the Earl of Buckinghamshire has sustained the loss of two sons and one daughter-in-law. The only representative of the family now in Madras is Major Bertie Hobart, R.A., who is a nephew of Lord Hobart, the Governor of Madras three quarters of a century since, and a cousin of the present Earl of Buckinghamshire, who is fifty-five years his senior.

BURMAH.

THE appeal of the four dacoits concerned in the murder of Colonel Hamilton has been heard. The judgment and sentence of death has been confirmed.

THE *Rangoon Times* publishes the following news from Mandalay: "Colonel Wyndham has returned to the forest from among the Khyiens, who, he says, are perfectly savage, and it is reported that he has offered to conquer the country for His Majesty with 100 well-trained Burmese, with the proviso that he is to become the first Viceroy. The Italians have become, or are said to have become, possessors of the country commercially, having obtained concession to build a railway, which must be completed in five years, or His Majesty becomes entitled to demurrage. They have also got the mines—*viz.*, coal, iron, and silver—and are to give the King 25 per cent. royalty. Tuelli and Co. are the agents, and it is reported that the Bank of Venice is to advance the money. The engineers are soon expected out, and it was reported that the King was anxious to get the offices of Sutherland and Co. to lodge them. But as that firm is again in favour, this is not likely to be true."

A LETTER from Burmah contains the following: "The Burmese say that the Kalas (a term of contempt which they ordinarily apply to the English), subdued by the majesty and the glory of their king, sure of being beaten in case of war, were obliged to go to Mandalay barefooted and supplicate for peace. The Burmese of this province, and the same may be said of those elsewhere, though accustomed to British rule, love and venerate the king; he personifies to them their nationality and their religion, and they speak of him with the greatest respect. They would rise in a body were the English defeated, although they have been happier and more prosperous under this Government than under that of their native chiefs. The principal reason why the Burmese are *not* converted is, because they believe that by becoming Christians they would lose their nationality, and they will retain this prejudice until the kingdom of Ava ceases to exist. They are not so attached to Buddhism as some would make us believe, because if pushed at the point of an argument they are the first to laugh, and have no other excuse than the vulgar saying: "This is the Burmese custom."

ASIA.

THE Russian Embassy at Constantinople have advised the Odessa authorities that women acquired for Yakoob Khan's harem will shortly arrive at Odessa on their way to Kashgar. At Constantinople their attendants purchased jewelry to the amount of 30,000 roubles. Yakoob Khan's envoy at Constantinople will shortly set out for a trip in Europe.

THE *Moscow Gazette*, in another leader on the Central Asia question, rejoices at the frankness which has made English statesmen and papers avow at last their utter inability to stay Russian progress by petty bickerings and intrigues. This manly avowal, we are told, is the best guarantee that, if the Russian and English frontiers should ever meet in Asia, this consummation will lead to no hostile feelings.

COLONEL IVANOFF, the Governor of Russian Khiva, proposes to connect the Sir Darya and Amu Darya rivers by means of the Yani Darya river. The Yani Darya is a branch of the Sir Darya, which, leaving the main stream at about 44 degrees northern latitude and 63 longitude, proceeds in a westerly direction, and is swallowed up by the sands of the South Aral desert at 43 latitude and 60 longitude, at a distaunce of about 40 miles from the most easterly branch of the Amu Darya delta. The proposed Yani Darya canal is to be made navigable for steamers, and also to serve as a means of creating arable land to be colonized by Russian settlers. The Russian

Invalide complains that the Khan of Khiva displays too little energy against the Turcomans, and does not readily obey the orders sent him by General Von Kaufmann. He is, however, expected to consult General Ivanoff, the Governor of Russian Khiva, before appointing a new Prime Minster in lieu of Mat Nias, who recently died at St. Petersburg.

THE spiritual position of the Sultan as supreme head of all the Faithful is never lost sight of at Constantinople. The *Sadatat*, the nearest approach to a ministerial paper there, has lately been calling attention to the wrongs and dangers of the Mahomedans, said to number thirty millions or more, in the Chinese Empire. Those of Yunnan are especially sympathized with, and the Turkish paper has much to say on the subject of the barbarities practised in that province since the Chinese reconquered it. Reports sent privately, added to those brought by Jacoub Beg's recent mission, have moved the Porte, according to the *Sadatat*, to resolve on intervention. This is not, however, to take any more menacing form than the despatch of a properly accredited envoy to Pekin to request the good offices of the Government there in favour of its Mahomedan subjects. As the Chinese have lately been carrying out the conversion of Yunnan by the practical measure of making all the rebels they have spared eat pork, it is possible they may reply that no Mahommedans are left in the country.

INSTEAD of taking time to recruit her finances and lesson the burden of taxation imposed during the troublous times, China is preparing first for a wild goose expedition to Turkestan, and next against a possible European foe. From every quarter we hear the same note of warlike preparation. The Viceroy of Kwangtung is sending troops to Yunnan, the Governor of Yunnan is levying troops on his own account, and a strong Chinese garrison is posted at Manwein, the frontier town where Margary was killed. Li Hungchang keeps a great army in Chihli, and is always doing something to improve the defences at Taku. One day he procures torpedoes from the Danes; the next he resolves to buy Armstrong guns at the advice of the Inspector-General of Customs; and all this while the resources of the province are utterly exhausted. A little while ago the Special Commissioner, Peng Yu-lin started to inspect the defences of the Yangtsze; and the *Peking Gazette* of the 6th July contains a memorial from the Governor-General of the Two Kiang, reporting the progress of forts and war ships within his viceroyalty.

GREAT as a projector, M. Lesseps, appears, according to recent reports from Turkey, to be most unfortunate as a negotiator. He has been making fresh efforts at Constantinople, through his son, to reverse the judgment of the International Commission on the Suez Canal; but with so little success that at the last accounts he is reported as having abandoned the correspondence in dudgeon. His representations were to the effect that the rate at present paid of 13 francs per ton measurement being only enough for bare current expenses, it should be augmented to 14 francs for a fixed term, for the express purpose of allowing the works at Port Said, and some other necessary improvements, to be paid for out of the addition. He asked that the decision of the commission in favour of an ultimate reduction to 10 francs should be reconsidered, as taking all hope of profit from the shareholders. The answer of the Porte was to the effect that his propositions would be referred to the Government of the Khedive; and on a refusal to give any more definite reply M. Lesseps ordered his son to break off the correspondence—a step hardly wise in itself, and certainly hasty in form, as the Porte could not possibly take definite action without the consent of the other Powers interested.

ON July 5 General Lomakine, on his return from Igda and the Amu Darya bed, arrived at Djamala, on the confines of the Tekke country. There he was met by all the principal chiefs of the Tekke tribes nomadizing north of the Attreck. All promised subjection to Russia. Meanwhile, the Amu Darya Bed Expedition proceeded further north to Tcharishli, 150 versts north-east of Igda. According to the news received from the expedition, there is nothing to prevent the construction of the contemplated canal in those parts. Five hundred more Persian slaves were set at liberty by the Khivese and sent home through the Tekke districts. A short time ago it appears Lieutenaut-Colonel Sosnovski, Captain Matusovski, Dr. Pyasoltzki, and four Siberian Cossacks, at the command of the Russian Ministry of Foreign Affairs, set out from Hankow, in Southern China, with orders to make their way through Yunnan and Sihuan to South-western Siberia. The object of the expedition is partly to ascertain the real state of things in the mutinous provinces of the Celestial Empire and partly to find a direct caravan road from South-western China to the Russian territory. For this purpose, Colonel Sosnovski was to cross the entire province of Hansu, and, threading his way through the Gobi wilderness, make for Kami, Barkul, Gutchen, Balun, Tokhai, and the Saissan post, or else proceed from Kamiato Kumdja. It is understood that the Russian Ministry intend placing private railway companies under the direct control of Government directors.

THE murder of Mr. Margary is regarded in China, we are told, as an act of bravery worthy of reward; and our delay in exacting redress will be regarded an acknowledgment of Chinese prowess. No punishment has been given the rioters who lately attacked the *British Consulate* at Chinkeang, nor is it likely that they will receive any. A very similar incident occurred at Chinkeang last January, and for a few hours seemed likely to lead to even more serious consequences. As the particulars were not published at the time, we may state them. Two foreigners were walking quietly along the back street of the Concession, about mid-day, when three Chinese soldiers rode by at a furious rate, and one of them in passing struck at the foreigners with a heavy whip. On arriving at the end of the street the soldiers turned back, and the foreigners managed to capture their ponies and take them to the British Consulate. A mafoo turned up to claim the ponies, and said that they belonged to the force of the Chentai or Brigadier-General stationed in Chinkeang. A message was sent to the Taotai to send for the ponies and mafoo, and to find out the delinquents and have them reprimanded for furious riding in the Concession. It so happend that one of the delinquents was the Chentai's nephew, and the first intimation he received of the affair was getting back the ponies with the request from the Taotai. Instead of sending for his nephew and his two companions, and impressing on them the inadvisability of their conduct, the General got into a rage, and ordered his men, over a thousand in number, to arm, announcing his intention of pulling down first the Consulate, and then the houses of the foreigners who had presumed to capture the ponies. In the afternoon the settlement began to get unusually full of Chinese loafers, who had heard from the soldiers of the affair, and of the intention of the troops to begin the attack at dark. One or two of the residents had stones thrown at them, and this circumstance led to a discovery of the plot. Fortunately the Taotai had likewise received information, and sent his officers to preserve order in the Concession, as far as possible, while he himself went to the irate General. When he arrived there, he found the men all turned out, and two brass guns with shells and fusees all ready. The second trumpet had sounded, and the third was to be the signal to march. The Chinese say that the Taotai had to perform the kotow to the General to get him to alter his intention; for had the men once started, neither he or the Brigadier himself would have been able to restrain them.

A RUSSIAN military officer of high rank who had once travelled in British India, and possessed a great deal of respect for the British Indian system of government, is said to have asserted that his countrymen in Turkestan had two great advantages over Englishmen in India. "In the first place," he observed, "our men have a much greater affinity for our new subjects than yours; in the next, we don't stand any nonsense." No doubt both these are points of difference from the British government of India, and in a certain degree points of superiority. The British soldier in India is an exotic and most expensive article. He lives apart from the natives; his food is that which they most abhor; and he never learns a word of their languages. But the Russian army is recruited over spaces so vast that a certain proportion of the men must be taken from countries bordering on the new conquests, and a still greater number from classes very little different in habits and measure of refinement from the Tartars of the Central Asiatic Khanates. If anything, the Russian soldier is possibly a little dirtier than the population among whom he is quartered; but then he fights under European command and discipline, and is a fanatical devotee of his Church and his Emperor. The other alleged advantage—that the Russians in Turkestan "stand no nonsense"—is a curious commentary on the opinion given by Mr. Bright the other evening, that what is wanting in India is more courtesy to the natives—a want which the Prince of Wales is to supply. Nobody knows whether the Russian officers and privates call the Tartars of Khokand "niggers," or treat them to occasional kicks; but we may be sure that there is one kind of "nonsense", which the Russians will never tolerate as long as they have a dozen bayonets at their back. If the humbled Emir of Bokhara attempts to poison the Russian Resident, he will not have a public trial on the spot at the expense of the revenues of Bokhara, nor will an eminent lawyer from St. Petersburg or Moscow be permitted to cross-examine Russian public servants, or to make a speech exposing the misdeeds of the Russian Government and the wrongs of its subject Khans. It will also be a long time before the native public of Khokand or Khiva will have a vernacular press of its own, and the satisfaction of reading such frank criticism of its infidel masters as we have more then once extracted from native Indian newspapers and reprinted in these pages. The determination to stand no nonsense may, no doubt, be the pretext for a great deal of unnecessary tyranny; but it may also be a protection against a great deal of feeble-minded folly. The Russians still keep English constitutional maxims and English judicial immunities out of their western provinces almost as jealously as English iron and cottons, though no doubt of late the tariff has been somewhat less prohibitory; but their Central Asian territory is still absolutely sealed to all "nonsense" of the kind. The method of government and the mode of criticising it which are allowed in Turkestan are as purely Russian as the fabrics permitted to be sold in the bazaars.

LITERARY.

WE understand that Sir Richard Garth, Kt., Chief Justice, has been elected an Honorary Member of the Burra Bazaar Family Literary Club.

MR. ROGERS, a Bombay civilian, writes suggesting the following appropriate addition to the National Anthem in honour of the Prince of Wales's visit:—

Till in Thy Providence
Thou call'st Victoria hence,
Far be the day,
Lord! hear the nation's prayer,
Long deign their lives to spare,
God bless old England's heir,
God save the Queen.

WITH regard to the use of the word Saiyid as a distinctive title of sovereignty, Dr. Badger, in a letter to the *Pall Mall Gazette*, maintains that it is quite correctly applied to the ruler of Zanzibar. The word, he says, "is derived from the root *sanda*, 'to be or to become chief or lord, to be possessed of glory or honour;' and its primary signification is 'a chief, lord, prince, or king.' Secondarily, it means 'a master, owner, or proprietor;' then 'one nobly born,' &c. In the present day however it is often applied, like the word 'Sharif,' to any descendant of the prophet Mahomed." It is moreover "perfectly correct, notwithstanding the contrary assertion of 'Hujjee,' that the title of 'Saiyid' is, with the Arabs

superior to that of 'Sultan.' Many of the petty Arab chiefs of Arabia, and even some in Africa, assume the latter title, which, according to the generality of Oriental writers, was not directly applied to any Eastern Prince till A.H. 338 (A.D. 1002), when Mahmud-al-Ghazny dignified Khali-bin-Ahmad, the Governor of Sajistan, with it, subsequently to which the Abbaside Khalifahs at Baghdad adopted it to designate their provincial satraps or governors. The title 'Sayyid of Zanzibar,' whatever 'Hujjee' may say, means the Lord or Sovereign of Zanzibar, whereas that of 'Sultan of Zanzibar,' which has been adopted mainly to suit European ideas, signifies nothing more than Governor of Zanzibar." When these learned doctors differ thus greatly, we cannot venture to decide between them. The dictionaries at any rate seem to go with Dr. Badger. Forbes for one gives as the first meaning of *Saiyid*, "a lord," "a prince."

ECCLESIASTICAL.

LIEUTENANT CONDER'S party was recently attacked near Acre. Lieutenant Conder was badly, but not dangerously, wounded. The official accounts represent that the assailants were lead by a relative of the late Abd-el-Kader. The French Consul at Jerusalem is investigating the affair. No further details have yet been received.

A HANDSOME building has been erected in Ambrolie, Bombay, for the accommodation of the Native Girls' School connected with the Free Church Mission. The late Mrs. Wilson left a sum of money to be applied by the Rev. Dr. Wilson to some evangelistic object to be chosen by him, and he has applied it in this way. The principal room upstairs contains inscriptions in Marathee and English, contributed by Native Christians and other friends, in token of their admiration of the noble, disinterested, and exemplary Christian charater of the late Mrs. Wilson and their gratitude for the benefits received from her instructions. On Tuesday last the school was formally opened; many European and native friends of Dr. Wilson were present, and a number of addresses were made. It was a very interesting occasion.

A SAD event occurred on Sunday, the 4th July, in one of the London Mission chapels in Shanghai. Service had been held there in the forenoon as usual, and there was no sign of disturbance whatever. As Messrs. Muirhead and Barrett were proceeding in the afternoon to a chapel in another part of the city, they were informed that the door-keeper of the former place had been killed. They went at once and found an immense crowd inside and outside the building, and in a state of great excitement. On getting into the chapel they saw two bodies lying on the floor, one quite dead, and the other weltering in blood, with a knife at a little distance from him. The former was recognized to be the door-keeper, who had received in the hand, stomach, side, and heart several most deadly cuts, which must have caused immediate death.

IN some recent numbers of the *Rock* is a very singular account of the removal of a Miss Cosserat, a Protestant young lady, a lunatic, from the Romish Convent at Bandora (near Bombay) to a similar institution in Germany. A Miss Weppner received the young lady from the lady superior at Bandora, and conducted her, with no little peril to herself, to Europe. The father of the young lady is represented to be an opium merchant at Patna. Miss Weppner's account is not very favourable to the inmates of nunneries, but what it all means we are unable to say. The extracts from her book furnish new proof of the necessity of a Government inspection of conventual institutions. The very opposition made to this serves to show the need of it. Christians are the children of light. "He that doeth truth cometh to the light that his deeds may be made manifest that they are wrought in God."

THE following interesting items regarding medical work in Kashmeer are furnished by Dr. Maxwell, the missionary there: "The hospital recently built by the Maharajah for the Church Missionary Society's Medical Mission in Kashmeer was opened last May. Patients attend in such numbers that the Medical Missionary has had to limit the out-patients seen to one hundred three days a week. The other days are reserved for operations and cases requiring lengthened examination. Fifty-nine patients have been taken into the wards, and 57 surgical operations performed. Many of these were for cancer, and not a few for cataract and other eye diseases. Religious addresses are given before the out-patients are seen, and the catechist works amongst them while they are waiting their respective turns, showing large Scripture pictures and explaining them. One woman and her infant have lately been baptized by the Rev. W. Jukes, of Peshawar, who is spending a short time in Kashmeer."

MILITARY ORDERS.

BROCK, Lieutenant M. W., to be Captain.
BROWN, Surgeon-Major T. E. B., two months' sick leave.
CAMPBELL, Sub-Lieutenant W. A., to be Lieutenant.
COAKER, Lieutenant W. H., to be Captain.
DARWIN, Sub-Lieutenant C. W., to be Lieutenant.
DUJARDIN, Captain B. S., to be Major.
DAVIDSON, Captain J., to officiate as Assistant Adjutant-General.
FITZGERALD, Lieutenant T. O., admitted to the Bengal Staff Corps.
GASTRELL, Lieutenant G. D. C., admitted to the Bengal Staff Corps.
HAYES, Captain M. H., to Europe for two years.
HENNEL, Lieutenant W. F., to officiate as 2nd Squadron Subaltern.
KEEFER, Surgeon W. N., to Europe for two years.
KELLY, J., 1st Class Assistant Apothecary, to Europe for one year.
MILLER, Captain J. J. C., to be Major.
MONTEITH, Sub-Lieutenant A. M., to be Lieutenant.
MUIR, Lieutenant A. M., to officiate as 1st Squadron Subaltern.
NEWBOLT, Captain J. R., to be Major.
PASKE, Lieutenant-Colonel E. H., leave for two years.
ROSS, Captain A. G., to be Assistant Adjutant-General.
WHEATLEY, Lieutenant H. S., admitted to the Bengal Staff Corps.
WHITTALL, Lieutenant-Colonel J. S., to officiate as Adjutant.

CIVIL GAZETTE.

IMPERIAL.

ANGELO. Lieutenant J. W. E., admitted to the Bengal Staff Corps.
BOYD, Surgeon H., to Europe for eighteen months.
COOK, Lieutenant L. A. C., to Europe for two years.
TAYLOR, Mr. R., to be a Director of the Bank of Bengal.

BENGAL.

BANERJEA, Baboo P. M., to be Secretary to the District School Committee of Durbhanga
BEDFORD, Mr. C. A. S., an extension of leave for three months.
BISWAS, Baboo G. S., Deputy Magistrate, Sarun, to be a Municipal Commissioner for Chuprah.
BOSE, Baboo M. C., to act as Sub-Deputy Collector at Khoonla.
BROWN, Mr. H. F., to be a Commissioner for the Port of Calcutta.
DUTTO, Baboo R., Sub-Deputy Collector, Noakholly, leave for two months.
GRANT, Dr. J. G. G., to act as Medical Inspector of Emigrants.
GRAVES, Mr. F., Assistant Superintendent, Jessore, to be Vice-Chairman to the Municipal Commissioner for Jessore.
MOITRA, Baboo C. N., to be Secretary to the Pubna District School Committee.
QUINLAN, Rev. A., to be a member of the District School Committee of Cuttack.
SINGH, Baboo M. P., Officiating Deputy Magistrate, Shahabad, leave for two months.
SMITH, Mr. A., Magistrate and Collector, Jessore, leave for three months.

PUBLIC WORKS DEPARTMENT.

CALDWELL, Mr. J. W., leave for two months.
CAMPBELL, Mr. W. A., Accountant, 2nd Grade, transferred to the Holkar and Neemuch State Railway.
CHATTERJEE, Baboo P. C., to officiate as Accountant, 4th Grade, in the District of Patna.
CHRYSTIE, Major W., transferred to Hyderabad.
COPPIN, Mr. R. F., promoted to the rank of Assistant Engineer.
DOUGLAS, Mr. J., Assistant Examiner, to officiate as Examiner of Guaranted Railway Accounts, Lahore.
DOVETON, Captain H., leave for two months.
FOSTER, Mr. E. W. P., leave for two months.
GANTZER, Mr. C. A., Accountant, 3rd Grade, transferred to Bengal.
HIGGINS, Mr. M. A., Accountant, leave for ninety-two days.
MORRIS, Mr. T. B., Assistant Engineer, transferred to Ladakh.
NEVILLE, Corporal P., posted to British Burmah.
PORTER, Corporal W., posted to Bengal, Irrigation Branch.
ROY, Baboo M. C., to officiate as Executive Engineer of Mozufferpore.
SINGH, Baboo J., leave for two months.
SWETENHAM, Major G., to officiate as Superintending Engineer, 3rd Grade.
WHITFIELD, Mr. J., leave for three months.

MADRAS.

ENGLISH, Rev. G., to be Chaplain of Bangalore.
HAY, Major W., to be Lay Trustee of the Church at Trevandrum.
HANKS, Surgeon W., to act as Civil Surgeon, Cocanada.

GUPTA, Baboo D. N., three months' leave.
QUIN, Mr. R., Extra Assistant Commissioner, transferred to Kumaon.
THOMSON, Dr. M., three month's leave.

PUNJAB.

DAS, Baboo L., to officiate as Assistant Professor of the Lahore Government College.
WRAFTER, Honorary Surgeon, R. E., to be Civil Surgeon of Madhopore.

LATEST TELEGRAPHIC NEWS.

21ST AUGUST.

London, 19th August.

THERE is a semi-panic in the Stock Exchange caused by the insurrection in Bosnia.

Turkish securities are chiefly affected.

London, 20th August.

AN article has appeared in the *Nord*, a semi-official organ of the Russian Government, which states that Germany, Russia, and Austria will not allow the re-opening of the Eastern question, but intimates that Turkey nevertheless must seriously execute reforms.

23RD.

London, 21st August.

RUSSIA, Germany, and Austria have collectively interviewed the Porte and have counselled moderation in dealing with the Herzegovina insurgents. They have also asked the Porte to grant them facilities that they may communicate with the insurgents and recommend submission. The ceremony of unveiling the statue erected to Lord Mayo was performed yesterday at Cockermouth by Lord Napier of Ettrick, who delivered an oration on the occasion, eulogizing Lord Mayo's career.

St. Petersburg, 21st August.

THE Russian auxiliary corps, which is operating with the Khan of Khokand, has been defeated by the insurgents. General Kauffmann is organising an expedition to punish them.

24TH.

London, 23rd August.

THE Ottoman Porte has accepted the proposal made by Russia, Austria, and Germany, that they should send foreign Consuls to advise insurgents in Bosnia and Herzegovina to lay down arms, and submit their case to Server Pacha, who has been appointed Special Imperial Commissioner.

London, 23rd August.

THE *Times* ridicules the idea of England beingbound to uphold the integrity of Turkey, from consideration of the interests of bondholders, and maintains that the secession of Herzegovina and Bosnia is inevitable, and that the best solution of the Turkish difficulty would be the gradual breaking off; of province after province from Constantinople.

25TH.

London, 24th August.

ENGLAND, France, and Italy have joined a proposal made by Russia, Germany, and Austria to send foreign Consuls to Bosnia and Herzegovina to advice the insurgents to lay down arms. The Porte is concentrating a large force near Nissa in consequence of the attitude of Servia. One hundred thousand Servian Militia have been called out.

27TH.

London, 25th August.

CAPTAIN WEBB has performed the unparalleled feat of swimming from Dover to Calais. He accomplished the distance in 22 hours.

London, 25th August.

THE insurgents in Khokand, supported by the Clergy and Elders, have proclaimed Khan Sade Regent. General Kauffmann has agreed to recognise the new Khan on the condition that he accepts the treaty made between Russia and Khadayar, grants pension to the latter, and indemnifies the Russian traders for their losses.

Obituary.—Sir Edward Ryan.

London, 26th August.

LATEST advices from Turkey state that Essad Pacha has resigned the Grand Vizierate of Turkey. A conflict between Turkey and Servia is strongly apprehended. Garibaldi has requested his son Minotti to open a subscription in aid of the wounded Herzegovinians. The Duke of Connaught will visit Gibraltar next October.

London, 26th August.

THE *Times* to-day states that the Khedive has contracted a fresh private loan of 2500,000 sterling.

CALCUTTA: PUBLISHED AT 3, CHOWRINGHEE ROAD.

ADMINISTRATOR-GENERAL'S OFFICE.

THE undermentioned Estates having come under charge of this Office, all persons having claims upon, being indebted to, or holding property belonging to the said Estates, are requested to place themselves in immediate communication with the undersigned :—

George Henry ATKINSON, of the Bengal Civil Service and Assistant Collector of Kenderpara in the District of Cuttack, died at Cuttack on the 27th March 1875.

Thomas NORRIS, a Permanent-way Inspector in the service of the East Indian Railway Company, at Ghaziabad, near Delhi, died at Allahabad on the 20th April 1873.

John James ECKFORD, of Landour, in the North-West Provinces of India, but late of Brentwood in the County of Essex in England, died in Scotland on the 7th March 18 2.

John Alexander PITT, of Mount Pleasant Farm, Hornchurch, in the County of Essex in England, died in England on the 26th October 1874.

Deborah Ann BLANCHARD, of No. 13, Cambridge Terrace, Broke Road, Dalston, in the County of Middlesex in England, died in England on the 9th December 1861.

William O'FARREL, Secretary of the Himalaya Club, Mussoorie, died on the 6th October 1874.

Thomas MORAN, of Intally, in the Suburbs of Calcutta, died in Calcutta, on the 21st May 1875.

Mary Anne BROWN, of Anees Barber's Lane in the Town of Calcutta widow of the late Thomas Brown, Controller, Public Works Accounts, died at Calcutta on the 2nd July 1875.

Sophia Thomasin AYTON, of Garden Reach in the Suburbs of Calcutta, Widow, died at Garden Reach on the 23rd April 1875.

Henry JAMES, an Engraver, employed in the Surveyor-General's Office, Calcutta, died in Calcutta on the 24th July 1875.

William CRAMER, a Fireman in the service of the East Indian Railway, died at Burdwan on the 9th April 1875.

William THOMPSON, of the Bengal Pilot Service, died at Calcutta on the 31st May 1875.

George Frederick SNELLING, of Shibtollah Lane, in the Town of Calcutta, a Shed Officer in the Jetties of the Calcutta Port Commissioners, died at Calcutta on the 7th August 1875.

HIGH COURT,
Calcutta, 28th August 1875.

F. S. COLLIS,
Offg. Administrator-General.

Northern Bengal State Railway.

Petty Contractors wanted for Brick-moulding.

NATIVES, with command of labour, wishing to undertake the Mould ing, Stacking, &c., from 10 to 50 lakhs of bricks, are invited to submit Tenders to the Office of the Engineer-in-Chief, Darjeeling, before 30th September 1875.

Most of the work will be at a point about 120 miles north of Kooshtea.

Each Tender is to mention distinctly the price for Tempering, Table-moulding, placing on Hacks, Skintling, and loading Kilns, and must contain Rs. 200 as earnest money, which will be returned if the Tender is not accepted.

Ample security for the execution of each contract will be required in proportion to the amount of work tendered for.

Tenders to be registered and marked "Tender for Brick moulding."

JAS. G. LINDSAY, Major, R.E.,
Engineer-in-Chief.

Northern Bengal State Railway.

NOTICE.

SEALED Tenders are invited for the supply of the under-mentioned Scantlings and Planking rough from the saw; all to be of the best seasoned Teak, free from flaw or failure of any description:—

SCANTLINGS.

N. A. CHICK,
Secretary.

The 26th August 1875.

BONUS YEAR 1875.

INCORPORATED BY ROYAL CHARTER AND SPECIAL ACTS OF PARLIAMENT.

NORTH BRITISH & MERCANTILE INSURANCE CO.

ESTABLISHED 1809.

President—HIS GRACE THE DUKE OF ROXBURGHE, K.T.

Vice-Presidents.

HIS GRACE THE DUKE OF SUTHERLAND, K.G. | HIS GRACE THE DUKE OF ABERCORN, K.G.

Chairman of the General Court of Directors.

THE RIGHT HONORABLE LORD LAWRENCE, G.C.B., G.C.S.I.

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

CAMPBELL'S PLANTATION

HAVANA CIGARS.

"No. 7," a large Havanah pattern Cigar, about 60 to the pound.

"No. 6," a smaller Havanah pattern Cigar, about 85 to the pound.

Can be purchased only at Messrs. Campbell & Co's Depots at

CALCUTTA, ALLAHABAD, LAHORE, POONAH, BOMBAY.

"No. 7," Rs. 30 per 1,000, inclusive of all charges. | "No. 6," Rs. 23 per 1,000, inclusive of all charges.

Application should be made to the Clerk in charge of any of the above Depôts.

If 2,000 Cigars are taken, a Discount of 10 per cent. is allowed.

If 10,000 are taken, Discount of 20 per cent. | If 30,000 are taken, Discount of 25 per cent.

Terms—Cash prepaid.

MESSRS. CAMPBELL & Co. have sent a stock of their Havanah patterns Home, and are prepared to deliver them free of all charges to any Railway Station of the United Kingdom at the following rates, duty paid:—

"No. 7" Rs. 80 per 1,000. | "No. 6" Rs. 60 per 1,000.

Prices in Bond in London.

"No. 7" Rs. 35 per 1,000. | "No. 6" Rs. 25 per 1,000.

"No. 7" costs therefore about 7 Cigars to the shilling anywhere in the United Kingdom.

"No. 6" nine to the shilling.

Orders for large quantities, or orders for supplies to England, should be addressed direct to

MESSRS. CAMPBELL & CO.,
PLANTATION WORKS,
Dindigul, Madras Presidency.

MAIN SERVICE FILTERS.

Fig. 10, No. 30.

Rs. 125, *Rs.* 165, *Rs.* 250, *Rs.* 375 *each.*

The Main Service Filters can be attached to a Cistern or the Main Supply Service Pipes, and are capable of giving with a 10-feet pressure from 30 gallons upwards per hour.

BIRD'S PATENT HYDROSTATIC WATER PURIFIERS.

Rs. 22 *each.*

The above being cased with Britannia-metal ware, with flexible metal tube, and when packed only occupying a space about 12 by 6, are very convenient for travelling; and as they will filter a large quantity of water during the day, are worthy the notice of Commanding Officers for Troops when marching.

SOLE MANUFACTURERS OF

DR. F. N. MACNAMARA'S PATENT WATER FILTERS.

Rs. 38 *each.*

The above Filters are now very extensively used for purifying water for H. M.'s Regiments; they act rapidly, delivering upwards of 20 gallons per hour. For Schools or Public Institutions, where large quantities of pure water are required, we strongly recommend them as simple, thoroughly efficient, and very reasonable in price.

Ten per cent. Discount off the above prices for Cash.

HIBBERT'S

HEALTH-GIVING SALINE,

AS SUPPLIED through the WAR OFFICE for the USE of the TROOPS employed in the EXPEDITION to ASHANTEE, on the WEST COAST of AFRICA, and highly recommended by the Medical Profession as a Valuable FEBRIFUGE, and for its REFRIGERANT PROPERTIES.

BEING very agreeable in taste, it is taken readily by the most fastidious. A DRAUGHT of the SALINE exhilarates and invigorates the system in a marked degree.

HIBBERT'S HEALTH-GIVING SALINE is acknowledged by all to be the most approved remedy for DISORDERED DIGESTION so often accompanied by SICK HEAD-ACHE, HEARTBURN, FLATULENCY, INDISPOSITION FOR BUSINESS, and other distressing symptoms.

LIVER COMPLAINTS BILIOUSNESS, &c., so productive of LASSITUDE, MENTAL DEPRESSION, and NERVOUS DISORDERS, are quite under the control of this efficient medicine.

LETTER from EDMUND LEATHES, Esq., Savage Club, London:
"April 23rd, 1874.—Gentlemen,—Having suffered very much from Acidity and a tendency to Congestion of the Liver, a friend strongly advised me to try your Health-giving Saline. I am happy to say that I have derived great benefit from taking it. I shall always consider it a valuable household remedy, and will lose no opportunity of recommending the Saline to my friends and others, as a remedy in similar cases.—Yours truly, ED. LEATHES."

Captain GRAHAM, of Fowey, Cornwall, suffered greatly from Irritation of the Liver, which prevented sleep, and racked him with pain. After taking one bottle the pain was nearly removed, and he was able to sleep well at night, and, on taking a second bottle, expressed it as his opinion that it would complete the cure so well begun.

HIBBERT'S HEALTH-GIVING SALINE, as a Therapeutic Agent, *and* as a Cooling and Refreshing Drink in SCARLET, TYPHUS, and GASTRIC FEVERS, is unsurpassed—*frequent* experience has proved this.

Testimonials from Medical Men.

W. E. GREEN, ESQ., N.R.C.S., and L.S.A., Lond; speaks very favourably of the Saline as an efficient, aperient, as active as Friedrichshall Water, and decidedly more agreeable to the palate, and generally recommended for this purpose.

R. W. THOMAS, Esq., M.R.C.S., and L.S.A., London, remarks that he has found the Saline of considerable efficacy in febrile attacks as an efficient aperient and refrigerant, and very useful in attacks of bilious vomiting.

ALBERT B. REES, Esq., M.R.C.S., and L.S.A., writes—"I have taken your Saline personally, and have given it to members of my family and to patients. I am thoroughly satisfied with its effects, and can strongly recommend it as a safe family medicine. I have found it of special efficacy in the diseases of childhood and during the period of teething."

BY restoring lost Saline matter to the BLOOD it invigorates and enriches that fluid, enabling it to throw out all impure and effete matter, and thus perform the functions of an EFFICIENT BLOOD PURIFIER.

HIBBERT'S HEALTH-GIVING SALINE, for the above reasons, removes BLOTCHES and ERUPTIONS on the SKIN, whether arising from disorder, digestion or from some taint in the constitution.

A daughter of Mr. GEORGE WEBB, of Glyn-Neath, aged fifteen years, was troubled with a Scrofulous Eruption on her Limbs, accompanied with such weakness that she was unable to walk, and had to be lifted in and out of bed. After a course of the Saline, less than three weeks in duration, her father reported her as quite cured.

DIARRHŒA, ENGLISH CHOLERA, and DYSENTERY, so prevalent during the summer and autumn months, will be warded off by a judicious use of the Saline or will be quickly cut short by its prompt administration.

"Bedford, Nov. 20th, 1873.—Having tried your Health-giving Saline I am satisfied that it is a very valuable preparation in cases of fever, rheumatism, &c.; it is, in fact, a remedy that should be found in every household. since by its salutary influences (if taken at the first indications of fever, diarrhœa, and other complaints) many a tedious illness may be averted, I shall do my best to recommend it wherever I go. In the meantime wishing you every success, &c., &c., I am, gentlemen, yonrs truly, W. H. PHILLIPS, B.A., Oxon.

HIBBERT'S HEALTH-GIVING SALINE is invaluable to RESIDENTS and TRAVELLERS in INDIA, CHINA, AFRICA, &c., since it is peculiarly adapted for the cure of those Complaints prevalent in Hot Climates, such as Fevers, Dysentery, &c., &c.

Extract from a letter received from Captain R. ROBERTS of the ship "Sidney A. Jenkins."—Dundee, May 28th, 1874—I have just received the case containing the 10s. 6d. bottles of Saline. Since taking the bottle I purchased of you before last voyage, I have enjoyed better health than I have previously had for five years. It is the best thing of the kind I have yet met with. I shall strongly recommend it to my brother captains."

SOLD in Botties, 2s. 6d. each; Double Size, 4s. 6d.; in Bottles containing Five of the 2s. 6d. size at 10s. 6d.

INSIST ON HAVING HIBBERT'S SALINE

AGENTS FOR CALCUTTA,

BATHGATE & Co.

THE "Indian" is a Life Office only, and its Funds are therefore free from the Risks attaching to Fire and Marine business.

INDIAN LIFE ASSURANCE COMPANY, LIMITED.

COMBINING LIFE ASSURANCE AND PENSIONS.

Funds *entirely* in GOVERNMENT SECURITIES AND REMAIN IN INDIA. Policy-holders can appoint an Auditor.

Established 1869

ON NEW, SOUND AND POPULAR PRINCIPLES.

(Preliminary expenses including Establishment of 44 Agencies Rs. 2,066 only instead of Rs. 50,000 and upwards!)

REGISTERED UNDER ACT X. OF 1866.

Capital Rs. 500,000 Fully Subscribed.

Paid-up Rs. 100,000 only (to leave a large surplus to Policy-holders) as advised by the Actuary, J. Hill Williams, Esq., Vice-President, Institute of Actuaries, London.

HEAD OFFICE : MEERUT.

BRANCH OFFICE: BOMBAY.

Advantages of Assuring with this Company.

(1) ECONOMICAL MANAGEMENT. (2)* ENTIRE DIRECTION IN INDIA (3) NO AMALGAMATION. (4) FUNDS in Government Securities only. (5) REDUCTION OF PREMIUMS. (6) POLICY-HOLDERS entitled to appoint an Auditor. (7) REDUCTION TO ENGLISH RATES from date of leaving an port in India, Ceylon or China. The first Company which granted this complete concession. (8) NO RESTRICTION ON TRAVEL. (9) INDIAN RATES of Premium charged while in India. English Rates on leaving for Europe. Assurers who do not contemplate spending a *life time* in India or other tropical climates, will find that the rates of this Company compare *favourably* with *enhanced English Rates*. They have the advantage of *consistency*, as it is *proved beyond doubt* (by the various Civil and Military Funds) that English Life is of less value in India than in Europe. (10) ASSURANCES EFFECTED on lives of EUROPEANS, EURASIANS, PARSEES, AND HINDOOS. (11) CLAIMS PAID three months after satisfactory proof of death. (12) POLICIES for the whole term of life. Short terms of years certain, or payable during life time. ENDOWMENT ASSURANCES combine the advantages of Personal and Family Provisions. They are made payable to the assured themselves on attaining a specified age, or to the representatives at death should that happen sooner. A PROMISSORY NOTE GRANTED for every PREMIUM PAID. (13) HALF CREDIT SYSTEM. (14) NON-FORFEITABLE POLICIES BY LIMITED NUMBER OF PAYMENTS. Should payment of premium not be continued, a paid-up Policy in the form of a Negotiable Promissory Note payable to bearer is given for every Premium paid, which Promissory Note cannot *lapse, and* is payable on the death of the assured or may be converted into cash during his *lifetime* to the extent of 30 *or* 40 per cent. of the premium after 1st or 2nd years paid, *without* forfeiting the balance of the sum assured. Thus, the assured receives full value for his money for although he can only withdraw 30 or 40 per cent. of the amount of his premiums paid, he receives value for the remainder by being assured. In this way he has full control of his money, the Premiums paid becoming to him equal to a current banking account withdrawable at will. (15) LIBERAL SURRENDER VALUES. (16) SUMS PAID under Promissory Notes exempt from all charges. (17) PREMIUMS are payable monthly, quarterly, half-yearly, yearly, in five, ten, fifteen or twenty payments, or on the half credit system. (18) LAPSED POLICIES may be revived at any time on production of approved Medical Certificates and payment of arrears of Premium, with interest. (19) LOANS ON POLICIES. (20) EXCHANGE OF POLICIES by the substitution of Lives. (21) PENSION BRANCH. *The Rates are more favourable than those of any similar Fund in India.*

THE TWO GRAND INDUCEMENTS TO POLICY-HOLDERS MUST ALWAYS BE

Unquestionable Security; and as large Profits as the System of Life Assurance admits.

Forms of Proposal, Tables of Rates, and any further information may be obtained on application to the Company's Agents, or to

D. LANCASTER, *F. I. A.*,
Secretary.

Head Office, Meerut, 1875.

* Extract from Mr. P. M. Tait's Paper on "Anglo-Indian Vital Statistics," read before the East India Association, London, on 28th January, 1874:

"One formidable objection to English proprietary Companies doing business in India is, that the local Directors and representatives of these Companies in India are simply Agents without any substantial power, and removeable at pleasure by the chief authorities in this country."—(England) *Insurance Record, February*, 1874.

GROVE PARK SCHOOL, WREXHAM.

PRINCIPAL.—J. PRYCE JONES, L. C. PREC.

ATTENTION is *respectfully invited to the following facts*:—1. The locality of the School is remarkably healthy. 2. The premises are extensive, and fitted up with due regard to the comfort of the Pupils. 3. Every facility for recreation is afforded by the large playground and cricket-field which adjoin the house. 4. There is a sufficient staff of well qualified Masters, including a Classical Master, B.A., in Classical honours, Cambridge, and a resident Frenchman. 5. At the Examinations of the College of Preceptors and the Oxford and Cambridge Universities, Pupils from the School have taken Honours in several distinct branches of Education, *e.g.*, Latin, French Mathematics, Book-keeping, and English. 6. At five examinations by the College of Preceptors, Certificates were Awarded to one-third of all the pupils in the School. 7. At five out of seven examinations by the College the highest place in Book-keeping was given to candidates from the School. 8. The Principal earnestly endeavours to form in his Pupils a manly Christian character. 9. The Diet is liberal.

TERMS which are moderate and inclusive with lists of successful pupils on application.

THE LONDON ASSURANCE CORPORATION

FOR FIRE, LIFE, AND MARINE ASSURANCES,
INCORPORATED BY ROYAL CHARTER, A.D. 1720.

HEAD OFFICE.
No. 7, ROYAL EXCHANGE, LONDON, E.C.

GOVERNOR,
JAMES BLYTH, ESQ.
SUB-GOVERNOR, EDWIN GOWER, ESQ.
DEPUTY-GOVERNOR, DAVID POWELL, ESQ.
JOHN P. LAURENCE, ESQ., Secretary.
JOHN ANTHONY RUCKER, ESQ., Underwriter.
ARTHUR H. BAILEY, ESQ., Actuary.
THOS. B. BATEMAN, ESQ., Manager of the Fire Department.

LIFE DEPARTMENT.

This Corporation has granted Assurances on Lives for a period of nearly One Hundred and Fifty Years, having issued its first Policy on the 7th June 1721.

Two-thirds of the entire profits, without any Deduction for expenses of management, are alloted to the Assured.

The profits are declared at the end of every five years, and the share of the Policy-holders may be appropriated either in increase of the Sum Assured, or as an immediate Cash payment.

Assurances may also be effected without participation in profits, at reduced Rates of Premium.

The premiums have been computed from the most recent information on the subject of European mortality in India, and they will be reduced to the corresponding English rates on the return to Europe of the persons whose lives are Assured.

Premiums may be made payable either yearly or half-yearly.

Policies on lives of Military Officers in civil employ issued at the Civilian Rates. Risks on Male Parsee and Eurasian lives, under 40, accepted at European Rates. Medical Fees and Stamps are paid by the Corporation.

DECLARATION OF BONUS.

"THE FAMILY FRIENDS"

Is the name bestowed by the discerning and grateful Public on

DR. E. J. LAZARUS'S

DOMESTIC MEDICINES.

Parents, Guardians and persons residing in out districts, where medical aid was not available, or when circumstances prevented their calling in a physician, have used them for a number of years, and very many thousands of cases have been cured by their judicious use. They consist of

Infantile Fever Powder.

Of the greatest value for CHILDREN suffering from *Fever* in consequence either of *Cold, Derangement of the Bowels* or *Teething*, as also in various *Eruptions of the Skin, Thrust, Diarrhœa, Opthalmia*, &c, Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Tonic Antiperiodic Pills.

Invaluable in *Ague, Intermittent Fevers of all kinds, Ague and Spleen;* and all those diseases that partake of a *Periodic character*. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Spleen Pills.

Has cured thousands of cases of Enlarged Spleen—See full directions in Pamphlet. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Family Aperient Pills.

Mild, prompt, safe and uniform in their action. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Family Antibilious Pills.

More especially suited for acute diseases, such as *Continued Fever, Headaches from exposure, Bilious attacks*, &c. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Restringent Mixture.

A pleasant, safe, certain and effectual remedy for *Diarrhœa or Looseness of the Bowels*, certain form of *Dysentery, Incipient Cholera, Cholic, Griping Pains, Flatulency, Cramps in the Stomach*, &c. Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Cholera Drops.

Full directions given in the Pamphlet. Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Family Laxative.

A safe, certain and useful purgative ; *may be taken alike by young or old*. Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Family Carminative.

Of the utmost value in attacks of *Cholic, Griping Pains, Wind in the Stomach, Diarrhœa*, and other disorders to which young children are subject. Rs. 2 per bottle.

☞ *Does not contain opium in any shape.* ☜

DR. E. J. LAZARUS'S

Balsamic Expectorant Drops.

Of the greatest benefit in *Coughs, Colds, Hooping Cough, Chronic Pleurisy, Hoarseness, Asthma, Pain in the Chest, Difficulty of Breathing, Bronchitis, &c.* Rs. 1-8 per bottle.

DR. E. J. LAZARUS'S

Family Hair Tonic.

Stands unrivalled for the production of ELEGANT (LUXURIANT) GLOSSY and BEAUTIFUL HAIR. Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Family Embrocation.

For *Sprains, Sore Throat, Stiffneck, Quinsey, Pain* or *Stiffness of the Joints, Chronic Rheumatism*, &c. &c. &c. Rs. 1-8 a bottle.

A Printed Pamphlet giving full instructions will be found wrapped round each bottle.

Prepared only by MESSRS. E. J. LAZARUS & Co. at the MEDICAL HALL, BENARES, from the original receipt of EDWARD JOHN LAZARUS, M.D., and sold by all-Medicine Vendor

THE ROYAL VISIT TO INDIA.

C. LAZARUS & CO.

Beg to announce that they have been appointed

Sole and Special Agents

Special Programmes and Estimates.

Early orders are solicited, so as to allow ample time for perfect arrangements to be made.

Samples of Devices and Illumination Lamps may be seen, and prices ascertained, on application to

C. LAZARUS & CO.,
CALCUTTA.

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourishing frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ¼ lb. and 1 lb. tins, labelled thus:—

JAMES EPPS & CO.,

HOMŒOPATHIC CHEMISTS,

48, THREADNEEDLE STREET, & 170, PICCADILLY.

Works—EUSTON ROAD, AND CAMDEN TOWN.

(Makers of Epps's Milky Cocoa and Cocoa Condensed Milk.)

MDCCCXLVIII.

PRESENTED BY THE KING OF THE NETHERLANDS

DR. DE JONGH'S

KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM

LIGHT-BROWN COD LIVER OIL

GOLD MEDAL OF MERIT

PRESENTED BY THE KING OF THE BELGIANS

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion or DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

AGENTS AT MADRAS CALCUTTA.

ASSURANCE COMPANIES.

STANDARD LIFE OFFICE.

THE DEATH CLAIMS paid by the STANDARD COMPANY, during the past nine years, have been upwards of £1,200 per business day.

THE FUNDS during the same period, after payment of Claims and Expenses of every kind, have increased from £2,600,000 in 1865 to £4,800,000 in 1874.

NEW ASSURANCES, to the amount of £1,000,000 Sterling, have been placed upon the Company's Books in each of the years since 1865—some of them years of doubt and anxiety in the Assurance World. This result, it is believed, has been maintained by no other Office in the United Kingdom, during the same period.

BONUS YEAR 1875.

The next division of Profits will take place at 15th November *1875.*

ANNUAL REPORT 1875.

Copies of the Annual Report, containing the Balance Sheet, &c., may be obtained on application.

GEO. LUCAS KEMP,
Secretary, Calcutta Branch.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit."—Extrac from the Speech of the Chairman of the Annual Meeting 7th August,* 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY,
CALCUTTA.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1834.

Head Office, 1, King William Street, London.

Insurances effected with or without participation in Profits.

Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, ESQ., East Indian Railway Co.
WILLIAM THOMAS BERNERS, ESQ., of Messrs. Ashburner & Co.
GEORGE MILLER, ESQ., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, ESQ., Barrister-at-Law.
JOHN MATHESON LYALL, ESQ., of Messrs. Lyall, Rennie & Co.

Assurers under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest, that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed,* whilst the Assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past twelve years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of 50 *per cent. of their yearly Premium,* the sum allotted for Bonuses this year being £37,050.

NEW PLAN

BY THE

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATE, hwith 80 per cent Invested Solely for Policy Holders.

Example.

A, aged 30, wishes to Assure Rs. 1,000.		*With Profits.*
Annual Premium at Indian Rate ...	Rs.	*36 0 0*
Annual Premium at English Rates ...	„	*23 10 8*
Difference ...	Rs.	12 5 4

The "ORIENTAL" charges (*A*) the English Premium of Rs. 23-10-8 *only*. The Extra Premium for India, Rs. 12-5-4, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with *Compound* Interest at 3 per cent is equal to the sum assured, *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses, and Forms of Proposal can be obtained from any of the Agents, or from

PROSPECTUS.

The Bengal Freemasons' Hall Building Association.

Capital—Rs. 1,50,000, *divided into* 1,500 *Debentures of Rs.* 100 *each, bearing interest at the rate of* 6 *per cent. per annum, payable half-yearly.*

1.—This Association has been formed for the purpose of building and maintaining a Masonic Hall worthy of the Freemasons of Bengal and of the Capital of India.

2.—*President*:—The Right Worshipful the District Grand Master of Bengal, or the Officer in charge for the time being.

3.—*Directors.*—To be four in number, exclusive of the President, and to be elected by the Debenture-holders from such members of the Committee of General Purposes of the District Grand Lodge as are likewise Debenture-holders. Should the number of Debenture-holders on the Committee of General Purposes, able and willing to serve as Directors, be at any time fewer than four, elections may be made from such members of the general body of Grand Officers and Past Grand Officers of the District Grand Lodge of Bengal as shall be Debenture-holders. With the Directors will rest the appointment of a Secretary and framing of Bye-laws.

4.—It is proposed to raise the funds necessary for the purchase of a proper site, and for the erection of the Hall, by the issue of as many Debentures, of the value of Rs. 100 each, as may be necessary. It is thought that 1,200 will be ample. One thousand Debentures will be issued immediately the formation of the Association is completed upon the following terms:—First payment upon each Debenture to accompany application, Rs. 25; second call, Rs. 25; third call, Rs. 25; fourth and last call, Rs. 25. Not less than three months to elapse between any two calls, and two months' notice to be given previous to second and each subsequent call.

5.—It is estimated that the cost of the building will not exceed Rs. 1,10,000, thus leaving Rs. 10,000 towards expenditure for decorations and furniture.

6.—After careful computaton, it is found that an income of Rs. 700 per mensem may be safely counted upon as derivable from rents received from Lodges, Chapters, and other sources. The interest upon the 1,200 Debentures, which it is thought it will be sufficient to issue, will amount to Rs. 600 per mensem ; that a surplus would accrue of about Rs. 100 per month, or Rs. 1,200 per annum, from which will be formed a Reserved Fund for the purchase of Debentures to be the property of District Grand Lodge in trust for the Craft, under the Grand Lodge of England, in the Province of Bengal.

7.—The Debentures to be transferable at the pleasure of the holder, but District Grand Lodge will reserve to itself the right of paying off so many of the Debentures annually as it may be able to do from its funds.

The Secretary to the Committee of General Purposes of the District Grand Lodge is prepared to record preliminary notices of application for Debentures.

Address—

The Secretary to the Committee of General Purposes of the District Grand Lodge of Bengal,

Freemasons' Hall, 55 *Bentinck Street, Calcutta.*

No. 2112.] Calcutta: Saturday, September 4, 1875. [Vol. XLI.

REVENUE REPORT N.-W. PROVINCES
1873—1874.

THESE are said to be the days of short reports and brief reviews, but in the report on the revenue administration for the year 1873-74 now before us, we are unable to discover the brevity which should be the soul of its wisdom. On the contrary, we are confronted with the same confusing statements and long bewildering appendices as in former years, while the four heavy chapters with endless sub-divisions, of which the body of the report consists, read as wearily as former productions of the same kind. It would be unreasonable perhaps to look for flowers of eloquence or brilliancy of diction, in a work the very name of which is suggestive of the extremest aridity. If however the report is little less prolix than ever, the review is sufficiently curt and bold, to please the most exacting admirer of condensed writing. The one hundred and eighty-six sub-divisions of the Board's Report, are reviewed in less than a third that number of paragraphs.

The first division of the Report deals with harvests and prices. We are told that cotton and indigo suffered from the ill-timed distribution of the rainfall, but that the harvests were considerably above the average. The wheat-crop is said to have come up to the farmer's ideal; the harvest was abundant, while prices were high. "So far, therefore, "from 1873-74 being generally a year of distress in these provinces," as some persons of atrabiliar temperament have imagined, "it was, for agriculturists at least, a year of exceptional good fortune." We notice however, the absence of any attempt to explain this phenomenon of an abundant harvest conjoined with high prices. Is it of so simple a character as to be supposed not to need elucidation? Along with this roseate aspect of things generally, we have to remember that the year in question has been generally spoken of as one of distress. We were under the impression that a Scarcity Department had existed during part at least of 1873-74 in the North-West Provinces, as well as in Lower Bengal; but the only reference we find to that department is contained in a single short sentence in the third paragraph. The Board's Report also gives a very cursory account of the "scarcity"—the Secretariat euphemism for "famine"—but this is partly explained by the fact that a separate "narrative volume" on the subject had previously been published. We wonder Sir John did not acknowledge the sentence at the close of the Board's review of "harvests," in which "they congratulate Government on the success of the "summary measures which proved amply sufficient to "ward off the calamitous consequences of a dearth of food." Considering, however, that the members of the Board were the chief agents through which the alleged successful summary measures were carried out, this looks not unlike a little judicious self-adulation, and may account for the entire silence with which Sir John passes it over. He will not be charmed into giving the desired praise, charm they ever so wisely. On the contrary, when the review alludes to the present state of the revenue administration of the Jhansi district, there is a vein of "sarkassum" underlying the suggestion for the Board's consideration, "whether the "experience of the last five years in Jhansi, and of many "years in Bundelkhand, does not point to *the expediency of* "*adapting our system of settlement in the Bundelkhand dis-* "*tricts more closely to the peculiar conditions of that part* "*of the country.*" The shade of the late Mr. Mayne must recognize an additional cause for melancholy in finding the suggestion he made so long ago as 1858 put forth in 1875 as a novel idea. Mr. Mayne wrote thus of our system of settlement in the Bundelkhand districts: "To raise the revenue seems to have been the "main object, and let the means be what they might, so "long as an increase of revenue was obtained, it was re-"ceived as an indication of prosperity, and limitation to the "power and possibility of paying appears never to have "been contemplated." District officers who have had any experience of the comparative difficulty experienced in realizing the revenue in Bundelkhand and in districts in the Doab and higher up-country, will appreciate the force of these remarks. The system of settlement is one and the same in both cases, while the peculiar conditions of agricultural life in Bundelkhand render it far from being well adapted to its districts. To cite one peculiarity—the prevalence of *kans* grass, a weed that appears periodically to thwart the best efforts of the agriculturist: this alone is sufficient to show that a revenue demand fixed upon the outturn of any one year, or set of years must, almost of necessity be faulty. When we come to examine more at length the system of settlement in vogue in the North-West Provinces, we shall have an opportunity of indicating what to us seems the only solution of the difficulty referred to by Sir John Strachey. The receipts from all sources give a net increase of nearly four and a quarter lakhs, of which one lakh is due to Land Revenue, and more than two lakhs to Stamps, while Canal Receipts show an increase of three lakhs fifteen thousand and odd rupees—this increase being partly balanced by a decrease in other items, such as "Surplus Process Fees," &c.

The Report shows that 7,135 acres of land were during the year taken up under the Land Acquisition Act of 1870. The average rate of compensation paid for railway lands has, it appears, been lowered to about Rs 50-8, as against Rs. 164-7-3, the rate given in the former year's report. A new set of rules are promised and appear necessary, if, as the review tells us, "*compensation has been frequently calculated on no reasonable basis.*" The difference in the average rate paid for railway lands in the two years would seem to bear out this allegation, although it must not be forgotten that any generalization from averages is likely to be deceptive, as in one year lands in the heart of large cities, such as in Agra for the Rajputana State Railway, may have been taken up, and in the other year, with which comparison is made, no such lands may have been acquired. *The case of the single acre of land at Mussoorie*, required for a combined post and telegraph office, is referred to as needing explanation. The acre of land in question cost Government Rs. 22,000!

Chapter III. of the Report is occupied with the new Rent Law and its administration during the year. The most

important innovation in the law made by Act XVIII. of 1873 is the transfer of a large class of cases from the jurisdiction of the District Judges and other Civil Courts, to Commissioners and the Board of Revenue. From this report however it would seem as if no appeals had had time to reach either of these authorities, or at any rate had not been decided by them before the end of the year under report. The new Act indeed had only been nine months in force on the 30th September 1874. The result of appeals to the Judge in seven districts is said to have been "bad"—that is, we presume, it is meant for the credit of the officer who passed the original decree. The Board appear very vexed about this, and are indignant that the names of the officers whose decisions were reversed have not been submitted to them in order, we suppose, to read them a severe lecture, like so many schoolboys who had failed to pass an examination. But are the district Judges infallible? From our reading of theHigh Court Law Reports we opine not. In the large majority of cases, the decree of the Court of first instance has been upheld, if we remember rightly, against the district Judge's order of reversal or modification. An interesting statement is given to show in a simple form the amount of litigation in each district, by the percentage of number of cases to total revenue. This percentage varies from ·5 in Moradabad and Etah to ·05 in Basti.

Chapter IV. deals, first, with "coercive processes" for the realization of the revenue. Here, as before remarked, the chief difficulties of Collectors arose in the Bundelkand districts. "The people are poor and indolent and *inclined "to contumacy.*" One officer is mentioned with approbation for having "tempered severe measures with some discretion, *by releasing some wretched landlords who could not pay and whom it was useless to imprison!*" Then follows a section on perhaps the most difficult problem in Indian administration, *viz.*, how to avert transfers and sales of land. Sir John Strachey frankly admits, what few indeed who know anything of the matter from personal observation could well deny, that "experience has amply proved that in the present state of law nothing effective can be done to prevent transfers if the "creditor insists on sale." Like the regulations against usury, the prohibitive measures resorted to increase the difficulty the landholder has in raising loans at a fair rate of interest, by diminishing the value of the land *as a security* to the creditor. The settlement section is chiefly concerned with the reproduction of maps: "settlement maps have been accepted, settlement maps will be accepted," and so on. In conclusion, the Board gibbet the Commissioner of Agra for his omission to furnish any report for his division, and hand up for public commendation a considerable number of their favorite officers without stating however on what grounds the selection was made. Pity the great "unpicked" who have to struggle through another year without the customary meed of praise! As to the Report and its review, we may conclude by saying that we commenced its perusal without enthusiasm, and have finished it without regret.

SIR RICHARD TEMPLE: AND THE SCHOOL BOOK-MAKERS.

IT is exceedingly probable that most of our readers have been in blissful ignorance of the storm of indignation that has been raging during the two last months in the Native Press in ignorance as complete as dwellers in deep sea soundings are said to be, of cyclones gyrating far over head. Probably the first intimation to them of the existence of the storm, was Sir Richard Temple's miniature minute in a recent *Gazette*. Yet such a storm has been raging, and the minute is the modicum of oil with which Sir Richard Temple seems to hope to smooth the troubled waters. We fear the hope will prove visionary. The immediate cause of all the commotion, is the authoritative selection of certain text books for certain Government Scholarship examinations, which selection is denounced by the leading native papers as unfair to the books rejected in particular, and damaging to the cause of original Bengalee literature in general. And this denunciation they justify on grounds to which we will presently advert. Now this denunciation is no mere mealy-mouthed expostulation, made with that very luke warm ardour of Bengali patriotism with which native papers think it right to denounce anything, however harmless, that tends to the direct advantage of the foreigner: it is made with all the vehemence of real feeling, and includes in one great bracket of indignation Lieutenant-Governor, Director of Public Instruction, and all and each who have had anything to do with the obnoxious selection. Jobbery, jobbery, all is jobbery. And they are surprised, they say, that officers so astute should have made such mistakes, or, in other words, should have allowed themselves to be found out.

But it is time that we traced roughly the cause of this tea-cup storm for our readers' information. The story is an amusing one, and, as we gather it from our native contemporaries, suggestive of the well-worn moral of "King Log and his batrachian subjects"—out of the frying pan into the fire. We must begin at the egg, and so explain the wrath of Achilles. Once upon a time, not many years ago, there lived certain happy Bengali authors, whose books had been selected by the authorities as text books for certain examinations. Such a selection, our readers are aware, is no mere *imprimatur*. It means the sale of as many copies as there are small Bengali boys who hope for scholarships: and their name is Legion. But there are as good fish in the sea as ever came out of it; and the less fortunate, many among Bengali authors, began to murmur against this usurpation of the few. Was it not time that they should give others a chance, since those others were as good or better? And was it not injurious to the interests of literature, that one set of books should monopolise the sweets of Government patronage for so long a time? So they petitioned and memorialised; and the School Book Revision Committee was directed to summon before them all books, both those "in possession" and those that would be if they could, and report thereon. So far all was *couleur-de-rose*. The old tyranny was swept away, and now every one had a chance of being a sharer in the new one. Well, the committee sat more or less, being presided over by one European officer of the Educational Service, and having for its secretary another, and for its padding a number of native gentlemen of more or less literary fame. This committee deliberated and reported: and the practical result, the justification of their existence, took the form of a number of books written by European officers of the Educational Service, among them the president and secretary of the committee, and the translation of those books into Bengali. And, now we come to the point. These books have been selected as the text books for the scholarship and other school examinations of next year. So all the rejected authors are howling together, crying out that if the former monopoly was a grievance, the new one is ~~ten times more a grievance: that then at least~~ they were Bengali books that excluded their own from patronage, whereas now the production of school books threatens to become a monopoly in the hands of the European officers of the Educational Service. And in their anger, they accuse Sir Richard Temple of want of wisdom, and the Educational

Service of indecent greed. These complaints are backed up by native editors in the interests of Bengali literature. This then is the discontent which the Lieutenant-Governor's minute seeks to appease. But if we are to accept as accurate the history of the quarrel as sketched above, from the fuller account given in the native papers, we fear that an opening is given in the minute for further outcry. Sir Richard Temple speaks of some of these new books as "standard works already in use." Were they so: and if they were so, is not this the very cause of the commotion? It is to be remarked moreover, that the School Book Revision Committee is not once alluded to in the minute. But as far as we can understand the quarrel, it is against the committee, or at all events against the European section of it, that wrath is especially directed. There seems to be some misunderstanding of the real points at issue and we wait with some curiosity to see whether the complainants will accept Sir R. Temple's view of the quarrel, and his challenge to them to produce as good books as those selected by him. We think however it would have been better if the minute had not been written. If Sir R. Temple had chosen carefully and deliberately the books which seemed to him the best, what need was there to attend to the outcry of disappointed authors, or to write minutes in reply to editors jealous for the honour of Bengali literature? A committee was asked for by Bengali authors, and was granted; and the Government, though not bound to go by the report, is stultifying its own action, when it re-opens the question, supposed to have been answered by its committee, as often as a discontented author or editor clamours. The Committee's choice should either be rejected or approved, or, if modified, authoritatively modified.

THE FALL IN SILVER.

WHILE a part of the Press take it for granted that the fall in the value of silver, which has affected our foreign exchanges so heavily, must have similarly depreciated the purchasing power of the rupee in India itself, the *Englishman* can hardly understand how such a question has arisen at all. As regards commodities, it says, "produced and consumed "at home, it is obvious that their value in relation to silver, "or, in other words, the purchasing power of silver as regards "them, has no connection whatever with the value of silver "in relation to gold, but is a purely self-contained problem, "depending on the ratio between the total of commodities "brought to market, and the total of silver brought to market "to pay for them." Our contemporary is favourably distinguished by the ability with which economic subjects are generally discussed in its columns, but Homer is nodding in the present instance. The currency is the most troublesome question in the whole range of economic enquiries, and the closest attention often fails to prevent our falling into confusion concerning it. The value of the rupee for foreign exchange depends upon two elements—(1) The intrinsic value of the metal, and (2) The urgency or otherwise of the demand for remittances. The first of these elements has hitherto been almost constant and the rate of exchange has been ruled for many years together, simply by fluctuations in the demand for remittances to India. When that demand has been urgent and heavy remittances have had to be made to India from whatever cause, the exchange value of the rupee has risen; and when that *demand has been slack, has fallen. But the great* controlling element has now come to be a change in the intrinsic value of the metal itself. The urgency or slackness of the demand for remittances, is still of course in full operation upon the rupee, but is dwarfed into insignificance by the heavy fall that has taken place in its intrinsic value as metal. No urgency of demand for remitances will ever bring the exchange value of the rupee back to what it was before, because as silver is procurable in abundance in Europe at 55 pence per ounce, remittances can always be made at that price, *plus* the cost of transit and the seignorage charge at the Mint. Unless the intrinsic value of silver itself therefore rises, we can never see the exchange value of the rupee what it was before.

The question then is, what effect this change in the value of silver is exercising upon our home, or internal exchanges; in other words,—are prices of commodities in India itself effected thereby. That they will be so eventually is certain: but whether they have appreciably been affected by the change as yet, is not so certain. As there are two elements in the exchange value of the rupee with foreign lands, *viz.* the intrinsic value of the metal and the demand for remittances, so are there two causes that determine the value of the rupee in our home bazaars—

(1) The intrinsic value of the coin, and

(2) The abundance or otherwise of money in the country.

Now it is this second element that has been the chief regulator of prices in India hitherto; while the abundance or otherwise of money in the country has ever depended, and must ever depend, upon the value of the exports of the country. For India produces neither gold nor silver, and can procure them only by sending produce to foreign lands to buy them. It was because of this that we suggested three weeks ago that careful enquiry is necessary as to the extent to which the export demand for our produce affected the price of produce grown for home consumption. This enquiry *must* be made, if any good is to be done by discussing the question. To what extent does the price of jute, for instance, or seeds, or rice in the Calcutta export market, affect the price of maize or rice, sold in the bazaars for home consumption? Unless we are familiar with such enquiries, we speedily become astonished to find how far reaching and intricate they are.

A correspondent writes to us:—"A good deal has been lately said and written, and said and written well, on a topic which comes home to every man—the fall in the value of silver and its consequences, the rise of prices in India, and the loss on remittances abroad. Much of what we have seen and read is very useful, and likely to advance the cause of reform. The officers of the army, in particular, have a keen sense of their grievance in the matter of the exchange. They see that when on half pay at home, they draw 10 per cent. less than they used to do, and they believe that this is unjust. Having entered the service on the understanding that they would receive a certain income, which though moderate would be safe, they are surprised and by no means pleased, to find that when they are in England this income is greatly reduced. And this seems to them to be clearly unfair, because, by a one-sided arrangement, private soldiers on half pay draw at the old standard value of the rupee, Government keeping its hands from the gain it would make by paying them in the depreciated coinage This looks as if the Secretary of State was willing to take an unfair advantage in the matter of the salaries of the officers, but shrunk from so doing where the soldiers were concerned. It has always been held to be unsafe to tamper with the pay of the legions. This and other parts of the question have been very well put, and must have forced themselves on the attention of the Government. But through the whole controversy there appears to run a thread of error. Those who speak with most knowledge of details, are quite wrong as to the principle. They attribute their losses to a cause which cannot injure them, and they do not see the weapon with which they are really struck. This ignorance makes them very much understate their own case and it weakens the effect of what they say. It is

> The little rift within the lute
> That maketh all the music mute.

Until it is cleared away we see no chance of such a union among those interested as will secure to them redress.

"It is generally supposed that the rate of exchange with England is unfavourable, and that this result is produced by an unsound condition in the balance of trade. By the balance of trade is here meant the equality which should, in most states, exist between the exports and the imports of a country. When a country sends to the foreigner more than it receives from him in return, the balance of trade is, in this sense, against it. Now, India has always exported more than she im-

ports. And for this reason, that she has in the first place to send enough goods to pay for all that she buys, and then to despatch, in addition, enough to meet the heavy claims made on her by foreigners—for the interest of money lent to Government or invested in different kinds of industry, for the rent of lands owned by Englishmen, and for the pay or the pensions of various persons residing in England. The sum payable every year on this account, is about twenty millions sterling, and to that extent the exports of India must always exceed its imports. The fallacy to which we refer is the belief that this permanent depression in the balance of trade, is the cause of the permanent depression of the exchange.

"An error of this sort is often best corrected by considering how it arose, and particularly what amount of truth is mixed up with it. If we put aside the non-commercial remittances mentioned above, it will be seen that the rate of exchange does in fact depend on the balance of trade. If we buy more goods abroad than we send out from this country, we contract debts: these must be paid, and consequently money must be sent from the country. The cost of despatching this specie, freight, interest, and insurance must, for reasons too well known to require specification, be borne by those who want to receive money abroad in exchange for money in India. If while silver is being despatched from Calcutta to London, we wish to pay cash in this city and to receive its equivalant at the Bank of England, it is clear that we must repay the exchange bank with which we do business, the cost of the additional remittance which our action will render necessary. It is the same with money as with any other article. It must always be dearer in the importing, cheaper in the exporting, country, or it would not be moved. If we wanted to get Indian cotton in Manchester in exchange for the same fibre in Bombay, we would have to take a less quantity to make up for the cost of freight and the rest.

"The point of what we have said is this, that the balance of trade affects the rate of exchange only when it causes money to be sent from one country to another. Where it is itself governed by political causes, and does not render these remittances necessary, it is irrelevant. Exchange depends on the movements of the precious metals only, and can be effected through them and in no other way. It will be understood that in this we do not put forward opinions of our own, but simply state scientific truths, as to which there is no controversy among the students of political economy. It will be seen that the rate of exchange is in favour of India. Silver is exported from England to this country at the rate of two millions a year. The metal must therefore be of more value here than at home. It follows that for a thousand rupees delivered in Calcutta, we should get something more than their intrinsic worth in London. And the facts correspond with this theory. Silver really bears a higher price in this city than in any European country. It may be imported at a small profit, over and above all expenses, and could be exported only at great loss.

"Why then, it may be asked, do we not get a pound in London for our ten rupees here? We may reply, in the Scotch way, why should we? There is no cause whatever which renders it natural that a sovereign should always exchange for ten rupees rather than eleven. When compared with each other, the value of foreign coins depends on the amount and nature of the metal of which they are made. The sovereign will buy just as many rupees as the third and a fraction of an ounce of gold which it contains will buy of the silver of which the rupees are made. The weight of both coins remaining the same their comparative value is regulated by that of silver and gold. Now within the last twelve years the value of silver has fallen more than ten per cent. In 1844 it cost two shillings and a half-penny to make a rupee: it now costs a fraction more than one shilling and nine pence. This simple fact fully explains the whole matter. The rupee now exchanges for less, because it is worth less. We cannot now-a-days get two shillings' worth of anything for one and nine pence. The consequence is that we obtain less gold for our money in England, less meat and bread for it here. The loss on exchange and the rise in prices are both effects of the same cause—the fall in the value of silver.

"From this consideration it follows that officers and others understate their case, when they ask only for compensation for their loss on exchange when on half pay, or when they make family remittances. Their real grievance is that they are paid in a debased coinage, which, whether they spend it here or elsewhere, is of less value than formerly. It is as if the American Government had paid its troops during the war in green-backs, which in name were worth so many dollars; in fact, not half as much. All Government and other servants whose salaries were fixed before the fall in the value of silver, have now an equitable claim of ten per cent for indemnification. And the same is true of every landholder, of every man who has invested in the funds, and generally of all creditors.

"The best way to remedy this general grievance would be to restore the coinage to its original value. Why does the shilling in England continue to be worth as much as ever in spite of the fall in silver? Because it is by law exchangeable for a certain quantity of gold. If it were of no intrinsic worth, it would continue of the same value, just as bank notes do. Let us have in India, as in England, a gold coinage the sole standard. Let this be the English sovereign, which by law should be declared equal to ten rupees, as it is at home to ten florins. The old state of things would then be at once restored. That this would cost Government a round sum at first, as it has done in Germany, is certain; but it is better that a reasonable expense should be incurred at once than that the State should go on robbing its creditors of their just dues, and its soldiers and other servants of their pay, seeing its revenue shrink, its cash balances decline in value, and paying every year more than one million sterling as loss on exchange."

We are not able to endorse the writer's conclusions. The change in the value of silver has as yet exercised little influence we are persuaded upon prices in the Indian bazaars; while what influence it *may* have so excited will have been beneficial only, as cheapening money. We recommend the writer to read Mr. Horner Mills' lectures on *Currency and Banking*, in which the precise question is investigated (pp. 52-53.)

SIKKIM,

Our next Visit.

IT is believed that the Lieut.-Governor of Bengal intends to pay a State visit to the Rajah of Sikkim during the early part of October. Such a courtesy would appear to be due after Sir Richard's raid into the Chief's territory in June, which must have proved most tantalizing to that avatar of the divinity. It would be too much to expect that the chief of all the Boodhs, the head of a religion which places earthly and heavenly happiness in repose, should understand the spirit of unrest and enquiry which urges our Governor on his wanderings through his own and all neighbouring provinces. A Lama can never believe that a foreign ruler came unannounced into his country, merely for the pleasure of toiling up its precipices and sketching its mountains. But if we cannot explain, we can at least atone. A ceremonious meeting, kind words, and a few Tibet ponies laden with presents, will soothe the ruffled feelings of the Rajah, and leave him charmed with his allies and their representative.

There are reasons why we should wish to draw more tightly the bonds which connect us with Sikkim. The very existence of that odd little kingdom is due to our protection. It has no regular army, and the Lepcha inhabitants though mountaineers, are unwarlike, and incapable of self-defence. Sikkim has no power to resist encroachments from either of the two neighbours who threaten her—Nepal and Bhootan. In 1817 the Nepalese did actually seize the country, and the religious ruler, who is in character more like a priest than a king, fled to Tibet. It was by us that he was restored, and it is by us that he is upheld. Jung Bahadoor could any day march to his Capital. He offered to do so with a handful of men in 1849, when Hooker and Campbell were detained, but we wisely

refused such help in a quarrel which we were quite able to settle ourselves. Our treaties give us the right to control the country, and impose on us the duty of protecting it. For this latter purpose, the first thing necessary is that we should have a road through it practicable for troops. Its rivers are so danger ous, its mountains so steep, that Sir Charles Napier actually deterred Lord Dalhousie from rescuing the captives of 1849, by affirming that any expedition in that region would fail. Experience has since shown that this is not true, and confirmed the old idea that soldiers can go anywhere. Still it is a fact, that a road is very much needed, and would give to us the complete control of the country. And it so happens that by the treaty of 1861, we have the *right* to make such a road, the Rajah giving the required labour. The cost should be under a lakh of rupees; and it is time that we should act on the old Roman principle of providing the best highways for our troops.

The kingdom of Sikkim cannot be looked upon otherwise than as a part of Tibet. Politically, it is subject to us; but morally and socially it depends on its northern neighbour. The Rajah and his wives are generally Tibetans. The monasteries, which appear to be the great power in the State, are ruled from Lassa. Pushing Tibetans everywhere supplant, and often oppress, the easy-tempered Lepchas. The Mandarins at Lassa recently ventured to send to the Rajah an imperious and threatening despatch, blaming him for having cleared the paths on the tour of Mr. Edgar, our Deputy Commissioner at Darjeeling, and forbidding him to encourage the visit of that officer more than he could help. It is highly probable that they may try to prevent him receiving even Sir Richard Temple. Now, the isolation of Tibet has always been most vexatious to the Government of India. In 1797, Turner succeeded in reaching Lassa on a mission, but since then no European has crossed the frontier. There is a guard at every pass which turns back the envoy, the sportsman, the naturalist, and the trader. It is most unpleasant to have to deal with a neighbour who shuts his door in your face when you go to pay a friendly visit. And this is not merely a sentimental feeling. There is a good deal of trade between the uplands of Tibet, rich in flocks and herds, and the plains of India.

Through Lassa lies a route to Western China, probably a rude one, but which we should like to try. The interests of commerce seem to require that we should have a free passage through these passes, as have the Tibetan traders through ours. It is also our duty to do all we can, to see that a country so strange and so near is explored in the interests of science. It is not so much that we hope to find rich mines in those great mountain ranges, as that we should act on the principle which has given rise to the Polar Expedition—the desire to advance the interests of natural history and geography. Now, though we may deny the right of any government to exclude its subjects from the benefit of all intercourse with foreigners, yet we cannot make such an interdict a *casus belli*. We cannot force our way, sword in hand, through the snows of these guarded passes. It is evidently our policy to draw our sullen neighbour from his seclusion by peaceful means. A road from the best point on the new Darjeeling Railway, through Sikkim, to the gates of Tibet, would render it easy for us to prosecute such a design. When nations are brought into such close contact mutual interests are created. Difficulties arise requiring an embassy; the passage of the Ambassador cannot be denied, because the road is so handy for the conveyance of an expedition; and for the same reason his demands must be complied with. Had we the road, we might leave it to time and diplomacy to effect all we want in the direction of Tibet. It is well known that the Bengal Government has long desired to do the work, and that the difficulty is to persuade the Government of India to grant the funds. We hope that Sir Richard Temple may have been authorised to see to all arrangements necessary for commencing operations, and that this may be the true explanation of his intended visit.

GAME LAWS: A PROTEST.

By a N.-W. Shikaree.

IT is not unseldom the case in India that we legislate in haste, simply to find out that the evils which the laws was intended to remedy have not been reached, and that the law has certainly not produced the greatest good to the greatest number. There have been several articles of late in the Indian Press, advocating a law for restricting the destruction of game. However easily such a law might be drafted, it would be found to involve many difficulties necessitating amendments, alterations, and provisions, the details of which would at length become intolerable, and produce such real distress amongst the people that from dread of the Executive power they would shrink from the sight of a gun at any risk to their crops. It may not be out of place therefore to sift the question a little. If there must be a law, it must be general when put in action against the people. The subordinate police, the village peshkar, and the numerous subordinates of a large district, will be the men who must keep the law in force, and woe to the hungry wretch who kills a doe or a pig out of season, not to sell but to eat, after long abstinence it may be, and longing for the use of flesh described by Chaillu as the *guambe* of Africa. When caught transgressing, he will perhaps have to walk a distance of 25 miles to the cutcherry, and be absent from home for a week before he can manage to pay the fine. A caution such as this to his neighbours will make the sight of a gun a terror, and wild elephant and pig will be looked upon as a remediless calamity. Even the present system of granting licenses at the discretion of the authorities, is exposed to evils. An adverse zemindar has been known under false representations to prevent his neighbour getting more than one license, or perhaps any at all, when in reality a license for keeping three arms would hardly be sufficient to protect his villages, covering an area of several miles, on the borders of heavy timber jungle, whence thousands of wild pig, deer, &c., emerge at night, and lodge in the *khurreef* crops in the months of August and September, remaining there till break of day. It is a well known fact (we don't know if it is so to every sportsman, but certainly to those who have had any experience in the cultivation of land) that wild pig, wild buffalo, and elephant are the chief enemies to cultivation, while the pig is a most difficult animal to turn up and shoot, both during the rubbee and khurreef crops. And these are hard times. The population is increasing, and it is with difficulty, and at night only, that the *shikaree* can kill a pig or deer during the five months after July, when the jungle is so high that sportsmen declare it is not only dangerous to go into the jungle before November, but that for good sport you should go in March and April. Small game do not generally begin to breed till July, and it is seldom that you see a partridge or pheasant for sale even in March. And will no one admit that he has shot does in young during the four winter months, and that he has seen tiny fawns in April? We ask, who are the real slayers of game—the *shikaree*, or the party with a line of, elephants passing through the finest crops of the season for the mere luxury of sport? There is no doubt that if a game law is passed, or a close season enforced, the people will look upon it as an invidious and heavy grievance. The village *shikaree* will leave his village in search of other occupation for half the year, or perhaps abandon the occupation altogether; while those who continue to follow it will set a higher value upon what they can get leaving the husbandman to yearn for the morsel he once enjoyed. It is well known that, since the introduction of the Arms Act, few cultivators understood the use of fire arms. Ill feeling will be sure to arise between the few existing *shikarees* and the village community to which they may have once belonged, while the labour of protecting the crops by hedges will increase their toil. There are few, we presume, who have not seen the immense lines of tall hedges in the environs of a village bordering on a forest. Admitting the apathy of the people, does this indicate that game is decreasing, or that the ravages created thereby are insignificant? It appears to us that any restriction on the use of firearms in a village during the close season, while the villagers are eking out existence, will heavily retard the progress of cultivation in jungly districts, while the people will certainly believe that the restriction is simply to gratify the *sahib logs'* sporting proclivities during the season of their out door work. The game laws of England no doubt contribute to the easy slaughter of game during the shooting season; but it would not be so in India. The heavy cover

and impenetrable forest give such shelter to the game, that it is tame sport there compared with this country.

The thicker the jungle, the greater the protection to large game; the greater the cultivation in the vicinity of jungle, the greater the protection to small game. For under extensive underwood small game is exposed to its greatest enemies—The weasel, the jackal, the fox, the pole cat, the martin, and cats of various kinds, the leopard, the hawk, and last not least snakes are the great destroyers of small game at all times and seasons. If a method could be introduced whereby the village *shikaree* might destroy these ravagers of our still abundant game, no sportsman would question the advantage that would be gained. One of our most enterprising men generally gave a reward for the destruction of all sorts of vermin, &c., in his neighbourhood. On the other hand, is it only owing to the ravages of the tiger and elephant that large tracts of land have been abandoned by the cultivator, as in Assam, Nepal, Arracan, Chittagong, and even the Doon? It is the love of sport with natives, as with Europeans, which induces them to form a settlement in wild localities, and when they have a *shikaree* or two to join them, they feel secure and much happier. Would not the cultivator deem it very hard if he were not allowed to get a meal of flesh during six months of the year? Nay, would he not hold the belief we have already expressed. It is the village *shikaree*, obnoxious as he may be, who protects the flocks and herds of the village, marks down the tiger for the *burra sahib*, kn ows where game is to be found, and who is acquainted with all the recesses of the great fore-t. We know one man who killed a score of tigers within a few years in the N.-W. P. We will not say much about men keeping *shikarees*, for there are very few who regularly employ them, nor have many of them learnt the school boy knack of shooting deer with buck shot and wire cartridges. What great di fference is there whether a deer is wounded with a bullet or buck shot? It generally escapes, and must in either case die a lingering death. And how does a partridge or the beautiful peacock fare wounded with a charge of No. 6 and not bagged? Do not shoot any animal, except for the daily food you require. We shall then see who needs it most. It must be left to the reputation and humanity of a sportsman to regulate his mode of shooting. On the other hand, it is the *shikaree* who cannot afford to shoo t with so much recklessness and ease, who can ill afford to throw away the value of a shot or manage to blow out the intestines of a stag, or shatter the haunch of a sambur, at 500 or at 200 yards with the formidable express rifle now so generally used. There are very few persons who have greater opportunity of grati fying their love of sport with every advantage on their side than the jungle *walas*, while men of other departments who may be taking a run up to the hills during the close season (if that should be in April), and contemplate having a day's *shikar* while at the last dâk bungalow, may as well leave their guns at home till October. Surveyors and others, whose operations keep them out till the end of June in the wilderness teeming with life, may be eager with their party to have a partridge, or even a tough stag, which may be crossing their camp, but dare not shoot, and thus leave all the sport for the few who have the good fortune to do with their time as they please. There is already a difficulty in procuring fish in the N.-W. P. for some reason not very clear; and where the dreaded restriction is introduced in the cheapest possible way, we shall have few wild duck or quail except at greatly enhanced prices. As for ve nison, I have never seen any in any market in the N.-W. P., or any shop where it could be procured during the year.

These ~~are a few remarks reluctantly put together, as the~~ subject is one of general interest, and should be looked at under a new light; indeed, we do ourselves believe that game is not decreasing. Cultivation in the vicinity of jungle assists both the growth and preservation of game, and, if a close season is maintained, I do not believe that there would be any sensible increase, and, if there was, it would be almost impossible to form any rule whereby the increase could be fairly estimated; indeed, the opinion of the cultivator would be the best and most trustworthy data. The only direct effect that any penal law could have would be to destroy that only heritage of *rural liberty* which the *natives have so long* enjoyed, and which they neve r expect will be molested or interfered with by the new Government.

THE UNSEEN UNIVERSE.

AT the present day when, if the late Mr. Buckle's words have any truth in them, "the people of England "have such an admiration of any kind of intellectual splendour "that they will forgive for its sake the most objectionable "doctrines"—when if the writer of a book plainly avows his acceptance of the principles of Christianity, the confession is looked upon as a proclamation of inefficiency to discuss questions of scientific import—the book to which its unknown authors have given the name "The Unseen Universe; or, Physical Speculations on a Future State" possesses an unusual interest. For readers of it will recognise at once that its writers are men of undoubted pre-eminence as mathematicians and physicists—men who are abreast of the foremost scientific workers of the day, and familiar with the most recent speculation of philosophical inquirers. And at the same time, they will find that the object of the book is to show that science itself proclaims a constitution of the unseen universe, similar to that which is shadowed forth in the Christian writings, and that science, therefore, is not antagonistic to the claims of Christianity, but is in reality its most efficient supporter.

The opposition of science to the teachings of the Christian Church is loudly asserted by the opposing voices of defenders of orthodoxy and of investigators in science. Modern science has been called "the gospel of materialism." Christianity has been spoken of as a crumbling superstition, whose ruins block the path of human progress. Still, both in the ranks of the men of science and amongst the teachers of the Christian Church, there are many who will not admit that science and religion are opposed. The underlying unity of science and theology is being more and more boldly taught by our thinking clergy; who at the same time know that, in accord with them, there is growing up a school of devout workers in science—a school of which the writers of "The Unseen Universe," if their names were but announced, would, we believe, be recognised as leading members. The clergy who are not afraid of the development of science, and the scientific men who cherish the assurance that science will in the long run help to strengthen the foundations of Christian theology, are in their respective ways preparing for the coming of the day when it will be acknowledged that theology is the crowning science of all sciences. That such a day is approaching there are various indications. Their supposed opposition, which is more and more clearly seen to spring out of the real opposition of science truly so-called to theology falsely so-called, is itself one indication. The dawning of the thought that in the domain of science and in the realm of theology, a corresponding use has to be made of the faculty of imagination; that what is scientific imagination when directed towards the operations of nature whose mysteries we eagerly strive to unveil becomes, when exalted into the sphere of theology, the Christian principle of faith; or that spiritualised imagination, by virtue of which the things hoped for become substantial realities to the longing soul, the things unseen by the bodily eye become vividly present to the inner eye, the dawning of this thought is another indication. "The Unseen Universe" is precisely the book which one who has been noting the drift of the higher thought of men of science on the one hand, and the widening views of theologians on the other, would expect to appear. It will be welcome alike to the man of science and to the theologian, who will recognise the thoughts they perhaps have as yet only succeeded in seeing before them in dim outline. The ideas which the two writers develope in their book they themselves speak of, not as the result of hasty guessing, but as ideas which have been pressed upon them "by the reflections and discussions of several years." This will commend itself as perfectly true to every reader who finds expressed in a lucid and well matured form the thoughts of which he has been long desirous to obtain a clearer view. The conclusions at which the writers arrive with

regard to the constitution of the unseen world, and which they deduce step by step from the generally received principles of physical science, may be thus briefly expressed.

That the visible universe has by Divine operation been evolved from the invisible universe, into which in process of time it will be dissolved and absorbed.

That within the present material and perishable body there is a spiritual body, and that this is immortal.

That some at least of the mighty operations of nature are probably the work of angels.

That miracles are not inconsistent with any of the established facts of physical science; are not really violations of the divine laws which govern the universe.

To trace, even in the briefest way, the various steps by which the writers lead up to the above conclusions would be impossible, unless the present article were to extend itself to an unwonted length. Yet it may be possible to indicate the main path along which the enquiry is conducted. The great principle of Continuity is adopted to the full. This principle demands that the universe shall be looked upon as one great whole, with a continuous chain of connection running from part to part. The motion and life of the universe are carried on by processes of natural law, which are really the continued expression of the unchanging will of the Creator. There is no such solution of continuity as would be involved in repeated acts of individual creation. Worlds give birth to worlds, and species to species. All organisations are adjusted to their surroundings. The indestructibility of matter, the conservation of energy, and the dissipation of energy are three principles which are closely adhered to. The last, which has emphatic attention called to it, will have its import best understood if its connection with the two preceding principles be pointed out. There is in the universe a certain definite amount of matter which can neither be increased nor diminished, though it is continually undergoing transformation. There is also a certain definite amount of force, which can manifest itself in various ways—as gravitation, electricity, heat, muscular contraction, molecular motion in the brain. Force, like matter, can neither be generated nor destroyed. Nevertheless "a large "portion of force is continually becoming useless for all pur- "poses of work," and in course of time the whole of it will become useless. "Other forms of force are perpetually being changed—by friction, collision, and other means—into heat; and heat is only available for use as long as there is inequality of temperature. It is the passage of heat from one body to another—as, for instance, from fire to water and from water to air—which generates available energy; but as soon as equilibrium is obtained, as soon as one body is as hot as that with which it is in contact, no more heat passes between them, and consequently no more energy can be got out of them. The energy is there, but it is locked up and unavailable." The writers show how "that at each transformation of heat-energy into work a large portion is degraded, while only a small portion is transformed into work. So that while it is very easy to change all our mechanical or useful energy into heat, it is only possible to transform a portion of this heat-energy back into work. After each change, too, the heat becomes more and more dissipated or degraded, and less and less available for any future transformation." And thus "the process of evolution, consisting always of the integration of matter and the dissipation of energy, will at last run all orbs together into one vast mass, out of which all energy will be gone, because all force will have been reduced to heat, and all heat will be in equilibrium." This involves the destruction of life. "It is absolutely certain that life, so far as it is physical, depends essentially upon transformations of energy; it is also absolutely certain that age after age the possibility of such transformations is becoming less and less; and, so far as we *yet know*, the final state of the present universe must be an aggregation (into one mass) of all the matter it contains." The present visible universe, which began in time, will in time come to an end. In such a universe, therefore, immortality is impossible.

The very principle of *continuity* which has led our two writers so far, leads them on still further to the very threshhold of a universe in which immortality may be possible. They find it impossible to conceive of such a thing as "action at a distance"—to conceive of force passing from one point of space to another, sundered from it by any interval without passing through all the consecutive series of par cles along the force's line of action. Newton himself found it impossible to conceive of such distant action. His law of gravitation—to which some point as a prominent instance of discontinuous action—he looked upon as an expression of the mode in which the mutual action of the heavenly bodies depends on their relative position. He himself says in a letter to Bentley that the notion of action at a distance through a vacuum "is to me so great an absurdity, that I believe no man "who has in philosophical matters a competent faculty of think- "ing can ever fall into it." The impossibility of resting content with such a notion has compelled the scientific mind to conconceive of the existence of a medium filling all space, but without weight, without tension, without resistance, invisible and impalpable, by the vibrations of the particles of which gravity, light, heat, electricity, magnetism are transmitted. With this ethereal medium, this all pervading ether, the writers associate the "Unseen Universe." In truth, they say—though with language whose caution manifestly springs from a reverent feeling—that the Ether is the Unseen Universe. To think of it as other than eternal would be a violation of the principles which have guided them in their enquiry. In that ethereal Unseen Universe, they see the abiding place of the immortal souls of men; they see a universe which existed before the present visible one, which exists now independently of it, which will exist through all eternity; they see a Universe from which the energy of the present system is to be looked upon as originally derived, which is all along capable of acting energetically upon the present visible system, and is also capable of receiving energy from it. Here however it will be as well to give the writers' own words:—

"Is it not natural to imagine that a universe of this nature, which we have reason to think exists, and is connected by bonds of energy with the visible universe, is also capable of receiving energy from it? Whether is it more likely that by far the larger portion of the high-class energy of the present universe is travelling outwards into space with an immense velocity, or that it is gradually transferred into an invisible order of things? May we not regard ether or the medium as not merely a bridge between one portion of the visible universe and another, but also as a bridge between one order of things and another, forming as it were a species of cement, in virtue of which the various orders of the universe are welded together and made into one? In fine, what we generally call ether may not be a mere medium but a medium *plus* the invisible order of things, so that when the motions of the visible universe are transferred into ether, part of them are conveyed as by a bridge into the invisible universe, and are there made use of or stored up. Nay, is it even necessary to retain the conception of a bridge? May we not at once say that when energy is carried from matter into ether, it is carried from the visible into the invisible; and that when it is carried from ether to matter, it is carried from the invisible into the visible."

The writers are not unconscious that similar views have been held by Christian theologians, who although they have not felt themselves able to show in language which would be accepted as coming from those who spoke with authority, how glimpses of the unseen world may be obtained by those who reverently mount the heights of scientific enquiry, have yet felt assured from their knowledge of the tendencies of devout scientific thought that such glimpses would be vouchsafed, such theologians have been accustomed to speak of the spiritual world as one not sundered from the visible world by stellar space, but as within and round it, as pervading it. They have been accustomed too to adopt the language of the Apostle Paul, and to say "there is a natural body and there is a *spiritual* body," and to think of the spiritual body as dwelling within the natural body, as conterminous with it, as permeating it. Such a phrase as "the body is saturated with the soul" is often on their lips. This view of the spiritual body is one which finds acceptance with the writers of "The Unseen Universe." The tendency of modern physiology seems to them to be directed towards no other conclusion. They find it too, accordant with the main theory they have endeavoured to lay the foundations

of as to the constitution of the unseen world. The language they use with regard to it is in marvellous agreement with the language used by such theologians as have clearly discerned the doctrine. They see a correspondence between the relations of the natural body and the spiritual body and those of the seen and unseen worlds. Our thoughts are accompanied by certain molecular motions and displacements in the brain, part of which are in some way stored up in that organ, so as to produce what may be termed our material or physical memory ; while other parts are " communicated to the spiritual or invisible body, and are there stored up, forming a memory which may be made use of when that body is free to exercise its functions." In like manner, the unseen universe may be conceived to be a storehouse of the past history of the world. And since every displacement which takes place in the very heart of the earth, will be propagated throughout the universe, it must be conceived of as being registered finally in the invisible ethereal world. " We may even imagine that the same thing will hold true of those molecular motions which accompany thought," and that these will also affect the invisible order of things. So that every provision is made both in man and the universe, to secure a continuous undying memory, and an unerased record of thoughts, deeds, and events, without which it is impossible to conceive of an immortal spirit for man or of a universe to endure throughout eternity.

The main conclusions of this remarkable book are necessarily the only ones to which we can now call attention. The most important feature of the book, in our estimation, is its agreement with the thoughts which have dawned upon the minds of those who believe that all growth in knowledge is continuous and divinely aided ; and that the revelations made to devout men in earlier days, are continued in the divine whisperings to human souls now who are earnestly seeking after truth.

THOUGHTS ON REVELATION.

THE evidences in support of the inspiration of the Bible do not appear sufficient, to satisfy the requirements on this subject of thoughtful and intelligent men. Many of these, after years of sincere and anxious investigation, with all their desires tending to the hope that the Bible is truly God's word in the orthodox sense, remain unconvinced that it is so. Still there are some who have studied this important question, and who come to the full belief that the Bible is really *inspired*. But if they only come to this conviction after years of trial and mental labour, how can it be said that the Scriptures commend themselves to the unlearned or to those fully occupied in daily manual and other work ? If the doubts of the former are only cleared up after years of thoughtful inquiry, how shall the doubts of the unlearned be dispersed ? Must they take the conclusions of those who have inquired and who believe? But there are many who have inquired and who disbelieve. Whom then shall they follow ?—

" O for a firm and lasting faith !
To credit what the Almighty saith."

So was I taught to sing and pray as a child. But who would doubt God? Not I ; not you. It is man we doubt, and well may we. For man has been saying to his fellow-man in all ages, " Lo ! here, and lo ! there," until bewildered we know not whither to turn. O God ! speak to me, even to *me*, as thou didst to my fellowman in the ages long ago.

Should those who witnessed past miracles have been deceived, and none can prove that they were not, what becomes of the doctrines held to be confirmed by those miracles? And if they were really not deceived, who shall convince me of the fact ? Again, the miracles may have sufficed for those who witnessed them, but how can they suffice for me, to whom it is known that the witnesses may have been mistaken in what they thought they saw ; and also that the reports of these apparent prodigies may have been handed down influenced the belief of the ages in which they happened, thus rendering them unsuitable to confirm the faith of men who ask for something more than the testimony of those who believed centuries ago in wonders and signs.

Had miracles been vouchsafed in these modern times to men of education and science, such as Milton, Locke and Newton, their evidence, though still open to question, would nevertheless be worthy of great respect. But, can any man's belief in a miracle he may think he has witnessed be of primary value to any one but himself ? To one man an appearance may seem supernatural ; be accounted a miracle—nay, *may be* a miracle ; but even in the latter case, how can that miracle be a miracle to me ? That which has made it one to *him*, does not make it one to others. He witnesses all that constitutes it a miracle to him, in its contrariety to the laws of nature. Penetrated with awe, he believes it supernatural, while others see nothing of the kind, but are shut up to believing or rejecting his testimony. In the former case, it is not so much a miracle that is believed, as the testimony of another that he has seen a miracle. And then comes the doubt whether the testimony is not false, however upright the character of the witness, confirmed by the support of other truthful men.

What adds to the difficulty of the question is that the working of miracles is not confined to the Maker of all things, but is alleged to have been exercised by men for trivial and insignificant purposes. Thus we have in 2 Kings, VI.c., 6 v., an instance of a reversal of the laws of gravitation that a wood-cutter might recover an axe-head, and in XIII. c., 21v., it is recorded of a deceased person that " they cast the man into the sepulchre of Elisha, and when the man was let down and touched the bones of Elisha, he revived and stood on his feet." The Jewish and Christian histories abound in interesting narratives and sublime teachings, and is it right that my hearty acceptance of these should be liable to dispute, unless I profess my belief in the Scripture miracles ? It is very remarkable that some of those writings which I am invited to believe on miraculous ground reprobate a belief in signs and wonders. Thus Jesus himself in one of the Gospels condemns his hearers, because of their unbelief in his " mighty works ; " while in another he teaches by implication that " Moses and the prophets " are more worthy of belief than the testimony of one who should even arise from the dead.

There are thousands of men and women, kindhearted and charitable, whom theology has hardened like a flint against all who differ in belief from themselves, and who anticipate with exultation the last act of " the world's drama," when " those who have differed from them in what they term the *essentials* of faith, shall be finally separated from themselves, " the righteous," because they, the latter, were able to accept, often without inquiry, what the others were compelled, frequently with anguish, to reject. The soft and tender ties of affection are then to be eternally severed. Those who on earth were all in all to each other, who wiped away each other's tears and bore each other's griefs, shall henceforth be antagonistic, the favoured ones viewing with celestial complacency the irredeemable and extreme agony of the lost loved ones. The wife shall applaud the justice of the Judge in the condemnation of her husband, the husband say " Amen" to the damnation of her who lay in his bosom, the parents shall sing " Hallelujah" at the passing of the sentence against his child, and the child from his heart approve the supreme misery of his parents —of the father who begat him, and the mother who bore him. Such is the teaching of the men who call themselves orthodox.*

It is these who insist that if we have any doubt about what *man* has written concerning God's dealings with the human race, though the record is more or less tinctured with error, we lose all hope of a blessed immortality and forfeit our birthright as sons of the Heavenly Father. We are in a moral wilderness, with a collection of histories, sacred songs, and letters written at different ages by different men, of different countries, in different languages, and transmitted to us by long lines of copyists, and through various translations, and we are told that our only hope is to believe that what we hold in our hands is the unadulterated word of God ! If I can believe *this*, then hope shall spring up as a garden ; and " the wilderness shall bloom and blossom as the rose," and " all shall be well with me." But if I cannot believe this, as though God had spoken to me from heaven " without any human intervention," or if I question whether God will really make my eternal well-being depend upon my accepting as Divine what is *so* human, then, however just my doubts, however impossible to that what is full of error, contradiction, and anthropomorphic representations of the Deity, is altogether of God, I shall be lost beyond redemption !

The testimony of men said to have been inspired, when they relate events involving the earliest history of mankind, which can only be certainly known by direct revelation, or when they narrate the incidents of miracles, is very different to the evidence of men as regards the common events of life, and which we receive without much doubt or investigation. The two cases are far from being parallel. In the first I have no means of ascertaining the truthfulness of the historian, or to test the miracles he relates. What he tells me is out of the range of human knowledge

* Bostons' *Fourfold State.*

His assertions are only the convictions of his own mind, which he is not in a position to *prove* even to himself. His mental condition may be an exalted or morbid one, which he may succeed or not in communicating to others. Thus Paul tells us of a temporary translation from earth to paradise : "I will come "to visions and revelations of the Lord. I knew a man in Christ "above fourteen years ago (whether in the body, I cannot tell ; or "whether out of the body, I cannot tell : God knoweth) such an "one caught up to the third heaven. And I knew such a man "(whether in the body, or out of the body, I cannot tell : God "knoweth) how he was caught up into paradise, and heard unspeak- "able words, which it is not lawful for a man to utter.†" Now, what is my obligation to believe Paul in this recital? I know that it was easy for him to have been deceived, and I could bring many instances of delusion which resemble his statement. The history of enthusiasm abounds with such narratives, and if I am to believe in such manifestations on the testimony of one person, I may as, reasonably credit the statements of others. In weighing the testimony of men concerning the ordinary events of life, the case is different. I am able to judge of the inherent probability of the event related to me. I have my own experience and that of my friends in the mutual relation of things to guide me ; standards and tests to which I can resort; and which in few instances will permit me to be totally deceived. I see that men do make mistakes and err in believing what they should not believe, and in repudiating what they should accept.

But in the former case, what does not mistake in belief involve according to the orthodox? Remediless ruin, not of the body only, but of the soul ; not in time only, but eternity. How merciless this creed, which pursues erring, fallible man, for errors of belief, for ever ! The word of God : oh ! give me this word of God ! It shall be "a token upon my hands, and for frontlets between my eyes." It shall be more precious to me than gold, yea, than fine gold, sweeter than honey and the honeycomb. I will live upon it, and hide it in my heart. Give me this word of God : that I may believe and doubt no more. Alas ! you give me once more the book to understand which to believe which I must read whole libraries. The presses of Germany and England are pouring forth streams of books on the orthodox and heterodox sides of what it is man's highest in terest to know, and which the Bible alone is said to contain.

I am willing to believe : I long to believe. But *what* shall I believe ? I have read, and prayed, and *wept*: but in the Book I see so much that is human, so much that is fallible, that I *cannot* believe. Am *I* then undone ? *Is* there no hope for me? My anxious efforts by day and night only lead me further and further away from orthodoxy. But I trust not from Him ! To Him, then, I turn in my trouble. He who made me knows me best ; man may reject, but God will receive ! Yes : I will dare approach my Father in heaven, and " will say unto Him : " Lord, thou knowest all things ; thou knowest " that I desire above all else the truth. Give me courage to reject " the false traditions of men however venerable. May I grasp and " hold fast that which is worthy of acceptation, though I lose all " else beside." Approaching thus I cannot perish : I throw myself into the all-embracing arms of the Eternal Father ?

E. P. N.

NOTE.—The writer is an old friend of our boyhood, whom we have not seen for nearly 30 years. Concerning him, we know enough to say with Tennyson—

> " Perplexed in faith but pure in deeds,
> At last he beat his music out ;
> There lives more faith in honest doubt
> Believe me than in half the creeds."

THE writer stumbles over difficulties that are felt keenly by every honest and active mind. They are (1) the plainly human character of much that he finds in the Bible, (2) the unsatisfactory character of the evidence on which he is required to believe in the *miracles*; and (3) the doctrine of the Church concerning the destiny of the unbeliever. It may possibly help him, if we state briefly our own mental attitude towards each. It has long been our own conviction then, that all three difficulties have been made by dogmatizers upon the Bible. The Bible is just as truly human as divine; and as we believe in the true and proper humanity of the Saviour, as well as in his true and proper divinity—without being able to define where the human ends and the divine begins, so do we see in the Bible both its human and divine nature. Without puzzling ourselves therefore, as to where the one begins and the other ends, we simply accept the statement which we find in the Book itself, of its true nature and ends: "All Scripture is given by inspiration of God, and is " profitable for doctrine, for reproof, for correction, for instruction " in righteousness, that the man of God may be perfect thoroughly " furnished unto all good works." As a fact, the Scriptures have been found to be thus profitable in all ages, by all men who have studied them *for this purpose*. The Bible was not written to make us learned or intellectually knowing, but to make man discern the beauty and necessity of holiness, and by its various methods of instruction make plain to the conscience our deflections from the straight and narrow path that it marks out. We cannot enlarge ; but it would be easy to shew that the false morality which the careless reader sometimes thinks he finds in the Book, is commonly the result of his own desultory method of studying it. We are no believers in verbal inspiration, for we believe the Book to be human as well as divine ; but the stumbling blocks men find therein are too often, as long observation has convinced us, the fruits of their own want of moral earnestness in dealing with the Book. As to (2) the Miracles, we have for many years felt a strong impatience of the practice of challenging belief in the Scriptures on this ground. It seems to ourselves to be a radically false method of presenting them to men. When Christianity is once felt to meet the moral wants of man, the miracles by which its first promulgation was attended fall into their natural and proper place. It was not with miracles that the great apostle of the primitive church approached the minds of his hearers, but "by commending himself to every man's conscience in the sight of God", by manifestation of the "truth" or, as he goes on to explain, shewing to them the character of God as seen "in the face of Jesus Christ" (2 Cor. IV. v. 2-6). No man was ever made a Christian by the evidence of miracles or of prophecy, and it is to lower Christianity to a system of signs and wonders, to insist so unseasonably, as Christian apologists do, upon the " Evidences." We believe the miracles implicitly ; but we do so because we believe in Christ. Men are made Christians in one way only—by the truth of the Christian message being borne in upon the heart "by the *demonstration* of the spirit" (1 Cor., ch. II iv. 4). Where that "demonstration" is wanting, no reasoning concerning the 'evidences' will ever make men believe where it accompanies the message, no other evidence will be wanting. The word " of God is quick and powerful, and sharper than " any two edged sword," and the man who is once pierced thereby, whether in the cathedral or the conventicle, will never after doubt whose sword it was. Our correspondent would do well to cease troubling himself about "the miracles" altogether, if possible. (3); As to the doctrine of eternal misery, we do not find it in the Bible, but about that we shall have something to say probably in our next issue. Our correspondent would do well to draw a broader line than he has yet, thought of doing, between the Bible and the dogmatizers thereon and their Creeds.—ED., *F. of I.*

† 2 Cor : XII, 2,3,4.

EDITORIAL NOTES.

ON Tuesday afternoon last, the following notice was sent from the Foreign Office to the various newspapers of this city :—

Neither the English Foreign Office, nor the Government of India, has received any information regarding the alleged Russian occupation of Merve, as reported in Reuter's telegram.

B. E. BAACON, *Col.*,
Foreign Office.

And the Government cannot see the mischief which this fussy and ridiculous alarm about the Russians, is producing in the country. Instead of treating the popular impressions upon the subject as the mischievous nonsense which they really are, our Foreign Office is to lend the weight of its authority to give them substance. The Foreign Office, as we have had but too full proof in the last twelve months, is under feeble administration. Whose fault it is, we do not presume to say ; but the fact is patent. Anything more silly, or more mischievous, than this official circular, we hardly remember.

***

THE Government of India has received, we understand, a despatch frem Lord Salisbury on the grievance of the North-West civilians, couched in strong terms. We are completely at a loss to understand what difficulty there *is in the case*. We do not think it immodest to say that were we in Sir William Muir's place, it would not take us twenty-four hours, to settle not merely the principle on which relief should be given, but all that was indispensable in the way of detail. A want of moral earnestness is the true cause of the evasions and delays, which mark the Govermental treatment of such matters in every case. It is not that there is any real difficulty in finding a remedy, but that there is not earnestness enough to adopt it. And so the sore is kept running,

and the matter bandied from India to Home and from Parliament back again to India, when two or three hours' honest effort on the part of the Finance Minister to look the grievance fairly in the face, and find out a remedy for it, would at once settle it satisfactorily.

***

WE have a true respect for the personal character of the Indian executive as a whole, but there is not sufficient conscience shewn by it in the exercise of its patronage. Why, we ask, is Mr. Phil. Robinson made Professor of English Literature on Rs. 600 a month in the North-West, and Reporter on Vernacular Literature on another Rs. 200 or Rs. 300, and brought down to Allahabad upon these allowances, after but two years' service under Government? Every one knows why; and there is a real breach of public trust committed when such appointments are made. To put it on the lowest ground, the Government loses far more in character by such an appointment, than it can ever gain thereby in the way of newspaper support.

While this North-West grievance moreover is in full public view, a Mr. Hill is made Professor of Law at Allahabad on Rs. 600 a month, for the all but sinecure duty of lecturing upon law to a class of ten or twelve small boys. Now, Mr. Hill was called to the bar but three years ago, while the same Government that finds no difficulty in making these appointments, professes its total inability to pay its own covenanted magistrates more than starvation allowances. Appointments that have been made in the last few months in Assam call for unpleasant remark, but we forbear. Sincerity on the part of Government in its professions on the subject of patronage, is what the public has a right to expect. But we are a long way off from it as yet. Another case occurs to us as we were dropping our pen. Why has Captain Jarrett been made Junior Secretary in the Legislative Department? Does not every one know why? And in the face of such appoinments constantly being made, what are we to say to the insincere-sincere lamentations of the Government over its inability to fulfil the pledges under which we brought the men of 1861 and 1865 into *our* service. We believe that Mr. Robinson, Mr. Hill, and Captain Jarrett will forgive as for using their names as we have done. We rejoice sincerely at their good fortune, but the Government is heavily to blame for all three appointments, in view of *the grievance* we have spoken of.

***

THE floods in Behar appear to have been very calamitous. Thousands of beegahs are under deep water, while the granaries have been destroyed in many villages, and the cattle can hardly be kept alive. A native gentleman writes to us:—

"When this province was in the possession of its ancient kings, they placed great faith in the 'silver streak.' They looked upon it as a bulwark to keep off not only Pindarees and dacoits but famine. If stringent and active measures are not adopted to stop these floods in Behar, the past destruction of life and property will be a trifle only to the future mischief. Canals with strong dams are to a certain extent a security against inundations acting as regulators; but the interests of the people require that no canal and embankment should be made without rigourous watching, by trained engineers, of its working as well as design. What cost and what pains we bestow on the collection, raising, and distribution of water! And yet how we throw it away, as if our worst foe, when it comes to us uninvited! Is it not possible to devise plans to place under our control the whole supply of water in Behar, so as never to have too little or too much? Water is servant to engineering science and power, and we ought never to let it become our master—nay, not even in our paddy and corn fields. We should use it, as a masterful race is apt to use an abject and servile one, at our own convenience, but not forget that it may one day turn on its oppressors."

***

THE *Englishman* thinks that the Government is to blame for having let slip the moment when a gold currency might have been introduced into India with the greatest advantage. "The time to "have entered on this operation was during the American war, when "the rupee was worth two shillings and upwards in gold. We could "then probably have converted our currencey at about 1-11 per rupee, "and the loss would only have been about a fourth of what, in all "probability, it would now be."

But is it quite certain that the fall which has taken place in the value of silver is a calamity to us? We are not sure that there is not strong reason for believing the contrary. Instead of regretting that we did not change the standard ten years ago, it is not clear to ourselves that the country is not to be congratulated on the fact that we did not. Even our contempory says: "It is contrary to every "rule of commerce to buy a commodity when it is dear rather than "when it is cheap; and consequently the present time, when gold is "dear, is a bad time for buying it, except on the supposition that it is "destined to become still dearer; and in any case, it is a bad time "for buying it as compared with past periods when it was cheap."

But does not this equally apply to silver? There are economists who tell us that "it is an obvious fact that if we obtain our money "cheaper, we shall obtain all other imports cheaper also." If it was a good reason in 1865 for changing our standard that gold was believed to be falling in value as compared with silver, is it not an equally good reason in 1875 for retaining silver as our standard that a corresponding change is now believed to be taking place therein?

***

THE *Pioneer* in an able article on the land question, recalls the suggestion made some time ago in the *Calcutta Review* that Government should have a right of pre-emption in all sales of land in execution of decree, and adds "the Government might then buy in any estate which they wish to preserve in the hands of an old and respectable family, and might restore it to the proprietors after making the necessary arrangements for reimbursing themselves." The idea is undoubtedly a good one, but our contemporary thinks that the only complete remedy is "to entail all estates or to make all transfers of land illegal." This would be an infringement of our first proclamations of settlement, and would no doubt be at first objected to by all owners of land. The question is simply one of policy, whether it is not better to take away the right of selling land, than to allow such property to pass into the hands of the money-lenders. We are strongly disposed to agree with our contemporary; but why is there not a commission of enquiry upon this great subject sitting *en permanence*? There should be; and another on the currency.

***

WE may congratulate the Government of India upon the condensed and therefore improved form in—which the telegraph statistics of the year just closed (1874-75) are presented to the public. It may be well once in every five years to publish a very detailed report of the department, but in general the abbreviated form adopted in the present instance is, we think, sufficient for all practical purposes. The total number of messages transmitted during the year were:

	Inland.	Foreign.	Total.
State telegrams ...	77,226	13,057	78,531
Private do. ...	658,522	100,338	758,860
Free messages	...	...	7,361

The messages received and despatched by the several foreign lines were as follows:—

	From India.	To India.	Total.
Vid Teheran ...	14,802	13,036	27,838
,, Turkey ...	541	442	983
,, Persian Gulf ...	675	1,376	2,050
,, Suez ...	16,492	15,032	31,524

The first three routes are those of the Indo-European lines, and the last which appears to be the favorite one, is the Read Sea route. An apparent discrepancy exists between the figures on page 692 and those on page 694 as to the number of the foreign messages received and transmitted during the year. We do not attempt to explain it, but point it out to Colonel Murray.

***

MAY we suggest to the Commission about to assemble at Poona to enquire into the causes of the recent agrarian riots in the Deccan, that its members should make a point of obtaining from the local Government and of reading, the late Professor Green's essay on "The Deccan Ryots and their Land Tenure," published in 1852—one of the most valuable and timely pamphlets that ever appeared in India. They should also see the critical notices that appeared in the *Indian Economist, three or four years ago, upon the new settlements in the* Indapoor and Bheemthuree talooks of the Poona Collectorate. There seems to be some doubt however as to the exact nature of the enquiry, this Deccan Commission is to make. According to the *Bombay Gazette*, its principal, if not only, duty will be to ascertain in what ways and to what extent our courts have helped to make the bondage of the ryot to the usurer more hopeless than in the time of the Peishwas. Incessant complaints from every part of the country, of processes which enforce the claims of creditors

with a harshness previously unknown, have led to this effort to ascertain how far the law has been in league with the money-lender, so that some measure of legislative reform may be prepared to remove from English rule the reproach of having become "The Raj of the Vakeel." But if this be so, why are the instructions to the Commission not published? Many non-official gentlemen, both native and European, are well able to assist the Commission with suggestions and information; and the public press certainly ought to know precisely what it is that the commission is to attempt. The policy of *secrecy* is happily falling into discredit, and to maintain it in matters like the present is pure folly.

***

TRUE to the character of his school, Mr. MacKonochie is attempting, we see, to drag his diocesan into a correspondence, in which to gratify his own vanity and insolence at the expense of the Bishop, while hypocritically professing the most profound reverence for his office. The trick has become so stale that it has lost all novelty, and simply moves indignation in sincere men of all parties. The course of this school from the first was, as Archbishop Whateley pointed out,—(1) to profess excessive submission to the authority of the Church and veneration for its Bishops, (2) to represent the Church as consisting of *themselves* and their adherents, and (3) to treat all their brother ministers, and especially the Bishops who did not agree with them, sometimes with utter neglect and sometimes with the greatest insolence. They remind one of Addision's Tory freeholder, who declared: "I am for passive obedience and non-resistance, and I will oppose to the utmost any Ministry and any King that will not maintain that doctrine." To drag their Bishop into an evasive and insincere correspondence, with expressions of profound regret and reverent humility, interspersed with occasional defiances and almost open threats—to create difficulties that they may throw the *onus* and the odium of solving them upon the Bench—are the recognized tactics of the school which Mr. MacKonochie represents, and of which he is the most perverse and irritating sample. Mr. MacKonochie *dare* not administer the sacrament, it seems, unless he is allowed to wear a stole when doing so, and to stand before the table, instead of at the north end of it! And when the people revolt at such drivel and raise the cry of "no popery," the satisfaction of martyrdom is added to that of controversy with his Bishop; and "the highest theological felicity would seem to be reached when you can at once worry a Bishop and be worried by a mob." A scourge of small cords is wanted in the Church of England to drive the spirit of the MacKonochie school out of it. There is no real sincerity in the party, except the sincerity of conceited wrongheadness.

***

A NATIVE gentleman writes to us from Behar: "I asked an opulent zemindar the other day—'Why don't you educate your son, instead of loading him with ornaments as a temptation to some ruffian to murder him?' With a grave face he told me that his nephew had learnt to read and write, and was looked upon as a learned young man in the village; *but he died of small-pox*, and the same coincidence having occurred in his uncle's family, it is now settled once for all that "learning in our family is inauspicious, and brings adversity and death." It is the fact that nothing will induce any member of this family to learn. Do we not see hundreds of educated men, added he, absolutely starving, while ignorant men are enjoying ease and comfort. Besides learning unfits a man of our clan to follow his walk of life, and in ninety-nine cases out of a hundred learning makes a man good for nothing."

What about *technical* education, Sir Richard?

***

THE Balance Sheet of the Irrigation Canals in the Punjab appears in the *Gazette of India* of 28th August. The total capital outlay on these works, to the end of 1873-74, was £2,684,279, and the revenue derived therefrom, directly or indirectly, £145,411 made up as follows:—

Direct: water rates ...	£48,555
Indirect: increased land revenue ...	£96,856
Total	£145,411

The revenue represents therefore a return of a little less than 8 per cent. upon the capital expended, and as the Government can borrow as freely as it pleases at 4, the apologetic tone of the Resolution to which we are indebted for these figures was hardly called for. We must expect that in years when an abundant rainfall blesses the land, the water from the canals will be in less request than in seasons of drought or comparative scarcity. Is it the deliberate conviction of the Government, may we ask, that a clear 4 per cent. gain upon these works is not sufficient inducement to enter upon them? It would really seem so from the strain in which the Resolution runs.

***

WE are indebted to the same Gazette for an account of the earnings and expenses of the various lines of Railway in the country during the six months ending 31st December last. The figures are—

Gross earnings	Rs. 3,37,99,453
Expenses	„ 1,89,61,631
Nett profit ...	„ 1,48,37,822

The most striking feature in the return is the singularly favorable contrast which the East Indian Railway presents to its great rival, the Great Indian Peninsular. The figures are—

	Miles.	*Earnings.*	*Expenses.*
East Indian Railway ...	12,80	1,34,88,322	53,70,838
Great Indian Peninsular ...	1,266½	74,98,045	50,98,305

The train mileage run "in the one case was 16,44,380 miles, and in the other 28,71,860. Thus if the Great Indian Peninsular Railway could but be worked as inexpensively as the great line on this side of India, its expenses instead of being 51 lakhs a year would be a little below 30. That the Great Indian Peninsular Line is under as able and skilful management as any in the country" is undoubted. The working expenses will ever, it may be feared, be indefinitely higher than on this side of India.

***

THE bitter Calvinism of Dr. Manning's younger days has given place in his old age to a fierce Papal zeal that seems to know neither moderation nor charity. The title of his new book on the *Internal Mission of the Holy Ghost* hardly prepares the reader, we are told, for the tone of bitter controversy that marks it throughout. "The air of unbounded confidence with which the writer expresses himself on every subject, great or small, is very unpleasant to those who know anything. With those who do not, it will of course carry weight. We have been much struck, too, by instances of bad taste, such as were never found in his writings before he joined the Roman schism. Thus after a violent and indiscriminating charge against "the apostles, prophets, the doctors and Pharisees, of modern civilisation," he proceeds:—

"But I must not go on. The Holy Ghost creates saints; and the Holy Ghost creates doctors; but fools create themselves."

The mistake in the following case is of a less serious kind:—

"When you kneel at the Holy Mass, put your heart upon the paten, and let it be offered up."

In the next extract we have a metaphor illustrated by violent absurdity:—

"Just as paralysis is a parasite of the human frame, so superstition is a parasite of faith."

Certain "men of culture" are denounced with great vigour; but we know not with what justice, as, remembering poor Galileo, we cannot tell how far the censure is designed to reach:—

"To us simple men," observes the humble-minded writer, "it seems as if these intellectual Titans were truncated men, walking about headless and unconscious of their mutilation. To us they seem to be intellectual pollards: stunted trees walking."

Where, asks the writer, is the University preacher of 1843, and to what manner of men does he now preach?

***

IN strong contrast with this fierce publication of the Cardinal Archbishop, appears a posthumous volume of sermons for *Passiontide* by the late John Keble, couched in simple but impressive language, and breathing the deep personal humility and sweet reasonableness of all Keble's writings. Dr. Pusey contributes, we see, a preface to the volume. With one exception, the sermons were all preached by the revered author to his village flock at Hursley, mostly between the years 1840 and 1855, when he began to preach *extempore*. They were written, therefore, when his powers were at their best. Much that is valuable of Keble's is said to be lost without hope of recovery. "Of one remarkable series on the Penitential Psalms," all but one, the twenty-sixth in this volume, have been sought for in vain.

THE *Russian World* announces the formation in St. Petersburg of a society of ladies who have renounced the use of silk dresses and every other kind of expensive attire in order to employ the money so saved in the education of poor orphans.

***

WE regret to notice the increasing illness of Bishop Douglas. Mrs. Douglas writes to a friend in Bombay: "We thought last week that he was sinking, but he has rallied again. He is confined to his bed, but he has no pain at all in the tumour. He bids me send his love to all the clergy and the missionaries in the diocese, and wishes he could have written to them all to tell them how his heart is with them and his thoughts and prayers."

It is a mitigating circumstance in the good Bishop's illness that he suffers no physical pain. Poor Charles Metcalfe's last days were marked by extreme physical suffering, though the fact seldom escaped his lips.

***

ACCORDING to the Berlin correspondent of the *Morning Post*, the Russian Government has once more in a very determined tone appealed to the Government of China for compensation for the plundering by the Chinese of a Russian caravan near Shicho in 1872. And the demand is coupled with a threat to suspend diplomatic intercourse with China.

***

THERE seems to be much diversity of opinion in the country as to the good or evil resulting from our having made adultery a criminal offence by the New Penal Code. Native thought on the subject stumbles, not unnaturally, over what seems to it the anomaly of letting the wife go free, while we punish her paramour. Our judicial officers, we are told, remark that the injured husband, when preferring a charge of adultery, invariably tells the court that he wishes to *prosecute* his wife also. When informed that this cannot be done, as the wife is not punishable by law, he seems quite unable to understand the matter. The time has perhaps not yet come to review our legislation on the subject; but there can be little doubt that it is incomprehensible to the people and of very doubtful result. When the husband finds that his guilty wife is exempted from punishment by the law, he too often takes vengeance on her himself, and is justified by the opinion of his caste-fellows in doing so. It is a curious fact that in the great mine of Hebrew axiomatic philosophy—the proverbs of Solomon—it is the woman that is denounced throughout as the seducer—not the man. It may reasonably be doubted, we think, whether the villany of systematic seduction is common amongst any race.

***

A HOME writer in one of the English dailies of Calcutta tells us that escaping out of the Civilian atmosphere of India into England, is like coming into the fresh mountain air out of the mephitic vapours of a dungeon. "You feel yourself a man again; you are once more in possession of the rightful heritage of humanity. But conceive a state of existence where there was no such escape, and that if you presumed to hold a meeting in the Calcutta Town Hall, Sir Richard Temple fusilladed you with grape and musketry. Imagine a state of things where the simple suspicion of not being an admirer of Sir Richard Temple was a sufficient pretext for shipping you off as a convict to the Andamans. Would Englishmen under such a system be strictly legal and orderly in their modes of protesting? I trow not." Now this, says the writer (Major Osborne), has been the recurring condition of things in France ever since the first revolution. The common notion that the French are continually breaking out in aimless and unprofitable revolutions, sweeping away Governments from mere wanton desire for change, is not a true one. Every revolution in France has been a protest against some form of misgovernment which had become intolerable, and every such movement has carried forward the great work of national emancipation. The great revolution of 1792 relieved France of a despotic sovereign, a vicious aristocracy, and a corrupt clergy; and gave to the country a landed peasantry, equality before the law, and a national code unequalled in the world. When that Ancient *Régime* was brought back to Paris by foreign bayonets, and attempted to re-establish old abuses, the revolution of 1830 swept it away amid the plaudits of Europe, and delivered France for ever from Bourbonism and priest rule. When the Government of Louis Philippe, false to its pledges, persisted in attempting to govern the nation by corruption under constitutional forms, the revolution of 1848 revealed the organised hypocrisy, and Orleanism sank never to rise. Of the revolution of 4th September it is hardly needful to speak. Imperialism simply sank under the weight of its own crimes, and the Provincial Government merely caught the reins of Government as they slipped from its nerveless grasp. In the main these remarks are true. The Erckman Chatrian novels are probably the most trustworthy reflection of French opinion as a whole that we possess. No reader should be unacquainted with them.

***

INDIA is garrisoned by an army of 58,000 British soldiers, of whom a small proportion only can be quartered in the hills. In this army, permission is given to 15 per cent. of the men to have their wives and children with them. Much has been done to render the soldier's family comfortable, and in the cold season there is much happiness and little sickness amongst the children. In the hot season, however, there is excessive mortality. The Report of Sanitary Commissioners for 1873 shews that there were in all India of the class we speak of—women, 6,626, and children, 11,860. The mortality for 1873 was as follows:—

Of	3,858	women in Bengal	88 died.
„	1,541	„ Madras	23 „
„	1,227	„ Bombay	21 „
Total of	6,626	„ all India	132 „

The mortality of the children however was as follows:—

Out of	6,753	children in Bengal,	459 died.
„	2.880	„ Madras	148 „
„	2,217	„ Bombay	108 „
Total of	11,860	„ India	715 total deaths.

General Biddulph (Sealkote) sends these statistics to the *Times* to shew how deadly are "the fierce heats of India to "the poor little ones who have to follow the fortunes" of the soldier in India The situation of the women can only be improved by the gradual increase of quartering troops in the hills; for the women cannot be properly separated from their husbands, nor will it do to quarter the married soldier in the hills, while the unmarried soldier does the duty in the plains. "The case of the smaller children is almost hopeless. Still it should be known at what cost of life they have to battle against climate. It is stated that the death-rate per *mille* of children in all India at the following ages is—under six months, 255; 12 to 18 months, 144; two years, 72; three years, 52; four years, 26." The figures hardly perhaps bear out the purpose for which they are quoted. A death-rate of 20 per thousand amongst the women can hardly be held to be an excessive rate in this climate, and we fear it is neglect rather than heat that is so deadly to the children. For these latter we heartily support General Biddulph's recommendation that we should combine to raise subscriptions to establish Lawrence Asylums and similar institutions in all our hill sanitaria in Bengal, Madras, and Bombay."

***

ENGLISHMEN imagine that the French are always in a white heat of excitement on political matters, and the correspondents of the London journals do their best to propagate this notion. There are violent papers in France as in England, but as a rule they are the organs of Imperialism, Ultramontanism, and Legitimism. The mendacity of these papers almost passes belief, but they do not represent the French nation any more than Dr. Kenealy's *Englishman* represents the English. The *Journal des Debats*, the *Temps*, and the *Republique Francaise* differ from our English daily papers only in their greater finish of style and deeper sincerity. They are all organs of the Republic, and the hope of France lies, we believe, in the final trumph of this party. The Bourbons, the Orleanists, the Bonapartists, and their Ultramontane allies—on which each of these parties as it obtains the ascendancy can count—are the curse of the country. The aims of the three political parties are purely selfish without an alloy of any kind, while the Papacy, is ready to help either of them that bids highest for its support, with the influence of the whole body of the clergy. That Macmahon, Broglie, and Buffet are secretly Imperialist, we fear there can be little doubt. And it is the intrigues of these men that prevent quiet in France.

***

THE leader of the *Brahmo Somaj* party has been photographed in the *Lucknow Witness* not unfavourably, and yet perhaps not quite fairly. The personal get-up of Keshub is inconsistent, we are told, with that of the ideal reformer. The Baboo pays far too much attention to his clothes. "The Chaitanya of the future "must be like the Chaitanya of the past—an *ascetic* in the "highest sense of the term; he must be intellectually a genius "and spiritually a giant. The reach of his resources, the keenness

" and spring of his intellect, and the unaffected simplicity of his " consecration to his cause must all be prominent and unmistakable " alike to the ignorant and to the cultured. The opinion of men " will be a matter of absolute unconcern to him. He will not be " solicitous about 'broadness of view;' his ruling feeling will be " one of fearless and unquenchable enthusiasm for the claims of the " Almighty, and of melting compassion for the ignorant and erring. " The heart of the Indian people cannot believe in ireligious re- " former unless he sits under a tree, be covered with some such " attire as a strip of bark, keep no society and no property but a " manuscript or two, and feed on bulbs. It does not follow that " any and every man who may live thus is of necessity a " reformer; but any man who is a real reformer will answer in some " way to this description."

Having thus pourtrayed what the ideal reformer will be, the writer tells us that if Keshub Chunder Sen had been the true Chaitanya of our times—the Luther of Hindooism—" he would " never have thought so much about himself as the adornment of " his person implies. I raise no objection to the present leader " of the Brohmo Samaj wearing articles of gold in prominent " relief about his person, nor to his preference for a first-class " carriage on the railway, nor to the extreme attention he pays " to his personal 'get-up'; he is surely entitled to exercise to the " full his own judgment and tastes in such matters; but surely " such extreme care for the outward appearance is not a charac- " teristic of the reformer in religion."

Whatever our excellent friend Keshub may say to this, he will agree with his critic that " it is most saddening to find that " every tipsy, licentious, worldly-minded Bengali Baboo one meets " with, calls himself Brahmo Somaj." When the true Chaitanya arises, will there be any fear, asks the writer, of his name becoming the badge of such characters as these? We pause for Keshub's reply.

***

IN reply to the complaint that the Church is ever attempting to encroach upon the sphere of the civil power, we are told that the charge is unfounded. But observe what is taking place at this moment in the Bavarian elections. One of the Canons of Wurzburg voted Liberal in the elections, and was at once summoned before the Ordinary to give an account of himself, for exercising this simple civil right. The Canon refused, alleging that he was not in any way responsible to his ecclesiastical superiors for his vote, when the Bishop straightway deprived him of his canonry. If the Bavarian Government put up with this, they will deserve the contempt of all honest men.

***

AGAIN: the Bishop of Paderborn has just issued a "Catechism of Roman Catholic Church Law," from which the following points are extracted by the *Deutscher Merkur*:—

"(1.) Catholics cannot be bound to send their children to undenominational State schools, nor can they be compelled to pay taxes for such schools: the Bishops have the right of setting up educational establishments of their own.

"(2.) Bishops may order processions, pilgrimages, and observance of church festivals, and in this right they may not be interfered with by law or police regulations.

"(3.) The State may not suppress or limit church societies, such as the Workmen's Unions, St. Borromeo's Union, and the like.

"(4.) The State has not the right to limit by a statute of mortmaon the acquirement of property by the church: it may not tax church property, and must leave its administration and application solely it ecclesiastical officials.

"(5.) Members of church boards must be nominated by the Bishop, or, if chosen by the congregation, must be confirmed by the Bishop."

"(6.) The State cannot levy any taxes or dues from the clergy, except by permission of the Papal See. Similarly, without permission of the Papal See, clergy cannot be summoned before a civil tribunal, even in ordinary civil and criminal causes.

"(7.) Under pain of excommunication, it is forbidden to imprison a Bishop or to remove him from his see."

"(8.) The State may not order that the bodies of Catholics should be buried in communal graveyards, but it ought to set apart for ever special portions of these cemeteries for Catholics, or should allow them to provide their own burying grounds."

And there are no civil rights we are to understand touched in these propositions. Let the reader look in particular at the fourth, fifth, and sixth. The spirit of blindness has fallen upon these men. In forcing upon public attention such claims as these to freedom from taxation, and exemption from the power of the civil magistrate, they are affording full and complete justification of Prince Bismarck's course. The Bishop of Paderborn has one conspicuous merit. He does not conceal what the claims of the Papacy really are, and it would be better for themselves if the whole Ultramontane school honestly avowed their coincidence with the Bishop's views, instead of dishonestly insisting that they are misrepresented.

***

THE quarrel over the Wesleyan tombstone in Owston Ferry churchyard has produced an elaborate and interesting judgment from Sir R. Phillimore, on the legal rights of the parishioners on the one hand and the incumbent on the other, in the churchyard. Sir R. Phillimore affirms that by the law of the country, the churchyard is the freehold of the incumbent, subject simply to the right of the parishioner or stranger happening to die in the parish "to interment, and to no more." The incumbent has the right—we presume the sole right—to pasture animals in the churchyard; and every gravestone, of course, interferes with that pasturage. For this, as well as for other more important reasons, the imcumbent has a *prima facie* right to prohibit altogether the placing of any gravestone whatever in the churchyard, or to permit it upon conditions, Usage has favoured the placing of such stones, and as a rule the incumbent permits them, the exercise of the right of refusal being perhaps subject to the control of the Ordinary.

It would thus seem that simple interment is a matter of right: the placing of a gravestone not so, but a matter of permission only. That inscriptions of an improper or ludicrous character are to be found in some of our churchyards only proves the culpable indifference and carelessness of those who had the control of the church and churchyard at the period when such inscriptions were allowed, and not that there was no power in the clergyman or the Ordinary to refuse them. The notion that an incumbent is bound to permit an inscription at variance with religion, morality, or propriety is erroneous, and not the less mischievous because the law holds that tombstones once erected become, in a sense, the property of the person who erected them.

There is thus something to say even for the Vicar of Owston Ferry: but it must be remembered that we live in days when "a man may *not* do what he likes with his own." And if this be so in the case of private personal freehold, Sir R. Phillimore and the Vicar may be very sure that where the freehold is a *quasi* public trust, as in this case, our "freeholder" will be told emphatically as it proceeds that still less may *he* do what he likes with his own, when his rights take the gratuitiously offensive form they have assumed in this instance. The Vicar's conscience is so sensitive and his charity so deep it seems, that for the good of Mr. Keet's soul and as a protest to the age, he felt himself obliged to scandalize the country by telling Mr. Keet that he was merely a conventicle lay preacher, and not the true apostolic thing at all. And he could find no other occasion so suitable for assuring him of this, as the grave side of his dead child. It is these men who are pulling down the Church as fast as they can.

THE WEEK.

THE enthusiasm about the reception of the Prince of Wales still continues at a high pitch. Cynics may suggest that novelty has as much as loyalty to do with the excitement, and the contributions, in which Bombay promises to excel the other capitals, but there will be enough of demonstration to cause much self-congratulation to loyalty. Two bright ideas have been taken up in Bombay and are likely to be carried. There is to be an enormous school-treat, at which 7,000 children of both sexes and all colours are to be present. On this Rs. 12,000 will be expended, and the children will be royally fed with cakes, ice-cream, fruit, and sweetmeats. Two prizes of Rs. 100 each will be given for prize poems of Welcome. This item seems quite an unnecessary expenditure. The muse is not mercenary, and already the Bombay papers are full of the most remarkable poems on the approach of the Prince. The other proposal is also a most appropriate one. Rupees 15,000 are to be expended on a Sailors' feast, and provision for two thousand tars will be made.

IT is arranged that the Viceroy will leave Simla about the 10th or 15th October and proceed to Kumaon and thence to Bombay. After two days spent in Bombay, he will start for Mount Aboo, Oodeypore, and Ajmere, where he will be joined by Miss Baring, and will then travel by Agra to Calcutta to meet the Prince on his arrival in the capital. In Calcutta we hear chiefly of estimates for illumination. The details of the estimate have been prepared by Mr. Hogg, and we are not surprised to learn that of the Rs. 15,000 to be expended, the largest sum goes to that dear object of his affection—the Municipal Market. The Town Hall, Dalhousie Square, Wellington Square, which is to have a splendid trans-

parency costing Rs. 500, College Square, and Beadon Square, are the other principal places that it is proposed to illuminate. It is said that Government is to engage fourteen houses in the neighbourhood of Chowringhee for the accommodation of the Rajahs and Chiefs that are invited. The *Serapis* is to be ready for the Prince's embarkation at Venice on the 16th October; and he is expected to arrive in Bombay on the 9th November. He brings with him a host of artists and special correspondents, and it is also said both a botanical and zoological collector.

A GOOD deal of excitement and speculation has been created during the week, by a telegram to the effect that the *Times* had received information that the occupation of Merve by the Russians was probably an accomplished fact, and had published a tranquilising article on the occasion. According to the latest information, however, neither the Government of India nor the English Foreign Office, have received any confirmation of the news, and we are inclined to discredit it. It will probably turn out that our contemporary has been premature in his announcement, although, this would not be the first occasion on which the *Times* has been able to publish important facts before they had come to the knowledge of the Government. However that may be, there are few who doubt that the Russian occupation of Merve is not far distant; but we are not of those who see therein a step towards the overthrow of our Indian dominion. The Indian Government, unfortunately, scarcely appears to know its own mind, and is, as a consequence, far too easily alarmed by such rumours.

INTELLIGENCE from China is of a threatening, though as yet uncertain, character. It is believed that the Yunnan inquiry is abortive. Colonel Horace Brown, who is expected to arrive in Calcutta in a few days, reports that, owing to the attitude of the Chinese, little progress in the negotiations is being made. It was stated in the *China Mail* that Mr. Wade had been provoked by the cool and persistent delay of the Chinese authorities to proceed to Peking with an ultimatum. It has since been reported that he has warned the Home Government to have troops in readiness to send to China if required. The news that he had been insulted at Peking is not confirmed by the latest intelligence from London. But he had expressed a dissatisfaction with the Chinese Government strong enough to lead him to anticipate the necessity of warlike demonstrations. Meanwhile constant reports reach us of outrages committed by the Chinese on Europeans. The latest is that Mr. Henderson, Customs Engineer, has been mobbed at Shangting promontory, Northern China.

WHAT may be the result of the wide-spread insurrectionary movement among the Christian subjects of the Porte it is still difficult to forecast. A strong and simultaneous spirit of rebellion has become manifest among them, and the insurgents seem to have met with some successes. The financial necessities of the Porte have stimulated the tax-collector, and the exactions seems to have reached a point when they cannot longer be endured. The great Powers have apparently agreed to make an attempt to patch matters up for the present, and it is stated that Server Pacha, the Imperial Commissioner, had arranged a meeting with the foreign consuls at Mostar to negotiate with the Herzegovinian insurgents. The latest telegrams are to the effect that 3,000 Servians had crossed the southern frontier into Turkey, and that bands of Servians were endeavouring to excite a rising in Bulgaria. A new Servian ministry, belonging to the party aiming at independence, has been formed. It is also reported that great excitement prevails in Armenia on account of the increasing zeal of the tax-gatherer, and we may presume that it is Turkish Armenia that is referred to. The Sick Man's life is again despaired of, for the disease is virulent over all his members, and though the powers who attend as doctors can doubtless prolong his life if they will, it is suspected that some of them would not be sorry at his demise. Alarmists see in the anticipated downfall of the Turk, the shutting up of the Overland route to India, and the invasion of this country by Russia. Nothing is easier than to imagine and predict such disasters.

IT is reported from St. Petersburg that the Chinese expeditionary force sent against China, three years ago, has been under the necessity of building quarters, sowing grain, and awaiting a harvest before it can proceed further. It will evidently be a long time before it reaches its destination, and events in Central Asia are beginning to move with an accelerated rapidity which the Chinese have hardly, as yet, opened their eyes to, and while they are sowing and building, Yakoob Khan is said to be busy capturing Chinese towns one after another without resistance.

CHOLERA is still making its appearance at various places, though not generally of a severe type, and its virulence is abating in those localities where it broke out some time ago. Cholera is a sharp monitor, and an ultimate benefit will flow from its unwelcome visits, for wherever it has appeared we find it noted that the conservancy of the place was carried out in a perfunctory manner, or that some sink of corruption had been allowed to pollute the locality. The report of Dr. Blane, the Superintendent of the Central Jail at Yerrowda, Poona, on an outbreak in the jail last May, has been highly eulogised by the local Government as an interesting contribution to the medical history of cholera, and as stating valuable facts regarding the theory of the propagation of cholera by contagion. The outbreak in the jail was undoubtedly due to water-poisoning, some of the prisoners having drunk water from the river only twenty yards below the place where some *dhobies* had been washing the clothes of two persons who had died of cholera. The Government recommends that the police should, as far as possible, see that the clothes of persons who have died from cholera or other zymotic diseases be burnt at cremation ghâts at some distance below villages.

THE long felt want of a Zoological Garden at Calcutta has at last a prospect of being supplied. The great difficulty hitherto has been to procure a suitable site, and that has now been overcome by the Lieut.-Governor offering to give the land on both sides of the road leading into Belvedere, and a hope has been expressed that the Temple Zoological Garden may be ready to be opened by the Prince of Wales. The exposure that has just taken place in the Calcutta Municipality has given rise, and not without reason, to attacks on the constitution of the Municipality, and the desirability of giving to the rate-payers of Calcutta the right of electing their own representatives is being warmly advocated. Elective privileges have already been granted to the rate-payers of Serampore and Burdwan, and it can hardly be supposed that those of Calcutta are less qualified to use such privileges for the public good. The expenditure is now so enormous, that there is not only a right but a necessity for the rate-payers to demand a voice in the selection of those who manage the expenditure.

Money Market.

FRIDAY, 3RD SEPTEMBER.

THE state of trade of almost every description remains so deplorably bad, that the employment for money continues to decline, and discounts on good security can be effected in the bazaar at rates considerably under the official terms of the Bank of Bengal. The amount of money lent out by the Bank, especially in form of advances against Government securities, has, for some time back, been well maintained, although borrowing in the bazaar has been cheaper; but this week's statement shows such a large reduction in the public demand, that lower rates of interest might have been expected to be announced at the Board Meeting yesterday, especially as there will be a considerable inflow of bullion during the present month from China and Europe. The China steamers are bringing about 22 lakhs of silver and 10 lakhs of gold to Calcutta, besides 10 lakhs of silver to Bombay. The European shipments are principally directed to Bombay, about 50 lakhs being on the way to that place against 10 to this. There may, of course, be expected to arise the demand for money usual prior to the Doorga Poojah holidays now getting near, and that may suffice to give a certain steadiness to the money market for a time, but unless a great and unforeseen expansion in trade should take place towards the cold weather, an easy state of things is likely to last. The Bank of Bengal's cash balances continue strong—about 450 lakhs—but the Government balances in their hands rather exceed that amount. The private deposits are moderate—217 lakhs—and the loans, discounts, &c., aggregate 314 lakhs, although they declined no less than 31 lakhs last week.

During the past week, there have been some rather important failures in the bazaar, and a good part of the loss will fall on European houses. The import market is in a most wretched state of depression, and the large business which is looked for as a matter of course in the two months preceding the holidays has shown no sign of its appearance this year as yet. Prices are declining. Shipments from England are becoming reasonably moderate, but nothing will tempt dealers to work with any spirit.

The course of exchange on England, which showed decided symptoms of going up moderately in the middle of August, has become flat and weak again, since the bullion shipments were announced, and a decline of 3-16 per rupee was reached, from the highest point, by departure of last mail. The rate for Council bills, telegraphed out here yesterday, was almost practically the same as that of the previous fortnight—1-9¾*d.* per rupee—and as silver now quotes 56¾*d.* against 56⅝*d.* a fortnight ago, the effect on exchange has been slightly strengthening, and the following are the rates at which business can now be done :—

Bank Bills	...	1-10 1-16	to ⅛	6 months' sight.
Credit Bills	...	1-10 3-16	to ¼	
Document Bills	...	1-10 5-16	to ⅜	

The market for Government securities, after a period of great inactivity and some depression, has had a more lively appearance the last two days, and a large business had taken place in the four and four and a half per cent. stocks. The five and a half per cents are gradually falling out of enquiry, as the period of their redemption draws near, and the premium is becoming weaker. The market prices of the different stocks are now as under—

4	per cents	...	Rs. 102 0	to	Rs. 102 2
4½	„	...	„ 102 14	to	„ 103 0
5½	„	...	„ 107 14	to	„ 108 0

The share market is in a more lethargic state than it has been in for years before, and for most descriptions of stock it may truly be said there is at present no market at all. If forced for sale, much lower prices than the quotations would have to be taken. However, there is very little forcing going on, and holders seem strong enough to hold the property they have, although of fresh investing power there appears to be none. Bank shares keep steady, with a moderate business going on. Spinning Mill shares are scarcely so active as they were for greater part of August, but prices are fairly firm, and prospects considered good. Tea shares are very flat, neither buyers nor sellers caring to operate. India General Steam shares have had a strong upward movement, prices being about Rs. 40 higher for the week. Coal shares are very quiet for the moment. The sales, altogether, for the present week have been extremely small, and the following are the principal of those effected for ready cash :—

Bank of Bengal, 1,420.
National Bank, 114.
Bowreah Cotton Mills, 88, 90, 91, 92.
Goureepore Jute Mills, 1,000.
Barnagore Jute Mills, 97.
Seebpore Jute Mills, 78, 77, 78.
Howrah Jute Mills, 27, 27½, discount.
India General Steam Co. 400, 407½, 410, 412½.
Central Cachar Tea Co., 153, 154.
Durrung Tea Co., 78,78½.
Singell Tea Co., 104.

LETTERS TO THE EDITOR.

RELIGIOUS NEUTRALITY.

According to the Queen's Proclamation.

ILLUSTRATED IN BRITISH BURMAH.

To the Editor of the Friend of India.

SCENE I.—In the forest. A large, unfinished boat in transit to the river. Present: an English official and thirty or forty natives, Karens and Burmans, rendering several days' gratuitous [forced?] service. Time: Sunday morning.

A. C.—On with the work!

Loogalay.—The Karens, my Lord, say that it is Sunday, and decline to work.

A. C.—Send their headman to me!

Karens.—We are here, my Lord.

A. C.—[Red in the face] *Do you eat rice on Sundays?*

Karens.—Yes, my Lord.

A. C.—[growing redder] DO YOU EAT RICE ON SUNDAYS?

Karens.—[quaking] We eat rice, my Lord.

A. C.—[redder and louder] DO YOU EAT RICE ON SUNDAYS?

Karens.—[fearing instant extermination answer inaudibly.]

A. C.—[with an emphatic gesture] Then you can work for me on Sunday?

Exeunt Karens, blessing the day when the tyranny and religious persecution of the Burman King was exchanged for the liberty and toleration [to Boodhists] of the Christian Queen.

The boat makes more than a Sabbath day's journey towards the water.

SCENE II.—A Christian village remote from the station. Time: Sunday forenoon. The pastor with his congregation just coming down the steps of their humble place of worship. An English official rides up, and orders two bullock carts to be prepared at once to carry his baggage to a village some miles away.

The pastor would mildly suggest that, as Christians, they think it right to keep the Sabbath holy, but what business has a native, especially a Christian, with a religious conviction that interferes with the pleasure or convenience of Her Christian Majesty's representative?

SCENE III.—Timbuctoo. Deputy Commissioner's Court, *Thoogyee.*

D. C.—To *Christian Thoogyee.*—Are the pagodas and idol-houses in your circle in good repair?

C. T.—I am a Christian, my Lord. What are such works to me?

D. C.—It is my wish: you must see that they are kept in repair.

SCENE IV.—Public gardens in Caracorum before the alabaster image of GAUDAMA, recently enshrined in a conspicuous position with the consent of—the laird.

Boodhist No. 1.—[greatly edified] Surely our religion is true. What power it has over the minds of men! Ceylon, Siam, China, and Japan have yielded to its potent sway, and now, these English, who think they have conquered us, will adopt it too!

Boodhist No. 2.—Not a bit of it: I know them too well for that. They care nothing for our religion or any other. Just now they fear that our King will make war with them, and they do this to win our good-will.

Native Christians look on; silent but disgusted: Englishmen amazed remonstrate to no purpose. The Boodhist law forbids any change!!

British Burma,
Whaso lah pyee, 1237. FIDELIS.

WHAT WILL COME OF IT?

To the Editor of the Friend of India.

SIR,—Junior civilians who are keenly alive to the wrongs which it is admitted they have suffered, are naturally enough anxious to lay the flattering unction to their souls that a statement of these wrongs uncontradicted, and to which hardly even a reply could be given in the House of Commons, will be necessarily followed by their speedy redress. Too much confidence however should not be felt by them on this point, merely because Mr. Lowe in an eloquent speech dilated upon their grievances. To some it appears anything but a hopeful sign, that the task of setting the matter right was relegated once more to the Indian Government. It was doubtless a good thing in one sense, to get a ventilation of these grievances in Parliament. It will possibly have the effect of preventing future candidates from preferring the N.-W. Provinces to the other presidencies. But that the present members of the service in those provinces, will gain anything by it, is too much to expect. The course the debate took seemed to be the very reverse of what might be expected, if any action was about to be taken. Mr. Lowe was patted on the back, and praised for his cleverness in discovering the interesting subject of his speech, much in the same way as if he had been describing the grievances of the ancient Ninevites as described in some inscription which he had been fortunately able to decipher. It is extremely difficult to develope commiseration at home, for men on the receipt of £600 a year as a *minimum* salary. Broken promises are too often the subject of deploring speeches in the House, to be any novelty in the case of the N.-W. P. civilians. The matter has been a kind of nine days' wonder. A few people not before interested in India, have become aware that there still are such things as nepotism and corruption (in the sense implied by Mr. Lowe) among our Indian Governors, just as there are among politicians and men in office at home. A number of articles have been written more or less *apropos* of the subject, and the public interest in it has again died out. Perhaps five years hence we shall hear of it again, and the hopes of the wronged civilians will once more be raised, only to sink them in greater despair afterwards. The wildest expectations have been entertained by some of the aggrieved. One officer, who had by his own calculation lost Rs. 25,000 by the block in promotion, lately proposed that he and others in his position should compound with Government for a sum down of (say) Rs. 10,000. It is needless to add that the suggestion was received with polite derision by the authorities to whom it was addressed. Probably the only wise course to be taken by those who are now allowing themselves to be elated with hope, would be to curse their fate if they like, but to make up their minds to "grin and bear it." It is very doubtful if the wildest speculator would advance a rupee on the chance of any pecuniary benefit accruing to the civilians who have suffered so heavily. By the time any action is taken, these men will have either retired or died off, and as the present flock cannot last for ever, it will be asserted that matters have righted themselves. Those among the juniors who have any prospects of success in professions at home would do well to cut the service now, rather than grow old in it, and more and more deeply involved in debt, hopelessly waiting for the redress that will never come. "Hope deferred maketh the heart sick," and scores have cursed the day when they sacrificed their fair prospects of success at home for a career in India, which too late they now find must be one of grinding poverty and often of premature death—as did your correspondent,

AN UNWARY BIRD.

NOTE.—What does Sir William Muir think of this letter?—ED., *F. of I.*

THE OPIUM TRAFFIC.

To the Editor of the Friend of India.

SIR,—In its issue of 27th July the *Pioneer* makes the following remark on the Indian opium question:—

"It is evident from the tone of the recent debates in the House of Commons that English superstition on the opium question is rapidly dying away. Scarcely anybody now believes that our Indian Government, in its capacity of the leading opium firm in the East, is responsible for the moral and physical ruin of the Chinese. &c., &c."

I venture to challenge this sweeping statement which I believe to be both erroneous and misleading, erroneous, because it does not accord with the deep feeling of the English public on the opium question; and misleading because those who take no interest in the matter are ignorant of the real facts of the case, and are therefore likely to take this *ipse dixit* as a correct guide of English opinion on this important subject.

The very deep interest which has of late years been taken in England in the Indian opium traffic, is a fact which no well-informed journalist can possibly deny. Large and influential bodies from among all sections of the Church of Christ in Great Britain have again and again mooted the question at their assemblies. They have condemned the traffic as highly pernicious in its effects, and most immoral in principle. They are agitating the question by means of the press, the platform, and the pulpit, and honorable members of the House of Commons have dared to push the question on for parliamentary discussion. And though opposed by a ministry which is a great stickler for "vested interests" and "conservative measures," yet the little band who cry out against this imperial iniquity, feeling strong in moral power and by no means daunted by opposition, are sure that truth and morality will ultimately triumph over all monetary and mercenary influence.

As a further proof of the feeling abroad in England on this opium question, may be mentioned the fact that some of our leading public men have come forward to offer large prizes for the best essays that can be produced on the subject, the object being to lay bare before the reading public the iniquity of the opium traffic, so as to bring public opinion in a still stronger form to bear on legislation on the subject.

And why all this agitation in England about the Indian opium trade? Is it because the traffic is disastrous to the fiscal interests of the agitators? Have their hearts been moved in the matter because their pockets had to suffer therefrom? By no means. Contrariwise: the abolition of the Indian opium trade may possibly involve an increase of the English income-tax, and thus prove a financial loss to the abolitionists. They know this and still they agitate. Why? Can there be but one answer to the question? Because they are fully persuaded that this opium traffic is highly immoral, and that our Indian Government *is* in a large measure responsible "for the moral and physical ruin of the Chinese" in its mercenary capacity of the leading opium firm in the East.

And let me ask, are they singular and alone in this opinion? However lightly and flippantly this grave question may be treated by some classes of the secular press, to whom it may assume the shape of foolish "superstition," it is not at all certain that the higher powers who are immediately concerned in the question are disposed to regard it in such a light.

It is at least a fact that when some years ago a number of gentlemen in India sent up a petition to the Indian Government on the opium traffic, that Government acknowledged and deplored the many evils complained of, and said that it would gladly give up the traffic if means could possibly be devised by which to meet the loss that would result to the public exchequer. Such was then the opinion of the Indian Government, and, if I am not much mistaken, there are still those at the head of affairs who sadly deplore the traffic in opium, while some have mustered sufficient moral courage to introduce the subject for discussion into the Indian Council.

As to Imperial legislation on the question, it is quite possible that a dizzy Parliament, constituted chiefly by the representatives of rich brewers and "respectable licensed victualers," may feel itself too much hampered by promises to preserve "constitutional rights," or in plain English *self-interest*, to move hand or foot for the abolition of a traffic so closely akin to the roaring trade carried on by those to whose influence they owe their seats in the House of Commons. May we not however hope that barrels and bottles will not always exercise such power in high places and that the day will come when our rulers will scorn the thought of swelling the public revenue at the expense of the "moral and physical ruin of the Chinese," or of any other people whatsoever.

THOMAS EVANS.

Monghyr, July 30th 1875.

NOTE.—We have paid close attention to this opium question for 20 years, and formerly shared to some extent the views of the writer. We have long been satisfied, however, that they are mistaken; and that the manufacture and the trade should be left as they are. We may review the subject at length in a future issue.—ED., *F. of I.*

THE CHURCH IN THE MOFUSSIL.

To the Editor of the Friend of India.

SIR,—Your correspondent "Mofussilite" would seem to have narrowed the question of disestablishment to limits which make the matter easily considered, and as I conceive that the two points raised in his letter are the most salient in the whole question of Indian Church Disestablishment, and are also easily met, I desire to say a few words upon them in the order in which he has put them.

I. *Mofussil ministrations of Chaplains.*—Like "Mofussilite", *I* also have spent a number of years in the mofussil, and my experience of chaplains' religious ministrations, are far from leading me to set much value upon them. To begin with, the stations I have resided at, have never been visited above once a quarter by the Government chaplains, and then usually in such a hurried manner that there was scarcely time to see each of the residents at their own homes. Moreover, their pulpit ministrations have been notoriously dry. I could instance the case of one whom most of the residents prefer *not* to hear, the general beiief being that his sermons are made up of notes taken by random from some of the contents of his book-shelves, and strung together without any connection but the paper they are written on.

It happens further, that several *marriages* have taken place in the district I am now living, in during the seven or more years I have been here, but none of these have been solemnized by the chaplain. A missionary from the neighbouring district, or a minister from the Capital, has been the officiating priest on such occassions.

Moreover, in all cases of *baptism* the parents or guardins have had to bring the child to the sudder station to have the rite administered, involving in nearly every case as much expense as would have brought a missionary from the next district to perform this service also.

Now, I am far from assuming that every chaplain is like the one I have referred to, or that every district is similarly situated as to missionaries as this one. But what I do say is this, that the mofussil services of chaplains are next to *nil*, and missionaries are found performing their most important functions. Further, as "Mofussilite" puts it, some of the official prefer to have the services of a chaplain and of a doctor as part of their pay, but why should those who desire such services not combine to keep a chaplain or a missionary for themselves, the Government making good to them what is supposed to be cut from their salary to supply one or two religious services monthly, bi-monthly, or quarterly?

Here I should like to ask a few questions of "Mofussilite." Since when have the ministrations of chaplains been considered a part of your pay? What is the difference in the pay of one who enjoys your chaplain's ministrations thrice a month, and yours in the same grade who have them only once? What provision is made for religious ministrations to the Congregationalist the Baptist, or the Unitarian in your station in lieu of the money supposed to be cut from his pay for such a purpose? And if no provision is made for such parties as well as for you, is it not a hardship—not to say an injustice—that his pay should be cut similarly to yours without an equivalent? Would you force his conscience so that he must either take the distasteful spiritual food supplied by Government chaplains, or want? If so, why not carry out the principle and have Government cut so much from every officials' salary, and supply him from a general commisariat with whatever kind of food the heads may fancy?

"Mofussilite" is wrong when he supposes that missionary societies at home, would be displeased were their agents to occupy a part of every Sunday in ministering to English residents at their stations. On the contrary, the Societies well know that ministrations to Europeans are a stimulus to their agents, which elementary work, such as is required in most mofussil native congregations, does not furnish. And none feel this more than missionaries who are without English work.

II. The case of European troops. I set forward this as an indisputable *fact* that wherever troops in India are allowed the freedom of choosing their place of worship, the majority of those who are really in earnest about religion, do not choose to attend the ministrations of *Church of England* chaplains—At least I take Agra and Lucknow as instances; because we have there the greatest proofs perhaps of spiritual energy among the troops. The total abstinence movement has been most promoted in these places, and in such stations as Dehli and Bangalore; and those who have most busily promoted it, have been the men who attended dissenting places of worship.

Now as to keeping up the ordinances of religion in the army, it was only the other day that I saw a letter from Chunar, which stated that a handful of faithful men there, preferred to hold their own services to going to those of the chaplain. And they were not content to have only two services on the Sunday, but had other meetings in the week; all held in a room kindly granted them on their requesting it, by the officer in charge. I have no doubt that men such as these who care for themselves, will care for others also; and have only to cite such officers as Hedley Vicars, Havelock, and Wheeler, to show that there are not wanting in the army itself men who would look well to the spiritual well being of their corps were the Government aid withdrawn. On the principle of "Mofussilite" moreover, I take it that if the troops are charged for the maintenance of chaplains, they should be enfranchised to choose their own minister, and to pay him themselves.

Under the existing arrangement, religion is in most cases forced upon our troops to the extent they have it at all. The men are paraded, and marched to church, or chapel, by military order. It would be an interesting enquiry, and could be easily answered, how many British troops in India attend the voluntary services of the week? Further, what proportion of these attend the ministrations not provided by the State? We should have to wait till the experiment were tried ere we could answer a third question, how many men in the British army in India would be willing to subscribe towards the maintenance of their own religious ordinances? I maintain that until the trial is made, we have no right, especially in the present active state of the church, to assume that the European troops in India would in any way be sufferers by the withdrawal of the Government chaplains. The Church of England, whose enfranchisement is not far distant, (let us then call it the English Episcopal Church) and the other branches of the church, in Britain and America may safely be trusted to look after the troops as regards spiritual quickening, and the troops when quickened may be trusted to choose their own pastors and to pay for them. And should they under the new arrangement be rather diffierently circumstanced as regards *the loaves and fishes*, still *they will feel that they are ministering to* those who appreciate their services, while the men will feel that *they have a right* and an interest in them. As things now are, the Wesleyans care for Wesleyan troops, the Baptists for Baptist troops, &c. Why should not Episcopalians be allowed to care for troops of *their* faith and Presbyterians for theirs in the same way, without the interference of the State? Is it so that the three strongest churches—they themselves being the judges;—the Church of England, the Church of Scotland, and the Church of Rome—are the only ones that cannot get along without State crutches?

M. N.

DISESTABLISHMENT.

The Editor of the Friend of India.

SIR,—Your correspondent "Mofussilite," while professing, I observe, to agree for the most part with the principles advocated by me in former letters on "disestablishment," and while declaring himself a supporter of disestablishment principles "at home," finds a difficulty in the way of adopting them in India. He asks me "What are the practical measures you suggest, and how will they work under the various circumstances they will meet?"

I might decline to answer the question, on the ground that it is sufficient for the advocates of disestablishment to show that the control and support of religion by Government, are beyond its proper sphere. The State support of a church or religion is a political injustice; and this is true, apart altogether from the question as to how the Christian population of India is to b supplied with religious ministrations. The question for example, as to whether the traffic of Government in opium is right or wrong must not be mixed up, as it often is, with the question as to how the money is to be supplied if the traffic be abandoned. The former is a question of political morality; the latter a question of finance. So also the question as to whether Government should control and support religion, is one which has to do with the duties and functions of political Government; but the question as to how clerical ministrations are to be supplied to Christians in India, is one that has to do with the duties of Christian people as to the support of their own religion. "Mofussilite" may very conclusively show that people in the Mofussil are not able to support their own ministers and churches; but when he has done this he by no means has shewn that Government ought to do it with other people's money. A. may show very clearly that he cannot pay his debts, but that is a long way from showing that B. should pay them for him. That "Mofussilite" and his friend, should go without regular clerical ministrations may be very hard to them, just as many other things connected with Indian life may be; but it is not only hard, but unjust, that the Hindoo and Mussulman, or any "non-Christian," should be mulct of money by authority of Government to pay for, the support of "Mofussilite's" pastor. Clearly with "Mofussilite" the end justifies the means, at least in his own particular case. He is so pleased with the arrangement by which he individually and others in his position enjoy certain religious advantages, that he is not disposed to ask whether the money for this is obtained in accordance with, or in violation of, a great principle. The question, "What is to become of us if Government withdraw support from our clergy?" is evidently of more importance to him than the other question—"Is the action of Government in supporting our clergy by taxes just or unjust?" I think he should answer the latter question first. If he did so, he might then help "disestablishment," by trying to answer the former question for his own benefit and theirs.

But while the question of the political morality of Government in supporting a State church, is to be kept quite distinct from the question as to how the wants of the Christian population of India are to be supplied, I think the latter, as raised by "Mofussilite," is one of very grave importance. So far however, from finding therein an argument for Government support the conduct and policy of the State have actually prevented much better provision than is now made under the patronage of the secular Government. Had there been no State church in India, a man of "Mofussilite's" principles would never have thought of calling in the aid of Government to supply Christian ordinances for mofussilites or others. It is, I fear, because he has been "corrupted" by the existing state of things and become a believer in Pope's sentiment, "whatever is, is best," that he finds it difficult to imagine any better way of supporting Christianity than by the patronage of Government.

My answer as to what could be done if Government help were withdrawn is this: the resources of devout Christian people in India and their friends in Great Britian, are quite sufficient to supply all the Christian population in India with the means of grace. "Mofussilite" has but scant faith in Christian willing-hood if he thinks that a secular Government can do more for Christianity than the liberality of Christian people. That liberality has not been fully tested. It has been hindered very largely by the fact of the secular Government doing for the support of religion what Christian people should voluntarily do. So long as chaplains are supposed to look after the people, and the Additional Clergy Aid Society is regarded as only supplementing their work, you cannot expect the Christian liberality to be provoked to any great degree. The leaders of the churches of England and Scotland have done much to stop the flow of their people's liberality by taking the attitude of "waiters upon" Government, and by appealing to the people only to supply the shortcomings of Government, or when hope from that quarter has altogether failed. Let them throw themselves frankly upon the liberality *of the people, and they* will find that Christian willing-hood is a better support than Government *patronage*, as has been proved in every case by other churches.

I think I recognise in "Mofussilite" an esteemed correspondent who wrote me a letter lately, in which nearly the same arguments appeared as he puts forth in his letter to you. If I am right in my guess, I think the "difficulty he fears in the case of the withdrawal of Government aid, is much exaggerated. His district is a wide one, and is not supplied by a chaplain but by an agent of the A. D. C. S., who receives aid to the extent of only Rs. 150 per month. The salaries of the Christian gentlemen in Government service in that district, amount to above Rs. 22,000 per month. In addition to these, there are many indigo planters, contractors, and other residents. Suppose the incomes of all to be say Rs. 35,000: two per cent. on that sum would yield Rs. 700 per month, quite sufficient to pay for the support of a clergyman. I do not say that *all* would contribute at that rate; but (if my guess is right) such men as "Mofussilite" himself, who I believe gives away for Christian and benevolent purposes nearer 20 than 2 per cent of his income, might fairly be expected to make up for the deficiencies of less liberal, men. And I believe that there are such generous souls as he in nearly every station in India. Supposing that only one per cent. on the above sum could be raised, or Rs. 350 per month, I have not the slightest doubt that the other moiety would be forthcoming from England, if the people there knew that the Indian Government had withdrawn all aid; but only in that case. Nothing in my opinion has done more to stop the flow of money to the East, for the support and spread of Christianity than the patronage of the Church by the State. Can "Mofussilite" believe that the churches of England and Scotland, that raise their hundreds of thousands annually for the spread of Christianity among the heathen, could not or would not supply the men and money necessary for supporting Christian ordinance among their own countrymen? I believe that the £200,000 now annually drawn from Hindoos, Mussulmans, and others for the support of chaplains and other clergymen, would be more than doubled by the contributions of Christian people here and at home, if only they were made to feel that the obligation rested on them, and not on Government.

I know "Mofussilite" and churchmen generally, shake their heads at such extravagant faith in Christian willing-hood. All I can say is—that it is a faith amply warranted by experience in this direction. The Nonconformists of England and the non-established Presbyterians in Scotland, when they cast off the patronage and control of Government in matters of religion, did so in great doubt as to how ways and means were to be provided. But the success of the voluntary principle, has justified a much stronger faith than even they had in it. "Mofussilite" seems to think that in cities like Calcutta, Christians may be expected to do more for the support of their ministers and churches than in the mofussil. No doubt there are greater facilities there for gathering and keeping congregations together, owing to the larger population. But he is mistaken if he supposes that the voluntary principle succeeds owing to the greater wealth of the people. It is among the poor that it has its best supporters. I believe that if you compare the wealth of the members of self-supporting Christian churches in Calcutta with that of the Christian residents in "Mofussilite's" district, the latter would be able to support three clergymen instead of partly supporting but one, if they only gave as liberally as the Calcutta Christians.

I admit the difficulty arising from frequent changes among residents in the mofussil. What is wanted to meet this, is proper "organisation." Let contributions for the support of the clergymen only become a "custom," and there will be little difficulty about money. I believe military officers find no great difficulty in supporting a regimental band at their own expense, because it is regarded as the "proper thing" for each officer to give his contribution. Why should not a similar "custom" be established among moffussilites in regard to the support of the clergymen? That would be appealing to a rather low motive truly, but at any rate it would be better to obtain money in this way, than by taking it by taxes from people who have not the option of refusal.

There are many other points in "Mofussilite's" letter that invite discussion, but I cannot refer to them now. Your correspondent agrees with my "principles," but he wants "to know and consider the effect of the practical measures proposed [*i.e.*, disestablishment], before rashly following the principle." The "principle" which he is afraid of rashly following is *justice*, which is set at nought by the heathen being compelled to support the religion of the Christian. Can your correspondent be rash in following *that*? What should we think of a judge or jury being afraid of rashness in giving a just judgment or verdict, lest some of the parties concerned might be put to trouble? Would it be "just" for your correspondent forcibly to take a heathen's money to buy a Bible for his own or his neighbour's use, and then defend his conduct by saying that he must take the money in this way, until he found some better way of obtaining it? Would it not be better for him even to want his Bible than deal unjustly towards his neighbour? But the Indian Government is guilty of the same injustice in taking the money of the heathen millions of India to support a religion which they hate. "Mofussilite" asks if can I suggest a better way of supporting religion than doing it at the expense of the unwilling heathen? I ask him. Can he think of a *worse*? I am prepared to accept the principle he quotes from Robespierre with all my heart, though I wish he had quoted it from a better man: "*Perissent les Colonies plutôt qu'un principe.*" Rather than advocate a system by which Christianity is supported by the sacrifice of one of its first principles—justice—I would prefer to see churches and clergy banished from town, and mofussil and Christians left with their, Bible only. But the adoption of the principle of equal justice to all in matters of religion will involve no such disastrous consequences. Let Government cease attempting to provide religion for the people, and leave religion to provide for itself by its own great power on men's hearts and consciences. The result will be such as to set at rest all "Mofussilite's" doubts. More money and better clergymen will be forthcoming than are now to be had. I say "better clergymen," because we may well hope that the men who are the choice and the gifts of the church herself to the service of God will more purely represent the piety of the church than those appointed by a secular Government.

J. ROSS.

NOTE.—We apologize sincerely to Mr. Ross for our delay in publishing his excellent letter.—ED., *F. of I.*

INDIAN INTELLIGENCE.

BENGAL.

IT appears likely that a portrait of the late Dr. Stoliczka, as well as the bust already subscribed for, will be placed in the Asiatic Society's rooms here.

THERE is at last some prospect of an early realisation of the long projected scheme of a Zoological Garden for Calcutta. Sir Richard Temple, who fully recognises the importance of such an institution, has determined on taking up the land lying on both sides of the road leading into Belvedere for the purpose, and, if the public will only extend their support, there is no reason why the garden should not be ready in time to be opened by the Prince of Wales.

THE Freemasons of Bengal propose to erect a Masonic Hall worthy of the Capital of India. An association has been started for this purpose, and a capital of Rs. 1,50,000 will be raised to be divided into 1,500 debentures of Rs. 100 each. The building will cost Rs. 1,10,000. The fact that the project has been raised at this unseasonable moment seems to show that the Freemasons of Bengal intend to utilise the visit of the Prince of Wales in some way.

THE public subscription in Calcutta for the reception of the Prince of Wales already exceeds Rs. 59,000. We learn that the Municipality propose illuminating the following buildings and squares in their charge at an aggregate cost of Rs. 15,000 : the Municipal Market, the Town Hall, the Municipal Office, Dalhousie Square, Wellington Square, and College Square. The illumination of other parts of the town and the cost of the fireworks at the Race Stand will be defrayed out of the public subscription.

THE ship *British Viceroy*, while being towed up to her moorings by a tug, parted her hawser off Police Ghât, and fell into collision with the ship *Hooghly* and another ship at about 5-45 P.M. on Monday last, and at 6-20 she sank, bow foremost, off the said ghât. At present it is not known whether any lives have been lost, but considerable damage has been done to the other ships, one or two of them losing their spars. The unfortunate vessel was laden with salt from Liverpool. The crew saved themselves by boarding the neighbouring ships, who rendered every assistance that lay in their power.

THE finance accounts of India for the year 1873-74, recently issued, give the following statement of the established strength of the Army of India, exclusive of native artificers and followers: European army, 66,406, namely, 6,162 officers and 60,254 non-commissioned officers and privates; native army, 123,858, namely, 180 officers and 123,678 non-commissioned officers and privates, 208 of this last number being Europeans. The total is 190,264—namely, 6,342 officers and 183,922 non-commissioned officers and privates. The native army is described as constituted thus: 796 artillery, 166 body-guard, 18,435 cavalry, 3,219 sappers and miners, and 101,242 infantry.

THE recent attempt of a prisoner in the Bankipore (Patna) Jail to cause grievous hurt to the Superintendent, Dr. Simpson, affords another instance of the uselessness or inefficient working of the rule enjoining a careful classification of prisoners and the segregation of such of them as happen to be of a violent character. In the present case, the prisoner was already in jail on conviction of the very offence which he attempted to commit, namely, murder. If the iron weight which struck Dr. Simpson on the back had been heavy, the consequences might have been serious, if not fatal. The Government cannot have forgotten the murder of a Magistrate some years ago in the Alipore Jail.

THE Darjeeling paper asserts that the embankment for the Northern Bengal Railway is now finished for all practical purposes from the Ganges to Julpigorie. Plate-laying was begun on the line last month, at a point 60 miles north of the Ganges, up to which good water-communication is available, and from this place the laying of rails will proceed steadily and without a break to Julpigorie. Two engines are being constructed, and material trains will commence running next month. By the middle of next rains it is considered probable that it will be feasible to run a locomotive into Julpigorie. It is hoped that orders will be received for proceeding with the extension of the line from Julpigorie to the foot of the hills in time to allow of work being commenced next season.

THE Foreign Office has issued the following circular with regard to the exchanges of presents with native chiefs during the visit of the Prince of Wales: "I am directed by His Excellency the Viceroy and Governor-General in Council to communicate the following orders and instructions with reference to the exchanges of presents with native chiefs on the occasion of the visit of His Royal Highness the Prince of Wales to India. (2.) His Excellency the Viceroy and Governor-General is desirous that the expenses of the Native Chiefs who may be invited to Calcutta, Bombay, and elsewhere should be kept within the most reasonable limits possible. The Viceroy will therefore hold no ceremonial durbar; the exchange of presents, which is usual at durbars, will consequently not be made, but His Excellency will receive and return the visits of chiefs in accordance with custom in other respects. (3.) His Royal Highness will similarly receive and return visits according to the same custom and precedent which exist as regards the receipt and return of visits by the Viceroy; but there will be no exchange of presents, such as is usual when the Viceroy holds a durbar. (4.) It is probable, however, that princes and chiefs in whose States any special manufactures are produced will desire to present to His Royal Highness specimens of such manufacture; and other chiefs may also desire to present offerings to His Royal Highness. (5.) His Excellency the Viceroy does not wish to place any obstacles in the way of such presents being offered to His Royal Highness, but His Excellency is satisfied that it would be His Royal Highness's wish that such presents should not exceed in value a reasonable amount. (6.) These presents will not be dealt with in the usual manner by the Toshakhana, and should consist of such articles as it would be suitable for His Royal Highness to retain as souvenirs. (7.) It is necessary that the nature and value of the articles should be intimated beforehand to the Political Agent or other officer through whom the chief usually corresponds, in order that the pleasure of His Royal Highness may be taken. (8.) Except as provided in the preceding paragraphs, presents from princes and chiefs are not to be offered to His Royal Highness."

NORTHERN INDIA.

THE Peshawur correspondent of *Public Opinion* states that Arsulla Khan, the Gilzai Chief, has informed the Ameer of Cabool that Nowroz Khan is negotiating with the Akhoond of Swat for assistance, and may prove dangerous in time.

THE bund of the Ganges' bank was cut through on August 31 to allow the escape of the flood-water collected between Daragunge and Kydgunge, and is draining off 30,000,000 cubic feet water per day. It will take a fortnight to clear the submerged ground.

A SINGULAR epidemic has broken out among the feline tribe in Delhi, where cats are dying by the dozen. The symptoms are vomiting a watery substance, and in some cases purging followed shortly by death. We believe it is being enquired into by the doctors.

A FATAL case of cholera has occurred at Lahore in the European railway quarters. The railway line is to re-open on the 4th instant for through traffic. The damage by the flood at the town of Kussoor in the Lahore district is 2,100 houses out of a total of 5,000. The people are in great distress.

THE Prince of Wales brings out some half-a-dozen carriages with him and three favorite horses. His hosts here, says the *Pioneer*, will probably welcome relief from all responsibility for mounting His Royal Highness safely. Since the days when the Queen's huntsman declared of the Prince, "he *must* make a good King, sir, he's got such an uncommon nice seat," His Royal Highness has put on flesh and lost nerve in proportion.

THE latest news from Simla is that, as at present arranged, the Viceroy will leave that station about the 10th or 15th October, and proceed to Kumaon; from thence he will go to Bombay, where he will receive H.R.H. the Prince of Wales, and after a stay of a couple of days start for Mount Aboo, Odeypore and Ajmere, where he will be met by the Hon'ble Miss Baring. From Ajmere His Excellency and *suite* will travel, *viâ* Agra, to Calcutta, where he will reach in time to meet and receive the Prince of Wales.

CHOLERA is still present in various up-country stations; but nowhere happily is it severe, and save in the exceptional instances named below the health of the troops is everywhere good. Bhagoo, 5 European cases, all fatal; no fresh cases reported since 18th. Ferozepore, 3 cases, 2 fatal. Delhi, 7 cases, 5 fatal; and 1 native case. Further, a company of the 55th Regiment is moving into camp. Morar, 17 European cases, 6 fatal; 6 native ditto, 1 fatal. Cholera greatly abating in Lushkur. Lucknow, 7 European cases, all fatal: no fresh cases since 15th in camp or cantonment. Nowgong, 2 Europeans cases, both fatal: 3 natives, 1 fatal.

AN Allahabad correspondent tells us that some of the soldiers in the Fort have fallen victims to a mysterious disease resembling cholera. He attributes this to "malignant malaria," and says that "the underground compartments of the Fort excavations, or whatever else they may be called, have been the receptacles of the vilest filth for ages. When dry all this was of course comparatively harmless, but the late floods having liquefied the mass, a sickening stench arises therefrom. Besides, the alluvial deposits left by the late floods all round the Fort must, now that we have the sun shining, throw up exhalations injurious to the men located within the Fort walls."

THE Lahore paper publishes a rumour "from Simla, which would, if true, tend to explain the recent attack on Sir Douglas Forsyth, which appeared in the columns of our Allahabad contemporary. The story is that Sir Douglas Forsyth was instrumental in discovering to Lord Northbrook the sources from whence the attacks upon the policy adopted by the Government during the recent mission of Mandalay were inspired, and that, in consequence, certain high officials were severely hauled over the coals by Lord Northbrook, and strictly cautioned against supplying information of a confidential nature, or in future in any way inspiring the press. Should this report be correct, as many believe it to be, our contemporary's loss of temper with Sir Douglas Forsyth may be at once accounted for."

THE Chemical Examiner at Lahore does not appear to have been able to make anything of the suspected substance found in the late Colonel Colyear, and has sent to Simla for further information. Suspicion was first aroused by the discovery in the stomach of a considerable quantity of some dark green vegetable, which could have formed no proper part of the strict diet on which deceased was being kept by the medical adviser, who had been attending him for some days before his death. This vegetable cannot be identified by the analysts. Considering how difficult medical science finds it to cope with the subtlety of the native poisons, we do not suppose that even if the Colonel was the victim of foul play, it is at all within the bounds of probability that the crime will be brought home to anybody. A correspondent of the *Pioneer* "hears that his affairs are in a very unsatisfactory state. His sole executor had been at variance with, or at least estranged from, him for the last twenty years until a very short time before he died. The gentleman who bears his name is the illegitimate son of a medical officer. Colonel Colyear had (as I dare say you have heard) been divorced from his wife, and though he took her back, I believe he never remarried her. Under these circumstances I am told by one who should know the law, that there is no legal claimant to a valuable portion of his house property, which was not, it is said, mentioned in the will. Taken altogether it is 'a pretty kettle of fish to fry,' and no doubt the

Administrator-General of Bengal will ultimately step in and find room to assert his rights.

A LAHORE correspondent of the *Pioneer* says: "The railway were all cut through, the telegraph wires all broken down, the station of Lahore put into such complete quarantine as no Sanitary Commissioner ever hoped for, and the boats belonging to the ordinary bridges on the rivers went on private cruises of their own to visit distant inland villages. The race of pigs has become nearly extinct, and the very snakes have been despatched to their peculiar Hades to such an extent, that one Sub-Collector submitted a bill for Rs. 300 for the destruction of their carcases at the rate of two annas apiece. It is said that about two thousand houses have been destroyed in the city of Lahore. The number of houses which have been destroyed in the surrounding villages cannot be easily calculated, and must be exceedingly great. The cotton, *mot*, and *jowar* crops have suffered severely from submersion; but, on the other hand, the taller crops which have survived have benefited, and future sowings have been greatly facilitated. Even in European houses the inconvenience felt has been great—the safest place of residence, in some cases, being beneath substantial tables. In other cases, fair women and brave men sat down to social repasts protected only by umbrellas. Railway and other engineers have been afflicted with water on the brain. A coating of blue mould is generally perceptible. Traffic Managers have been the greatest sufferers. The belief in the universal deluge has been greatly strengthened. One gentleman offered to give a capital shower-bath on the back of his billiard table and a nice dry place underneath for the subsequent toilet operations. An unfortunate Judge starting for the hills found his course on all sides intercepted on arriving at Umritsur. He could neither move backward nor forward, and was finally only able to proceed on an elephant. Three young men bound for Murree crossed the Ravee by the railway bridge with the smallest modicum of luggage each, and, mounted upon two mules and a donkey, eventually succeeded in reaching a dry island fourteen miles from Lahore, with the loss of only one sowar. They saw about a hundred head of cattle lying drowned on the Grand Trunk Road. Altogether the perils of travelling have been not insignificant. All surplus infant population has been disposed of on true anti-Malthusian principles on this occasion. Every one since the flood has remained at his post from the simple difficulty of getting away. Whoever got hold of a post was to be seen sticking to it with the most affectionate solicitude."

BOMBAY.

GRAVE apprehensions, amounting almost to a certainty, are entertained as to the loss of the S.S. *Coromandel* which left Bombay on the 30th June for England *viâ* the Suez Canal. She is believed to have foundered or been otherwise lost in the Arabian Sea.

A CONTEMPORARY states that offers have been made to the owners of hired conveyances in Bombay for securing carriages for the use of the followers of Rajahs and Native Chiefs, who are to come to Bombay to receive the Prince of Wales, on payment of Rs. 40 and Rs. 50 per day for a *shigram*, but the owners decline to bind themselves even to supply on payment of such exorbitant fares.

THE Poona Fine Arts Exhibition was opened by the Governor of Bombay on Thursday last without ceremony. The collection of pictures is small, but includes some of good quality. The Governor's prize for the best picture was won by Major Tanner; the first prize for water colors by Colonel Hancock; the other prizes by Mr. Peyton, Captain Pullan, Sergeant Chard, and Mr. Peile.

WE see it stated that six Clerks of the Calcutta Foreign Office (four Christians and two natives) have been suspended on suspicion of having communicated information of a secret and confidential nature to the *Times of India*. A contemporary inquires whether this information may not just as likely have oozed out from the office of Messrs. Jefferson and Payne, the solicitors at Bombay.

THE Ahmedabad people intend holding a meeting to consider the reception of the Prince of Wales when he visits that city. In consequence of a combination amongst the glass-dealers, the Reception Committee have telegraphed to England a large order for glass-tumblers for illuminating purposes. The estimated cost of the reception is over a lakh of rupees, of which forty-seven thousand have been promised as subscription up to date.

FROM the estimates prepared by the Prince of Wales's Reception Committee at Bombay, it appears that the number of school children to attend the proposed *fête* to be given them will be about 7,000 of both sexes. Of these 2,000 will be Christians, 2,000 native girls, and 3,000 native boys. The cost is estimated at Rs. 12,000, namely, Rs. 3,500 for cakes, ice-cream, and sweetmeats; Rs. 2,000 for carriage and railway fare for, say, 4,000 children; Rs. 3,000 for decorations, invitation cards, &c.; Rs. 2,000 for coolie and cart hire of benches, &c.; Rs. 1,500 for contingencies, which will include two sums of Rs. 100 each for prizes in Guzerathee and Mahrathee of "Welcome Prince."

THE official news from Aden up to the 18th August says: "Three Egyptian vessels are reported to be at Zeyla. A considerable body of the Khedive's troops are at Taghoosha, a fort on a headland about twelve miles to the westward of Zeyla, and it is understood an Egyptian officer of rank will proceed with some of them to Hurrar, and then return to Berbera. Aboo Bukur has been appointed Governor of Zeyla, which has been declared a free port for one year. The Foodhlee Chief proceeded a short time ago in force to open the Nazaa stream which had been closed by the Yaffaees for some time past. The latter attacked the Foodhlees, and were defeated with a loss of twenty killed and many wounded. On the side of the Foodhlees five were killed and three wounded. The skirmish is said to have been a hand-to-hand one. A dispute arose a few days since between the Sultan of Lahej and some of Azaibee tribe at Fioosh, connected with the tenure of land, in which one of the latter was killed and several wounded. The affair has been settled for the present. The S.S. *Rozario* arrived in port on the 15th August, forty-six days out from Tuticorin. She ran short of coal, and anchored under Ras Hafoon for sixteen days. On the monsoon moderating, she got up steam, and consumed nearly 400 bags of coffee with extra spars, cocoanut-oil, &c., and so reached Aden."

MADRAS.

THE Maharajah of Travancore will leave his capital for Madras to meet the Prince of Wales on the 22nd November, and will visit Calcutta, Benares, Delhi, and other places in Upper India, returning to his own territories in February.

AT a meeting held lately in the Memorial Hall, Madras, the Amalgamated Railway Society's Memorial to the Indian Government on behalf of all unemployed Europeans and Eurasians was adopted and signed. The Hon'ble J. Coleman presided. A resolution, recommending the establishment of an Indo-European Association for all India, was carried.

MAJOR BERTIE HOBART lately went to Oossoor to purchase horses for the Duke of Buckingham. Twelve horses have been purchased from the Remount Depôt at a cost of Rs. 8,400, or at Rs. 700 for each horse. The value of the horses will be deducted from the Duke's salary in five equal monthly instalments in accordance with orders issued by the Government.

THE Ooty season seems to have been an unsatisfactory one up to this. The shop-keepers complain that there has been little or no business. Misquith's rooms were not engaged on any one occasion, and the enterprising owner, disgusted no doubt with the selfishness of the visitors, intends partitioning the spacious rooms in which people often tripped on the fantastic toe, and letting them out to those who need spacious apartments to live in.

ALTHOUGH in some places in Wynaad coffee estates will yield good returns this year, the prospects of the general outturn are said to be bad. Leaf disease, of which nothin ghas been heard for some time, has not re-appeared, but is said to be spreading. The estates on the Coonoor and Kotgherry side have suffered very much from want of rain. In the Ochterlony Valley, where the rainfall is about 60 inches below the average, and where the crops are exceedingly good, planting out has entirely failed for want of rain, and this may be said of the majority of estates.

MONKEYS have so much increased in number in Shrerungam that a reward of Rs. 1,000 has been offered for the deportation of these animals within six months' time. About eight years ago the monkeys of Bangalore were deported at the cost of 2 annas per monkey. But they have again increased, and molest women and children, besides doing a great deal of mischief to fruit gardens, &c. A large brown monkey is, says a local paper, in the habit of visiting the dining-rooms of houses in the infantry lines and annex whatever it lays hand on. The police are afraid of it, and say that the monkey must be regularly prosecuted under the Penal Code, and that they cannot arrest it.

THERE are various rumours afloat as to the results of the first crushing of quartz by the Alpha Gold Company, and some people are inclined thoughtlessly to blame the directors for not making the results public. "We (*Neilgherry Courier*) believe the truth to be that two conditions combine to render any statement at this juncture somewhat difficult. In the first place only surface-quartz was taken instead of, as was suggested by some of the shareholders, from a considerable depth below the surface. In the second place it is considered that the process of washing the quartz has not been perfected, and that consequently much of the finer gold escapes. It follows, therefore, that the company's first operations cannot be taken as a fair test of the outturn of the reef. We hear that a very promising vein of gold is now receiving attention. There is naturally a very great deal of interest taken by the public in the operations of the Alpha; up to the present time enough is known to warrant others in prospecting for the precious metal in neighbouring localities."

MR. BALLARD appears to have terminated his by no means successful reign as Resident of Travancore, by a proposal that is likely to terminate territorial disputes between the Native States of Travancore and Cochin. He suggested that each State should, in the first instance, prepare its own case in respect to each of the disputed localities, and having done so appoint a special officer of standing to meet on the spot an officer to be deputed by the Madras Government, and discuss the points involved. He recommended that the Government officer be a Covenanted Civilian of the grade of Head Assistant Collector, and be appointed Special Assistant Resident for the time being. As a condition precedent to the carrying out of this arrangement, both States should be required to enter into a formal agreement to abide by the Resident's arbitration. The Government have now sanctioned Mr. Ballard's proposal, and it is believed that the two Sirkars will consent to it. The *Western Star* remarks: "It is gratifying to know that there is at length a fair prospect of the settlement of a much vexed question, and we cannot too highly commend the action of Mr. Ballard in having initiated so satisfactory an arrangement before yielding up his control over the affairs of these States."

THE *Madras Mail* has received further particulars of the disaster at Mahalingam, when a number of pilgrims were caught by, and drowned, in a freshet. The current swept down with fearful velocity, washing down stones and masses of earth in its onward course as it leapt from rock to rock; but even in that perilous juncture a few pilgrims plunged into the water to save their drowning friends. One plucky young fellow in particular plunged thrice

into the stream, and dragged three persons to the shore; but we regret to add he was swept away at the fourth time, when, wearied by his exertions, he could no longer withstand the current. After the freshet had subsided, the Saptoor zemindar, who was present at the scene with his retainers, helped in the melancholy task of removing the dead, who lay scattered here and there in the river bed. At a certain place in the side of the torrent, where the bank caved into a hollow, some twenty corpses lay in a heap huddled together; a little further on was a dead body jammed between rocks; some bodies bearing marks of fearful injuries were found at the bottom of the first drop of the stream; in short all along its course till it emptied itself into the Watrap tank were to be seen the remains of the unfortunate pilgrims who had been all life and devotion only ten minutes ago. The catastrophe, sudden and fearful as it was, did not deter some rascals among the crowd from making away with the clothes and ornaments of the deceased. Under pretence of searching for friends and relatives, they robbed the dead in broad daylight, and in some cases cut off noses and ears, the more readily to effect their purpose. The police, headed by a European official, appeared on the spot the third day after the disaster. Of the Madura pilgrims, 15 silk-weavers, 10 brick-layers, and 5 oil-mongers were carried away; and the total number of persons who lost their lives may safely be put down at 150.

ASIA.

THE Wissar Expedition has returned to Tashkend after two months' stay in the reconnoitred principality. They returned by Kobalan, Baisun, and Shansisabsk.

AS a confirmation of the report that the negotiations for the enquiry into the murder of Mr. Margary have been suspended, we are informed by the *Pioneer* that Colonel Horace Browne may be expected in Calcutta in about seven days from his journey to Shanghai.

A BERLIN telegram to the *Times* says it is believed that the Russian Government contemplate forming a commercial road through the Yunnan Provinces of the Chinese Empire, which the Calcutta Government has been so long desirous to reconnoitre. Co-operation with England and, if necessary, coercion of China, seems to be advocated in influential quarters at St. Petersburg.

THE Berlin correspondent of the *Morning Post* says: "The Russian Government has once more, in a very decided tone, appealed to the Government of China to satisfy its claims for compensation arising from the plundering by the Chinese of a Russian caravan near Shicho in 1872. The Russian demand is coupled with a threat to suspend diplomatic intercourse with China.

YAKOOB KHAN seems to be more than a match for his "Celestial" foes. The fact of the Chinese expeditionary force against Kashgar building quarters, sowing grain, and awaiting a harvest before resuming its march is highly suggestive of the proceedings of the Alphonsists in Spain, who seem to require at least half-a-year's rest after each engagement with the Carlists.

THE *Moscow Gazette* says that as the Merv-Turcomans continue their depredations in the Amoo Darya country, notwithstanding the promises given to the Chief of the Kranovodsk district, they must be prepared to find themselves held responsible for their intolerable conduct. The expeditionary force, we are further told, will have to march along the Attreck and the Kurendagh Hills, whence there is a practicable road to Merv.

THE semi-official *Journal de Saint Petersbourg*, commenting upon a recent leader in the *Times*, says that the only rational policy for England and Russia, is to make common cause against the Mussulmans and other subject nationalities in Asia. Before determining upon a different policy, we are counselled to remember that while Russia can bring the strength of her 70 millions to bear upon her few Mussulman subjects, England is separated from India by the ocean. The *Moscow Gazette*, which speaks with hardly less authority, says that both England and Russia may be congratulated upon, Mr. Bourke having in his recent speech abandoned the theory of an intermediate zone between the English and Russian possessions in Asia. The establishment of such a zone must have necessarily engendered fresh suspicion, and led to fresh difficulties between the two Powers. Mr. Bourke having likewise the most friendly sentiments towards the Russian Government, it was to be expected that the abolition of the neutral zone would not cause him to prefer any demands incompatible with the position and dignity of Russia.

THE *Allgemeine Zeitung* makes some comments on the cession by the Sultan to the Khedive of the port of Zelia, and as much of the surrounding territory as he desires consideration of an annual tribute of 15,000, Turkish lire. Zelia, situated at the extremity of a peninsula on the Somala coast, has 5,000 inhabitants. Although in Africa it was ever considered a dependency of Yemen, on Mehemet Ali occupying the latter the payment of tribute ceased. On the Turks re-occupying Hudeida and Mocha, a Mocha merchant was nominated Governor of Zelia, paying 800 lire annually to the Governor of Hudeida; but his exactions caused the port to be deserted. About 1848 Schen Markab, a Somala merchant, became governor, and being an English subject, his ships hoisted the British flag, and the place grew in importance. Last year, the Khedive sent a vessel to blockade the neighbouring port of Berbera, but desisted, not wishing to come in conflict with the English Government. The interior of the country is under several chiefs, over whom the Resident at Aden exercises great influence. The future of these rich districts, which produce coffee, gum, ivory, wool, &c., depends on the relations of Egypt and England. They are likely, in the hands of the Khedive, to make great advances, and whether Abyssinia, now more closely than ever encircled by his dominions, will retain its independence is doubtful.

ECCLESIASTICAL.

THIS is the latest account of the attack upon Lieutenant Conder's survey party: "It took place at Safed, six or seven miles north-west of the Lake of Galilee, in the afternoon of Saturday, July 10th, very shortly after the arrival of the party there. Our people were fifteen in number—Lieutenants Conder and Kitchener, R.E., Corporals Armstrong, Brophy, and Junor, a native scribe, the dragoman, cook, grooms, and other servants. The attack was entirely unprovoked, but of a very savage character, and appears to have arisen simply from the fact that the party were Christians. Sticks and large stones were freely used by the Mussulmans, and later in the fray firearms, scimitars, big knives, clubs, and other weapons. Our people were unarmed, and seem to have conducted themselves with great courage, temper, and judgment under very trying circumstances. The fight lasted half an hour, and several hundred people collected. At the end of that time some Turkish soldiers arrived with Herr Cigal, the English Consular Agent, which at once put an end to the disturbance. Nine were hurt on our side. Lieutenant Conder received two wounds on the head, and a violent blow on the neck, causing much suffering and swelling; Lieutenant Kitchener severely bruised on thigh and arm; Corporals Armstrong and Brophy bruised: Arab servants very much hurt with stones and sticks. About £30 worth of property missing. The next day Lieutenant Conder retired to Medjdel Karum, and the day following to Caiffa in the Bay of Carmel. Though nearly all were more or less hurt, it is hoped that no one is seriously injured. Dr. Varton, of Nazareth, was attending them at the date of our last and only advices. Lieutenant Conder had lost no time in sending a full account of the transaction to the British Consul-General at Beyrout, and a telegram from that gentleman to Lord Derby has been for warded to the fund by Lord Tenterden, saying that measures have been taken "to secure the arrest and punishment of the assailants." It is much to be hoped that this intention will be promptly followed up. True, the attack is the first serious one which our exploring parties have met with during eight years, but it is all-important that such attempts should be stopped at once, and that these fanatical peasants should be shown that they cannot hurt harmless Englishmen with impunity."

MILITARY ORDERS.

BAILEY, Major W. S., furlough for thirteen months and two days.
BELLASIS, Lieut. G. M., admitted to the Bengal Staff Corps.

HIGH COURT,
Calcutta, 28th August 1875.

F. S. COLLIS,
Offg. Administrator-General.

BONUS YEAR 1875.

INCORPORATED BY ROYAL CHARTER AND SPECIAL ACTS OF PARLIAMENT.

NORTH BRITISH & MERCANTILE INSURANCE CO.

ESTABLISHED 1809.

President—HIS GRACE THE DUKE OF ROXBURGHE, K.T.

Vice-Presidents.

HIS GRACE THE DUKE OF SUTHERLAND, K.G. | HIS GRACE THE DUKE OF ABERCORN, K.G.

Chairman of the General Court of Directors.

THE RIGHT HONORABLE LORD LAWRENCE, G.C.B., G.C.S.I.,

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

GRATEFUL—COMFORTING.

ALL BILIOUS COMPLAINTS and every disorder depending on either functional derangement of the Liver or obstruction of the hepatic or biliary Ducts, such as Indigestion, Jaundice, Heartburn, Dyspepsia, Pain in the Right Side and Shoulder, Blotches, Habitual Costiveness, Offensive Breath, Depression of Spirits, Oppression after Meals, Nervous and General Debility, Restlessness, Wasting, &c. &c., have their appropriate remedy in

Dr. E. J. LAZARUS'S

ESSENCE OF CHIRETTA.

That it is the only preparation that has a really *beneficial* influence on the Liver has already been proved, *beyond all doubt*, by the 97,500 cases in which it has been tried. It has already saved *thousands* of valuable lives (*see the numberless Testimonials in the Pamphlet of Directions that is wrapped round each bottle*), and has enabled very many thousands more to continue their residence in India in the enjoyment of perfect health and comfort; hence it has, with all truth, been generally styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the Medical Hall, Benares, from the original receipt of E. J. LAZARUS, M.D., and sold by all Medicine Vendors at Rs. 4 each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof of its value*—against whom the Public are warned. Please observe that every bottle is capsuled, and bears on its labels the facsimile of our signature.

THE GRAND INDIAN ALTERATIVE TONIC.

DR. E. J. LAZARUS'S

ESSENCE OF HEMIDESMUS.

THIS preparation of the INDIAN SARSAPARILLA UNUNTAMUL is equal, if not superior, to the more costly Jamaica or Honduras Sarsaparilla. INDIAN MEDICAL AUTHORITIES, *both European and Native, with one accord bear testimony* to its valuable alterative tonic, diuretic and diaphoretic properties, pronouncing it a most efficacious remedy in all those diseases arising from an *impure state of the blood*, and most strongly recommend it in SCROFULOUS COMPLAINTS, BOILS, PIMPLES and BLOTCHES of the SKIN, CONSTITUTIONAL DEBILITY, CACHEXIA, especially of children. CONSTITUTIONAL SYPHILIS, CHRONIC RHEUMATISM, certain diseases of the Skin, &c., &c.

Prepared only by Messrs. E. J. Lazarus and Co., Medical Hall, Benares, from the original receipt of E. J. LAZARUS, M.D., and sold by Medicine Vendor at Rs. 2-8 per bottle.

NOTICE.
RANGOON MUNICIPALITY.

SEALED TENDERS are invited for the supply of twenty thousand tons, or 400,000 cubic feet of Rubble or Ballast Stone (Bombay trap being preferred or stone of equal quality) for Road metal. Delivery to be taken in boat at ship's side. Tenders to state clearly the price per ton of 20 cubic feet.

Tenders will be received up to 12 o'clock noon on the 15th November 1875.

By order,
O. D. CHILL,
Executive Engineer, Rangoon Municipality.

Rangoon, the 5th August 1875.

RANEEGUNGE FIRE BRICKS as supplied to Government and the various Railways, Iron Works, and Coal Gas and Steam Navigation Companies. Price—Rs. 9 per 100.

Extract from Official Report of tests made at H. M. Calcutta by THEODORE W. H. HUGHES, ESQ., F.G.S., A.R.S.M., Officiating Deputy Superintendent, Geological Survey, India.

"The Fire Bricks tested by me were furnished by the Firm of Messrs. BURN & Co." * * * *"The materials from which they are made are very refractory and capable of resisting high temperature without sensibly fusing"* * * * *"That compared with Stourbridge Fire Bricks they are somewhat superior."*

The specimens were subjected to a temperature of over 3,000 deg. Fht., the smelting point of Cast Iron being 2,786 deg. Fht.

Apply for the above and for Raneegunge Salt Glazed Stoneware imperishable Drainage Pipes to

BURN & CO.,
7, Hastings' Street, Calcutta, or
Raneegunge Pottery Works, Raneegunge,
E. I. R., Bengal.

Northern Bengal State Railway.
Petty Contractors wanted for Brick-moulding.

NATIVES, with command of labour, wishing to undertake the Moulding, Stacking, &c., from 10 to 50 lakhs of bricks, are invited to submit Tenders to the Office of the Engineer-in-Chief, Darjeeling, before 30th September 1875.

Most of the work will be at a point about 120 miles north of Kooshtea.

Each Tender is to mention distinctly the price for Tempering, Table-moulding, placing on Hacks, Skintling, and loading Kilns, and must contain Rs. 200 as earnest money, which will be returned if the Tender is not accepted.

Ample security for the execution of each contract will be required in proportion to the amount of work tendered for.

Tenders to be registered and marked "Tender for Brick moulding."

JAS. G. LINDSAY, Major, R.E.,
Engineer-in-Chief.

Northern Bengal State Railway.
NOTICE.

SEALED Tenders are invited for the supply of the undermentioned Scantlings and Planking rough from the saw; all to be of the best seasoned Teak, free from flaw or failure of any description:—

THE INDEPENDENT ORDER OF GOOD TEMPLARS.

PRINCIPLES.—Total abstinence, enforced by a life-long pledge, and the absolute prohibition of the manufacture, importation, and sale of intoxicating drinks.

POLICY.—Broad, allowing Lodges to act according to locality, times, and circumstances.

BASIS.—Non-beneficiary, the object being to do good rather than to receive benefit.

FINANCIAL SYSTEM.—Entrance fee may be as low as Re. 1. Quarterly subscription—Males, 12 ans.; Females, 8 ans.

ELIGIBILITY.—Male and Female are admitted, and are on a perfect equality as to eligibility for office, &c.

MEMBERSHIP.—About 800,000 Members, including Military Officers, Clergymen, Governors, College Professors, Lawyers, Directors, Merchants, Clerks, Soldiers, Sailors, and Mechanics.

SCOPE.—The Membership is fraternal, all being entitled to the privileges of the whole Order.

MODE OF WORK.—Employment of competent Lecturers, printing of temperance works, and formation of temperance libraries.

RESULTS.—The violations of pledges amount to only about 5 per cent. annually.

MAIN SERVICE FILTERS.

Fig. 10, No. 30.

Rs. 125, *Rs.* 165, *Rs.* 250, *Rs.* 375 *each.*

The Main Service Filters can be attached to a Cistern or the Main Supply Service Pipes, and are capable of giving with a 10-feet pressure from 30 gallons upwards per hour.

BIRD'S PATENT HYDROSTATIC WATER PURIFIERS.

Rs. 22 *each.*

The above being cased with Britannia-metal ware, with flexible metal tube, and when packed only occupying a space about 12 by 6, are very convenient for travelling; and as they will filter a large quantity of water during the day, are worthy the notice of Commanding Officers for Troops when marching.

SOLE MANUFACTURERS OF

DR. F. N. MACNAMARA'S PATENT WATER FILTERS.

Rs. 38 *each.*

The above Filters are now very extensively used for purifying water for H. M.'s Regiments; they act rapidly, delivering upwards of 20 gallons per hour. For Schools or Public Institutions, where large quantities of pure water are required, we strongly recommend them as simple, thoroughly efficient, and very reasonable in price.

Ten per cent. Discount off the above prices for Cash.

PRINCE OF WALES'S
ROYAL VISIT TO INDIA.

P. W. FLEURY & Co.,

BUILDERS, ENGINEERS, MANUFACTURERS, AND EXHIBITORS OF

ELECTRIC LIGHTS,

PATENTEES FOR AN IMPROVED METHOD OF EXHIBITING

TRANSPARENCIES,

REPRESENTING

PRINCE OF WALES'S PLUME,
PRINCE OF WALES'S
COAT OF ARMS,
PRINCE OF WALES'S
CHROMATROPE REVOLVING CROWNS,
AND
OTHER COATS OF ARMS.

P. W. FLEURY & Co.

BEG respectfully to offer their services to the Maharajahs and Princes of India, and Chairmen of Municipalities, for brilliantly illuminating, by the agency of Electricity,

10,000 running feet

of roadway, and for decorating Buildings within that space with appropriate Devices and Designs.

Our charges for exhibiting our Revolving Chromatrope Stars, Lights, Ornamental Welcomes, Prince of Wales's Plumes, Crests, Coats of Arms, and other Transparencies will range from

RS. 50 to RS. 400 EACH.

With reference to our Patent, which was filed by the Secretary to the Government of India, on 7th August 1875, for an improved method of exhibiting for exterior Illuminations Transparencies, &c., we beg respectfully to invite the Chairman or Agents of Municipalities and other Committees, the Merchants, the Editors of Journals, Executive Engineers, and Agents of the Maharajahs of India, to witness the effects of our Transparencies, which we are prepared to exhibit at No. 62, Wellesley Street, Calcutta, for the inspection of our constituents and parties who are desirous of engaging our services.

Our Mr. Fleury and his staff of experienced Assistants will superintend and carefully carry out all arrangements entrusted to them in any part of India.

ST. XAVIER'S COLLEGE, 10 *and* 11 *Park Street.*

MY DEAR MR. FLEURY,—I very willingly give you the certificate you ask from me regarding your Electric Light and your Tranparencies. I think that your appliances are very good, and I may add, I know by experience, that your Electric Batteries never fail to give a strong and steady light.

Yours sincerely,

Calcutta, 13th May 1875. E. LAFONT,
Rector.

OPINION OF BRADFORD LESLIE, Esq., C.E.,

Chief Engineer, Calcutta Municipality.

I have been much pleased with the Transparencies exhibited by Messrs. P. W. FLEURY & Co. The designs are tasteful and carefully drawn, and the chromatic effects both varied and beautiful.

Calcutta, 9th August 1875. BRADFORD LESLIE, C.E.

Letter from Chevalier Blondin's Secretary.

P. W. FLEURY, ESQ.

DEAR SIR,—Mr. Blondin wishes me to inform you that the Electric Light with which you lighted his Tight Rope Performance on the Maidan from the Ochterlony Monument last Tuesday, 13th, was all that could be desired, and a perfect success—a proof of your perfect mastery in the management of such a difficult task, and with Mr. Blondin's thanks for your kindness to him,

I remain, &c.,

GREAT EASTERN HOTEL, NIAUDE,
Calcutta, 17th January 1874. *Secretary.*

Calcutta, 28th December 1869,

MESSRS. P. W. FLEURY & CO.

DEAR SIRS,—On the night of the general illumination of this *City in honor of* the arrival of His Royal Highness the Duke of Edinburgh, you supplied us with four Transparencies, showing a Crown, Stars, &c., and the word "Welcome." The effect of these was decidedly rich and satisfactory. The machinery by which changes of light and design were thrown into each device worked as truly as anything possibly could, so that there was no interruption of any kind in a trial of five hours.

We express our complete satisfaction with them.

Yours, &c.,
F. & C. OSLER.

P. W. FLEURY & CO.,

No. 62, WELLESLEY STREET,

AND

No. 44, FREE SCHOOL STREET, CALCUTTA.

CALCUTTA METAL MART.

THE undersigned have a large stock of Machinery, Metals, and Miscellaneous Articles of all descriptions, and are prepared to give estimates, or contract for the supply of any materials which they have not in their godowns.

They are also prepared, for a moderate commission, to import any articles from England at actual cost, and are in a position to get the best quality at the lowest possible price.

The following are generally in stock or on the way :—

Portable Engines.

Clayton & Shuttleworth's

		4 H. P.	6 H. P.	8 H. P.	10 H. P.
Prices, with Single Cylinder	Rs.	2,700	3,250	3,900	4,500
		10 H. P.	12 H. P.	16 H. P.	20 H. P.
Do., with Double Cylinder	Rs.	4,750	5,000	6,250	7,500

Reversing Gear.

Extra, at Rs. 200 to Rs. 400, according to size.

Stationary Engines.

Tangye's (suited for Tea Gardens), with vertical boiler mounted on base plates, occupy little room, and are well adapted for use with Tea or other machinery requiring small power. Fire-places are constructed to burn either wood or coal.

		2 H. P.	3 H. P.	4 H. P.
Prices	Rs.	1,400	1,500	1,650

Fire Engines.

Holman's, with suction and delivery hose complete.

Centrifugal Pumps.

Gwynne's—are largely used all over the world where a rapid discharge of water is wanted.
A 6-inch pump worked by a 6 H.P. Portable Engine will discharge about 700 gallons of water per minute.
A 7-inch pump worked by an 8 H.P. Portable Engine will discharge about 900 gallons per minute.
An 8-inch pump worked by a 10 H.P. Portable Engine, will discharge about 1,100 gallons per minute.
Prices, with pipes and other fittings complete.

	4 in.	5 in.	6 in.	7 in.	8 in.	10 in.	12 in.
Rs.	460	600	750	900	1,050.	1,300	1,500.

Centrifugal Pumps.

The same sizes, but of slightly different shape, may be had mounted on wheels, and will be found useful by Contractors and Engineers who require Portable Pumps.

Special Steam Pumps.

Tangye's, are very compact and simple in construction.

Disintegrators.

Norton and Hawksley's for grinding to a fine powder artificial manures, ores of all kinds, shale, asphalte, lime, chalk, coal, coke, clays, barks, myrobalans, leather, drugs, sugar, seeds, and grains of all descriptions, besides many other articles.

Prices.

No. 1, Rs. 450; No. 2, Rs. 1,050.

Extinctures.

Dick's—can be carried by one man, and always kept ready for instant use in case of fire. They have proved very efficacious at Home; and in Warehouses, Mills, and Ships; as well as for Private Dwellings, they form a great safeguard against damage by fire.

Prices.

No. 4, Rs. 100; No. 5, Rs. 125.

Charges for ditto supplied extra, at Rs. 4 per tin.

Steam Road Rollers.

Aveling and Porter's, 5 ton and 8 ton.

Stone Breakers,

Marsden's	Rs.	3,000
ALBION DRILLING MACHINES	„	325

Steam Hammers,

3 cwt., with fittings complete	„	1,250

Soorkee Mills,

with 6-feet pan and rollers complete	„	1,025

Injectors.

Giffard's—are much superior to Pumps as Boiler feeders, and are very simple in their construction.

		No. 4.	No. 6.	No. 8.
Prices	Rs.	70.	90.	135.

Wire Tramway.

Hodgson's. These Tramways are well adapted for carrying produce and minerals over hilly ground, or in any country where good road or water carriage is unavailable; and as feeders for railways, their use might be extended.

The undersigned will be happy to furnish Catalogues and particulars on application.

ASSURANCE COMPANIES.

STANDARD LIFE OFFICE.

[redacted]EATH CLAIMS paid by the STANDARD COMPANY, during the [redacted]nine years have been upwards of £1,200 per business day.

[redacted]NDS during the same period, after payment [redacted]es of every kind, have increased from £2,600,000 in [redacted]) in 1874.

NEW ASSURANCES, to the amount of £1,000,000 Sterling, have been placed upon the Company's Books in each of the [redacted] since 1865—some of them years of doubt and anxiety in the Assurance World. This result, it is believed, has been maintained by no other Office in the United Kingdom, during the same period.

BONUS YEAR 1875.

The next division of Profits will take place at 15th November 1875.

ANNUAL REPORT 1875.

Copies of the Annual Report, containing the Balance Sheet, &c., may be obtained on application.

GEO. LUCAS KEMP,
Secretary, Calcutta Branch.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit."—Extract from the Speech of the Chairman of the Annual Meeting 7th August,* 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY,
[redacted]CALCUTTA.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policy-holders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 41 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society, which for twelve years continuously has now returned *Fifty per cent.* of premiums on the participating scale.

Insurances effected for Whole Term of Life, or short Periods,

With or Without Participation in Profits:

The Medical Fee in all Cases Paid by the Society:

Premiums payable Yearly, Half-Yearly, or Quarterly,

at Option of Assured:

Reduced Rates of Premium during Residence in Europe:

Proprietary Capital	.. .. ..	£1,000,000	0 0
Annual Life Income	{ Premia	76,424	0 0
	{ Interest	25,594	0 0
Realized and Invested Funds	.. .. ..	598,970	0 0

RETIRING PROVISIONS.

Policies are issued by which these may be secured, and at the same time a surviving family be protected in the event of premature death.

ASSURANCES BY TERMINATING RATES OF PREMIUM.

Under this system, Assurances can be effected for the whole term of life, the annual premia for which cease after a given number of years.

FREE POLICIES.

Assurances by this system can never altogether be forfeited by non-payment of Premia.

CLERGY FUND.

One-tenth of the Proprietors' Profits is periodically set aside for the purpose of aiding Clergymen and Ministers to assure their lives for the benefit of their families

THE "Indian" is a Life Office only, and its Funds are therefore free from the Risks attaching to Fire and Marine business.

INDIAN LIFE ASSURANCE COMPANY, LIMITED.

COMBINING LIFE ASSURANCE AND PENSIONS.

Funds *entirely* in GOVERNMENT SECURITIES AND REMAIN IN INDIA. Policy-holders can appoint an Auditor.

Established 1869

ON NEW, SOUND AND POPULAR PRINCIPLES.

(Preliminary expenses including Establishment of 44 Agencies Rs. 2,066 only instead of Rs. 50,000 and upwards!)

REGISTERED UNDER ACT X. OF *1866.*

Capital Rs. 500,000 Fully Subscribed.

Paid-up Rs. 100,000 only (to leave a large surplus to Policy-holders) as advised by the Actuary, J. Hill Williams, Esq., Vice-President, Institute of Actuaries, London.

HEAD OFFICE : MEERUT.

BRANCH OFFICE: BOMBAY.

Advantages of Assuring with this Company.

(1) ECONOMICAL MANAGEMENT. (2)* ENTIRE DIRECTION IN INDIA (3) NO AMALGAMATION. (4) FUNDS in Government Securities only. (5) REDUCTION OF PREMIUMS. (6) POLICY-HOLDERS entitled to appoint an Auditor. (7) REDUCTION TO ENGLISH RATES from date of leaving an port in India, Ceylon or China. The first Company which granted this complete concession. (8) NO RESTRICTION ON TRAVEL. (9) INDIAN RATES of Premium charged while in India. English Rates on leaving for Europe. Assurers who do not contemplate spending a *life time* in India or other tropical climates, will find that the rates of this Company compare *favourably* with *enhanced English Rates.* They have the advantage of *consistency*, as it is *proved beyond doubt* (by the various Civil and Military Funds) that English Life is of less value in India than in Europe. (10) ASSURANCES EFFECTED on lives of EUROPEANS, EURASIANS, PARSEES, AND HINDOOS. (11) CLAIMS PAID three months after satisfactory proof of death. (12) POLICIES for the whole term of life. Short terms of years certain, or payable during life time. ENDOWMENT ASSURANCES combine the advantages of Personal and Family Provisions. They are made payable to the assured themselves on attaining a specified age, or to the representatives at death should that happen sooner. A PROMISSORY NOTE GRANTED for every PREMIUM PAID. (13) HALF CREDIT SYSTEM. (14) NON-FORFEITABLE POLICIES BY LIMITED NUMBER OF PAYMENTS. Should payment of premium not be continued, a paid-up Policy in the form of a Negotiable Promissory Note payable to bearer is given for every Premium paid, which Promissory Note cannot lapse, and is payable on the death of the assured or may be converted into cash during his lifetime to the extent of 30 *or* 40 per cent. of *the premium* after 1st or 2nd years paid, *without forfeiting* the balance of the sum assured. *Thus, the assured receives full value for his money for although* he can only withdraw 30 or 40 per cent. of the amount of his premiums paid, he receives value for the remainder by being assured. In this way he has full control of his money, the Premiums paid becoming to him equal to a current banking account withdrawable at will. (15) LIBERAL SURRENDER VALUES. (16) SUMS PAID under Promissory Notes exempt from all charges. (17) PREMIUMS are payable monthly, quarterly, half-yearly, yearly, in five, ten, fifteen or twenty payments, or on *the half credit system.* (18) LAPSED POLICIES may be revived at any time on production of approved Medical Certificates and payment of arrears of Premium, *with interest.* (19) LOANS ON POLICIES. (20) EXCHANGE OF POLICIES by the substitution of Lives. (21) PENSION BRANCH. *The Rates are more favourable than those of any similar Fund in India.*

THE TWO GRAND INDUCEMENTS TO POLICY-HOLDERS MUST ALWAYS BE

Unquestionable Security; and as large Profits as the System of Life Assurance admits.

Forms of Proposal, Tables of Rates, and any further information may be obtained on application to the Company's Agents, or to

* Extract from Mr. P. M. Tait's Paper on "Anglo-Indian Vital Statistics," read before the East India Association, London, on 28th January, 1874:

"One formidable objection to English proprietary Companies doing business in India is, that the local Directors and representatives of these Companies in India are simply Agents without any substantial power, and removeable at pleasure by the chief authorities in this country."—(England) *Insurance Record, February,* 1874.

GROVE PARK SCHOOL, WREXHAM.

PRINCIPAL.—J. PRYCE JONES, L. C. PREC.

ATTENTION is respectfully invited to the following facts:—1. The locality of the School is *remarkably healthy.* 2. *The premises are extensive, and fitted up with due regard to the comfort of the Pupils.* 3. Every facility for recreation is afforded by the large playground and cricket-field which adjoin the house. 4. There is a sufficient staff of well qualified Masters, including a Classical Master, B.A., in Classical honours, Cambridge, and a resident Frenchman. 5. At the Examinations of the College of Preceptors and the Oxford and Cambridge Universities, Pupils from the School have taken Honours in several distinct branches of Education, *e.g.*, Latin, French Mathematics, Bookkeeping, and English. 6. At five examinations by the College of Preceptors, Certificates were Awarded to one-third of all the pupils in the School. 7. At five out of seven examinations by the College the highest place in Book-keeping was given to candidates from the School. 8. The Principal earnestly endeavours to form in his Pupils a manly Christian character. 9. The Diet is liberal.

TERMS which are moderate and inclusive with lists of successful pupils on application.

THE LONDON ASSURANCE CORPORATION.

FOR FIRE, LIFE, AND MARINE ASSURANCES,
INCORPORATED BY ROYAL CHARTER, A.D. 1720.

HEAD OFFICE.
No. 7, ROYAL EXCHANGE, LONDON, E.C.

GOVERNOR,
JAMES BLYTH, ESQ.
SUB-GOVERNOR, DEPUTY-GOVERNOR,
EDWIN GOWER, ESQ. DAVID POWELL, ESQ.
JOHN P. LAURENCE, ESQ., Secretary.
JOHN ANTHONY RUCKER, ESQ., Underwriter.
ARTHUR H. BAILEY, ESQ., Actuary.
THOS. B. BATEMAN, ESQ., Manager of the Fire Department.

LIFE DEPARTMENT.

This Corporation has granted Assurances on Lives for a period of nearly One Hundred and Fifty Years, having issued its first Policy on the 7th June 1721.

Two-thirds of the entire profits, without any Deduction for expenses of management, are alloted to the Assured.

The profits are declared at the end of every five years, and the share of the Policy-holders may be appropriated either in increase of the Sum Assured, or as an immediate Cash payment.

Assurances may also be effected without participation in profits, at reduced Rates of Premium.

The premiums have been computed from the most recent information on the subject of European mortality in India, and they will be reduced to the corresponding English rates on the return to Europe of the persons whose lives are Assured.

Premiums may be made payable either yearly or half-yearly.

Policies on lives of Military Officers in civil employ issued at the Civilian Rates.

Risks on Male Parsee and Eurasian lives, under 40, accepted at European Rates.

Medical Fees and Stamps are paid by the Corporation.

Notification.

REVENUE DEPARTMENT.

Dated the 21st August 1875.

MISCELLANEOUS.

THE following Tea Plantations in Kumaon, the property of Government, will be offered for sale by public auction at the Senior Assistant Commissioner's Office, Almorah, on Wednesday, the 1st December 1875, at noon :—

Hawalbagh.—Forty-six miles from the plains by bridle-road and six from Almorah. Area about one hundred acres, after excluding the house known as Mr. Traill's with its compound, which will not be sold : said house and ground are in an outlying corner of the estate, and are to be set apart for travellers. Separated from the plantation by the Kosi River (suspension bridge) is a pine forest of one hundred and two acres belonging to the estate, but in which neighbouring villages have the right to graze their cattle. The garden, having latterly been used as a nursery for fruit trees, the whole of the area is not under tea. There are on the estate two large slated houses (exclusive of Traill's house), a slated factory, two slated godowns, a slated barrack for tea-makers, and numerous slated out-offices. The height of the houses above sea-level is 4,000 feet, and the lands are not much higher or lower. Upset price—Rs. 25,000.

Communications.—A good bridle-road, 8 to 10 feet wide and bridged, runs to (1) Haldwani, (2) Kaladungi (*viâ* Naini Tal), and (3) Ramnagar (*viâ* Khyrna). From Haldwani to Barreily Railway Station 60 miles over a *pucka* cart-road ; from Kaladungi to Moradabad Railway Station 48 miles on partly *pucka* road ; and from Ramnagur to Moradabad 45 miles *via* Kashipur, of which 25 miles more or less are a *kutcha* fair weather road, bridged. Bridge-of-boats on Ramganga north of Moradabad. From Ramnagar up there is a cart-road (Kosi River not bridged) to Ranikhet 56 miles ; and to the Hawalbagh plantation, where the Kosi River is being bridged, 19 miles.

1, 2, 3—mar' ets at the foot of the hills.

Ayar Toly—In Kuttyur, consisting of about 2,546 acres, the area under tea was some years ago considerable. About 700 acres are cleared, and nearly 1,500 acres consist of jungle, of which part may be unculturable : a portion of the estate, named Binculi, 919 acres, is held under a perpetual lease from the Nagnath temple, at an annual rent of Rs. 24. There were on the estate a house, factory, godowns, and numerous out-offices, all slated ; but all these are in bad repair. Height of house above sea-level 5,200 feet, and the plaintation ranges from that height to 4,400 feet. Upset price—Rs. 17,000.

Communications.—To Hawalbagh 24 miles by bridle-road ; thence as detailed under Hawalbagh.

These two estates will be put up to auction separately, at the upset prices named, and sold in fee simple to the highest bidder, free of all demands for land revenue, but subject to the rights already named in each case, and also to payment of customary cesses now in force or that may be imposed hereafter. Both estates have been surveyed, and maps may be seen at the District Office, Almorah. Intending purchasers must satisfy themselves as to the present condition of the estates, and on all other matters involved in their sale. The purchasers must deposit 5 per cent. of the purchase-money at the time of sale, and the balance on or before the 1st January 1876, when possession will be given : failing payment in full, the deposit will be forfeited and the estate resold.

By order of the Hon'ble the Lieutenant-Governor of the North-Western Provinces.

A. COLVIN,

Registered No. 19.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2113.] Calcutta: Saturday, September 11, 1875. [Vol. XLI.

EDITORIAL NOTES.

THE North-West papers speak with concern of the distress which the cultivators of the Jhansi district are suffering, from the spread of *kans* grass in the soil. Land with this weed in it, requires to be kept under careful cultivation, or it speedily becomes a sea of grass that nothing will destroy but the exhaustion of the soil itself, after the weed has monopolized it for eight or ten years.

***

WHO would have ventured to predict three months ago, that the Baroda *imbroglio* would become history without running the gauntlet of a parliamentary debate. The truth is there was nothing more to say about it. Interest in the story had been discounted to the last farthing, and the withdrawal of Mr. Sullivan's motion, although Sir George Campbell was understood to be at its back, seems to have been a relief to all parties. The *Westminster Review* for July sums up the case heavily against both the Home and Indian Governments, and it is an evil precedent that a case of such importance to the people of India and their princes should pass without notice in Parliament. Mr. Sullivan was not perhaps the man for the motion, for though he speaks well, he commands no influence in the House. The Government professed to be anxious for the debate, but Mr. Sullivan does not seem to have believed them to be in earnest, and the motion was dropped from the order book without a remark.

***

THE metrical system will be in force in Egypt from the 1st January next. In order to accustom the public to the new system, its application will be obligatory at first only in transactions with the Government administration, and the Dairia: but in 1878 it is to become compulsory throughout the country. In India, we are afraid to take a single step in the direction of reforming our weights and measures, although every bazaar in the country is a rogues' paradise from the confusion that prevails, and the endless diversities in the so-called standards.

***

THE Home papers fully understand the difficulty with Burmah. We cannot punish the murderers of Mr. Margary without carrying a British force through Burmah, and an expedition of this nature would involve the command by our gun-boats of the Irrawaddy from Rangoon to Bhamo—a distance of eight hundred and fifty miles. The King of Burmah is naturally jealous of giving us this power over the great riverway of his kingdom; and as naturally it seems intolerable to us that this jealousy should shelter a crime like the massacre at Manwyne, as well as block the desired trade route to Western China. It is a source of satisfaction, we think, that the difficulty will be dealt with as an *English* and not an *Indian* one. If war were finally resolved upon against either China or Burmah, or both, it would be an English war and not an Indian one. India would simply contribute forces as she did for the expedition to Abyssinia.

***

MR. MACKENZIE insists in another long letter to the *Times* that the visit of the Prince as planned, can only end in one of three results—

1. If the Prince keeps within the proposed expenditure, even with all his grace and cordial manner, the visit has every chance of being a failure, and the blame will eventually attach to the Prince instead of the Government.

2. Should he expend anything like the required amount, and attempt to defray it out of his own limited income, he will hamper himself and family for life.

3. Should the money be expended, and he has to come to the country for a supplementary vote, Government should take the entire responsibility of this beforehand, as otherwise it will be most unwise for the Prince to exceed the sum allotted by Parliament.

A very needless fuss is, we think, being made over this question. We may be sure that the Prince will spend whatever it is becoming for him to spend, and as England is anxious to contribute her share and India not willing that she should do more, the agitation of the matter should cease. The Prince is coming: and his visit will not be spoiled by niggardliness.

***

A CORRESPONDENT writes to us: "I wish you would enlighten "the public as to the result of the Commission appointed last year "to enquire into the Stevens' murder case. I do not remember "having seen anything about it in the newspapers; and it is a pity "that the police should have their own way entirely. I hope "Government is not keeping things quiet." It is most extraordinary that this case, after commanding so much attention and creating so much public excitement that the Government even appointed a special Commission to enquire into it upon the spot, should now, as if by consent of all parties, be disposed of without the publication of Mr. Cockerell's report. The report *must* be published, let its nature be what it may, or must be called for in Parliament. The Commissioners have kept their own counsel very closely, but their report will, we suspect, convince the community of the mistake made in getting up the Stevens' subscription.

***

MR. LEWIS HYNES, of the Bombay Mint, publishes some interesting letters on "the fall in silver," in the *Bombay Gazette*. Mr. Hynes has the merit of seing and stating clearly the magnitude of the task urged upon the Government, when it is required to change the standard. He tells us that, "*at the very least*, it would take seven years to effect the change, as the gold required for coinage, except what is already in India, could not be bought with silver, but would have to be received in payment of the balance of trade due to India, and that ninety millions of gold would require to be coined before it could be considered the standard of the country; that it would take at least seven years to collect this gold and probably longer; and that the direct losses on the change, which would have to be met from the revenues of India, would be about $2\frac{1}{4}$ millions if the change were carried out in seven years, but would be lessened if the period were extended."

If India demonetizes silver, we may reasonably look for a very rapid decline in the value of the metal, and it may well fall from 55*d.* to 40*d.* per ounce. The economic effects of changing our standard no one can foresee, but they ought to be forecast carefully before such a change is seriously thought of. We suggest to Mr. Hynes that he should reprint his letters in independent form. We know that he has given much attention to the subject, and we should like him to forecast the effects of demonetizing silver upon the value of *both* metals. Ten years ago we were advised to change our standard on the ground that silver was rising in value as compared with gold. To-day we are asked to do so on the ground that it is falling. We are ourselves inclined to the belief that India had better retain her silver standard under present circumstances; and that instead of the moment being opportune for the change, it is the reverse. We should like to see Mr. Hynes reconsider this carefully; for he has spoken hastily.

***

Is it possible, in these days, to kindle in Europe the flames of a great religious war? The question is not without positive practical interest. It is abundantly evident that the dominant party in the Roman Church, would do so if it could. In support of his charge that they contemplate a war of religion, Mr. Gladstone quotes the following words of Cardinal Manning spoken in January 1874:—

"Now, when the nations of Europe have revolted, and when they have dethroned, as far as men can dethrone, the Vicar of Jesus Christ, and when they have made the usurpation of the Holy City a part of international law, when all this has been done, there is only one solution of the difficulty—a solution I fear impending—and that

is the terrible scourge of continental war—a war which will exceed the horrors of any of the wars of the First Empire. I do not see how this can be averted. And it is my firm conviction that, in spite of all obstacles, the Vicar of Jesus Christ will be put again in his own rightful place." And we learn that the prospect of Cardinal Manning is brightening, and that it becomes more and more probable that he himself will by-and-bye fill the chair of "the Vicar of Jesus Christ."

***

THE Holy See, though unflinching enough on occasions, sometimes shows remarkable dexterity in the art of serving two masters. "Through its embassy at the Vatican, the French Government, it is reported at Rome, has asked the Holy See that the Sacred Congregation of Rites may authorise the French bishops to recite in the churches a prayer for the preservation of the Republic. This authorisation will not be refused, but, in order to avoid offending the political susceptibilities of a majority of the Bishops, the formula "God save the Republic"—*Domine salvam fac Republicam*—will be altered to "God save the people"—*Salvum fac Populum*."

***

IF our Eurasian friends do not enter on the heritage provided for them in the upland districts of India, where by humbling themselves to honorable toil, they might form prosperous agricultural communities, they will by-and-bye find themselves supplanted by colonies of Scotchmen. The *Overland Mail* gives a copy of the petition presented in Parliament by Sir George Campbell, from the "East India Colonisation" Society and others in Edinburgh," praying for aid from Government in originating a scheme of emigration to India. When the "canny" Scotch mind has satisfied itself that the idea is practicable and the prospect hopeful, Scotch enterprise will sooner or later make the attempt. It has often been urged on Government that the planting of such colonies is the only way of providing a hopeful future for the growing numbers of poor Europeans and Eurasians in the country. We are afraid that the invincible repugnance of the majority of these to manual labour, would prove a serious barrier in the way of any such undertaking on the part of Government, though that consideration may be no sufficient reason why an attempt should not be made. In the plains, where Europeans cannot undertake manual labour, it is easy to see why Eurasians will not. But were a colony of Europeans to settle on some favourable hill tract, Eurasians might be induced to join them, and some of our "loafing" population might honourably redeem the wretched life they lead in our cities. Something may come of this "East India Colonisation" project before very long.

***

IT is commonly asserted that the cause of blindness being so common among natives is that they sleep exposed to the moon's rays. Some even believe that contortions of the face are caused in the same way. The Moon is supposed to take a mischievous pleasure in putting out the eyes and twisting the faces of those whom she catches asleep unveiled from her rays. More reasonable is the belief in the moon's effect on the weather. Those who have watched its changes closely, have believed that there is a connection between these and the changes of the moon, and when we know the influence of these on the oceanic tides, such a connection does not seem incredible. We now find Dr. Coates declaring himself a convert to the belief, that malarious fevers are influenced by the revolutions of the moon. He laughed at the belief, as most of us are inclined to do, till he had studied the subject, and met with confirmatory cases. He thinks that the influence is to be accounted for by the tides. We quote his words: "In thinking through the subject, and seeing the effect of aerial "moisture in determining fever attacks, it struck me that during "spring tides, that is, at new moon periods, when the water "encroaches to its highest and ebbs to its lowest, the greatest amount "of moist decomposable debris is exposed to evaporation, which, "rising in the air, may pass far beyond the tidal range. Dr. "Meadows meets these at Chittagong; Dr. Green and Dr. Cowan at "Comilla; and Dr. Ghose largely at Rungpore. It is curious that "the late Dr. Balfour met them first in Cooch Behar, which is just "above Rungpore. The proposed explanation may not be the correct "one, still the subject deserves further attention." Dr. Giraud was supposed some ten or a dozen years ago, to have disproved this notion, but the observations on which he rested his conclusion were open to objection. The question we believe, must still be regarded as an open one.

***

GENERAL BIDDULPH tells us that the children of the Sunawur Asylum cost Rs. 344 each per annum, those at Meerut Rs. 314, and those at Aboo School Rs. 288. He tells us also that the wife of the chaplain of Umritsur has this season arranged for a certain number of children from Mean-Meer and from Umritsur to be located in the hills under her own charge, and that she hoped to be able to manage for seven children from each place, at a total cost of £100 only. The other rates certainly seem high.

***

THE *Indian Evangelical Review* wishes "the *Friend* all prosperity in the best sense of the word," but says it "can hope for that "only as it gives effect to those views of religion and religious "matters generally, which are common to the mass of earnest Chris-"tians in this and the mother country. The emasculated Christiani-"ty of certain *literati*, who affect to sneer at what they think the "vulgar views of the people, should never find a place in the good "old Serampore journal. A little less horror of Exeter Hall and "its associations is desirable on many grounds."

Are we to understand that there is no earnestness amongst Christians except those of the Exeter Hall type? Pusey, Faber, Newman, are not earnest Christians. Bishops Wilson and Dealtry and Harding were; but Bishops Douglas and Milman, Bishops Meurin and Steins are not. Frankly, this spirit is hateful to us: and it is views of this order that we strive to discredit. Evangelical in our own convictions, we abhor the narrow exclusiveness which thinks there is no earnest Christianity outside Exeter Hall.

***

A LOVER of asparagus would like to know if nothing can be done to improve the character of the plant grown in India. In France there are immense plains devoted to its culture, and the yield is valued at 2,000 francs per acre; and it is also cultivated between the vines. French cultivators never cut asparagus, but break it off. The greatest attention is paid to earthing up the stems, so as to have the stalks perfectly white and succulent. A single stem will bring from five to one hundred sous, according to the season. High manuring produces stems of great size and oftentimes of eccentric shape, becoming flat, bent, and contorted, and these malformations can be reproduced by cuttings—a peculiarity incident to other plants also.

***

FATHER SECCHI, of the observatory at Rome, has produced a second edition of his magnificent work—"The Sun." But it is a new work rather than a new edition. *The surface of the sun* resembles a sea incessantly agitated. The nature of the sun's spots are still matter of debate, but they are undoubtedly subject to periodicity, and affect the radiations of the great luminary, and the physical and organic phenomena of the planets.

***

WE are not aware whether any attempt has yet been made to bring the Japan lacquer tree—*Rhus vernix*—into India, but if not it certainly should be. It is from the sap of the *Rhus* and the oil of the *Bignonia tomentosa* that the exquisite lacquer of Japan is made, but both the manner of preparing it and the mode of applying it are, we believe, a secret. Old laque like good lace is very costly. Forty to sixty pounds are said to be given in Japan itself for specimens of it not a foot square. Ordinary Japan-ware does not approach in beauty the ancient specimens of the art in old Japan families. The laque is said to be yielded by every part of the *Rhus* tree, and has the consistency of treacle, the first coating being thin and yellowish, the second of a brownish tinge, and the last a bright mahogany.

***

THE difficulties in the way of social intercourse between native gentlemen and ourselves seem next to insuperable, and we notice the suggestion of the *Indian Mirror* that Calcutta should have a sort of cosmopolitan club, in which European and native gentlemen might meet on terms of equality, for social converse "Can we not have a place for this purpose then? We ourselves "are ready to do what we can to further this end. And what more "can we do than raise a few thousand rupees for the erection of a "building with this cosmopolitan object. We are prepared to come "forward with our money, if our enlightened and influential coun-"trymen will contribute theirs, and the European community give "what they can, and should, for a purpose that concerns all alike. "We expect a response from our contemporaries in this matter."

We wish the *Mirror* success very heartily, but our growing fear is that the climate exhausts men too much, to permit of the hope that a Club of this nature could be made attractive enough to draw men to it in the evenings, when most of us are too worn out to regard even indispensable visits as anything but an affliction. As a rule, both official and mercantile men

work very hard in Calcutta, and the easy chair and the after dinner cheroot seem the most natural way of spending the evening, nothing but really good music being powerful enough to overcome them.

***

THE *Westminister Reviewers* think they have detected a fallacy in the argument on which Paley bases his Natural Theology. While Mr. Mill's conclusion was that "in the present state of our knowledge, "the adaptations in nature afford a large balance of probability in "favor of creation by intelligence," the *Reviewers* have discovered that both Paley and Mill made a profound mistake. They tell us *in their last number (p. 187)* that, humiliating as the confession is, a trick of hocus-pocus will now have to be reckoned among the weapons of theology. "The facts shew plainly that such has been the case." The question is—why, if marks of utility and adaptation are conclusive of design in the works of man, should they not be considered equally conclusive in the works of nature; and the oracles proceed to tell us—why. We shall draw their argument out simply into a series of propositions. An intelligent maker, as opposed to blind chance, may be inferred from the marks of adaptation and utility in the works of a *watch* with readiness and certainty; but the watch-finder is not guided solely by these marks of adaptation and utility in inferring an intelligent maker therefrom. He would recognize an intelligent maker just as surely in a bit of the watch case, as in a whole time-keeper, though marks of adaptation and utility were wanting in the fragment. The true reason why he would infer an intelligent maker in either case, is simply that he sees marks of human workmanship thereon. For wherever we see marks of what we recognize as human-workmanship we recognize design, as *all* the works of man are products of an intelligent or designing mind.

In other words, the works of a watch enable us "with readiness and certainty" to infer that an intelligent maker designed them, because we see at a glance that they are the work of a man. But we could not infer this from the marks themselves, if we did not already know that the watch was made by an intelligent maker. Let then the works only be such and their adaptations and utility such as man cannot rival, and it is certain that an intelligent maker can have had no hand therein whatever. The, work in this case must have sprung from processes of blind force and not from intelligence. There is no intelligence in the universe but Man's!

***

WE noticed a few issues back, the extreme uncertainty which exists as to the part played by *alcohol* in the system. Is it injurious to persons in ordinary health: or does it really minister power to the frame? At present, there is no certain reply from science, but we have little doubt what the final answer will be. If taken habitually in more than moderate quantities, not only does it afford no help to vital action but it is a positively noxious agent. As little doubt we think can there be on the other hand, that used in moderation, stimulants are amongst those "creatures of God" that may be received with thankfulness. In particular, do we believe this to be true in advanced life, and in the case of persons whose employments exhaust the nervous forces.

***

FEW amongst our readers will remember O'Connell personally; for he was born but six years after Bonaparte, and has been dead nearly 30 years, although his name is still familiar as a household word amongst us. Educated at St. Omers and Donai, he became a student at Lincoln's Inn in 1794, and was called to the Bar four years afterwards. Emmets' trial was the starting point in his political life. The two great movements with which his name will ever be associated, were those of Catholic Emancipation and the Repeal of the Union; and although he failed in the latter, one does not need to be an Irishman to feel something of enthusiasm for the "Great Liberator." He was journeying to Rome when death overtook him at Genoa in 1847. As he passed through Paris a deputation waited upon him, and addressed him through Montalembert in the following words:—

"We are come to tender to you the affectionate and respectful homage we owe to the man of the age who has done most for the dignity and liberty of mankind, and especially for the political instruction of Catholic nations. We admire in you the man who has accomplished the noblest achievement that can be given to man to conceive in this world—the man who, without shedding a drop of blood, has reconquered the nationality of his country and the political rights of eight millions of Catholics. You are the man not only of one nation—you are the man of all Christendom. Your glory is not only Irish—it is Catholic. Wherever Catholics begin anew to practice civic virtues, and devote themselves to the conquest of their legislative rights, after God, it is your work. Wherever religion tends to emancipate itself from the thraldom in which several generations of sophists and bigots have placed it, to you, after God, it is indebted."

Englishman were hardly just to O'Connell while he lived, and we suppose could not be so. His eloquence was matchless. We never heard him but once, but the music of his voice lingers in our memory *till now*. He was speaking against capital punishment, and we well remember his saying that he had known six men in his own practice, hanged for crimes of which they were innocent. Ireland has been commemorating the Centenary of his birth. He was born 6th August 1775 of an old but impoverished family in the south.

***

THE oasis of Murchaba, of which Merv is the capital, contains, it is said, about 200,000 Tekke, 50,000 Saraiks, and 3,000 Solors, all Turcomans of pure descent. Notwithstanding their small extent of arable land, the people live in plenty, owing to the fertility of the soil Proud of their agricultural wealth, and glorying in their ancient. independence, they have long, considered their city an inaccessible or, at all events, an impregnable place. Of late however the Russian advance has struck terror into their hearts, and the conviction that the children of the White Czar may be shortly expected on a trip to their remote city, is pretty general among them. At all events so says the Berlin correspondent of the *Times*. "It is singularly lucky, says the writer, for the Russians that towards the end of June they should have received intelligence from Merv, giving them a general idea of the statistics and institutions of the place. About that time, one Kurban Ali arrived at the fortress of Petro Alexandrovsk, the capital of Russian Khiva, carrying letters from certain Persian prisoners at Merv to Colonel Ivanoff, the Commander-in-Chief of the province. The writers of these letters, Madali Khan and Ibrahim Sultan, were captured some years ago in a raid, and in deference to their aristocratic birth are allowed to reside in a kind of honourable captivity until released by their friends or Government. Learning the Russian purpose of visiting the place of their involuntary abode, they thought it good policy to put themselves into communication with the "coming men," Among other subjects too delicate to have transpired, their opportune missive alluded to the Russian soldier Kideyeff, kidnapped by the Turcomans while escorting a caravan, and detained as a valuable hostage at Merv. Kideyeff, the Persian correspondents of Colonel Ivanoff assure the high and mighty, majestic, benign, and, indeed, perfectly "red" Commander-in-Chief (the latter epithet forms the climax of a Turcoman eulogium), is doing well, and enjoys the advantage of being befriended by the writers of the epistle Quite as worthy of acceptance as the written communication was what Kurban Ali was instructed to impart orally. Upon Colonel Ivanoff inquiring how it was that so diminutive a community as that of Murchaba, should have been permitted to prey upon its neighbours and keep the Persian and Bokhara forces at bay, Kurban Ali replied that the peculiar tactics of the Tekke, consist in night attacks, made with terrific fury and force, that had hitherto borne down all resistance. Colonel Ivanoff answered the friendly communication of Madali Khan without loss of time, and profited by the opportunity for sending a message to the rulers of Merv."

***

MR. THURLOW WEED tells the Americans in a letter to the *Tribune* that during the first year of the late civil war, the Queen herself personally, on no less than three occasions, contributed essentially to the preservation of peace between America and England. On two occasions, they were suggestions from the French Government that Her Majesty discouraged. The first was the proposition for the intervention of France and England, for recognising the Confederate Government. The second was the introduction into Parliament, after an interview by the mover with the French Emperor, of a resolution repudiating the blockade. The feeling in England was so strongly in favor of the Confederate States, that, but for the reluctance of the Queen, both measures would have been adopted when the dispatch demanding the surrender of Mason and Slidell was read finally to the Queen, and the consequences of a refusal were explained, Her Majesty was greatly distressed at the idea of war. Taking the despatch to the Prince Consort, who was in his last illness, sitting in his apartment, the Queen asked him, we are told, to read it, saying that she thought both the language and spirit needlessly harsh and peremptory. The Prince concurring with Her Majesty, made several erasures and interlineations in the despatch, in which amended form it was returned to the Premier Lord Palmerston. In relating this incident

to Sir Henry Holland the Queen added, "that was the last time the Prince used his pen."

The story is not at all unlikely to be true. The Prince Consort could have had little sympathy with the intense insularity of English statesmen. England was separated by more than the English Channel from the Continent throughout the war, and the misdirection of her sympathies in the struggle will long remain a blot upon her history. It ought to be remembered, however, that it was the statesmen and monied classes of the country, and not the workmen, whose sympathies were so strangely perverted. The Continental nations saw clearly the real issue that was being fought out, although neither English statesmen nor English churchmen were able to discern it. The French Emperor saw it clearly too, but then he had an 'idea' to accomplish, and he sacrificed everything to its fulfilment. A great Anglo-Saxon, Protestant, *Republic* was developing itself all over North America and overshadowing the earth with its might. And the foundation of a Great Latin Roman Catholic *Empire*, side by side with this republic, to hold it in check and as a counterpoise to its weight in the world, was the idea that filled Louis Napoleon's mind, and led him to his fate. For the empire had really fallen in Mexico ere it fell at Sedan. The peremptory order to embark his troops and retire from Mexico, was a deeper humiliation than the surrender at Sedan, and was probably felt to be so by the Emperor himself. The fatal error of Louis Napoleon's reign was this attempt to found a Latin empire in the West. The truer sympathies and deeper insight of the Prince Consort saved England from all complicity in such a policy, but English statesmen plentiful as blackberries were ready to lend themselves to the dream, and Mr. Weed now tells us that they were counteracted by our good little Queen.

***

WE have now two distinct and conflicting decisions of the law courts, as to the doctrine of the Church of England on the subject of Eternal punishment. In the prosecution of Dr. Williams in 1863—the famous *Essays and Reviews* case—the Privy Council, with the concurrence of both Archbishops and the Bishop of London, ruled that the Church of England had made no authoritative declaration in any of her formularies as to the doctrine; while Sir R. Phillimore now boldly affirms that she has, resting the assertion on the damnatory—or as it is the sincere-insincere fashion of the age to call them minatory—clauses of the Athanasian creed. The judgment of the Dean of Arches will of course be appealed against. The ecclesiastical courts are true to the traditions of the Church, and yield nothing to authority or reason that they are not forced to yield. One might have supposed that a decision of the Privy Council, in which both Archbishops and the Bishop of London had concurred, would have been felt by Sir R. Phillimore to bar further litigation on the point, the more so as the judgment simply ruled that the Church had left the doctrine an open question. As a fact, Sir R. Phillimore no more believes in the doctrine than Mr. Jennings, for no one believes in it. The human mind happily is so constituted that such a belief is not possible to it. It is difficult to get men to be honest with themselves in such matters. Were this doctrine true, the procreation of children, which is nowhere made obligatory upon men, would be a crime of the deepest dye, the only fitting atonement for which would be to murder every child in infancy. There is no escape whatever from the dilemma. You are under no obligation to beget children, and yet you do so; professing all the while to believe that the vast majority of your offspring will be a curse and horror throughout eternity. The men who say they believe it, simply deceive themselves. We are so made that it is impossible for any one who is not insane to believe it. And the insane prove their belief by commendably cutting the throats of their children, before they have learnt to know good from evil.

***

THE reluctance of Protestant writers to believe in such cases as that of Louise Lateau, the Belgian ecstatica, is mainly attributable to the notorious character of eclesiastical miracles. There seems no reason to doubt that in the present case the peculiar phenomena called stigmata, or marks of the wounds which our Lord suffered in his passion, really do appear upon this young woman's person at stated intervals. The medical men, who have examined the phenomena with every care, are convinced that no deception is practised; and that, let the cause be what it may, the phenomena are real. The *Indian Mirror* tells us that it is supposed by many that the stigmata can be artificially produced, and it publishes the following advertisement which it says is to be found in the *Morgenzeitung* newspaper of Breslau: 'Marriageable girls who wish to wear the stigmata or 'to be instructed in the art of *stigmatizing* others may in all 'confidence address Madame Franciska Schlecker, midwife, 'Domstrasse 20. Kind treatment, low prices, absolute secresy.' "And the lady who inserts this advertisement is a Roman Catholic." May we ask our contemporary whether he quotes the paper in question at first or second hand. Most of the cases of 'stigmatization' on record, are those of women, but the first in order of time, we believe, was that of the great founder of the Franciscans, Saint Francis of Assisi; and several other instances are recorded in which men are reported to have received the marks. Dr. Huguet accounts, we are told, for the appearances in the present case thus: "The soul puts in motion the nervous "fluid, the nervous fluid puts the blood in motion toward those "points of the body which in Louise's memory answer to "those in Christ's body through which the blood flowed."

If the doctors can get no nearer to an explanation of these curious appearances than this, they might as well, we think, frankly give the whole matter up. It is very unwarrantable to conclude that they are miraculous, for we do not know what is miraculous, and the attitude of candid and well informed persons will be that of watchful, patient interest for some satisfactory insight into their true nature. The very worst use to put them to is that of religious controversy. The phenomena appear we know not how. They attest no message to us, and claim to attest none, but occur just as clairvoyant and spiritualistic phenomena occur, and should be observed in the same way. There is a natural tendency amongst Romanists to look upon them as miraculous attestations of the truth of what Rome teaches, in the same way as the Wesleyan Methodists look upon the strange and beautiful appearances that floated over the dead body of Mrs. Patterson for several days as proof of the truth of Wesleyan doctrine. We can hardly put such phenomena to a worse use; for if the doctrines themselves are not true, no outward phenomena will make them so.

***

SOME time ago we observed that the Ultramontanes were bent on making capital out of the O'Connell Centenary, holding up O'Connell as a saint rather than a patriot—as nothing, indeed, if not a devout son of Rome. The banquet which terminated the proceedings in Dublin ended in an explosion. The Lord Mayor, who was under the influence of the Church party, in giving the toast of "the Legislative Independence of Ireland," called on Sir Charles Gavin Duffy to reply, while the crowd would listen to no one but Mr. Butt. The Lord Mayor lost his temper, stood on his chair and shouted; the Bishop of Nantes shouted too, but the audience outdid them in powers of vociferation. Mr. Butt attempted to sprinkle oil on the troubled waters, but the Lord Mayor refused to listen to him, and finally left the hall in high dudgeon; and while some of the quieter order were trying to listen to Mr. Butt, the gas was turned off and the O'Connell Centenary Banquet ended in darkness, if not in silence.

If we are to believe the Liberator himself, in his parliamentary speeches, his church principles were by no means those of the Ultramontanes. He said in a speech delivered on August 5th 1831: "He was for no exclusive church, and hoped the time would come when every man would resort to his priest as to his doctor or lawyer, and pay the man whose aid he might require." On September 9th 1831: "He, for one, wished to state—and he made the declaration in the presence of that God who would judge him by what he then stated to eternal weal or woe—that he should be as strenuous an opponent of Catholic ascendancy in Ireland as any Protestant in that country." Again in May 25th 1832 he declared that he would concede to every man what he claimed for himself—"full and unrestricted freedom of opinion, and the undoubted and inalienable right of every man to worship God according to the dictates of his own conscience." These were his own declarations, and we are inclined to believe that they were sincere, and not to believe with Mr. Disraeli that he was "the hired mouthpiece of the Jesuits."

***

MR. DALE, the well-known non-conformist minister in Birmingham, has published a book on the Atonement, which, judging from the notices we have seen, it would be worth while to study. Not that Mr. Dale has cleared up the mystery of the Atonement, which none of us expect he should, but he appears to have treated the subject in a more enlightened spirit than theologians have been wont to do. He rests the assertion that we have a spiritual life as well as a natural, and a relation to spiritual facts and persons as well as to natural phenomena, simply on an appeal to the consciousness of Christians—a ground which the sceptic cannot admit for the excellent reason that he never felt it, and which is the only ground we know of on which spiritual truth can resist every attack. He shows that there is a direc

relation between the death of Christ and the remission of sin; that this and other spiritual facts have not been, and perhaps cannot in this world, be satisfactorily explained; that yet we cannot but attempt to frame a theory of the efficacy of Christ's death, for "it is one of the instincts of our Christian life to add knowledge to faith." He shows that there have been successive theories of the Atonement in the history of the Church, all of which have been rejected in turn. Yet *the fact is independent of all theories.* "For it is not "the *doctrine* of the death of Christ that atones for human "sin, but the death itself. And great as are the uses of the "doctrine in promoting the healthy and vigorious development of "the spiritual life, the death of Christ has such a wonderful 'power that *it inspires faith* in God and purifies the heart, though "the doctrine of the atonement may be unknown or denied." It is of importance to get such a declaration as this spoken and published by a leading nonconformist; for that full belief in the *doctrine* is essential to salvation is still weekly proclaimed from the majority of our pulpits.

***

THE columns of a contemporary this week contained an account of Mr. George Müller's asylum for children near Bristol, where "nearly 2,000 children are maintained, fed, clothed, educated, and "sent forth with some occupation fitted to make them useful and "honourable members of society." The remarkable thing about Müller's institution is that it is supported by *prayer*. No contributions are asked for: visitors usually purchase small pamphlets giving an account of *the Lord's dealings with G. Müller*," and presents of money and other valuables flow in in abundance to enable the establishment to be carried on. While chronicling the great things from abroad, let us be mindful of the small things at home. It has come to our knowledge that under the auspices of the Young Men's Christian Association—although we believe others, who are not young men, have a beneficent hand in it—an undertaking has been lately commenced, and carried on for some time successfully, which also depends for its support on unsolicited contributions, which are believed to come in in answer to prayer. It is not a large undertaking, but is characterized, we are certain, by the most benevolent motives, and may be productive of no little good in a quarter where good is much needed. A Sunday morning breakfast is given every week in Bow Bazaar Street to a considerable number of poor people—Whites and Eurasians we believe. If we are rightly informed, admission is by tickets distributed gratuitously, but so as to ensure that, as far as may be, the recipients shall be the needy and deserving. A substantial meal is given, and a few Christian friends attend and take the opportunity of ministering, as they can, to their moral and spiritual wants. We are not in a position to furnish further facts, as we have not been authorized to call public attention to the matter. No means have been taken, we believe, to advertise it, and there has been no general begging on its account. The beneficent workers are evidently not among those who blow a trumpet before them, and we advise our readers who may wish to know more on the subject to apply for information to the Secretary of the Young Men's Christian Association, who will doubtless be glad to furnish it.

***

THE *Statesman* quotes a passage from Mr. Mill to the effect that a fall in the value of the currency of any country "might be "accounted an advantage if integrity and faith were of no import- "ance in the world, and to industry and commerce in particular." It would of course be a violation of integrity and good faith for any Government purposely to debase its currency for the sake of the debtor class of the community; but that is not the question. The fall in the present case has come about of itself, and as the belief was being propagated that it was doing such mischief that our standard ought to be changed, we thought it desirable to point out that the mischief is partial only, and that as a fact the country as a whole is likely to derive more benefit from the fall than harm. If the Government were producing the change intentionally, Mill's strictures might perhaps be applied thereto. By adopting gold as our standard because of the present fall in silver, we might produce economic results of fatal moment to the people; and we therefore point out that the evil is likely to be more than counterbalanced by the good. The question is—whether it is not wiser to await the natural adjustment of things to the altered value of money, that will take place of itself, than force a solution in the interests of the classes that are now suffering by changing our standard. But what a comment does not this sudden fall in the value of money furnish upon the permanent settlement-mongers of the country? We have been long insisting that even our 30 years' leases form o long a settlement on this very ground; and here is a sudden fall of 10 per cent. in the value of money just as they are being re-issued in Western India and the North-West Provinces. As to the currency, the Government should at once appoint a commission to report upon the whole matter.

THE RUSSIANS AT MERV.

IT is difficult for us to express adequately our sense of the unwisdom of the attitude with which the advance of Russia in Central Asia is watched by the great majority of Englishmen. That attitude is not merely unwise, but most unworthy. Our almost insane dread of the Russian advance has already plunged the nation into war, three times over within forty years, and would long ere this have involved us in strife with half Asia, if the counsels of the "alarmist" school had been followed, and we had pushed our armies forward to Quettah and Herat. It was the insane dread of Russia alone that led us into the iniquitous Affghan War, the memory of which we try to persuade ourselves has died out of that country. The same fear led us into the gigantic folly of the Crimean war, and finally entailed the Persian war upon us in 1857. It seems impossible to make our countrymen see that Russia has a legitimate right in Asia as ourselves. The frontier difficulties and complications in which she is constantly involved, by the conduct of the semi-civilized powers in her neighbourhood, are to English minds simply so many devices for furthering her final intention of picking a quarrel with ourselves, and precipitating all the tribes of Asia upon India. She is nearly a thousand miles away from our only frontier on which she can advance, owing to the nature of the intervening country, while one would really imagine that she was within a couple of marches of that frontier, and could cross it any moment she pleased. Thus some of our readers may possibly remember the pamphlet, published by Chapman in 1866, entitled *Our North-West Frontier*, that excited so much attention at the time, and was the immediate prelude to the Persian war. To shew that we are not misrepresenting the folly we would discredit, we shall quote a few sentences from it:—

"It were well for our statesmen to bestow some little atten- "tion upon this matter. They have still time. A few years, "perhaps a few months hence, it may be too late. At least "every hour's delay aggravates the difficulty and increases "the cost of the work. Therefore I repeat, let this frontier "be looked to at once. For we may be surprised! "It is a plain fact which is here asserted, and dares con- "tradiction from any quarter, that when the proposed ex- "pedition to the Gulf shall perhaps within a few days from "this time dismantle the southern portion of our frontier of "its European troops, an enemy debouching at the Bolan "mouth upon the plain at Shikarpoor might march to Suk- "kur, through Shikarpoor, and at Sukkur cross the Indus, "without the possibility of its being opposed by more than "one foot regiment of Sepoys, of whom a large proportion "would be found in hospital at this sickly period of the year. "It is true the Sind Irregular Horse are on the line. It "is true that these troops would do all that men could do. "But a handful of cavalry, however good, cannot be opposed "single-handed to an organized invading army. And the fact "remains to be contradicted, that if the Russo-Persio force "should debouch to-morrow, it could reach Sukkur, and es- "tablish itself at Bukkur and Roree, without meeting eight "hundred bayonets."

That it would require an outlay of twenty millions of money and six months' arduous concentration of her resources at the Caspian, for Russia to place even a small unopposed force upon the Sindh frontier, seems never to enter the minds of such writers. The notion of a Persian army invading India is almost too ridiculous to be seriously noticed. If Russia were to contemplate such an invasion, she knows well that she would have to do it herself; and though she were to concentrate at Astrabad all the resources for offensive warfare of the Russian Empire, leaving nothing but garrisons at every other point of her territories, she would find the task of invasion upon the only scale that would have a chance of success impossible to her. Still more: though she could bind Persia and all Central Asia in one common purpose with her, an invasion with any rational hope of success would still be impossible, as the least exact acquaintance with the necessities of modern warfare might make plain to us. Sixty or seventy years

ago, Russia was credited with the settled purpose of making all Europe Cossack, and this wild notion lasted down to the Crimean war. She is now credited in the same way with the intention of making all Asia Cossack; and it is with indignant impatience that we listen to the *proof* of her purposes, and of her capacity for executing them. At one time, it is all Japan that is to be certainly appropriated; at another, China; and then India. Our real danger arises from our own mischievous folly in filling the bazaars of the country with the notion that our rule is unstable from the near presence of a more powerful nation than ourselves. The whole press of India and our enlightened Foreign Office seem bent on doing their best to fill the *budmashes* of the country with the belief that a chance will certainly come for them, at no distant day, for striking a blow against order, and subverting the Government of the country. There is no danger to India from the Russian advance, but that which our own childish folly is itself creating. Instead of treating the extension of the Russian border as so much gain to civilization, a matter of interest to ourselves as well as to the Russian people, we persist in regarding it as a menace. Regard it as we may, we shall not retard it a single hour, nor a single march. How infinitely wiser then would it be, recognizing it as inevitable, to rejoice in the manifest gain there is therein to humanty.

The counsels which are urged upon the Government by the alarmists are amusing from their very extravagance, while they are urged with a seriousness that leaves no doubt of the sincerity of their authors. Thus we have been told that we committed a fatal mistake in 1856, in not relieving Kars, or retaking it from the Russians. The conquest of Georgia would have been easy we were assured, as the forces of Russia were isolated owing to the physical features of the country and the communications being imperfect. We ought, it seems, to have thrown ourselves into the Circassian struggle for independence, launched an English navy upon the Caspian, made a railway between it and the Black Sea, and made the Caucasus our frontier line for the defence of India! Through our omission to do so, both Persia and Afghanistan are now, we are assured, thoroughly commanded by Russia and lie at her mercy; and from Samarkhand a Russian army has only to promenade through Affghanistan upon our frontier. "The whole of the base line, which might have been "seized by Great Britain, ~~is now in the possession of~~ "Russia—the line that would have been most suitable for "the defence of India." And this incredible nonsense is debated at our Foreign Office as though it were statesmanship!

While Englishmen are watching with the utmost jealousy every footstep of Russia in Central Asia, the *Moscow Gazette*, in noticing our efforts to open up a trade route with Western China *viâ* Yunnan, is writing as follows:—

"The strong desire of the English to establish an overland route between the Indian ports and the inner provinces of China will not be put down either by the dangers of the route or by political complications. The advantages to be derived from establishing this route to China do not excite in us any other feeling but that of admiration for so remarkably far-sighted a policy. We cannot blame the English for being an enterprising and farsighted people, and had much better take them for an example. The isolated state of China cannot possibly last long; and England is getting ready for political changes that may take place in this ancient empire, her commercial interests occupying the foremost position. But the Queen of the Seas prefers an overland route to China as the shortest, and Russia, whose commercial intercourse with China has ever been conducted overland, should do her best to revive her stagnant trade with her. All that is necessary for the purpose is an improvement in the means of communication and the tranquillization of our Siberian-China frontier. The first will be attained by the construction of the Siberian railway; and as to the second, the civil wars on our frontier being chronic, and the Chinese Government unable to put them down, Russia has an indisputable right to interfere for the purpose of tranquillizing that part of the country, and punishing those who, some years ago, plundered a Russian caravan at Shikho."

Can any one doubt that she has the right to do so? And should Englishmen not feel some shame at the broad spirit which characterizes these remarks? Our Foreign Office and Army between them contrive to make the Russian advance mean potential war; while that advance is as natural and legitimate as our own, as every one not blinded by national self-love can see. The Foreign Office has become positively diseased upon the subject, and it is not the public but the Government that is doing the mischief. Grant Duff is one of the few English statesmen who have not lost their heads on the subject, and he utters but the language of sober reason in his notes when he says: "So "far from having any cause to fear Russian aggression, we "could, if need were, which God forbid, make her position in "Central Asia wholly intolerable." Were every diplomatic scrap upon the subject in the Foreign Office consigned to the flames, and the department required never to open a chart of Central Asia, nor to look at a report thereon for the next ten years—it would be well for the country.

OUR ARMY.

[By an old Officer.]

THE Duke of Cambridge lately stated his readiness to lead the Aldershott division of the army, at the shortest notice, to any part of the world to which it might be ordered. We do not doubt that he would do so, for he comes of a family celebrated for personal courage, and he proved on the bloody field of Inkerman that he was a worthy scion of our Royal House. About his discretion we may have some misgivings, but this has nothing to do with our present subject. A general's honor is in the hands of his troops, and no one would speak so confidently if not perfectly assured of their efficiency. But this says nothing more than that the Aldershott command is what he describes; for we find him subsequently giving a most lamentable account of the general position of things military, on the authority of his high position as Commander-in-Chief, who, he justly remarks, "ought to know and fearlessly speak the truth." Happy would it be for England and for this country, if all our officials would evince the same candour. The Duke has distinctly shown, in defiance of Mr. Hardy's emphatic statements to the contrary in the House of Commons, that recruiting is miserably deficient; that the men who are brought to the colors are undersized and under-aged; that short service is a failure and the reserve a myth, since the men liberated after three years for the purpose of forming the force were nowhere, or existed only on paper. And he concluded by asserting that money, and money only, was required to bring back things to their proper standard; for with the increased wages for every description of service, it could not be expected that men would enlist on the present rate of pay, when they were able to earn double as much as daily labourers—a subject we may remark, *en passant*, which was mooted in this country by one of our western contemporaries. His Royal Highness also intimated that without money he could not prove his reserves. Now, as to this latter remark, we were under the impression that Lord Cardwell's and Lord Northbrook's re-organization system contemplated the yearly embodiment of the reserves. There may be reason therefore in the remarks of those who introduced the measure, that if there is any failure, it is not the result of the system but of those whose duty it was to carry it out. For we can have little doubt that if the Minister asked for supplies for the purpose, he would be assisted by those who upheld Mr. Gladstone in introducing the measure of "Army Reform." The onus would appear to rest with Mr. Gathorne Hardy, and not in any way with the Duke, who frankly explains the reason why he is powerless. The Duke did not touch however upon a matter which has long been whispered, and has since come prominently before the public, and that is more likely to affect the discipline of the troops than any of the evils yet enumerated. We allude to the existence of *Secret Societies* in the army, than which nothing can be more demoralizing. In illustration of the effects of these associations, we had the other day the strange sight of four soldiers of the Queen's Guards in full uniform, and in broad daylight, bearing a panoply over the person of the Cardinal Archbishop of Westminster in a public procession—a circumstance never known before, not even in Ireland, and which, while it shows the egregious vanity of Dr. Manning, shows

at the same time the growing influence of the Roman Church by means of societies, which, if not checked, will eventually lead to serious complications.

The incident now related, and the dismissal of one of their most respectable contributors by the *Daily News*, for having ventured to report the opprobious epithet applied by the Pope to Mr. Gladstone, have made the Roman interest jubilant. We quarrel with no man for his religion. We accord to all what we demand for ourselves, perfect freedom in such matters, but we do not wish to see history repeated. And history tells us to what lengths Rome will go if allowed. But is there no one who will speak the truth about the Indian Army, and with authority make known its real state. Most of the officers, and nearly all the press of India assert its rottenness, while Lord Napier of Magdala, who ought to know, says it was never more trustworthy and efficient. Let us consider a few things with reference to it. We believe there are few who will uphold the Staff Corps from which the regimental officers are furnished, and who when not so employed find life so intolerable as "doing duty officers" in cantonments, as to make them curse the day they dedicated their manhood to the service of their country. Their faith in the Government is annihilated, and what inducement have they to apply their energies to the service which they entered with all the zeal of boyish enthusiasm? Promotion stopped, their claims ignored, and now a final reduction of 10 per cent. on their pay by the changed value of the rupee. This last blow has been the most severely felt of all, for many are married and are obliged to send their families to England while they themselves remain at their post. It was difficult in former times for an officer, living ever so economically, to keep up his proper position which in the army is imperative, and to provide for those dependent on him at home; but it was done. Now, deprived he is of one-tenth of his pay, and with the price of everything in England increased it is simply impossible. Is there any wonder we ask that complaining is heard, deep and loud on every side? And can it be doubted that what is felt by the officers is felt also in the ranks? The officers care little for their men in comparison with what they did in times gone by, for they are never long with the same regiment. The men care still less about their officers, whom they have ceased to regard with the respect they once did. They have more to do with their native officers than with their English ones; and as these latter are moved from regiment to regiment, bearing about with them the brooding feeling of wrong and of discontent, the spirit of distrust is disseminated. Add to all this the reason to suspect that *Secret Societies* exist amongst the sepoys, which the few English officers with each regiment cannot fathom, and which have more subtle ramifications than any of those at home. How then can the statement be ventured that the Indian Army is as much to be trusted and as efficient *as it ever was*.

Before the fatal "57" regimental officers, attached as they were to the men with whom they had spent their lives, had every confidence in their loyalty. How terrible was their awakening. One man, one only, saw beneath the surface. Sir Charles Napier had the honesty to point out the danger, and to foretell what was coming; but he was poohpoohed. The Indian Army should be reorganized, or evil will come of it. We read daily of inspections and reports, all of the same stereotyped phrase—"the men well set up, steady under arms, marched past in perfect order, shall have much pleasure in reporting &c.,"—but we would recommend the looking a little deeper than the surface. Unless some of our men in power have the manliness to speak out in defiance of such statements, we may be nearer a catastrophe than many of us dream of. There is profound dissatisfaction throughout the Army; and the fact ought to be known.

MR. PLIMSOLL.

As was easy to be foreseen, Mr. Plimsoll's explosion in the House of Commons set fire to the whole country; but as is always the case in such movements, a good deal of extravagance of statement and of belief, has got abroad concerning the evil to be dealt with. It is the carelessness, over confidence, and incompetency of our seamen that cause a vast majority of the disasters at sea. The Board of Trade returns for 1873-74 shew that no less than 4,034 lives were lost on the high seas in that year alone, independently of the 500 lives lost on the coasts of the United Kingdom. This is a fearful increase on previous years, the foundering of the barque *Asia* bound from Amoy to Penang with 800 coolies, and the *Indus*, with 378 coolies telling heavily on the totals. The disasters are classified thus—

	Ships.	Lives Lost. Crew.	Passengers.
Founderings ...	... 48	253	847
Strandings ...	... 104	570	86
Collisions ...	... 31	88	15
Missing ships ...	... 150	1,926	455
Other Causes ...	... 132	252	48
	465 ships	3,089	1,451

The figures are frightful. The saddest feature of the table is the *missing* vessels, of the fate of which the "melancholy ocean" alone knows anything. Official enquiries were held in no less than 314 of these casualties, to ascertain if possible their causes; with the result of shewing that they were in the main attributable to incompetency, negligence, or misconduct on the part of our seamen. The loss in grain ships was mainly owing to careless stowage, an evil with which the new Bill deals effectually. We may easily however carry interference too far by hasty legislation. An analysis of the parliamentary returns from 1856 to 1872 shows that but 4½ per cent. of the losses during that long period arose from defects or faults in the ship itself, or its equipments; 65 per cent. of the casualties arising from the faults either of the pilot, the master, or the crew, the remaining 30½ per cent. being the result of stress of weather, unavoidable accident, or causes unknown. That "greed of gain" on the part of the ship-owner is one of the causes of shipwreck there can be no doubt, but it is still the fact that for one life sacrificed by the wickedness of the owner, fourteen fall victim to the ignorance or misconduct of the crew including the officers. The shipping interest of the kingdom is too vital to the country to be dealt with hastily, and to interfere with the trade in the radical way proposed by Mr. Plimsoll might seriously endanger the supremacy which the Mercantile Marine of England has achieved. The amount of British tonnage afloat is over 8,000,000 tons. According to the *Bureau Veritas* it was 7,900,000 tons in 1873, and the *Westminister Review* has estimated it for 1876, as follows:—

Sailing vessels ...	...	5,400,000 Tons.
Steamers ...	...	2,700,000 „

valued at £8 and £20 per ton respectively. The nation is building and equipping 500,000 tons of shipping a year, and to carry interference with so vast an industry to the lengths proposed in this agitation, would be very dangerous. Left wholly to itself, the private enterprise of the people has enabled them to distance the world in the carrying trade; and an interference therewith that is "to begin "in the draftsman's office, and be continued from the laying of the "keel through every stage of building, fitting, equipping, and loading—in the face of a keen and growing foreign competition," is a very serious proposal indeed. There is not much real danger of this being done. John Bull is in a rage, and needs to be quieted down a little.

In Mr. Plimsoll's original proposals, he enumerated all the causes of wrecks, and proposed that Government should remedy them all. Some were caused by bad building, and he proposed that the Government should effectually superintend all future building. He showed that some of the worst wrecks occur from lengthening vessels, and Government was to superintend all lengthening and altering. The insufficient repairing of ships led to wrecks, and Government was to superintend all repairing: bad stowage is one of the frequent causes of wrecks, and a Government officer was to regulate stowage. "In a "word, he took the whole life of a ship, from the cradle to the grave, "and proposed that the Government should watch over each step of "it, and should see that it was rightly taken." No sane Government, of course, could undertake anything of the kind.

The Thames and Mersey appear to have lost the English ship building trade altogether. While Glasgow built 52 steamers of 1,000 tons average during the first six months of the present year, Greenock 11 of 1,250 tons; Newcastle 21 of 1,150 tons; Sunderland 12 of 1,300 tons; Hartlepool 11 of 1,100 tons; Middlesborough 8 of 1,100 tons; Hull 1 of 3,100 tons; Whitby 4 of 1,150 tons; Stockton 4 of 1,200 tons; and other ports 17 of 1,150 tons.—London built, it seems, but nine small vessels of 450 tons average each, and Liverpool but five of 800 tons. The figures come from a trustworthy source, and will probably surprise many of our readers as much as they did ourselves.

The construction of sailing ships has forsaken both rivers in the same way, London having built nothing but a few small 70 ton

schooners during the period, and Liverpool only twelve ships of 550 tons average. Glasgow in the same period built 29 ships of 31,000 tons gross, Sunderland 28 of 20,600 tons, Port Glasgow 9 of 1,000 tons each, Dundee 6 of 900 tons, Belfast 4 of 1,100 tons, Barron 5 of 900, Aberdeen 5 of 600 tons, Stockton 2 of 1,300 tons, Whitehaven 2 of 1,100, and Grennock 13 of 700 tons. As the figures are not generally accessible, we may restate them in tabular form :—

Steamers.					
Glasgow	...	52	of 1,000	tons	average.
Greenock	...	11	„ 1,200	„	„
Newcastle	...	21	„ 1,150	„	„
Sunderland	...	12	„ 1,300	„	„
Hartlepool	...	11	„ 1,100	„	„
Middlesborough	...	8	„ 1,100	„	„
Hull	...	1	„ 3,100	„	„
Whitby	...	4	„ 1,150	„	„
Stockton	...	4	„ 1,200	„	„
Other ports	...	17	„ 1,150	„	„
Port Glasgow	...	18	„ 450	„	„

London	...	9	„ 450	„	„
Liverpool	...	5	„ 800	„	„
Sailing Ships.					
Glasgow	...	29	„ 1070	„	„
Greenock	...	13	„ 750	„	„
Sunderland	...	28	„ 750	„	„
Stockton	...	2	„ 1200	„	„
Port Glasgow	...	9	„ 1000	„	„
Dundee	...	6	„ 900	„	„
Belfast	...	4	„ 1100	„	„
Barrow	...	5	„ 900	„	„
Aberdeen	...	5	„ 600	„	„
Whitehaven	...	2	„ 1100	„	„
London	...	8	„ 45	„	„
Liverpool	...	12	„ 550	„	„

The Thames and Mersey are thus nowhere in the race ; the Clyde, Sunderland, Newcastle, Hartlepool, and Middlesborough having completly distanced them. An extraordinary revolution has taken place in the character of our Mercantile Marine in the last fifteen years. In the years 1860, 1861, and 1862 the number of sailing ships launched annually in the United Kingdom was 806 of an average burden of 190 tons ; while in the three years 1871, 1872 and 1873 the average annual outturn was but 444 ships of 160 tons. During the former period again, the annual number of steamers built was 207, with an average burden of 336 tons each ; while in 1871-73 the number was 560 of 700 tons each.

	Sailing Ships.	*Steamers.*
1860-62	806 of 190 tons	... 207 of 336 tons.
1871-73	444 „ 160 „	... 560 „ 700 „

The figures, although striking enough, convey no adequate impression of the magnitude of the revolution that has taken place. The *total number of ships built every year is almost the same now* that it was fifteen years ago, but the average tonnage of each ship is just double what it was then.

	Ships and Steamers.	*Gross tonnage.*
1860-62	3,039	654,206 Tons
1871-73	3,015	1,319,319 „

Twelve or fifteen years ago, four sailing ships were built for every steamer : we are now building five steamers to every four sailing ships. The great change that has taken place in the size of our steamers and sailing vessels, is also a very noticeable fact, three-fourths of the steamers and sailing ships built now-a-days are of very heavy tonnage, small vessels being employed only in the Coasting trade.

OUR EDUCATIONAL SYSTEM.

THE *Pioneer* of 4th September contains a paper by a native upon the education provided by Government in this country, which well deserves attention. It has long been apparent that the more intelligent and cultivated classes are dissatisfied with the Government system, and its results. The English unofficial mind sees the defective results as clearly as the native, but it is desirable to have the matter put clearly before us, by a native of superior culture, as such men see it. The writer shows that the results are unsatisfactory in three respects. Our educational system has failed to take any powerful hold of the Mussulmans. Perhaps this is not altogether the fault of Government but partly of the Mussulmans themselves, who have held disdainfully aloof as a rule from the education provided by Government, preferring ignorance and stagnation to western enlightenment. But, as the writer remarks, the late Lord Hobart adopted special measures for their behalf, and his efforts were not unappreciated. Government is certainly in a difficult position, in having to provide education for two classes of people so widely different as the Hindoos and Mahomedan. The present system meets in some measure the wants and desires of the former, but not of the latter, and the consequence is that the better educated Hindoo has outstripped the Mussulman *in the race for preferment.* And though the latter may himself have been *originally* to blame for this, he is inclined to accuse the Government of partiality, and both the disaffection of our Mussulman subjects and the feelings of antagonism between Hindoo and Mussulman are increased The question is whether Government ought to do more than it has done to supply the educational wants of the higher class Mahomedans.

The next defect mentioned by the writer is that the education offered by the State has not been sufficiently taken advantage of by the higher classes of the Hindoos themselves. "The "Government educational institutions can, without exaggeration, be "described to be a mixture of the lower class of English private "and public schools, having the disadvantages of both and the "advantages of neither, and we are not surprised to find that natives of good position are not anxious to patronise them." They do not provide a true moral and intellectual training ; they "encourage cramming in its worst form," and "discourage sound study of any individual branch of knowledge." The writer believes in the necessity for institutions "like the public schools of Eton and Rugby, or the Universities of Oxford and Cambridge." He believes that such institutions would be more likely to become self-supporting than the present Government institutions. This is a subject which deserves increased attention. It was pointed out in these columns not long ago that, in this direction too, Madras is taking the lead, and that the Hindoo Proprietary School is intended to be a sort of Eton for the sons of Madras zemindars. The character and working of this school, and the success which attends it, will possess great interest for the true friends of higher class native education.

Not only are important classes of the people not sufficiently reached by the present system, but the scholarship imparted to those who take advantage of it is of a most defective kind. This point is too clear to need further elucidation at present. We may however quote the words in which this "Native" writer describes the typical product of our colleges. The education which the student receives in Government colleges does not tend to develop the intellectual or moral side of his nature, and years of training do not improve his mode of thought or social habits. He uses the English language in the same mechanical manner in which he uses an English knife, considering it purely as a means towards an end, and nothing more. He does not take any position in his country, and exercises no influence upon his countrymen. His best recommendation *in life* is that he has succeeded *in passing certain examinations ; but* this recommendation, in the absence of other social qualities, has no great weight with his countrymen. He takes an exaggerated view of his own abilities, and looks to Government for their due appreciation. The State does not show an exceptional treatment of him, and he therefore begins to show his "patriotism" by spreading sedition against it. Such, it may be feared are the highest results which the Government educational system has yet attained, as those who read native periodicals see too much ground to believe.

RENAISSANCE IN ITALY.*

THE term Renaissance until of late years has been differently applied by different men. By the artist, it was applied to the change which came over the world of art after the discovery of long-hidden monuments of antiquity. By literary workers, whether in the domain of poetry or philosophy, it was applied to the extended knowledge of the classics, the fresh taste in poetry, the new systems of thought which sprung from the discovery of manuscripts, and from the desire which that discovery enkindled to enter into the longlost ideas of the ancient world. Such students of theology as deemed the term a fitting one to use, thought of it as applicable to the great movement which brought about the Reformation in Germany and England, and led on to the freedom of the individual conscience. By the student of science the term was applied to the growth of the modern system of investigation of the facts of the natural world, and the change from the Ptolemaic to the Copernican system of astronomy. By the politician, it was applied to the rise of the great nationalties of Europe upon the ruins of feudalism, the growth of the monarchic system; the check to the political power of the Papacy; and the dawnings of popular freedom. Some have pointed out, as great features of the Renaissance period, the exploration of America, the invention of printing, of the compass, and the telescope, of paper, and of gunpowder. Mr. Addington Symonds, in his valuable work, uses the term in a manner inconsistent with none

* Renaissance in Italy.—Age of the Despots.—By John Addington Symonds.—London : Smith, Elder and Co.

of these limited uses of it, but so as to include them all. He uses it to denote the whole transition from the "Middle Ages to the Modern World." The history of the Renaissance with him is "the history of the attainment of self-conscious freedom by the human spirit, manifested in the European races." It is a history which is not yet written. It is a history which could not yet be fully written. The Renaissance period is not yet ended. "In many senses we are still in mid-Renaissance." The intellectual energy of the present day is a continuation of the energy of the early days of the period. The spirit which animates the foremost workers and thinkers of to-day, is the spirit which from those early days has prompted the human mind to ceaseless activity.

This new birth of the human mind to a higher life first took place in Italy. It could not well have taken place elsewhere. When it did take place, the barbarism of the ancestors of the northern nations had not been wholly absorbed. The Germanic races had not yet entered fully into the culture of the people they had superseded. Italy with its pliant language, with its sunny climate, with its political freedom and commercial prosperity—Italy was the land in which all things were first ready for the upspringing of new life for the human intellect. The intellectual awakening spread itself in ever widening circles to other lands. There, as in Italy, the dawning of new life had been preceded and anticipated, by heroic attempts of men born before their due time. In France, in the twelfth century, Abelard strove in vain to throw off the fetters which impeded philosophical enquiry. And later on, in England, Roger, Bacon, the Franciscan friar, worked for that freedom of scientific investigation which was not secured till modern days. In various parts of Christendom, the early religious reformers unavailingly raised their protest against the tyranny of the Church. The more decided anticipations of the general awakening of the higher spirit of humanity, we find later on in Italy. Dante, Petrarch, and Boccaccio are the names which typify the main tendencies of the revival of which they were the heralds. Dante's poem was the assertion that the living language of his country, was a fitting medium for the expression of lofty thoughts; that its melody and pliancy rendered it available to the artist in words. In Dante modern thought first proclaimed the all-sufficiency; for its needs, of modern speech, and first boldly put forth its claim to mould its work in accordance with its own promptings. In Petrarch, on the other hand, may be seen how, alongside of the resolve of the awakening intellect of Europe to work out its own salvation, there was a passionate yearning to avail itself of the teachings of the ancient world. With its own inborn impulse to fashion a culture stamped with its own impress, the newly roused spirit of humanity combined a desire to sit at the feet of antiquity; a desire so to perpetuate the thoughts of the past, that humanity in all it future workings, should bear with it the rich inheritance of the days of old. Boccaccio too performed his part in the great revival. He was the representative of the reaction of the human spirit against monasticism, against the thought that the main heritage of man in life is one of woe, and that the only discipline which contributes to the perfection of humanity is the discipline of suffering. He carried even to excess his declaration that life had its flooding sunshine of joy, which should ever be recognized with a jubilant outburst of thankfulness. He proclaimed, as Mr. Symonds well puts it, "the beauty of the world, the goodliness "of youth and strength and love and life, unterrified by hell, un- "appalled by the shadow of death."

Mr. Symonds fixes the beginning of the fourteenth century, as the date at which the new age began. Italy, it is true, had then lost the heroic spirit which characterised her communes of the preceding century, but she had gained ease, wealth, magnificence, and repose. She felt the of new life throbbing in her veins. The re-awakening of the minds of her children can be likened only to the outburst of life in the natural world in spring time. They became keenly alive to the beautiful, and their first tendency was to greet everything natural as necessarily endowed with beauty. The hardy training which the men of those days received in their homes, even amidst the growing prosperity, contributed to robustness of physique, so that along with the recognition of the long lost beauty of the world and the long hidden wealth of the human mind, there was a healthy capacity for enjoying the life dawning upon them with such hopeful splendour. Here Mr. Symonds's own words must be quoted:—

"During the Middle Ages, man had lived enveloped in a cowl. He had not seen the beauty of the world, or had seen it only to cross himself and turn aside and tell his beads and pray. Like Sir Bernard travelling along the shores of the Lake Leman, and noticing neither the azure of the waters, nor the luxuriance of the vines, nor the radiance of the mountains, with their robe of sun and snow, but bending low as though burdened his forehead over the neck of his mule; even like this monk, humanity had passed, a careful pilgrim, intent on the terrors of sin, death, and judgment, along the highways of the world, and had not known that they were sightworthy or that life is a blessing. Beauty is a snare, pleasure a sin, the world a fleeting show, man fallen and lost, death the only certainty, judgment inevitable, hell everlasting, heaven hard to win. Ignorance is acceptable to God as a proof of faith and submission; abstinence and mortification are the only safe rules of life: these were the fixed ideas of the ascetic mediæval Church. The Renaissance shattered and destroyed them, rending the thick veil which they had drawn between the mind of man and the outer world, and flashing the light of reality upon the darkened places of his own nature. For the mystic teaching of the Church, was substituted culture in the classical humanities; a new ideal was established, whereby man strove to make himself the monarch of the globe on which it is his privilege as well as destiny to live. The Renaissance was the liberation of humanity from a dungeon, the double discovery of the outer and the inner world."

Mr. Symonds recognises the influence on the western world of the fall of the Greek Empire in 1453. The effect of this was to bring the modern mind into contact with the ancient. "While "it signalised the extinction of the old order, it gave an impulse "to the now accumulated forces of the new." It gave rise to a belief in the identity of the human spirit under all manifestations. "Men found that in classical as well as Biblical antiquity there existed an ideal of human life, both moral and intellectual, by which they might profit in the present. The modern genius felt confidence in its own energies, when it learned what the ancients had achieved. The guesses of the ancients stimulated the exertions of the moderns. The whole world's history seemed once more to be one."

It was Michelet who asserted that the great achievements of the Renaissance were "the discovery of the world and the discovery of man." This dictum Mr. Symonds adopts, though with an extended explanation. The discovery of the world he speaks of as two-fold in its character. It means, on the one hand, the appropriation by civilised humanity of all comers of the habitable world; and, on the other, the conquest by science of all that we know of the nature of the Universe. The discovery of man has also a two-fold aspect. It has reference to man, both in his temporal relations and in his spiritual relations, the two relations illustrated, the one by Pagan antiquity, the other by Biblical antiquity. These are the two main regions which the thoughts of humanity in past times had already traversed, and which the Renaissance re-opened for investigation. At first they were thought to be distinct, but afterwards they were found to be inter-penetrative. It is in the former region that art and scholarship work. With the Renaissance, there arose a new spirit in the arts. The old conventional forms, the rigid ungraceful attitudes, the almond-shaped eyes—these were no longer reproduced, The idea of the nobility of the human form sprang up. The thought that it was worthy of patient study was eagerly embraced by the artist; and he studied from the undraped figure. He introduced reality even into the paintings he intended for the adornment of the sanctuary. He painted alike with reverence for the sacred legend and with devotion to truthful delineation. By representing Christ and the Modanna like unto living human beings, he set forth more faithfully than preachers had yet learned to do, the divineness of humanity. Artist and sculptor too did all they could to bring the art of their own day into unison with the art of pagan times, when saintly emaciation and ecstatic asceticism were unknown. And thus, says Mr. Symonds, "through the instrumentality of art, the Renaissance wrought for the modern world a real resurrection of the body, which since the destruction of the pagan civilisation had lain swathed in hair-shirts and cerements, within the tomb of the mediæval cloister." The up-growth of scholarship too revealed to men what they had long been unconscious of—the wealth of their own minds, the dignity of human thought, the divine import of human life even when contemplated apart from the domain of devotion and formal worship. "During the Middle Ages, a few students had possessed the poems of Virgil and the prose of Boethius—and Virgil at Mantua, Boethius at Pavia, had actually been honoured as saints—together with fragments of Lucan, Ovid, Statius, Cicero, and Horace. The Renaissance opened to the whole reading public, the treasure-houses of Greek and Latin literature. At the same time the Bible in its original tongues was rediscovered. Mines of Oriental learning were opened for the students of the Jewish and Arabic traditions. With

unerring instinct, the men of the Renaissance named the voluminous subject matter of scholarship 'Literæ Humaniores; the more human literature, the literature that humanises." Mr. Symonds traces out three stages in the history of scholarship during the Renaissance. The first he calls the age of passionate desire, when Petrarch pored over a Homer he could not understand, and Boccacio in mature years set himself to learn Greek, so that he might gain access to the very fount of poetic inspiration. The second is an age of acquisition and of libraries; an age of accumulation, of an enthusiasm which knew nothing of criticism, an age which treasured the long concealed manuscripts as men of the days gone by had treasured up the reliques of saints. The third age is the age of the critics, the philologers, and the printers; the age when Greek type was struck; when at Florence, Venice, Basle, and Paris printing presses were at work unceasingly; when scores of scholars were kept employed "to ascertain the right reading of sentences, to accentuate, to punctuate, to commit to the press, and to place beyond the reach of monkish hatred, or of envious time, that everlasting solace of humanity which exists in the classics." The printing of Virgil in 1470, of Homer in 1488, of Aristotle in 1498, of Plato in 1512, events whose dates deserve to be remembered. The ultimate effect of the recovery and dissemination of classic literature was the liberation of the human intellect: the immediate effect was to enkindle in the minds of the learned a spirit antagonistic not simply to monasticism but even to Christianity itself. Men were thus urged to an extreme imitation of pagan licence, which led to a two fold re-action, to Puritanism in the north, and to what has been called counter-Reformation started under Spanish influences in the south.

To the second of the two great regions which the Renaissance opened out for free investigation—the region of man's spiritual relations—Mr. Symonds devotes a few suggestive pages. The Renaissance revealed to human consciousness its own spiritual freedom. In aiding him to secure this, scholarship did good service by restoring the text of the Bible and encouraging theological criticism. Following upon theological freedom, there came a free philosophy over which the dogmas of the Church had no control. The whole Reformation movement is a phase of the Renaissance. The term Reformation applies to the change in the region of religious thought and national politics, which corresponds to the changes brought about in the sphere of culture, art, and science; and the Renaissance may with the extended meaning attached to it by Mr. Symonds be said to include all such changes. The period of the Renaissance is distinguished from that of the Middle Ages by culture carrying on the humanising and repining influence which the church had hitherto exercised, though with but a limited conception of what was humanising and refining. The Renaissance was thus emphatically the commencement of an era of culture. All the great nations of Europe shared in its work. But inasmuch as it began in Italy, as it was Italy which "created that new spiritual atmosphere of culture and of intellectual freedom which has been the life breath of the European races," Mr. Symonds has devoted himself to the task of unfolding the whole course of the events of Italian history which ushered in the Renaissance period, and of those which marked its progress. His book is one which will be read with great interest by students of history, who now that history is being treated by the master minds of English literature are fast increasing in number. All who have read Mr. Symonds's other works, his "Sketches in Italy and Greece," for instance, will expect to find a picturesque dignity of language, and a sustained though subdued enthusiasm; and what they expect they will find in this valuable contribution to history, which he has given to the world with the title "Renaissance in Italy." The present volume, which is devoted to a sketch of the "Age of the Despots," will be followed by two others on "The Fine Arts and the Revival of Learning" and on "Italian Literature."

A FRAGMENT OF MR. RUSKIN'S AUTO-BIOGRAPHY.

THE August number of "Fors Clavigera," the name with many meanings which Mr. Ruskin gives to his letters to the workmen and labourers of Great Britain, is interesting as containing sundry autobiographical details as to one who, from the time when he wrote under the signature of "An Oxford Graduate," has never been without readers who have accepted his words with welcome, even when they have not been prepared to assent to all his teaching. The details in the August letter of Mr. Ruskin's early life begin with the brass plate under his father's counting-house bell, upon which plate was inscribed the names "Ruskin, Telford, and Domecq." The counting-house was in Billiter Street at the east end of the city, and it was as wine merchants that the three were associated together. The main capital of the firm was a Spanish vineyard on the hill side of Macharnudo. This vineyard, from which was produced the finest white wine of Spain, was in reality the sole property of the partner whose name stood last on the brass plate, Mr. Peter Domecq. This gentleman, "Spanish born, and partly French, partly English bred," we are told, had had opportunities for noting the elder Ruskin, during nine years of duty as head clerk to an older London firm; and when the house broke up pressed him to unite with himself in business. This he consented to do, when he had secured that he himself should nominally be the head partner. Of Mr. Domecq we are told but little. He lived chiefly at Paris. He rarely visited his Spanish estate, but he had a perfect knowledge of the proper processes of cultivation, and authority over the labourers like a chief over his clan. Of the second partner, to whom the London premises belonged, we have a more minute sketch. He lived in a Kentish village. "He "was a perfect type of an English country gentleman of moderate "fortune; unmarried, living with three unmarried sisters, who in "the refinement of their highly educated, unpretending, benevolent, "and felicitous lives remain in my memory more like the figures in "a beautiful story than realities. Neither in story nor in reality "have I ever again heard of, or seen, anything like Mr. Henry "Telford; so gentle, so humble, so affectionate, so clear in common "sense, so fond of horses, and so entirely incapable of doing, "thinking, or saying anything that had the slightest taint in it of "the race-course or the stable." And yet he never failed to be present at a great race; he passed the greater part of his life on horseback; and hunted during the whole Leicestershire season. Still with all this interest in racing, riding, and hunting, he "never made a bet, never had a serious fall, and never hurt a horse." The only time he took any active part in the business was during two months of the summer, when the elder Ruskin was taking his holiday, or during other occasional absences. Mr. Telford, we are told in this fragment of autobiography, was always held by his father and mother as primarily responsible for what Mr. Ruskin calls his "Turner insanities." This was because he gave him a copy of the illustrated edition of Rogers's "Italy." This book enabled him to carefully note Turner's work. He shrinks from saying that it gave the direction to the energies of many years; but it was the accident which brought to the front a new mental phrase; and the essential point to be noted is, he thinks, that he could understand Turner's work when he saw it.

But the most interesting part of the present contribution towards a sketch of his own life is the description given by Mr. Ruskin of the two months' summer holidays. The elder Ruskin had always with him to share his enjoyment his wife and child. The holiday consisted in a tour for orders through half the English counties, and, when the northern half was being taken, in a visit to a *relative* in Scotland. The journey was for some years made in Mr. Telford's travelling chariot. The old English chariot Mr. Ruskin maintains was the most luxurious of travelling carriages. The one of which he has such pleasant remembrances was hung high, so that the travellers could see well over stone dykes and high hedges. A booted and bright-jacketed rider was their post-boy. In the dickey, over the capacious boot, in which the miscellaneous luggage was stored, was "nurse Anne," who was both guard and packer, and was unrivalled "in the flatness and precision of her laying in of dresses." The chariot's "four large, admirably fitting, and sliding windows, admitting no drop of rain when they were up, and never sticking when they were let down, formed one large moving oriel, out of which one saw the country round to the full half of the horizon. My own prospect was more extended still, for my seat was the little box containing my clothes, strongly made, with a cushion on one end of it. . . . We went from forty to fifty miles a day, starting always early enough in the morning to arrive comfortably to a 4 o'clock dinner. Generally, therefore, getting off at 6 o'clock, a stage or two were done before breakfast, with the dew on the grass, and first scent from the hawthorns. If in the course of the mid-day drive there were any gentleman's house to be seen, or better still a lord's, or best of all a duke's, my father baited the horses, and took my mother and me reverently through the state rooms, always speaking a little under our breath to the house-keeper, major-domo, or other authority in charge, and gleaning worshipfully what fragmentary illustrations of the history and domestic ways of the family might fall from their lips. My father had a quite infallible natural judgment in painting; and though it had never been cultivated so as to enable him to understand the Italian schools, his sense of the power of the nobler masters in northern work was as true and passionate as the most accomplished artists. He never, when I was old enough to care for what he himself delighted in, allowed me to look

THE WEEK.

A FEW days ago there was every reason to fear that we were on the eve of a great war with China. The assassination of Mr. Margary was but one—although the greatest—of many recent outrages inflicted on us by the Chinese, who seemed to have made up their minds to treat all foreigners as vermin, and either expel or exterminate them. It did not appear that the British demands for reparation in the Margary case were being prosecuted with much vigour, and the delays of the Chinese officials were reported to have been aggravated by violence and deliberate insult. The latest report which we published last week was to the effect that Mr. Wade had warned the Home Government to have troops in readiness for China. The coming Chinese war was therefore for some days the principal subject of discussion. To some the prospect appeared positively delightful, because, on the one hand, the Chinese have for some time being laying up for themselves wrath against the day of wrath, and seemed really to stand in need of a castigation; and, on the other hand, the prestige of the British nation is supposed to need the momentum of a great and successful war to send it up to a somewhat higher level than it has lately occupied in the opinion of Asiatic powers. Also a few more ports might be opened for commerce, and the trade route through Burmah to Yunnan opened to the discomfiture of both China and Burmah. Other organs of opinion took a less sanguine view of the prospect, and, considering that we should have had to enter the war without allies, and that China is at present supposed to be better prepared for a conflict than before, held that the advantages derivable from a war with the Celestials would cost an amount of blood and treasure which they would scarcely repay. The Government has been almost universally blamed for its feeble diplomacy, on the ground that had the demand for satisfaction been presented with more firmness, prompt reparation would have ensued. We are not able to symyathize with the keenness for war shewn by some of our contemporaries; and, that a good deal of the animadversion on our foreign diplomacy was hastier than neccessary appears from the latest telegram on the subject—that is, if the telegram in question prove to be true, as we trust it will. It is to the effect that the Yunnan difficulty is substantially settled. We hope the settlement is of a satisfactory nature, though the telegram is not very explicit on one point. It might almost be inferred from the wording of it that the punishment of Mr. Margary's murderers is to be left entirely in the hands of the Chinese. That is, we should think, a course not consistent with the declared intentions of the Home Government to see that the punishment was effectually executed, for, we suspect, it will not be easy to get a satisfactory guarantee from the Chinese Government that the real murderers have suffered; and a few vicarious deaths, with the payment of a pecuniary compensation to Mr. Margary's, family would hardly be a result consistent with the dignity of the British Government. We are, however, willing to hope that fuller information may be more satisfactory on this head. It may perhaps be an evidence of honest intention that a Special Ambassador is to be sent by the Chinese to London. The trade route between Yunnan and Burmah is to be opened, and, if China has consented to aid us heartily in this matter, the escort difficulty with His Majesty of Burmah will soon be dissipated.

MANY voiced rumour appears to be mistress of the day, and *canards* fly thick and fast. These are not only chronicled by the daily press, but grave Editors in London, Bombay, and elsewhere indite "tranquillizing" speculative leading articles upon them, while the Indian Government flutters on its lofty seat, and sends round its re-assuring telegrams. A Government driven into palpitations by a telegram, which is at least premature, and in the midst of its alarm shouting round to the organs of public opinion "Cant you keep calm like me!" *may* prove both energetic and dignified in time of real danger, but does not inspire us with excessive confidence. We refer of course to the Russian occupation of Merv, which was reported and denied last week. Last week, we also chronicled a rumour that Yakoob Khan was quietly taking possession of one Chinese town after another, and that also proves to be unfounded. A week ago the *Bombay Gazette* was made the medium of a "startling" telegram to the effect that the Nizam of Hyderabad had refused to see the Prince of Wales, and the *Gazette*, which expected better things of Sir Salar Jung, wrote a protesting leader thereupon, giving the *Times of India* an opportunity of condoling with his "unfortunate contemporary." The fact the health of the youthful Nizam is not considered sufficiently established, we regret to say, to justify his encountering the fatigue and excitement that would be inseparable from his attendance upon the Prince. As first of the native Princes, he would be obliged to take a prominent position in Durbar, and he is wanting both in years and physical strength in the opinion of his medical advisers for the task. It is only mischievous in these circumstances to give to the matter the complexion of a refusal to meet the Prince. The absence of the young Nizam will be a great disappointment, but these Durbar attendances are notoriously very fatiguing, and productive of much excitement and frequently of great distress to the native Princes; and there is honest ground for the representations of the Hyderabad Ministers that the young Prince is yet equal to them. An exact knowledge of the facts of the case makes us sympathise with the position of Sir Salar Jung. We yet hope that the young Nizam will see the Prince, but we have no right to blame the Minister if he does not.

ALTHOUGH it is not true that the Ameer of Kashgar is busy capturing Chinese towns, he is said to be energetically reforming his army and making his forces more effective. Turkish instructors are said to be working wonders by introducing a European drill system, which is exceedingly popular among the soldiers. Mr. Shaw, the British Envoy, left Yarkund for Simla on the 29th July, bringing a ratification of Sir D. Forsyth's treaty and presents for the Viceroy. If Government feels at all afraid of either Russia or China, it could not do better than draw the cords of alliance as tight as possible between us and the Ameer. There is said to be no anxiety in Kashgar with regard to Chinese aggression.

A ST. PETERSBURGH telegram of the 7th instant informs us that on the 4th, General Kaufmann obtained a complete victory over 30,000 Khokand insurgents, and intimated his intentions of pushing on to Khokand immediately on the arrival of supplies from Khodshent.

THE week has not been particularly fruitful of internal events or matters of fresh interest. Preparations for the coming Prince go on briskly enough, and small items of gossip on this subject appear almost daily, but tend to be come tiresome. It is not of infinite importance, except to glass-blowers, to know, that owing to a combination of the dealers in Bombay, the illumination tumblers from that city have been ordered from England. That the State *howdahs* must be overhauled and new State umbrellas prepared, that Calcutta saddlers are likely to profit by the orders of native chiefs; that Colonel. Somebody of Gwalior will be made a K.C.S.I. during the Investiture Durbar in Calcutta,—these and similar intimations are chiefly useful for making up paragraph columns. It is perhaps a little startling to people, who are anxious how the money is raised, to read that while the Prince is expected to sleep but four nights in Madras, the cost of the furnishing of his apartments there will be thirty thousand rupees—a tenth part of the share of the financial burden of the visit which the Home Government estimated would fall upon India. A good deal of complaint is heard about the way in which certain Government officials have exerted themselves to raise subscriptions. It is said that wealthy natives have been asked to contribute forced sums, that particular amounts have been specified, and that, when the victims attempted to wriggle and offered less, they were met with a peremptory refusal. If these reports are correct, as there is reason to fear, it is to be hoped that the circumstances will not be hid from the Government, which would certainly make known its displeasure at such folly and insolence.

THE Prince of Wales on arriving in Bombay will open the new Sailors' Home, which is now far advanced towards completion, and by the time the Prince arrives in November will be finished. None of the Princes of India, except the magnates of the presidency, will meet the Prince in Bombay. The Viceroy will receive His Royal Highness in Bombay, but will not remain, and no regular Durbar will be held. The Chapter of the Star of India will be the first and grandest of the gatherings in Calcutta at the end of the year, and the Prince will commence his progress to the North-West early in January, visiting Lucknow *en route*. He will spend some time at Delhi and at the camp to be formed there, and will probably visit some of the principal Chiefs whose capitals are not too distant from the railway. He will also make a brief stay in the Punjab capital.

THE ill-feeling among the ryots of Dacca, has been augmented by a report that the Queen had prohibited them from paying more than five annas a beegah for arable land or more than eight for homestead. Mymensingh and Backergunge are looked upon with some suspicion, but Fureedpore is believed to be safe. The arbitrators who were appointed to settle the disputes seem not to have arrived at any decision.

IT was stated that the ex-Gaekwar Mulhar Rao intended to present a petition to Parliament, but though Government has afforded him every facility for so doing, he seems disinclined to carry out his intention. The reason is believed to be, and doubtless is, that Government insists upon a European officer being present at his interview with his attorney. Perhaps Mulhar Rao had other purposes in his mind besides to petition Parliament, and Government was wise to make such a stipulation.

SEVERAL slight shocks of earthquake were felt on the 3rd instant, throughout Bengal, with the exception of Patna, Orissa, and Chota Nagpore. In Eastern Bengal the floods and the consequent rapid rise of the rivers threaten to do considerable damage to the standing crops, and to prevent the sowing of the late *roah* plants in the flooded districts. In general however the amount and distribution of rain throughout the province has been very satisfactory. The cholera reports become gradually more favourable. Cases are both less numerous and less serious. The victims are most frequently persons whose lives were in danger from other diseases.

AN unfortunate military scandal has occurred. Captain Liot of the Royal Artillery has been charged by the Mussoorie Bank with forgery, and has been committed by the Superintendent, Dehra Doon to take his trial at the High Court at Allahabad. As no bail was forthcoming, the prisoner was removed to custody.

THE comm'ssion for enquiring into the causes of the late agricultural riots in the Mahratta country held its first sitting at Poona on the 6th instant. The points upon which enquiry will be made are—(1). The relations of the agricultural to the money-lending classes, and the manner in which they are affected by the law of Civil procedure, (2) The condition of the agricultural classes and the effects of our revenue system thereon. Nothing could be wiser then the institution of this enquiry. Had we but shewn the same promptitude in dealing with past difficulties, we should to-day have been far more advanced in the art of Government than we now are.

THE Calcutta Justices have suddenly resolved to dispense with the services of their Health Officer, Dr. Tonnerre, presenting him a *bonus* of Rs. 35,000 and giving him leave on full pay to the end of the year. Nothing can justify so extravagant an arrangement, and the *Statesman* is right to protest against it. Dr. Tonnere's service extends but to twelve years, and the *bonus* is equivalent with interest to a gratuity of a five years' pension of £1,000 a year.

THE CALCUTTA STOCK AND SHARE LIST.

T. CHARLES GILL, BILL & STOCK BROKER,
Brokers' Exchange, CALCUTTA.

Money Market.

FRIDAY, 10TH SEPTEMBER.

THE great falling off in the public demand on the Bank of Bengal, which was witnessed last week, has not made further progress; and the Board having separated yesterday without making any reduction in the rate leads to the belief that they see their way to maintain present scale of terms, at all events until after the Doorga Poojah holidays. Their business continues large in comparison with their available means, for the Government Balances are too large to be counted upon as permanent strength; and although bazaar rates are still nominally below those of the Bank, they do not appear to be very reliable. The expected supply of 22 lakhs of Silver from China and the Straits has now arrived, and also the greater part of the 10 lakhs from Europe; but most of it has to pass through the Mint, and probably none of it had reached the Bank when this week's statement was made up. Those supplies are therefore an element of strength to look forward to, and a large amonnt of Council Bills will no doubt have arrived by the mail this morning; still the Poojahs are now so near that the usual demand for that season will likely absorb all the known cash augmentations, and rates have a stronger appearance now than they lately had. Shipments of Silver to Ceylon have commenced early, 6 lakhs having been despatched during the past week. There are signs of increased activity in the export trade, and after the holidays there will be first the local produce demand and then the Burmah demand to provide for. Should Government have any extraordinary call on its balances during the cold weather, it is probable further importations of Silver may be urgently required, and, even as it is, further imports to a moderate extent will do no harm. The Government Balances at the Bank wer neither increased nor intrenched upon last week, and a reduction of 12 lakhs in the Cash Balances is represented by an increase of same amount in the Loan and Credit Accounts against Government and other approved securities. The bills discounted have decreased 10 lakhs, but a decline of similar amount in the private deposits has absorbed the cash thereby let loose.

Exchange on England has been very steady all the week, and is to-day strong at present rates, which are, and have all along been, the same as those quoted last Friday. A fair amount of business has been done, as times go, remittances perhaps rather preponderating over sales, but no appearance of weakness in the Bank's selling rates has been apparent. The business of the week, both for last Tuesday's mail and that of next Tuesday has been almost uniformly at under-noted quotations, the only exception having been in Credits, which have been exceptionally placed with private remitters at 1-10-⅛ and with Banks at 1-10-5-16. There has been very little sent by wire, and the rate for that has been 1-9-11-16 and for Demand Bills 1-9¾. Other rates are almost the same as on Friday last,

Bank Bills	...	1-10-1-16	to ⅛
Credit Bills	...	1-10-3-16	to ¼ } 6 months' sight.
Document Bills	...	1-10-3- 8	

Some business has been done for next China Steamers. Bank demand at 219½, subsequently strengthening after the Opium Sale to 219 for private bills at thirty days sight; business done in them also.

Import trade is looking rather better, and sales are on the increase, although not greatly so as yet, but there must be a good many goods taken during the next fortnight, or this will be a

most remarkable year. Prospects of higher prices are however very faint.

There is decidedly more doing in exports, especially in Jute, which has been in good demand and is dearer. A large business has been done, and bales of first marks are worth 18½ to 19 rupees. The local mills are in full work, and take off considerable quantities of loose. Seeds are rather falling off in demand, but Tea finds buyers, inferior sorts at scarcely so good prices, but good and fine qualities at quite previous rates. The bad result of the English harvest will likely lead to an early revival of the demand for food grains. Freights have improved, not so much for steamers as for sailing ships, of which there is rather a short supply available for early despatch.

The enquiry for paper of the various Government loans has been good, and for some days the market had a decided upward tendency. The last day or two, flatness has again set in, and sellers are more numerous than buyers, excepting in the 5½ per cent. stock, which has been taken at an advance, though not to any great extent. A very low sale of 4½ per cents. of 1872 has been made, but it is understood the paper *had* to be sold : the price was 102-12-0, but there are free buyers at the price, and other paper of same loan is not obtainable unless at an advance. The present rates are—

4	per cents	... Rs.	102-0
4½	„	... „	102-14
5½	„	... „	108-4 to Rs. 108-6

In shares there has been next to nothing doing, the only department showing any life being that of Spinning Mills, which stocks are gravitating towards par. Cotton Mills are most in favor at present. Gooserys maintain their premium, and Bowreahs have reached 96 for cash and par (100) for time. Bank shares are quiet on the whole, but Nationals have advanced to 117. Coal stocks are greatly neglected, and Bengals have not yet recovered the effect of late disclosures about management of the company, although its successful working is undoubted. India General Steam improved to 420, but are weaker since issue of the report, although the dividend gives nearly 20 per cent. per annum return on present price of the shares : certainly some people are very difficult to please, for the company's position otherwise also is very good. Tea shares keep decidedly flat, but holders are not pressing to sell by any means. Strand Bank Press shares 100 paid have been disposed of as low as 10 each. The week's business is wretched in extent—and the following are the principal sales for ready cash :—

Bank of Bengal, 1,420, 1,417½.
National Bank, 114½, 15½, 16½, 16, ½, 117.
Agra Bank, 98.
Barnagore Jute Mills, 98, 9, ½, 100.
Goureepore Jute Mills, 1,000, 5.
Budge-Budge Jute Mills, 72 (75 paid).
Howrah Jute Mills, 48, 7½ (75 paid).
Oriental Jute Mills, 70.
Seebpore Jute Mills, 78.
Goosery Cotton Mills, 224.
Bowreah Cotton Mills, 93½.4, 5, 6, 96½.
Singell Tea Company, 102½, 3. 4, 102.
Durrung Tea Company, 70, 73. 70, 3, 72 ex dividend.
Indian General Steam Boat Co., 410, 15, 20.

LATEST TELEGRAPHIC NEWS.

London, 2nd September.

THE ironclads *Ironduke* and *Vanguard* came into collision off Wicklow during a dense fog. The latter sank in nineteen fathoms of water, but all lives were saved.

London, 6th September.

STRIKES at Oldham and Dundee terminated on Saturday, Dundee operatives accepting 5 per cent. reduction in their wages, and Oldham masters having withdrawn the gross lists earning.

London, 6th September.

THE Homeward Mails *viâ* Brindisi, which left Calcutta on 10th August and Bombay on 13th, were delivered to-day.

London, 7th September.

THE *Times* publishes a Shanghai telegram, stating that the difficulty arising from the Yunnan outrage is reported to be substantially settled, China undertaking to send a Special Ambassador to England ; also to punish the guilty parties in Yunnan. An indemnity is to be paid to Mr. Margary's family. The trade route between Yunnan and Burmah is to be opened, and the levy of taxes at Pekin is to be regulated.

London, 8th Sep'ember.

THE sum of £187,000 was withdrawn from the Bank of England to-day. Large importations of foreign wheat are necessary to meet the deficiency of the English wheat crop.

ARRIVAL—Steamer *Venetia* (on 6th).

London, 8th September.

KUOSUNGTAO, Officiating Governor of Canton Province, and Hongchienihen, son of the President, Board of Works, have been appointed conjointly Chinese Ministers to England.

Paris, 8th September.

A LETTER from Admiral Laroncier, at the time commanding the Mediterranean Squadron, has created a sensation. The Admiral declares he will only support Marshal Macmahon so long as he keeps aloof from the party of the September revolution. The Admiral has been superseded. Notwithstanding official announcement of the pacification of Bosnia, further severe fighting has taken place, and Turkey has despatched troops to the Servian frontier.

Madrid, 8th September.

GENERAL Dorregarry is being hotly pursued with the remnant of the forces, and wholesale desertions are occurring. A collapse on the earliest cause is believed to be imminent.

St. Petersburg, 7th September.

GENERAL KAUFMANN telegraphed yesterday to the Czar that on the 4th instant he gained a complete victory over 30,000 Khokand insurgents. Upon the second advance from Khodshent the enemy was pursued for a distance of 15 versts with great loss both of men and war material, while the loss to the Russians was but slight. General Kaufmann further states that upon the arrival of supplies from Khodshent he intends to continue his advance upon Khokand.

St. Petersburg, 8th September.

THE semi-official Russian Press charge Yakoob Khan of Kashgar with complicity in instigating the present insurrection in Khokand.

Constantinople, 6th September.

SERVER PACHA has telegraphed to the Porte from Mostar that insurrectionary agitation is greatly allayed, and that many insurgents are submitting. He also expresses his belief in prompt restoration of order. In consequence of the pressure brought to bear upon the question by the interference of the great Powers, it is not thought likely that Servia will become aggressive. Insurgents refuse to assent to Consular Conference at Mostar on the ground that it is under the influence of the Porte, and demand autonomy of Bosnia and Herzegovina under any European Prince paying tribute to the Porte.

Constantinople, 7th September.

IT is officially announced that Servia has promised the Porte to remain neutral. Order has been restored in Bosnia, and the insurgents in Herzegovina have almost disappeared, Turkish troops being permitted to traverse the country unresisted.

Belgrade, 3rd September.

SERVIA is preparing a protest to the Powers against the violation of her territory by the Turks. The Servian Parliament meets on the 8th instant.

Belgrade, 6th September.

SERVIA has taken measures to prevent bands of troops crossing the frontier.

Ragusa, 3rd September.

THE Turkish troops have violated Servian territory, having burnt one village, killed some of the inhabitants, and seized a quantity of their cattle. Popular feeling in Servia is very excited against Turkey.

LIST OF PASSENGERS.

ARRIVALS.

THE P. and O. Co's S. S. "Mongolia," Commander A. Coleman, arrived at Bombay with the following passengers :—

FROM SOUTHAMPTON.—Capt and Mrs Yates, Capt and Mrs Hartshorne, Mrs H V Carter, Mr Smythan, Mrs F Turner, Mr H A Thornton, Mr W Lake and brother, Mr Pearse, Mr A Carritt, Mr J Grayson, Mrs Gibbon and 2 children, Mr Wheeler, Mr G Newton, Mr Sim, Mrs Graham and infant, Mr S Cost, Mr B Mosley, Mr W Slack, Mr Devonshire, Mr C Mathews, Mr J Entwhistle, Mr J Sutton, Mr Ashley's European female servant, Major Clark's ayah, and Mrs Lane's ayah.

FROM VENICE.—Mr and Mrs Sinnett, Mr Wheeler, Mr R Gross, Mr A Silbiger, Mr W H Cowley.

FROM BRINDISI.—Mr M J Tarachund and Mr J. Hickman

FROM ANCONA.—G Pothecary.

FROM ADEN—Mr Green, Shaik Syed Mahomed, and 3 native deck passengers.

DEPARTURES.

THE P and O Co's S S "Thibet" Captain C H Eastley, left Bombay with the following passengers :—

For SOUTHAMPTON.—Mr J Talbot, Mr P B Dixon, Mr J H Black, Mr E Williams, Mr T Hopper, Mr J McArthur and infant, Mr Maurice Bean, Mrs Black, Mrs Talbot and two infants, and Mr Tytler and three children.

FOR BRINDISI.—Mr W S Wells Mr G H R Hart, Mr Stuart C Barley, Mr D. R Lyall, Mr J Whitefield, Captain Grierson, Dr C Costello, and Mr H I Place.

FOR VENICE.—Mr J Walker and Mr E L Hunt.

FOR ADEN.—Lieut Kennedy and two native male servants.

FOR SUEZ.— The Venerable Archdeacon Gray.

MARRIAGE.

PETERS—CARPENTER.—On the 27th July, at Trinity Church, Great Portland Street, Portland Place, London, by the Revd, Thomas Meredith, Marcus Peters, Esq., son of George Peters, Esq., Merchant (deceased), to Caroline Carpenter, youngest daughter of John Fred. Carpenter, Esq., of Ullenhall, Warwickshire, —No cards.

for an instant at a bad picture; and if there were a Reynolds, Velasquez, Vandyck, or Rembrandt in the rooms, he would pay the surliest house-keepers into patience until he had seen it to his heart's content. If none of these, I was allowed to look at Guido, Carlo Dolce, or the more skilful masters of the Dutch school—Cuyp, Teniers, Hobbima, Wouvermans, but never any second-rate or doubtful examples .... If there were no nobleman's house to be seen, there was certainly in the course of the day's journey, some ruined castle or abbey; some celebrated village church or stately cathedral. We had always unstinted time for these; and if I was at disadvantage because neither my father nor mother could tell me enough history to make the building authoritatively interesting, I had at least leisure and liberty to animate them with romance in my own fashion."

Various minor touches give additional interest to this charming antobiographic sketch, which we have reproduced in a condensed form, and separated entirely from its context of running comment, some of which has reference to the main tendency of the method of training to which Mr. Ruskin was subject in early days. He expresses the hope that his readers will think that the tenour of his early life was happy, and the modes of his education on the whole salutary. And he asks the question, which for the present he leaves unanswered, as to how far, supposing his own education in any wise exemplary, the like advantages can be "supplied by the modern school board to every little boy, born in the prosperous England of this day?"

Mr. Ruskin combines with these pleasant reminiscences of his younger days the narration of an incident of his last year's summer holiday in Rome, which we cannot refrain from quoting: "I lodged at the Hotel de Russie, and in the archway of the court-yard of that mansion waited usually, in the mornings, a Capuchin friar begging for his monastery. Now, I never pass a begging friar without giving him six pence, or the equivalent five pence of foreign coin, extending the charity even occasionally as far as ten pence, if no five penny bit chanced to be in my purse. And this particular begging friar, having a gentle face and a long white beard and a beautiful cloak like a blanket, and being altogether the pleasantest *sight*, next to Sandro Botticelli's Zipporah. I was likely to see in Rome in the course of the day, I always gave him the extra five pence for looking so nice, which generosity so worked on his mind that, after some six or seven doles of ten pences, he must needs take my hand one day and try to kiss it, which being only just able to prevent I took *him* round the neck and kissed his lips instead; and this, it seems, was more to him than the ten pences, for next day he brought me a little reliquary with a certificated fibre in it of St. Francis's cloak (the hair one now preserved at Assisi), and when afterwards I showed my friend, Fra Antonio, the Assisi sacristan, what I had got, it was a pleasure to see him open his eyes. He thought I must have come by it dishonestly; but not I a whit, for I most carefully explained to the Capuchin, when he brought it to me, that I was more a Turk than a Catholic; but he said I might keep the reliquary for all that."

The letter closes with a detached paragraph revealing Mr. Ruskin's estimate of Mr. Plimsoll and his recent protest. "As the master "of the St. George's Company (a society which Mr. Ruskin is "by means of his letters engaged in forming) I request their "permission to convey their thanks to Mr. Plimsoll for his Christian "knightly, and valiant stand made against the recreant English "Commons on Thursday, 22nd July 1875."

A STUDY OF A STUDY.

PAST the large, low dining-room, where preparations are being made for a dinner party, up a short passage lined with book-shelves, and an open doorway admits you to a room—large, certainly, but so choked with contents that it rather reminds one of the inside of a disorderly portmanteau. It is square, but for a bay window in which stands a library table piled with books and papers, an old black velvet sermon-case, a battered travelling writing-case, and a desk, with a wine-glass of water on the ledge, and a tattered sheet of blotting-paper, on which lies a bright blue book—*Artists and Craftsman*—the last study of the owner of the room to judge from the paper-cutter between the leaves. It is flanked by *Lectures on Casuisty* and *Geschichte des Alten Bund*. A portentous waste-paper basket stands beneath; both this and the paper-cutter seem fitted by their unusual proportions to cope with their daily work. A hard horsehair chair, without arms, springs, or cushions, turns its back resolutely to the garden and its face to the army of papers.

Three tables and a whatnot dispersed over the room serve as foundations for a pyramid of books, reports, periodicals—*Cornhills*, *Macmillans*, *Revues des Deux Mondes*—thatched with the *Times*, *Pall Mall*, *Saturday*, *Guardian*, and other papers unnumbered. Two wandering book-cases, with double faces and no backs, are stocked with motley rows of volumes, at which we will look closer. *Saint Anselm de Canterbury*, *Artemus Ward*, *Science del' Histoire*, a long range of Dumas, Comte's *Système*, *Ingoldsby Legends*. Are the contents of the shelves which line the walls less miscellaneous? Hardly less surprising. Here is a favourite shelf apparently, where the books stand loosely and unevenly, as if ready for immediate action—*Lettish Bible*, *Biblj Swata*, *Wendish Bible*, *Zwingli's Werke* (pushed in hastily and upside down), a little Hindustani and incomprehensible *Jolowicz Polyglotte der Oriental Poesie*, *Rabbinische Blumenlese*. Nor, if you walk round the room with speed and caution that you may not be surprised too far from the two modes of escape—the door and window—are the other shelves less bewildering to a merely human understanding. *Bopp Sanskrita Spracha*, *Koptische Grammatik*, *Myverian Archælogy*; Arabic, Armenian, Celtic, Persian dictionaries; grammars of Icelandic, Erse, *Ægyptische*. Seventy-eight volumes of *Memoires relatifs a l'Histoire de France*; *Dallas*, *the Gay Science*—(what may that be?—whist? fencing? dancing? Not at all—criticism!). Dante, Shakspeare, Bunsen, Milton, Hallam, Sévigné, Luther. But a complete list would take days to write and hours to read. Besides these, the library steps are crushed under a haystack of unbound books, mostly Dutch, and two open portmanteaus are overflowing with papers and correspondence. The floor is covered with no luxurious recluse Turkey carpet, but a common crimson and drab drugget, worn and faded. The paper, if there be any, is hidden behind the books. No; there is a strip over the mantelpiece—Indian red—with a creeping, pattern of dull gold. On the mantelpiece stand three wax candles, a marble clock, and a heap of pennies, on which no unscrupulous housemaid will take compassion. Searching curiously for traces of human presence, we notice a crabstick leaning against the corner of the window, and on the centre table, erect and dignified, a black velvet skull-cap, very much—yes, uncommonly like in shape to Cowper's well-known nightcap. Its counterpart in black silk, tumbled, frayed, but evidently the more familiar friend, lies near the desk. A feather brush, worn out in hopeless attempts to fight the dust, droops over the edge of a century of *Quarterly Reviews*. Not many visitors are expected here, for all the chairs (horsehair and uncompromising, like the one at the desk) are built up with books. There are two deep leathern arm-chairs, though, on either side of the wide fireplace, but they are served in the same fashion. Over all, on a tall pedestal, the bust of Julius Hare gazes with bland, blank eyes.

Who is the master of the room? the hermit-crab of the shell? Hush—there are voices at the door; one grating with the huskiness of old age, slow and emphatic, giving, it would seem, some order, which is responded to with a ready "Yes, my lord"—and heavy, plodding steps come with frightful distinctness up the oilcloth-covered passage. Jump out of the window, if you are not prepared for instant annihilation, but wait behind that juniper and peep through the heavy dark branches that rob the window of half the rays of a watery autumn sun, and you may note the entrance of an old man with stooping shoulders and scanty grey hair, and watchful, light blue eyes, which need the warming effect of a smile on the quaint, rugged, but not unkindly face. He passes across to the chair in the window, and, sitting down, he reluctantly pushes aside the book and paper-cutter, and breaks open the topmost of a pile of letters addressed to "The Bishop of St. David's."—*Guardian*.

LETTERS TO THE EDITOR.

THE POSITIVE LIFE OFFICE.

To the Editor of the Friend of India.

SIR,—In reply to your correspondent "D. L." I would point out that it has been shown that the Positive Company realizes a higher rate of interest from Government securities in India than it would in England, and that this difference alone would preserve the Indian Life Funds from loss on account of increased mortality. In the "Stock Exchange Review" of August 1874, it was also clearly shown that this extra interest added to the Life Funds, rendered them quite equal to meeting risks on Indian lives, even on the basis of a rate

of mortality which it is insisted still prevails in India, notwithstanding the acknowledged improvements in the public health.

B.

27th August 1875.

NOTE.—It is a strong point in favor of the Positive that the North British and Mercantile Insurance Company has just reduced its rates 20 per cent. upon assurance of European lives in India. That the old rates are needlessly high we think there can be little doubt.—ED., *F. of I.*

MR. GRANT DUFF.

To the Editor of the Friend of India.

SIR,—"Do you know the scientific name of the tall grass which I heard called tiger-grass at Ahmedabad, and which is very abundant here, Lahore? I think it is a saccharum, but am not quite sure." Thus spoke Mr. Grant Duff in January last to an acquaintance with whom he was driving. "No,"——replied, "but the people in this neighbourhood call it Sikandar's grass." And thereupon—— fell to moralizing in the following strain: "Strange, is it not?—how that great individuality looms through history

On parlera de sa gloire,
Sous le chaume bien longtemps,
L'humble toit dans cinquante ans,
Ne connaitra pas d'autre histoire.

How long impressions remain, and how quickly details fade away! Was ever ex-Cabinet Minister so hoaxed before? What must be the feelings of——at seeing his little joke in print? No sermon ever hanging on so insecure a peg before. The name of the grass, as Dr. Hunter would write it, is *Sarkanda!*

M. N.

THE BEECHER-TILTON SCANDAL.

To the Editor of the Friend of India.

Beecher, "thou art permitted to speak for thyself."

SIR,—Having noticed in the *Friend of India* of the 14th instant, comments by yourself and London correspondent on the Beecher-Tilton case, I take the liberty of sending you a New York weekly, in the hope that you will find space in an early number of your valuable journal for the short article, headed "Good Testimony," on page 421. Your impartiality in allowing both parties a hearing on important matters encourages me to believe that you will cheerfully allow your readers the privilege of hearing Mr. Beecher speak for himself.—Yours, &c.,

J. PHILLIPS.

Jellasore, August 26th.

NOTE.—We cannot possibly find room for Mr. Beecher's address nor would it help him in the least, we think, with any one who has read the correspondence between him and Moulton. We have no wish to shake our correspondent's faith in Beecher; but how can we believe in these two statements as both true?

In his address he says— "God has tried me for five long "years as he has not tried you; but by "the grace of God *I have been kept in* "*peace!*	In letter after letter to Moulton he wrote: "I have suffered the torments "of the damned all night; and am "forsaken by all the world but you." and so on.

We are not Mr. Beecher's judge, but we hold the verdict of "not proven" to be the most favourable he can expect. His letters to the conspirators (as he calls them) are to ourselves inconsistent with any theory but one.—ED., *Friend of India.*

THE SONEPORE FAIR.

To the Editor of the Friend of India.

SIR,—The near approach of the great fair at Sonepore, reminds me of a defect in our arrangements there, which I have noticed for some years past. Business of a kind too bad to be named in your columns, is carried on, on both sides of the main route of the fair and of some of the subordinate ones; and this seems to have been the established order of things from time immemorial. I know that the occupants of the huts would shelter themselves under the plea that they are only the female relations of the *syces* and shopkeepers. However this may be, I have myself been the eye-witness of scenes enacted in broad daylight, and before a crowd of lookers, on which shew that those who have charge of the arrangements of the fair need a little direction. If it be deemed that such places are an essential feature of the fair, would there be any harm in causing them to be situated in less conspicuous and beguiling situations? I am quite sure that the advantage to the interests of decency and public morality would be great. All that is needed is doubtless that the thing be duly brought to the notice of those with whom rests the responsibility of assigning the places; but it is neccessary to speak before hand, as I now do, for if there be any *delay the places will be taken up according to custom.*

VERBUM SAPIENTI SAT.

THE OPIUM MONOPOLY.

To the Editor of the Friend of India.

SIR,—I forgot to mention in my last letter, the existence of a strong anti-Opium Association in England which is pledged to agitate this question, and bring public opinion to bear upon it in Parliament; and the fact that there are already in the House of Commons no less than 75 honourable members who voted for the Opium Abolition Bill ought, one would think, to be enough to convince the *Pioneer* even, that the immorality of the opium traffic is not regarded as "superstition" by the people of England, many of whom evidently believe that our Indian Government *is* to a large extent responsible for the "moral and physical ruin of the Chinese" by its wicked traffic in opium. Great stress is laid by the opium advocates on the fact that the English Government derives such a large amount of revenue from taxes imposed on strong drinks, and other deleterious articles, which are said to be as injurious to the people of England as opium is to the Chinese.

This may be all true, but it does not in any degree mitigate the evil of the opium traffic. Two wrongs will not make one right and if it is wrong for the English Government to replenish its exchequer by a revenue derived from excise duty, it is still *more* wrong for the Imperial power to uphold the Indian Government in the *manufacture* of a noxious drug the use of which is proved to be so very pernicious to Chinese.

It is one thing for the State to impose a heavy taxation on obnoxious articles of consumption manufactured by others, and quite another matter for the *State* itself to produce, to manufacture, and to sell by public auction a noxious drug which is known to be the cause of ruin to tens of thousands of people, and all for the sake of money! Such conduct is unworthy of the fame of that land of Christian benevolence which did not hesitate to shatter the galling shackles of slavery in the island of Jamaica at a cost of twenty *millions sterling*. Gain ill gotten is a loss in the end, and those who dare do right, even at an apparent sacrifice, will profit in the long run, and India gain politically, morally, and financially if our rulers will nobly resolve to abandon for ever the "filthy lucre" which is now acquired at such a terrible loss to the best interests of such a large portion of the people of China.

THOMAS EVANS.

Monghyr, August 9th.

SIR RICHARD'S LANDED ARISTOCRACY.

To the Editor of the Friend of India.

SIR,—In your issue of the 7th August you have a note on the law of the enhancement of rent in Bengal, and in this it was incidentally mentioned that the Government of India held the position of a great landlord. I would ask is not this to ignore altogether the duties and functions for which Governments exist at all? The interests of a landlord and a Government can never be the same: the one can only look to make the best use of the natural agent of which he is in possession for his own profit and pleasure; but it is the bounden duty of the other to act as the trustee of the whole community, especially in a country like this, where the whole landed property has been made over to them *in trust* to pay for the administration of its affairs, and not to be made away with to support what Sir. R. Temple is pleased to call "the great landed aristocracy of Bengal." *It would redound more to his* credit if he were to enquire into the condition of the ryot under the system he so much admires, what share of the produce of the land the aristocrat is satisfied with, and what capital he invests in the improvement of his lands. We might then hear less of famine and less of deficits. Of course if the Government evade *its duties to the* community by considering its position, that of an ordinary landlord, the permanent settlement in Bengal is never *likely to* be revised; but if it performed its duties as a Government, there is no reason why this measure should not be revised by an act of the Legislature, for which purpose it exists, as acknowledged by the highest authorities. Hooker says: "Notwithstanding: "we do not deny alteration of laws to be sometimes a thing "necessary, as when they are unnatural or impious, or other "wise hurtful to the public community of men, and against "that good for which human societies are instituted." On the Irish Church Bill, Mr. Gladstone said "When property had been "given for purposes that had not been attained and could not "be attained, it was the duty of the Legislature to see that it was "not wasted, and if it became mischievous to take it away." And this principle was acknowledged, and acted upon, by both Houses of Parliament. Again, Mr. J. S. Mill says: "All laws or usages which favour one class or set of persons to the disadvantage of others, which chain up the efforts of any part of the community in pursuit of their own good, or stand between those efforts and their natural fruits, are (independent of all other grounds of condemnation) "violations of the fundamental principles of economi- "cal policy, tending to make the aggregate productive powers of "the community productive in a less degree than they would "otherwise be." Now, let Sir R. Temple endeavour to explain on what great principles of statecraft he maintains the rights of the great landed aristocracy of Bengal. I have given him the authority of the greatest of English divines against it, and that of the most sceptical of English philosophers, and the deliberate sanction of both Houses of Parliament at the instance of the greatest statesman of the day, all concuring in the same view. And let it be shown what possible authority there is for calling a fat Chetty the great landed aristocracy of Bengal, entitled to be maintained and supported at the expense of the whole community, and to keep any number of his fellow-creatures in a worse condition than slavery under the protection of the British Government in India, because an absurd settlement was made a hundred years ago, the provisions of which the zemindars have notoriously violated, while they have the effrontery to tax the Queen of England with a breach of faith, if any attempt is made to correct their malpractices.—Yours, &c.,

A. B.

WHY ARE MISSIONS NOT MORE SUCCESSFUL?

To the Editor of the Friend of India.

SIR,—The question is one that merits earnest attention, and as you remark in your issue of the 3rd ultimo, it is of the utmost importance that we should know the obstructions that are to be removed. Would it not be well however, to consider that success does not consist of necessity in what can be seen or known by us. It would not detract from the real success of the gospel in India were native converts not so numerous, and better in quality. It would be well for missionaries not to be too hasty in their reception of many who profess to be sincere in their motives, but who are pointed to afterwards, by their fellow-countrymen, as having made their professions *pêt ke wasta*. Let us bear in mind also that the gospel is like unto leaven which a woman hid in meal; and who did not regard the leaven as unsuccessful because she could not see it working, but waited. We cannot deny it to be the case with the gospel in India to-day that there is silent influence at work. Truth is undermining the vast structures of falsehood. Light is quietly penetrating into the dark recesses of heathendom—recesses that have never heard the tread of the footstep of God's servant but into which the word of God has found an entrance, and is also being known and felt to be the power of God unto salvation. It would remove our feeling of despondency, if the bright side of the picture were looked upon with thankfulness to God. The Israelites saw no signs of the walls of Jericho falling until they had encompassed them for the seventh time, but they were not discouraged on that account. So let us, in the midst of the present enquiry, be encouraged in the contemplation of the sure success of the gospel in India. Could we but get at the effects of the sale and distribution of hundreds of thousands of copies of the Word of God—effects beyond the reach of our daily *ken*—the conclusion would be, the success is far greater than we dared to anticipate.

Whatever may be said, as to what the knowledge of Evangelicals *ought* to be as regards Hindooism—and well as it would be for all who teach Christianity to be able to see all that is "noble, beautiful, and true" in this system—still we must not lose sight of this, that the conduct of *nominal* Christians is the *great obstacle*, in the way of the spread of the gospel in India. The whitefaced man, though a professed infidel, is known to natives of the country by the title of "a Christian." Such a man however low in the depths of debauchery and guilt in the eyes of a native *is* a Christian! Well may the native say to the missionary. "If this is what Christianity teaches, then let me remain Hindoo." How sad it is to see so many Englishmen, drunken, degraded, *despised*, even looked down upon by natives, who are higher than they in the scale of being, but have not so much to answer for. But those of our fellow-countrymen, though thus low, are exerting an influence, which is opposed to the success of the gospel in India. It may be asked, how are we to remove this impediment? Can more be done than that each one remain faithful to his duties? And should we not expect that God would answer prayer if earnestly and universally offered up by the Christians of this country, for an outpouring of His Spirit, upon nominal Christians in India. Surely this being experienced, a mighty obstruction would be removed. It would be well for us also to bear in mind that the success of God's cause, here and elsewhere, does *not* depend upon either the perfection or imperfections of his people. "I the Lord will hasten it in his time."

ILLTUTUS.

"O FORMOSE PUER."

To the Editor of the Friend of India.

SIR,—Will the N.-W. Alexis ever be weak enough to list once more to the pipings of the Allahabad Corydon? If the gentle shepherd does, he will be a great fool for his pains, and I warn him in Corydon's own epigrammatic words, "*formose puer, "nimium ne crede colori!*" The wooer's eclogues are, however, inimitable in their way: they might well dazzle the understanding of the liveliest *cobra*, let alone that of an innocent young cowherd only too ready to forgive past infidelities, and we invite him to accompany us as we follow the variations of the masterly civilian Sonata. To drop metaphor and come to the point, the relations between the Allahabad paper and the Covenanted Civil Service have been throughout consistently regulated by those of the latter with the Government of India, and have, in consequence, experienced the vicissitudes incident to the successive stages of warm friendship, coolness, and positive aversion. The last stage has at length been passed, and there is naturally a reaction in the other direction, which may deceive some, but is more apparent than real, and is susceptible of a very simple explanation. When the *Pioneer* was first started, there was nothing anti-pathetic between the Government and the Service; therefore (it is unnecessary to syllogise minutely in coming to an obvious conclusion) the latter's interests and those of the *Pioneer* were identical, and the two were fast friends. The friendship was as sincere as it could be under the conditions indicated, and was daily cemented by mutual services. The one was ever ready to take the civilian view of any question affecting official interests, while the other contributed stores of useful information, as well as literary talent to the common fund. So things went on for some years, until a coolness grew up between them, Corydon getting rather tired of Alexis, and giving him unmistakeable hints that he intended to jog along in life without him. Their divorce was effected under the memorable administration of Sir W. Muir, when poor Alexis was rapidly going down in the world, having had to leave all his worldly goods, even to his flute, in pawn with Menaleus, and was actually applying for pecuniary assistance to the wealthy cattle-drover Melibœus. Some are unkind enough to say that the anger of Amaryllis (no longer very young, nor yet very handsome) had a good deal to do with his difficulties, and a woman is, it must be confessed, generally at the bottom of mischief. However this may be, there can be no doubt of one thing, namely, that the statesman above mentioned helped the lad on with a shove in the very nick of time to do him the most harm possible. Mr. Elliott's able letter of the 16th June 1873—a date memorable in the Annals of Jobbery—forwarding the now historic memorial of the same year, struck the blow. Here is the pith of it:—

"(1.) Don't accept the statements exhibiting the applicant's impoverished condition in their present form." They "will be submitted to further scrutiny, and the result be communicated hereafter." In other words "hold on a bit till we provide you with *cooked* statements made up so as to misrepresent facts."

"(2.) Although only 17 years old, he is a *pucca* Collector, and has been officiating in that capacity ever since the age of 14 on enormous pay"—an assertion the true classification of which may be left to the common sense of our readers.

"(3.) *Entre nous*, he is not half as good a hand at shearing a lamb as Damon or Alphesibœus, and has no idea of the proper method of driving pigs to market; in fact, he's barely worth his salt. Let him go hang!"

Such is the sum and substance of Mr. Elliott's remarkable letter, a production as little creditable to him as to his patron. He entered the N.-W. P. Secretariat with the good wishes of his brethren and a widespread reputation for manly independence of character. He has left it amid fervent prayers that he may never return, having offered up his self-respect on the altar of sycophancy. Is it not then now our turn to ask, "*nonne Menalcan?*"

There is just one thing to be said in Sir W. Muir's favour. He suggested that the year 1861 should be weeded—small thanks to his Secretary—and expressed a readiness to employ sufferers in other departments. The situation, however, presented a dilemma which his sensitive nature must have made him feel keenly. Unfortunately, he had already found himself unable to dispense with the services of several men whom good-natured Lord Mayo would have been quite willing to remove to a more promising sphere, and the openings in "other departments," *e. g.*, "the Jhansie and Kumaon Commissions, were rare"—*et pour cause*. They had been carefully packed with his own particular friends and dependants. So jealously was Kumaon guarded, that one adventurous covenanted civilian who had the audacity to apply for a transfer thither was *squared* by the simple expedient of turning another officer out of a less favoured appointment in the region of the hills to make place for him. Under Sir W. Muir's government nothing could be less comfortable than the position of the public servant who had either neglected or failed to conciliate the Naini Tál clique. Meanwhile, the *Pioneer*, having in the interval changed hands, and seeing its *quondam* ally sadly out at elbows, gave the cold shoulder to an individual who would hardly be admitted into even second-rate society at Simla, or any other really respectable hill station. Taking advantage of a miserable subterfuge, it defended the Government when Captain Henderson was appointed to a post reserved for the Covenanted Civil Service by Act of Parliament; when the perpetrators of that job, becoming rather ashamed of themselves, perpetrated another equally bad, by transferring him to Cashmere, in contempt of other rights founded on prescription, belonging to *military* men in the Punjab as well as to the civilians of the same commission; when Major Dennehy was appointed to the Dholepore Agency; and, finally, when the son of a High Court Judge, fresh out from England, was appointed to officiate as Registrar of the said tribunal. Nay, the sycophant, fondly imagining it possible to get on without old friends, after a temporary hesitation, arising possibly from pangs of conscience, loudly applauded these arrangements, recommending the seedy Junior, in an off-hand manner, to apply himself to the study of Foreign Office Persian, and shouting "hear, hear!" to the peroration of Sir W. Muir's after-dinner speech to the assembled civilians at Agra—an oration at the time most happily and wittily compared to the Mock Turtle's harangue over the expectant oysters in Wonderland—while the viceregal Gryphon looked on and chuckled. The cast-off acquaintance only groaned, "God save me from my friends!" deriving poor consolation from being told: "Sufferers in the Civil "Service will sometimes fall foul of the Government in cases which, "though involving some fresh hardship for themselves, also involve "*peculiar reasons for what may have been done*" (an argument equally applicable to garotting or the crime *inter Christianos haud nominandum*). When such cases arise, we shall take leave to "defend the Government without fearing possible charges of "vacillation." In plain English, "we will defend Government *per fas et nefas*." Such the language, such the sentiments, of the *Pioneer* towards the end of the year 1873. The stage of positive aversion had been reached, but when two men quarrel, one must be in the wrong. Who then was in the right? The following anecdote may throw light upon general facts at length placed before the British public. Sir W. Muir's determined satellite, his Mephisto, Mr. Elliott, at a period when the N.-W. Government professed to be at its wits' end, hunting up a new suit of clothes for its ragged subordinate, devised the notable plan of creating a new post within the sacred precincts of the N.-W. P. Secretariat, and giving it———to an ex-Sub-Editor of the Allahabad journal! The necessary preliminaries for carrying it out were all ready, when the Supreme Government asked:" "Whom are you going to put "in?" "Oh, Mr. Washington Plate of course!" "And who the "deuce is he?" enquired Lord Northbrook, for the Gryphon himself was growing tired of the farce. "He's a useful and obliging "journalist endowed with special qualifications and local claims." Now, what special qualifications and local claims mean, we know from the case of Colonel Phayre, amongst others. The Governor-

General, being in a sarcastic mood, accordingly replied : "If so, I can "get you the round man for the round hole myself." This repartee saved the new appointment, not a very lucrative or exalted one it is true, but a stepping-stone to something higher to the N.-W. P. civilians, who would do well to pause a moment and consider how much they owe those who are at present eager to share the credit of vindicating their wrongs. An extraordinary change has, indeed, come o'er the spirit of the *Pioneer's* dream. in which the once shabby hanger-on, having furnished himself with powerful recommendations, disputes precedence with the Heir Apparent. The voice of the British Parliament is not contemptible, and its utterances are not uncertain. The Supreme Government of India, too, boasts, we may presume, officials who can no longer remain deaf to the repeated calls of justice. The conditions of the case being thus changed, have operated a corresponding change in the attitude of the *Pioneer*. It generously offers the right hand of reconciliation to its neglected friend, always an able auxiliary in point of intrinsic merit, and likely at last to prove formidable as an enemy from extraneous causes. We will quote our contemporary's own words on the subject: "One thing "has, no doubt, been established by the recent debate, that the "combined influence of the competition-wallahs in Parliament "is not to be despised." A sneaking kindness, not altogether devoid of apprehension, has here taken the place of indifference approaching to contempt ; the affectation of an honest and independent desire to see a grievous wrong righted, that of a tone pitched to the keynote given by a self-interested and once powerful clique. But conscience has urged the advisability of some sort of explanation for these new tactics, an explanation to be suggested to the reader's mind rather than served up to him in so patent a fashion as to provoke rejoinder. It is given in a series of articles recently published in the *Pioneer*, bearing the words "by order" labelled on them as distinctly as the distinguishing mark impressed by Providence on the brow of Cain. Their true gist is, that the smart, spruce, well-educated young civilian posterior to 1865 is no connection of the clumsy, slouching, badly trained wallah of that year and anterior to it. "We are very fond of both of you, but *you* (aside to the Junior just beginning to cut his wise teeth) are my particular friend." A glance at the N.-W. P. Civil List for 1873-74 will show that this is the policy on which Sir W. Muir acted, and in a certain generation its wisdom is unquestionable. The comparatively Senior Civilian is netted irrevocably. Besides, in spite of parliamentary debates, suggestions of failure due to incompetence may yet command an audience, if the worst comes to the worst, whereas the *Pioneer* is not limed beyond all hope of redemption, and his plumage must be kept bright and trim to decoy other birds from abroad. The Allahabad charmer is also a master of the trimming style. "The Junior Civilians are to "be congratulated on the telegram we publish this morning. There "was no doubt, and no dispute, about their grievances, and the "*English Government* has therefore determined that they must "be redressed." Yes, the *English* Government, *not the Indian*, for only a few days before Captain W. F. Prideaux had been gazetted to an Assistant Secretaryship in the Foreign Department, an appointment not beneath the acceptance of many an able civilian. Again, observe the *suppressio veri, suggestio falsi* in this sentence : "We have not the slightest doubt that the Government of India, "*now that they have the sanction and support of the Home Govern-* "*ment*, will take the matter in hand at once, and not permit any "official delay and subterfuges to stand in the way of speedy "redress." Just as though the *Pioneer* had not itself glossed over official delays and subterfuges ; just as though the Government of India has not had the sanction of the Home Government to protect and promote the interests of officers sent out from home *during the last twenty years ! !* The *Pioneer* however apprehensive of having allowed spontaneous enthusiasm to carry it away too far, takes good care to add : "At the same time *civilians must not* "*think that everything is won* . . . . . and however loyally Lord "Northbrook may intend to carry out the wishes of the House "of Commons, *still delays may occur*. Civilians should be pre- "pared to help the Government to draw up a scheme by which "their case may be most equitably dealt with, &c." In other words, "if anything ever be done, many a head now black will "turn grey before it is done, so far as the doing depends upon "the clique we represent, and you must look to yourselves to "mend the mischief by hook or by crook." Anon the *Pioneer* preaches a little sermon on patience : "We may perhaps "*pacify our young friends* in the ranks of the Junior Civilians (as "well as those who have grown old in them), by stating that their "*alleged* grievances are now under serious enquiry by the Supreme "Government." But why has this serious enquiry been delayed so long. Owing, forsooth, to the absence of an important document, the advertisement setting forth the glories of an Indian career to candidate-wallahs, which had to be fetched from England, although copies were actually in this country. And how are the alleged grievances to be removed ? By reference to "a long and "elaborate note by Mr. C. A. Elliott, late Secretary to the N.-W. P. Government," whose policy it ever was to deny the existence of those grievances which, according to the *Pioneer*, his long and elaborate note is intended to remove. We have seen that note, and strongly recommend the agitators to repudiate it. An analysis of it would weary the general reader ; suffice it to say, Mr. Elliot's scheme is illusory, because impracticable, and, if it were practicable, would tend to reduce the total income drawn by the service, at the same time throwing more work upon its shoulders, and taking bread out of the mouths of other men. Mr. Elliott has truly proved himself an apt pupil in the school which regards human lives as so much fuel to heap upon the official furnace, and human brains as so much tinder to feed the flames with. The Junior Civilians may take our word for it, that any cure devised by him would be far worse than the disease. The scrap we have jus criticised was succeeded by an "*arpeggio*" on the Civil Servict debate, in which the performer attempted to conceal the true theme of Mr. Lowe's grand fantasia upon the shameless course of nepotism which has led to the interference of Parliament, beneath a mild rattling of chromatic scales up and down the unavoidable injury done to the Covenanted Civil Service by the introduction of the departmental system. Finally, Alexis is invited to "cast a longing look towards Oudh, the garden of India, as if he had not been doing so for the last fifteen years or more. To military men it has been verily a Canaan—a land flowing with milk and honey, &c., &c." This is all very true, but we doubt whether many Junior Civilians are likely to be deceived by the empty hopes thus held out to them, at a time when one gentleman having been transferred from Oude to the N.-W. P. without a return of the compliment, another coveted vacancy in the Oudh Commission, confessedly due to the N.-W. P., has not been filled up from them, the appointment having, we understand, been offered exclusively to those who, it was pretty well known beforehand, would not accept it. Nor can the *Pioneer* be ignorant of the absurd offer of two *officiating* assistantships at the very bottom of the list of the Berar Commission lately made, probably by way of a practical joke, to the younger fry of the Doab. Yet it has been hitherto silent on the subject. It is also very curious that a journal which has expressed itself unfavourably towards the elevation of barristers to the bench did not put in a kind word for its avowed *protége*, when Mr. Fagan's appointment fell vacant. Its silence about the vexed question of Kumaon, too, appears to us very ominous, and it might, we think, if really sincere in its profession, have advocated the deputation of a few vigorous officers, endowed with the *mens sana in corpore sano*, apparently so much wanting in our diplomatic corps, to assist in re-organizing the administration of Rewah and Baroda, or to supply the Burmah Mission with the quality wherein it proved so lamentably deficient, *viz.*, "grit." In fine, why is it that the *Pioneer*, which is continually having visions of bliss about the Prince of Wales, has never once considered the propriety of enlisting a couple of intelligent civilian *attachés* in his suite ? By these and such other expedients as occasion might from time to time dictate, the promotion blockage would be speedily freed, the way opened to more extensive relief in future, and the old school of diplomatists, whose gradual disappearance wrung the tear of regret from Sir William Muir's sympathetic eye, revived with certainty equal to that of its early extinction, if the present narrow-minded and jealous policy of excluding "Wallahs" from the diplomatic line be continued. When we see the *Pioneer* advocating views like these, we will then recommend our civilian friends to believe in its sincerity, and not one moment sooner, though ready to allow that the last cruel blow dealt to the glorious service that represents the British race in this country may have awakened feelings of remorse in its bosom.

ALEXIS.

NOTICE TO CORRESPONDENTS.

FAIR PLAY.—We are obliged to hold over your letter till next week, but Keshub wants no defence.—*ED., F. of I.*

POETRY.

THE WALLAH'S TALE.

One day, when I was reading for the Bar,
I snatched a holiday from musty books,
And seeking some new scenery, wandered far
Among green fields, and over purling brooks.

I followed carelessly where fancy bade ;
The hours were mine to spend them as I would,
And so through leafy copse and watered glade
I passed, my mind in pensive mood.

'Tis thus, when health is mine and cares are few,
And far removed the din of city-life,
To happiness methinks the only clue
Is found in being far from human strife.

At last, when deeper fell the shadows down
My pathway, telling me that day would soon
Lose its one light, I came upon a town
All glistening in the golden afternoon.

Quiet it seemed, as on a hill I stood
And overlooked the tiny haunts of men,
Nestling as from a dread lest some one should
Assail the little town within the glen.

Beneath my feet, and midway down the height,
A church of stone, in old half-Gothic style,
Towered o'er the town, as guarding it by right
And all the country round for many a mile.

A surly sexton slammed the oaken door,
And passed me as I entered at the gate ;
Then, at my prayer, opened the door once more,
But muttered it was getting rather late.

The roof was far from perfect, here and there
It gave an opening for the dark blue sky
To peer within ; and much was rude and bare
As though untended left to lie.

I learnt that years had passed since it was used—
It lay too far for modern people's taste ;
And so I sat upon a bench and mused
On art, and time, and labour, gone to waste.

A little corner, curtained off and screened,
Drew me all curious in the deepening gloom ;
And when we reached it, just as I had weened,
There lay concealed within—a tomb.

The marble of some other land than ours,
In exquisite beauty chased, lay over one
For whom were placed the fresh plucked flowers
That proved him loved, though gone.

Beneath a simple cross these words I read,
That one born here in eighteen hundred and ten,
Merchant and soldier, in the East had bled
In England's Indian wars, and then—

Brought to his native town, died in the year
When with the Russians peace was last proclaimed ;
And reading thus I brushed away a tear—
And was I to be blamed ?

For I had lost a father in the East,
A brother too had fallen in the fray,
Who sought revenge for wife and child—that least
Offending, were both murdered in a day.

And slowly, as I sought my city-home,
Great thoughts and hopes would crowd upon my mind ;
Arrived at last I seized a heavy tome,
And all night read and pored and underlined—

The deeds of heroes who in exile reared
Our mighty empire in the soil of Ind—
I read of these, of all they hoped and feared,
Where most did right and where some few had sinned.

And when I closed the fascinating page,
The die was cast and I had vowed a vow ;
The challenge given, I boldly took the gage,
Nothing should change my resolution now.

Days passed uncounted as my 'midnight oil'
Burnt dimly in the early breaking dawn,
That found me chained still to the needful toil,
For I had 'learnt delights to scorn.'

Months passed, till at the door I gave my name
And entered on the practice-ground with those
Who in their hundreds hurrying came
To the Great Hall in the grim strife to close.

Not one but wore an anxious eager look ;
And *thin and spectre-like* were some indeed,
As though their lives were buried in a book,
And clutched the papers with a hungry greed.

The steady ticking of the great clock heard
Showed silence reigned, save for the scratching quill
That hurried o'er the page, like some wild bird
That fluttered to be free, but bound was still.

At last the dreaded days passed, and the Hall
Was for a season empty, and suspense
Fell on our wearied spirits like a pall,
Hiding the hope and fear that reigned intense.

The list, to some so fatal, came at last,
And I was one among the chosen few ;
I hugged the prize in fancy long and fast,
And in the future, airy castles grew.

When the receding shore was seen to grow
Dim and more dim, I felt a mighty joy ;
Soon in the land of promise, I would show
My fitness for some great employ.

I stepped at last upon the golden sands—
The sands of India's venerable shore ;
I need not tell the joy of one who lands
From a see-voyage of a month or more.

My way up-country to the far North-West
Tended in haste, for there by the *Gazette*
I had been posted at my own request,
For, thought I, 'here promotion will be met'.

Five years have passed, my hopes have fallen low ;
The daily grind at the cutcherry wheel,
A round of writing, life unutterably slow ;
These are *delights* that those who taste can feel.

A wife and two fair children shared my fate,
But killed by fever in the graveyard are ;
And now I sometimes think—alas ! too late—
My hopes were brighter, reading for the Bar.

H. A. L.

LITERARY NOTES.

PROFESSOR D. SCHENKEL has brought to a conclusion his famous "*Dictionary of the Bible,*" *in five large volumes, which, as a monument* of learning, patient research, science, criticism, and philosophy, cannot be paralleled. It is only in Germany and perhaps Holland that such a lexicon could be provided.

***

THE revision of the New Testament appears to be progressing but slowly. The four Gospels have been completely revised, but two points in dispute have still to be decided. The Acts and small Epistles have been revised once, but have to undergo a second revision. The Epistles of St. Paul come next, and will take a long time. The revisers, who number 20, meet for a week once a month during ten months in the year. They have now been engaged five years, and it is estimated that their work will take them five years, longer.

***

PALESTINE is an inexhaustible subject. It has been numberless times described during twenty centuries, in nearly all modern languages, and yet every new volume is eagerly read. The French of course have not been behind hand in their contributions to the study of the Holy Land. To the recent works of de Saulcy and the Duc de Luynes, are now to be added two volumes by another authority, M. Grievin, whose "Samaria," published at the National Printing Office, is the result of a commission confided to him by the French Government. It is not a great history, but is rather a local or topographical memoir. Apart from the events connected with the cradle of Christianity, Palestine offers various problems of a scientific nature, none more interesting than the lugubrious Dead Sea, in which nothing can live. Fish die in it in a few minutes, and travellers who traverse it find their health affected by its emanations. Then there is the curious fact of the surface of the sea being about 400 yards below the Mediterranean, and some 380 yards in depth besides. M. Grievin believes every word from cover to cover of the Bible, and if all cannot follow him with the same faith, they will not be the less charmed by his narrative, as he shows us the state of localities now, and connects and compares them with their biblical past. Naplousa is remarkable, not for its mosques or its synagogues, or as being the place where Jacob learned from his other sons that Joseph had been devoured by an evil beast—hence called in Arabic the "Sadness of Jacob—" but as being a colony of the Samaritans, the last and dying out descendants of an antique people. M. Grievin claims to have discovered the tomb of the Maccabees, but the evidence of his having found the sepulchre of Joshua is not so clear. Time appears to have passed over Palestine only to create ruins, without changing the character of the people.

***

DR. BURGRAEVE, of Ghent, in his "Life of Jenner," just published, exhausts the whole question of vaccination. It is popularly supposed that Jenner's discovery was the result of a happy inspiration; but this was not the fact ; it was the result of twenty years' reasoning and observation. Vaccine was known before Jenner, but he was the first to impose belief in it on his fellow-men. When Jenner recommended vaccination, inoculation was at its zenith ; the process modified the disease, but was found to be a veritable recipe for the propagation of small-pox. Jenner's plan was soon generally adopted, and lymph not only taken from the cow but from the horse. In Lombardy and Austria, children were not vaccinated, but "equinated." England sent vaccinators to her colonies, and despite the continental blockade, Napoleon presented a medal to Jenner, and when he was captured by the French in 1804 ordered him to be set at liberty. Jenner was aware that the action of vaccine was limited in its duration, and to secure its efficacy urged great care in the choice of the lymph. The object of medical science now is to regenerate the lymph, by taking it from its original source, the cow, and developing it under the best conditions.

***

OFFICERS of the French navy appear not to like the Greek waters. One asked Edgar Quinet, in 1829, what he was going to do in that frightful country ? Another demanded of Edmond About "How he could dream of going to Greece without being forced?" Another expressed the same surprise to M. d'Ideville, admitting that he had been six weeks in the roads of the Piræus, without ever landing. M. d'Ideville during his short stay never quitted Athens, yet he condemns the soil as a plain of sand, with mountains of pyramidal rock. But in Eubœa and elsewhere, there are plenty of fields of wheat and barley. In Laconia, or Arcadia, there are olives five centuries old, forests of oak and laurel rose, lemon trees and ornamental shrubs. Greece is neither an Eden, nor are its inhabitants perfect : for the latter appear to be as politically turbulent as the French themselves. But instead of one, as the author alleges, there are twenty carriage roads in Greece, and Athens has a population of fifty instead of twenty thousand persons. All drawbacks considered, the Greeks are a nation, and have paid dearly for their right to be so. During the war of independence, a quarter of a million of

people, men, women. and children, fell in combat, or were massacred or sent into slavery. The isle of Chio, which had a population of 95,000 had but 15,000 after the war. Ipsara from 30,000 souls, fell to 5,000, and Athens and Hydra lost half their population. During four centuries of servitude, the people never despaired and for nine years fought for independence. It is not for Frenchmen, we think, to forget this.

***

THE *Levant Herald* gives an account of the result of the mission of M. de Lesseps, jun., to Constantinople, to subinit to the Porte, in the name of the Company of which his father is president, certain propositions relative to the Suez Canal: In the eyes of the Company, the system of levying tolls which it is obliged to employ in conformity with the decisions of the last International Commission, just allow it to balance the receipts and expenses; there is, consequently, no margin for the improvements or extension which the increasing traffic will render necessary. Amongst the improvements projected are the enlargement of the harbour of Port Said, which is too small for the ships which enter it the enlargement of the canal itself, the construction of stores, &c. In order to insure to the Company the means of executing these necessary works, M. de Lesseps, jun., submitted to the Porte two separate plans. One was to levy an additional rate of one franc per ton, besides the 13 francs per ton which ships passing through the canal pay at present. The second plan was to change the system by which the present rate of 13 francs per ton decreased gradually, for one which allowed the company a profit, and would cause no real prejudice to trade. M. de Lesseps added that, if either of the two plans proposed was adopted, he, on behalf of the company, would renounce all claims against the Ottoman Government for the nonfulfilment of engagements entered into by firmans or other official documents. On receipt of the documents the Porte promised to examine and answer them. The Grand Vizier wrote to the Khedive and obtained a favourable reply; but the decision of the Porte continues to be withheld. M. de Lesseps has now consequently, withdrawn his proposals.

***

A CORRESPONDENT of the *Athenæum* writes from Yokohama: "At Nara, an old capital of the Mikados, where seven of the descendants of the Sun reigned in the eighth century, is an immense wooden barn, built by one of the kings, and where he placed all the treasures of his palace, previous to the removal of the Government to Kiyoto, where it has been ever since. This barn has been carefully repaired every sixty or sixty-one years, and is now entire and sound. The treasures have been from time to time inspected, and some few additions have been made to those which are found in the original catalogue. All these things have now, for the first time, after lying for 1,100 years, been brought out, and are exhibited in the great temple of Daibutz. Such a collection of authentic antiquities, illustrating one era, certainly does not exist in any other part of the world. The objects are most various in kind, many of them, no doubt, Chinese or Indian, and throwing light upon the arts of these two countries, such as one could hardly get anywhere else. There are books, screens, pictures, sculptures, pottery, metal vessels, masks, fans, weapons, ornaments, beads, tortoiseshell objects, and soap (!) in large cakes. I saw one packet of Chinese paper, not written on, which was as clean and fresh as if it had been just brought from a stationer's. Some of the screens and pictures are a little the worse for years, but, as a rule, all the objects are in the most perfect preservation. I observed a ewer of white glass, about a foot high, which looked more modern than the eighth century. We were assured, however, by an antiquary who is engaged in describing the collection, that this ewer is one of the objects entered in the original list or catalogue which was deposited from the first. The antiquities are exposed in the inner hall of the temple of Daibutz, a colossus of bronze fifty-three feet high. In the outer cloister or court of the temple, is an immense collection of antiquities from various temples or private owners. Many of these things are attributed to the fourth, fifth, and sixth centuries. Some have a very Indian look, and are alleged to be modelled from Indian originals. The Japanese antiquarians seem to have very good means of verifying these things. The old barn in which the Mikado's treasures were preserved is a most remarkable building. It is composed of solid timbers wrought and dovetailed together, and rests upon pillars formed of stout trunks of trees eight or ten feet high, so that the air passes underneath. It stands on the side of the hill, and I suppose has been kept dry by the constant winds, Japan being the windiest of countries. This alone can explain the preservation of such perishable objects as paper; though how the attacks of insects have been warded off is to me incomprehensible."

M. ETIENNE'S "History of Italian Literature," from its first appearance to the present day, has achieved for itself a high rank. It is exactly what it professes to be. The author points out that from its earliest history, Italian literature was impregnated with the dominating idea of Italian unity. The idea appears in the writings of Dante, is veiled in Petrarch and Boccacio, re-appears in Laurence de Medici, is sketched by Machiavel, discussed by Guichardin, and ultimately finds refuge in Turin, whose sovereigns, as early as the commencement of the seventeenth century, entertained the hope of founding an Italian kingdom. Dante, if not the creator of the Italian language, was the founder of its national literature. After Dante comes Petrarch, almost French by the nature of his genius and long sojourn in France. He is the poet of love, as expressed in its highest form: Boccacio the *romancier*, frequently licentious. Ariosto is chivalry and heroic poetry. Machiavel, the strange diplomatist, the best abused and least known of politicians; and his contemporary and friend, the historian Guichardin. All are finely judged by M. Etienne The chapter on Tasso, who died in Rome at the close of the sixteenth century after a life of suffering and fraud, is most interesting but whether his madness was true or feigned, M. Etienne, cannot clear up. It is certain that Tasso had the courage to complete in prison his great work. His passion for Leonora made him endure all; and in prison his "Jerusalem Delivered" was achieved."

***

A REMARKABLE report has been published by Dr. Schuyler of the U. S. Govt., on Russia in Central Asia. The Governor-General of Orenburgh informed the American diplomatist that it would be "necessary for the Russians to have expeditions against the Turkomans for many years. It will be a second Caucasus; and in the end we shall find ourselves obliged to take Merv, which would immediately lead to complications with England." At Samarkand Dr. Schuyler heard from Abdul Rahman Khan, the ejected Afghan ruler, that "Sher Ali was detested by the Afghans for his complaisance to England, who would willingly join a foreign power in an attack on English domination in India." Apart from the making of good roads, Russian dominion is very barren of good results, according to Dr. Schuyler's showing. "For industry and commerce the Russian administration has done comparatively little. Nearly all the attempts in regard to irrigation, have proved failures. Russian engineers have yet to learn from the natives. Few of the officials who come to the country have a knowledge of the native languages, and the Administration is consequently obliged to use as interpreters natives who barely understand Russian—Cossacks who have a very rough knowledge of the native languages, or Tartars who are in general the most honest, are best interpreters. As far as education is concerned, the Russians have done almost nothing."

***.

M. PERRAT says that, like the ancient Greeks, French courage is but the offspring of momentary excitement, giving way to discouragement before obstacles barring its success. The recent war was a late but strong proof of the contrary. The military spirit of France is allowed by all to have come out of that terrible ordeal undiminished. They fought against superior numbers, superior discipline, and continued success, knowing that they would be beaten. Gravelotte shows that they have obstinacy, and no army has ever been a model of heroism when sorrows follow it, not singly, but in battalions. M. Perrat asserts that France, like the "negro" races of America, will fail in establishing democratic institutions. But the country is torn by pretenders, and no realm can be tranquil when so divided. England had her wars of the Roses as well as of the Stuarts. The genius of France is essentially democratic, and the social order, the legacy of 1789, has not been seriously disturbed by any of the political shocks which have since succeeded.

***

WHAT was the language of Accad? Who were the Accadians? And what is now understood by "Turanian idioms," are the questions to which M. Lenormant devotes himself in a recently published volume, and to which, we think, he has given an exhaustive answer. The discovery of the "language of Accad," meaning by this the primitive tongue of the dwellers in Babylonia and Chaldæa, and the further determination of the fact that, to those who spoke it, we owe the invention of the oldest Cuneiform writing, perhaps, the most ancient alphabet of any kind, is the greatest feat of recent Oriental research; and is, a result all the more remarkable that the existence of Accadian even was not suspected till considerable progress had been made in the interpretation of the simpler

historical inscriptions of Assyria. Dr. Hincks was, we believe, the first to notice, in 1847, the Scythic element in the Cuneiform texts, and, at the British Association in 1857, to give to those from Susiana, the title they have since borne of the "language of Accad," that of one of the towns attributed in Genesis (x. 10) to Nimrod. But to Mr. Norris, in 1852, and to M. Oppert, in 1857 and 1859, are due the full working out of this discovery, and the establishment of the facts relating to it, on a firm philological basis. The origin of this great discovery was in this wise: In the progress of Assyrian decipherment, students were struck with the occurrence of many words and forms that could not be explained from Semitic roots. Further research showed a manifest connection between them and the inscription on the second column of the Behistan Inscription, which, for the want of a better name, it has been agreed to call Median. Hence the suspicion—now an accepted fact—that, antecedently to the Semitic Assyrian Empire, there must have been a more primitive people, who were probably the inventors of these writings. As time went on, proofs turned up confirmatory of these suspicions, till at length, in 1852, Mr. Norris read before the Asiatic Society his famous 'Memoir on the Scythic Version of the Behistan Inscription.' In this 'Memoir' Mr. Norris showed that this column of Cuneiform writing, enshrined a language nearly connected with the dialects known generally by the name of Ugrian, having many analogies with the Magyar, Ostiak, Lapp, and other Tartar tongues, and he drew the further inference that the syllabarium of unchangeable and aggultinative roots with a simple syllabization was originally contrived for a Scythic language, that, probably, of the Dahæ, Sacæ, Mardi, and of the pastoral tribes of the Persian Empire. He at the same time stated his belief that the oldest native tongues of India, if not themselves of Tartar origin, exhibit remarkable phonetic and grammatical affinities with those of the Turanian stock. To these views, M. Oppert, six or seven years later, gave his assent in all essential particulars, at the same time adding very valuable deductions from a mass of materials not available when Mr. Norris wrote. Since then, this study has been pursued with great success by a host of scholars of special erudition, such as Hunfalvy, *Riedl*, Donner, De Saulcy, Lenormant, and Sayce, there being but one opponent to these views of any note, M. Halevy, with the answering of whose objections M. Lenormant's present volume is mainly occupied. At present it would seem quite certain that the Accadian represents a special group, closely allied to the *northern Turanian* languages, with affinities connecting it with the Ugrio-Finnic dialects, and, of course, at the same time, though less directly, with the Turkish, Mongolian, and Tungusian idioms. The language with which it has the closest connexion is naturally the Scythic of the Behistan Inscription, because there (as is admitted by all scholars) we have a Turanian tongue spoken in the immediate vicinity of Chaldæa, the only one, too, of the same family with written monuments ascending to a high antiquity; indeed, the only one between which and Accadian, there is not an enormous period of time.

***

"Is the Population of France on the Decline." In Saxony the population doubles itself in 38 years, in England in 77, in France in 165 years, while the number of marriages is not inferior as compared with others. There is one marriage for every 123 inhabitants; in England one for 120, in Saxony one for 106, and the question of early or late marriages remains about the same. French unions are less fruitful. The mean number of children per marriage in Russia, which tops the list, is 4·73; in France, the lowest on the list, 3·07. The compulsory celibacy of the French soldiery hardly affects the question, and illegitimate births are greater in other countries than in France. The mortality is one for every 39·96 of the population or less than in Saxony, Russia, and Austria. The new born die less rapidly, and France occupies the first rank with respect to active population, that is, having most adults capable to work between the ages of 15 and 70. The cause of the infecundity of French marriages can only be discussed within closed doors. Dr. Lombard touches deeply on this subject, but his remarks are too delicate to be reproduced: suffice it to say that no doctrine, no teaching, no legislative enactment, can have any sensible effect upon the phenomenon.

***

THE "Correspondence and Souvenirs" of the two Ampères, father and son, extending from 1805 to 1864, are instructive and interesting, though wanting a little the relish of age. It is the son, a promising Bohemian, who occupies however the foremost position. Style is said to be the man himself, but while a man is never completely photographed either in his works or in his style, he is always so in his letters. But letters, too recent, are like unripe fruit, setting the teeth on edge. Ampère held that letters to friends, were only "commenced conversations." This was in reference to one of his epistles, unauthorizedly published, concerning his visit to Goethe at Weimar, wherein he described the great man in his white dressing-gown, as a "huge white sheep, between his son, step-daughter, and two infants." Ampère, the son, Jean Jacques, commenced everything, we are told, and finished nothing, His poetry, plays, and histories are but specimens of his talent. He changed his studies as he did his climate; took pleasure in brusque antithesis of impressions and of thoughts; and enjoyed, as Sainte-Beuve observed, these intellectual Russian baths. J. J. Ampère was to have been the husband of Cuvier's daughter but he fall in love, at twenty years of age, with Mme Recamier, then aged forty-three; and his love was as incurable as imprudent. The famous beauty had many lovers, but she killed none. The most ridiculous of them was Chateaubriand, and the most lamentable young Ampère. The latter had been captivated by the head, however, not the heart. His smiling and insensible idol might have been his mother; although the famous beauty, once sovereign, was radiant even in her decline. When no longer the grand coquette, she was a woman with the resolution of a man, and the courage of a hero. She knew how to brave power and to smile at persecution; She was liberal with Mme. de Stael, and disdainful before the insolence of Fouche. She thirsted after homage, but was incapable of affection. According to La Bruyere, passion and pleasure dominate the courtesan; vanity and lightness the coquette. There was no scandal attached to the name of Mme. Recamier; there was nothing even equivocal in her conduct. Her beauty was strongly mysterious, which condemned her, as Lamartine said, "to the eternal purity of marble." She refused to marry Chateaubriand as an old widower, as well as Ampère the young bachelor; but, desired to keep both chained to her car, and confessed that the day when the little Italian boys in the street no longer turned their heads to look at her, her *rôle* was finished. "Only think, young M—— asked me yesterday," she remarked to a friend, "to tell him something about his grandfather, and what color had been my hair?" Her whole character was in the remark.

INDIAN INTELLIGENCE.

BENGAL.

THE rivers have risen in the eastern districts higher than on any previous occasion during the present season, and there is, fear of scarcity, if not famine, as the standing crops will be materially injured, and no opportunity afforded for sowing the late *roah* plants in the flooded districts.

CARAGOLA is almost under water. The Ganges has reached the dâk bangalow compound, and if the river rises a little more the building is almost sure to go.

IN the tea districts the long wished for break in the rains appears to have set in not before it was wanted. The bright hot days which have prevailed during the week have done a considerable amount of good to tea at the higher elevations, and have also tended to remove that blue-moulded state into which the Darjeelingites had fallen during last month.

ON the 3rd September, at 9 A. M., Lower Bengal was visited by a rather severe earthquake. There were two distinct shocks with an interval between, during the whole of which there was a distinct tremulous movement of the earth. The motion was apparently from S. E. to N. W. The earthquake lasted fully a minute and a quarter.

AN endeavour has been made to improve communications between Shillong, the head-quarters of the Assam Government, and the plains.

THE total number of deaths from all causes in Calcutta for the week ending August 28th was 270, an average ratio of 31·20 against 28·46 in the preceding week.

A SMART shock of earthquake was felt in Calcutta, and generally throughout Lower and Eastern Bengal, on the morning of the 3rd instant, at about 9-25. AM.

N.-W. PROVINCES.

THE absence of rain at Agra for more than a fortnight is distressing the agricultural classes. The *joar* and *bajra* crops depend solely upon the rainfall. Writing from Alligurh, a correspondent says the crops look very promising as yet. The indigo sown in June and July, however, is suffering for want of rain.

LARGE purchases of wheat are being made in the North-West and Punjab by European firms for exportation to Europe. One Calcutta firm has recently purchased, it is said, six thousand tons of grain, and there is every prospect of a large grain traffic springing up with Europe.

CHOLERA has appeared at Allahabad, but in a mild form. The troops are encamped in the Fort Square. The head-quarters of the regiment, are exceptionally healthy.

A SERIOUS obstacle of long standing has been removed from the path of the lawyer in the Criminal Courts of these provinces. The High Court has ruled that qualified practitioners engaged on behalf of an accused person, shall be entitled to peruse the records of the case in the Court-house.

IT is said to be in contemplation to remove from Jamalpore to Calcutta the office of the Traffic Superintendent of the East Indian Railway.

PUNJAUB.

THE order of the Commissioner of Lahore in the divorce suit *McCulloch* vs. *McCulloch* has been modified on appeal, and the Chief Court has passed a decree *nisi* for the dissolution of marriage. The Commissioner merely granted a judicial separation, and the order was concurred in by one of the Judges. The majority, however, were in favor of the divorce.

A RAWUL PINDEE correspondent, writing on August 28th, says : "The following tragical intelligence has just reached me from Peshawur. Some days back a driver, named Hodges, of the G-8th R. A., was missed at Cherat : his previous character having been indifferent, the military authorites came to the conclusion that he had deserted, and the police were acordingly put on the *qui vive* to apprehend him. The discovery however yesterday of a portion of Hodges' body (a leg with the boot on), two miles east of Cherat, placed it beyond doubt that he has either been assassinated or met his death by accident : the latter conclusion, however, is for many cogent reasons deemed highly improbable. It is thought that the unfortunate fellow may possibly have been endeavouring to desert, and being ignorant of the geography of the the country crossed the border, which is scarcely a mile distant from Cherat, and fell a victim to the ruthless vindictiveness of the hill tribes. Enquires are being instituted, the result of which I shall communicate to you in due course."

THE Commissioner of Lahore is on circuit to the Ferozepore District, where a heavy Session's calendar awaits him. The greater number of the cases are of murder or homicide.

THE cotton reports from the Punjab are on the whole satisfactory. The expected outturn of clean cotton in three districts will be about 31,677 maunds. In Mooltan the prospects are said to be good. In Photak the land under cotton cultivation is 29,510 acres ; the crop is expected to be an average one. In Lahore sowing operations have just been completed. In Gujranwalla the propects are described to be good : the same in Ferozepore. In Gujrat cotton cultivation is contracted, owing to want of rain. In Kurnal the present year's crop has not been sown.

SIND.

JACOBABAD is again surrounded by water, but no danger is apprehended from the flood. The cultivators appear to be the only sufferers, all the crops on the Jacobabad and Shikarpore road having been swept away.

NATIVE STATES.

THE Maharajah of Travancore is said to have given Mar Athanasius, the excommunicated Metran of the Syrians, two silver badges with the silver chank. By so doing the Maharajah has countenanced, it is said, a church dignitary whom the Patriarch has excommunicated, but who is on the best of terms with the reigning sovereign. The Maharajah had a close conversation with the Patriarch of Antioch lately in the royal bungalow, but reconciliation between the two Metrans of the Syrian Church seems still an impossibility.

SURGEON-MAJOR ROSS, Physician to H. H. the Maharajah of Travancore, has resigned his appointment and accepted the post of Zillah Surgeon, and Superintendent of the Jail at Nellore. Dr. Houston, the Zillah Surgeon of Tanjore, has been appointed in Dr. Ross' place at Trevandrum as Durbar Physician.

TWENTY-FIVE competitors have sent in specimen translations of Geikie's Physical Geography for the prize of Rs. 400 offered by the First Prince of Travancore. The translations are in the hands of a committee, Mr. Garthwaite, Inspector of Schools in Malabar, acting as President to the Committee.

YESTERDAY (5th September) His Highness the Thakore Saheb of Bhownagar arrived at the presidency Bombay from Ahmedabad. Eleven guns were fired from the saluting battery in honour of His Highness' arrival.

THE Government of India will pay the Maharajah of Kishengurh the sum of Rs. 20,000 annually for abandoning all transit dues on through traffic along the Rajpootana Railway, a portion of which passes through his territories. The pledge was given by Sir John Lawrence in 1866, before the line was commenced. The advantages of railway traffic through any State might be held to compensate it for the loss of transit dues thereby resulting. Kishengurh, we believe, represented that two-thirds of his revenue was derived from such dues, and the case appears to have been treated exceptionally.

A CORRESPONDENT of the *Pioneer*, writing on the 26th August, says : "I went down to Bahawalpur about a week ago, and though I had heard a good deal about the floods I was not prepared for such an extraordinary expanse of water as met my view. On the near side of the Sutlej the whole population of Adamwahan had migrated to the sand hills which here abut on the river, and were living some under canvas and most of them under little thatched huts without walls, The native town was entirely under water, and many of the buildings belonging to the railway had also been washed down. The station master's bungalow, for one, was represented by a mound of mud. Some houses, however, had been protected by bunds and remained secure.

HOLKAR has sanctioned the expenditure of three lakhs of rupees on works of public utility in his territory. The Prince of Wales it is said will visit Indore.

A FORMAL invitation has been received by the Cochin Durbar from His Excellency the Governor of Madras to be present at Madras on the occasion of the approaching visit of the Prince of Wales.

MR. ABDOOL HOSSAIN, a young man about twenty-two years of age, nephew of Mr. Cumroodeen Tyabjee, Solicitor, who has been lately appointed Grand Vizier to H. H. the Jam of Lush Beyla, left Bombay for Kurrachee, a few days ago, on his way to Beloochistan This is the first instance of a Mahomedan gentleman of Bombay obtaining this high appointment at Beloochistan. A number of influential Mahomedans assembled at the Apollo Bunder to wish him good-bye.

BARODA HIGH COURT.—Three Judges have been appointed in connection with the High Court which is shortly to be started at Baroda.

BARODA HIGH SCHOOL.—It is stated that Sir T. Madava Row intends to appoint a graduate of the Bombay University as Superintendent of the Baroda High School.

MR. WINGATE, Assistant Political Agent at Sattara, having regard to the mismanaged condition of the Jagheer of Jutt, has proposed certain measures of reform recommending the removal of the present *karbharee*, who is pronounced "ignorant of the magisterial work, and is found more despotic than the late *jagheerdar* himself." The charge against this official is declared to be both "groundless and libellous" by the Sattara paper the *Bodh Sudhakar*.

BOMBAY.

NOTWITHSTANDING the plenteous rain in Guzerat, its northern parts, including Ahmedabad and the greater part of Kattywar, are still panting for showers. If these be withheld, the crops in those parts will be seriously affected.

THE man who recently murdered one Sudla Doola at Borsud has not yet been apprehended, and a reward of Rs. 100 has been offered by the District Magistrate of Kaira for his arrest.

THE first and second class Chiefs have now been warned to be in Bombay by the 25th October, instead of the 30th, so that the exchange of visits between them and the Governor of Bombay may be over, and a little rest allowed to Government officials, before the arrival of the Viceroy on the 4th November.

THE Poona Horse and Cattle Show will be opened on Wednesday, the 22nd September, and remain open until Saturday, the 25th idem. There can be no doubt that encouragement to the training and breeding of good horses is given by the yearly recurrence of these fairs.

A PROPOSAL to start a society for the protection of British seamen in Bombay appears to be gaining ground. Rao Bahadoor Becherdas Ambaidas, the well-known Ahmedabad banker, has sent a donation of Rs. 50 to the fund and Rs. 25 as a subscription for one year. The society is well worthy of support, and we hope further subscriptions for so excellent a cause will be forthcoming.

A MISSING SEAMAN.—The boatswain of the S. S. *Timoor*, named Bishop, was missed from on board that ship on Sunday week. He is supposed to have fallen overboard during the previous night, and got drowned, while under the influence of liquor. He was last seen by the watchman on board the ship under the influence of liquor, and sleeping on the bridge about midnight, when he was aroused and asked to leave the bridge. The boatswain was then seen to stagger along and enter his cabin, which was situated under the bridge, and it is supposed that he rolled out of his bunk through a port hole into the sea. The police have instituted an enquiry into the matter, but no trace can be got of him.

MYSORE.

WE noticed some months back the scheme proposed by the Rev. Mr. Miller, M. A., of the Madras Free Church Mission, for the establishment of a Christian College for South India. Mr. Miller has since embodied his views in a memorandum addressed to the General Assembly, and steps are being taken in Scotland for the furtherance of the scheme. Mr. Miller's college, it is hoped, will receive the support of all societies, and the London Committee of the Church Mission has, we are told, resolved to grant £300 a year, for five years, on condition that the college is efficiently maintained.

A NATIVE letter says that an unusually large cobra lately sought shelter in the Nunjengode Temple in the inner apartment of the temple, and was found coiled around the neck of the idol. Considering it an ill omen, the Bramins have discontinued their *puja*.

THE Coffee is looking exceedingly well, and the promising condition of the crop is not confined to South Coorg. North Coorg and the Ghâts show excellent prospects, and planters begin to look forward to a favourable season.

MADRAS.

NEWS has reached Madras that Dr. Fennelly is on his way to Rome to confer with the Pope on important matters connected with the Madras Mission. The Bishop expects to be in Madras about the middle of October at latest, bringing with him several priests, monks, and nuns for the local mission.

THE rinderpest has appeared in Manantoddy in its most virulent form, and the cattle are dying by scores. In one herd of 100 head belonging to a Nair, 83 have perished. There is scarcely a herd in the talook that is not infected, except the planters', which as yet have escaped the contagion. Mr. Weston is recommending isolation, but the proprietors appear callous to their losses. It is the will of

God; if the bullocks are to die, let them die; the air is teeming with the stench of putrid carcases.

THE machinery of the Alpha Gold-mining Company of Wynaad has been at work more than a month; but, according to the Madras papers, the results have been very poor. The average outturn has been about 2 dwts. per ton, instead of the 11 dwts. which Mr. King, of the Geological Survey, confidently calculated upon. The explanation offered is that the engineer in charge is not a practical miner, and the manipulation of the quartz is described as "faulty and crude." It is also said that the company have commenced operations on the poorest portions of the gold field—those decribed by Mr. King himself as not likely to yield more than between 2 and 3 dwts. per ton. Later accounts say that with a new machinist and miner the outturn has reached 9 oz. to 20 tons, or about 7 dwts. to the ton, which corresponds closely with that obtained by Mr. King after a series of trials in the fields now being worked.

THE 4th Light Cavalry, at Bellary, is ordered down to Bangalore for the Prince's visit.

THE cholera epidemic which, was raging in the French territory of Karkal has abated. Isolated cases occur still: but one or two deaths daily instead of twelve or more.

THE re-organisation of the Nizam's Public Works Department has commenced. The arrangements carried out up to latest advices appear to have given satisfaction.

THE island of Mooram Shullee, in the roadstead of Tuticorin, has become submerged, and a screw pile beacon with a basket head has been erected on the position.

THE furniture now being made in Madras for the Prince of Wales will cost, it is said, thirty thousand rupees. All the rooms the Prince is to occupy at Government House are in charge of the upholsterers.

THE contract for the Mayo Town Hall has been given to Mr. C. Puiman, and there is some idea of asking H. R. H. the Prince of Wales to lay the foundation stone. The supervision of the work will be with Colonel Sankey, R. E.

MILITARY.

CAPTAIN HARTOPP, A.D.C. to the Viceroy, has left Simla for Calcutta and England on three months' privilege leave.

AN exchange of battalions has been sanctioned between Lieutenant-Colonel Walker and Major Sillery, of the 12th Regiment, the former joining the 1st Battalion at home, where he is on leave.

THE Secretary of State for India has notified for public information that subsistence allowance is admissible to step-children of soldiers; also to children of soldiers without reference to the fact that their *fathers did not serve or die in the presidency.*

COLONEL A. POND, commanding at Jheelum, succeeds to the command of the 43rd Native Infantry, *vice* Colonel Clarke, retired. Captain Evans, of the same regiment, being confirmed as Second in Command, and Captain Reid as Wing Officer.

NEW rules are promulgated for the supply of carriage to troops in the Central Provinces. The officers of the Commissariat Department are to supply all carriage needed by troops on the march, making their own arrangements if possible, but applying to the civil authorities for such assistance as they need.

IT has been ruled by the Secretary of State that the period of service required to qualify an officer of a British regiment as a probationer for the Staff Corps will be reckoned from the date when the officer entered the army as a Sub-Lieutenant, and not from the date on which he obtains his commission as Lieutenant.

THE finance accounts of India for the year 1873-4 give the following statement of the established strength of the army of India, exclusive of native artificers and followers: European army, 66,406, namely, 6,162 officers and 60,254 non-commissioned officers and privates—native army, 123,858, namely, 180 officers and 123,678 non-commissioned officers and privates, 208 of this last number being Europeans. The total is 190,264, namely, 6,342 officers and 183,922 non-commissioned officers and privates. The native army is described as constituted thus: 796 artillery, 166 body-guard, 18,435 cavalry, 3,219 sappers and miners, and 101,242 infantry.

GENERAL.

IT is said to be expected in London in well-informed circles that Lieutenant-General Haines (Madras) will succeed Lord Napier as Commander-in-Chief in India.

AN impression is abroad that the project of railway extension from Ajmeer to Ahmedabad is either shelved or abandoned. But, according to the *Pioneer*, Mr. Collett, the Superintending Engineer of the Western Rajpootna scheme, who has been employed for some time in surveying the several alternative lines, is now preparing his plans and reports for submission to Government, and these will probably be ready within a month or so. The importance of the link is so incontestible that the last thing to be apprehended is its being abandoned.

CHINA.

A CHINA paper tells us that the poppy has been more largely cultivated this year in Manchuria than it has ever yet been. Instead of as formerly being grown in retired nooks and in small patches, it is now openly planted by the roadside. The collection of the syrup commenced in the end of July. The consumption of native opium is also reported to be steadily increasing.

CABUL.

THE *canard* about Merv also stated that Yakoob Khan of Kashgar was occupying the Chinese towns on his frontier, but without resistance. The news is perhaps not improbable in itself; Mr. Shaw, the British Envoy, makes no reference to it in his latest letters, and it is open to great question.

MR. SHAW, the British Envoy, left Yarkund for Simla on the 29th July. He is bringing with him the Ameer's ratification of Sir D. Forsyth's treaty and some presents for the Viceroy. The Ameer is reforming his army, which will consist of a body of mounted infantry. "The Turkish instructors have worked wonders, and the enthusiasm of the soldiers is intense. The new drill, three hours every day of the week except Friday, is immensely popular. Throughout Kashgar and Yarkund it is the never failing subject of conversation. The Turkish words of command are in everybody's mouth. There is even a popular song, with a refrain 'One two, three!' taken from the new platoon exercise. To such an extent have old perjudices been overcome, that the long flowing robes of the Central Asiatics are now about to yield to a more warlike style of dress. Already the Ameer and his chief officers have taken to a sort of half-European dress of tunic and trowsers; and as soon as the men have become used to the sight of the strange, clothing they will be made to follow their chief's example."

IT is reported that Nowroz Khan is negotiating with the Akhoond of Swat for assistance, and may consequently prove a dangerous enemy in time to the Ameer of Cabul.
